THE

WORKING MAN'S FRIEND

AND

FAMILY INSTRUCTOR.

VOLUME THE FIRST—NEW SERIES.

Be earnest in effort, in purpose be wise,
Whate'er your condition may be,
Nor deem it impossible ever to rise
To a station of highest degree
For plebeian toil has oft earned the spoil
Of riches and fame as its due,
And what has been won in the race that you r
May perhaps be achieved, too, by you

Success without merit was never the rule,
Though numerous exceptions abound,
And he would be thought little else than a fool
Who should seek it seldom 'tis found.
The sower shall reap, the winner shall keep,
The rewards that to ensue,
And what has been won in the race that you run
May perchance be achieved by you

The plodding and patient, though mean and obscur
Of all are most worthy to lead,
The diligent hand shall abundance secure,
While the pithless shall never succeed
So success to deserve you must strain every nerve,
And the course of the sluggard eschew,
For what has been won in the race that you run
May perchance be achieved by you.

In the proud roll of history's illustrious names,
Most honoured in age or in youth,
Are heroes of peaceful and sanctified aims
In the service and love of the truth
Then a niche with the brave do you ardently crave
The same path you must strive to pur
And what has been won in the race that you run
May perchance be achieved by you

TO OUR READERS.

In concluding this, our First Volume of the New Series, we are happy to acknowledge our grateful thanks to those of our readers—and we number them by tens of thousands—who have favoured us with their confidence and approval. We promise them that the Second Volume shall be in no wise inferior to that which we have this day completed, but that where improvement seems practicable, it shall be our earnest endeavour to keep pace with the growing intelligence of the times.

The reception given to the series of papers entitled "Glimpses of the People of all Nations," has been so cordial, that we have made arrangement for resuming these interesting histories. The First Number of Volume the Second will commence with the HISTORY OF EGYPT AND THE HOLY LAND, illustrated with views of the countries, and sketches of the peculiar costumes, employments, and manners of their present inhabitants. This history, continued from week to week, will embrace all that is known of those lands which have been the scenes of so many astonishing and interesting events.

As in the present Volume, it will be our endeavour, by the aid of the pen and the pencil, to render our work a FRIEND and FAMILY INSTRUCTOR in the most comprehensive sense of the words. We beg to say, also, that a portion of our space will be devoted to the LITERATURE OF WORKING MEN, and that it will be our earnest endeavour to keep alive in the breasts of our readers the fire of learning and taste which it has been our good fortune to watch, and in some cases to kindle.

March 25th, 1852.

THE
WORKING MAN'S FRIEND
AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. I., No. 1.] SATURDAY, OCTOBER 4, 1851. ONE PENNY.

Glimpses of the People of all Nations.

AT a time when the attention of millions is directed to the industrial and artistic products of the civilized world, curiosity is naturally excited for an acquaintance with the people from whom they came, varying so greatly as they do in climate, colour, language, customs, and the means of present or future development. To gratify this desirable and laudable feeling by brief and popular, yet accurate details, is therefore the pleasing task on which we have entered in this NEW SERIES of THE WORKING MAN'S FRIEND. In so doing, we shall employ PICTORIAL as well as GRAPHIC description, solicitous by each mode to interest and inform our numerous readers. We commence the Series with CHINA AND THE CHINESE.

THE KIN-CHAN, OR MOUNTAIN OF GOLD

CHINA AND THE CHINESE.

IT is a curious fact, as Klaproth states, that we have borrowed our name for this country from the Malays, who call it *Tchina*. Generally speaking, the Chinese call their empire after the name of the reigning dynasty, so that it has greatly varied at different periods. Thus, when the Manchoo dynasty gained the ascendancy, as they adopted the name of *Thsing*, the Chinese called themselves *Thsing-jin*—that is, "men of *Thsing*." This vast country of South-Eastern Asia is in form nearly square, being bounded on the east and south-east by the Gulf of Tartary, the Sea of Japan, the Yellow Sea, the Strait of Formosa, the Chinese Sea, and the Gulf of Tonquin; on the land sides, by Tonquin, Laos, and Birmah; and west by Independent Tartary; and north, for the immense extent of 3,300 miles, by Asiatic Russia. It encloses altogether a space of about 5,300,000 square miles. The area of CHINA PROPER does not exceed a fourth part of the whole empire.

It has been generally supposed that the Chinese maintain an antiquity of myriads of years, and consequently that their historical records are at such absolute variance with the comparatively recent account of Moses, that, if they be received, he must be rejected. Infidelity has eagerly seized on this apparent collision, anxious to avail itself of *any* means to cast

credit on the Bible. But here, as in similar instances, its alignity has signally failed; for the Chinese, like most other eathen nations, have (as Dr. Medhurst, who has long lived nong them, states) a *mythological*, as well as a *chronological*, eriod; the one considered by themselves as *fabulous*, the other *authentic*—the one connected with the history of their *gods*, nd the other with that of their *men*. The evidence of the ivine authority of the Sacred Scriptures is therefore unaffected y the Chinese chronology; and, comparing the first and ubulous part of Chinese history with the early chapters of the ook of Genesis, the idea is suggested, as the same writer emarks, "that the whole is probably based on some indisnct recollections of the theory of the creation. Of the first an they say, that soon after the period of emptiness and conusion, when heaven and earth were first separated, Pwan-Koo as produced. His origin is not ascertained, but he knew ntuitively the relative proportions of heaven and earth, with he principles of creation and transmutation. During the upposed reign of the celestial, terrestrial, and human emperors, they allege that the year was settled, the months and ays arranged, and the hills and rivers divided,—all which nay be but distant allusions to the formation of the heavenly odies, and the settlement of the earth and waters." Other aces analogous to sacred history are also discernible. A long eries of dynasties appears on the page of authentic annals. The present Tartar race have occupied the throne of China for more than two hundred years.

The first object that invites attention in the general aspect of China, is its great *plain*, which is about 700 miles in length, and varies in width from 150 to nearly 500 miles. The entire area incloses no less than six provinces, and a space of 210,000 square miles; being seven times greater than the plain of Lombardy. It has, doubtless, a very large population; according to the census of 1813, no fewer that 170,000,000 "mouths," as the Chinese say, "were fed on its surface." It is everywhere well watered, and, on the whole, extremely fertile.

The *mountainous* and *hilly* districts of China comprise about half its area. Of these, the most important seems to be the mountain-chain which runs through the southern provinces, and forms a continuation, though on a much smaller scale, of the Great Himalaya. In Yunan, on the eastern frontier, where it first enters the empire, its ridges, which appear to be very steep and lofty, yield support to bands of lawless and predatory tribes. But in the eastern provinces, the mountain-pinnacles seldom rise above 3,000 or 4,000 feet; and being covered with noble forests, crowned with pagodas, and with cities along their sides, they give to the country, without any interruption to its culture and populousness, a magnificent aspect. The ground also rises rapidly as it approaches the northern frontier, which is formed or crossed by mountains of considerable height, and over which that stupendous bulwark, "The Great Wall" of China, has been carried with almost incredible labour.

Our first illustration represents the *Kin-chan*, or "Mountain of Gold," at the east of Nankin, situated in the middle of the river Kiang, at the north-west of Tan-tou-huen, a city of the third order. It bears also the name of "Floating Jasper." In a celebrated Chinese work it is said: "This mountain is surrounded by water, and, when the wind blows violently from all sides, it is stated to move, and to change its place. It is for this reason that it is called 'Floating Jasper.'" Various small pagodas are scattered over its different elevations.

China is chiefly indebted to her mighty *rivers* for that fertility which is at once the source of her wealth and of her vast population. The Hoang-ho, or yellow river; and the Yang-tse-Kiang, or "son of the ocean," rank in the first class of rivers. Other rivers are of great importance. The Ta-si-Kiang, or Canton river, of which we give a representation, rises in the province of Yunan, takes an easterly course to the plains of Canton, and, having received some smaller streams, forms an estuary known as the Bocca Tigris; by which, after a course of 600 miles, it is finally discharged into the China Sea. Many of the rivers—of which indeed there is a vast number—fall into the great lakes.

The principal *lake* in China is the Tunting-hoo, 220 miles in circumference. It receives the waters of many considerable rivers. It is surrounded by picturesque and finely-wooded hills, and so greatly is its scenery admired, that the shores are one of the favourite spots for the lucubrations of Chinese poets. Liable, however, to sudden tempests, its navigation is dangerous. The environs of another lake are so picturesque, that they have acquired the name of "The Chinese Arcadia." All the lakes furnish means of communication, and are abundantly stocked with fish.

If the statement generally made be correct, that the *sea-coast* of China extends for 2,500 miles, there is only one mile of coast to every 539 miles of territory; but internal navigation is carried on so extensively, that this deficiency has no ill effect on the commerce of the country.

The events of the last few years have given to some places on the coast of China an especial interest for *us*, and at these, therefore, we proceed to glance. Even under the old system of intercourse, *Amoy* was better known to Europeans than most cities skirting the country. This is attributable partly to the attempts made in former times, by the East India Company, to open a trade with the people; but principally to the enterprising spirit of the people themselves, which led them to settle for commercial purposes in the various countries and islands bordering on the China Sea. At so early a period as A.D. 1676, a ship was despatched from England to Amoy, with the object of establishing a factory. This attempt was successful, but the trade was afterwards interrupted by the civil wars which raged in China. Four years after, the Tartars expelled the Chinese from Amoy, and destroyed the Company's factory, but it was not long before it was allowed to be re-established. This permission was, however, of short duration, for in the following year the Company's residents at Amoy declared, in an official report, that, "having had five months' experience of the nature and quality of these people, they could characterise them no otherwise than as devils in men's shapes," and they further stated, that "to remain exposed to the rapaciousness of the avaricious governors, was considered as more detrimental than the trade could be beneficial." The factory was, however, continued, till an imperial edict, which limited the foreign trade to Canton, compelled the Company's officers to withdraw.

Amoy, though possessing only an estimated population of about 150,000, has three times as large a number of trading junks as the important capital of the province itself. Here is a sufficient proof of the commercial spirit that pervades the people. They emigrate in large numbers to Borneo, Siam, Singapore, Malacca, Batavia, Samarang, and other places in Java, hoping to realise fortunes by commerce, and then to enjoy them in their native land. These prospects of accumulated wealth and of subsequent gratification and indulgence prove commonly, however, "like the baseless fabric of a vision." Multitudes die in the pursuit of gain, and multitudes more fail to attain it. The few who return home are generally poor, and excessively vitiated in morals, often occasioning difficulty to the local government. In connexion with these facts it should be observed, that many are induced to repair to foreign lands from the difficulty of obtaining a livelihood in their own. Ordinarily, their course is one of privation and trial; but at Batavia some exceptions occur. In the populous sea-port and city of Java are several wealthy Chinese, two or three of whom are said to ride in fine carriages, built after the style of Europeans. These are the "Whittingtons" of "the Celestial Empire;" the overwhelming majority are the most degraded part of the population of the islands to which they emigrate.

Amoy consists of one continued range of black rocks, which, when recently broken, are of a light grey colour, but resume their original blackness after exposure to the atmosphere. A range of towering cliffs, varying in height, extends over the whole island, leaving portions of low, undulating ground between them base and the sea for the work of tillage. On the top of the ridge there are two or three miles of highly-cultivated table-land. In the northern and eastern parts of the island a few miles of level sandy soil intervene between the hills and the beach, and yield a supply of rice, wheat, and vegetables. The island extends about twelve miles in length and ten in breadth, and contains 136 villages and hamlets, the population amounting to about 400,000. The city of Amoy, which includes less than one-half of the people, is long and straggling, and occupies a promontory, so that it is surrounded on three sides by the sea. The citadel is surrounded by a wall

less than a mile in circuit, through which are four gate leading into the outer city. The streets are very narrow and dirty, and the houses, with few exceptions, are of the poorest description.

NINGPO, reputed to be the finest city on the coast of China open to foreigners, stands about twelve miles from the sea, at the junction of two fine streams, which by their union form a noble river capable of being navigated by the larger vessels and junks. One of these branches runs from the west, and the other from the south, meeting at Ningpo; and over the latter the Chinese have constructed a bridge of boats for the traffic with the suburbs on the opposite shore. Though a simple, it is a most ingenious contrivance, consisting of a number of large boats moored at equal distances across the river, forming the basis on which the upper woodwork rests, and enabling the whole to rise and fall to a certain extent with the tide. There is sufficient room under the bridge to allow fishing and passage-boats to pass through at all times of the tide, provided it is not running too strong. At spring-tides, however, the water rushes through the spaces between the boats with great velocity, and sometimes it is almost impossible to get through them.

The city itself is strongly fortified with high walls and ramparts, extending about five miles round, and the space within is almost entirely filled with houses, in most parts densely crowded together. There are two or three very fine streets. The different clothing establishments are very attractive. Silk shops and warehouses have but little external show to attract notice. Here are large quantities of the beautiful northern embroidery, which is greatly admired, it is entirely different from that commonly procured at Canton, and much more elaborate and expensive. Ladies' aprons, scarfs, shawls, work-bags, and many other articles made up in the English style, and beautifully embroidered, are the things most in demand. The products of various other arts also meet the eye. "There are, of course," says Mr. Fortune, "the usual quantity of curiosity shops, containing bamboo ornaments carved into all possible forms; specimens of ancient porcelain, which are said to preserve flowers and fruit from decay for an unusual time; lacquered ware, and other ornaments brought by the junks from Japan, many beautifully-carved rhinoceros' horns, bronzes, and other articles to which the Chinese attach great importance, purchasing them at exorbitant rates, apparently far beyond their value. But what struck me as being most unique, was a peculiar kind of furniture, made and sold in a street, generally called 'Furniture-street,' by foreigners, who visit Ningpo. There were beds, chairs, tables, washing-stands, cabinets, and presses, all peculiarly Chinese in their form, and beautifully inlaid with different kinds of wood and ivory, representing the people and customs of the country, and presenting, in fact, a series of pictures of China and the Chinese. Everyone who saw these things admired them, and, what was rather strange, they seem peculiar to Ningpo, and are not met with at any of the other five ports, not even in Shanghae. As all this beautiful work is expensive, it is, of course, only used in the houses of the wealthy."

It should also be remarked that the Chinese regard Ningpo as one of the most literary cities in the empire. Of the people included within its walls, while four-fifths are estimated to be engaged in trade, merchandise, or labour, no less a proportion than one-fifth are considered to belong to the literary class. This, however, includes not only the graduates and candidates for literary promotion, but also the writers and clerks in the public offices. The successful aspirants to degrees are invested with important civil privileges, being subject in most cases of a municipal nature, to the literary chancellor of the province, to whom they can appeal from the lower officers of government, so as to enjoy a prescriptive right. Of the population in the suburbs and on the level plain extending to the hills, six parts out of ten are estimated as deriving their livelihood from agriculture; three parts as artisans of various kinds; and the remaining tenth as consisting of fishermen and boatmen.

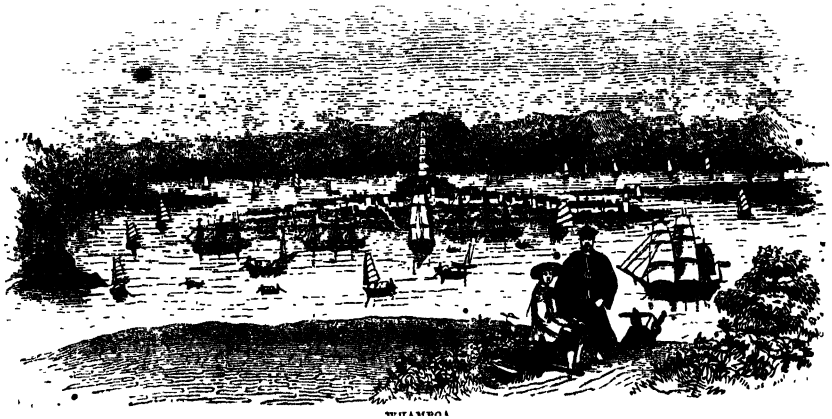
The Rev. George Smith, to whom we are indebted for many facts, describes himself and his companions as embarked on board a native fast-boat, and pursuing their course through the eastern part of the spacious Delta of the Pearl River. "Our boat," he says, "had two large mat-sails, which were managed with great skill, being raised and lowered by moveable ropes; so that in a few moments we were at any time able to alter our tack, or to reef, in order to avoid the sudden gusts of wind. The sailors lay on the deck in different parts of the vessel. The central part of the boat was formed into a cabin, with Venetians at the side, forming a kind of poop above, on which one of the crew kept watch. In this cabin we laid ourselves down; and though sleeping with most of our clothes on our bodies, we succeeded in obtaining a good night's rest. At daylight we found ourselves within the Bogue, or Bocca Tigris, the entrance to the river, and within a few miles of WHAMPOA"—of which an engraving is appended. "About noon we found our little vessel gliding through the numerous fleet of ships from all nations, which occupied the whole extent of the river called Whampoa reach. The country round was very beautiful, though, in most parts, presenting rather a monotonous appearance of paddy-fields, plantain-trees, orange-groves, bamboo fences, and a few gardens. The hills were cultivated in terraces along their sides to the very top, assuming, in some parts, a rocky, precipitate appearance. Numerous pagodas and native houses, of fantastic architecture, gave a variety to the scenery."

The city of SHANGHAI stands on the bank of a fine river, about twelve miles from the point where it joins the celebrated "Child," or "Son of the Ocean." At Shanghae the river is as wide as the Thames at London-bridge. Its main channel is deep and easily navigated, when known; but the river abounds in long mud-banks, dangerous to large foreign vessels, unless they happen to go up with a fair wind, and manage to get a good pilot on board at the entrance to the river.

Shanghae is surrounded with high walls and ramparts, according to the plan usually adopted by the Chinese, and about three miles and a half in circumference. The greater part of the inside is densely studded with houses; the suburbs, particularly all along the side of the river, are very extensive. The streets are generally very narrow, and in the day-time are crowded with people actively engaged in business. Silk and embroidery, like those already described at Ningpo, with a variety of useful articles, attract attention. "But," says Mr. Fortune, "articles of food form, of course, the most extensive trade of all; and it is sometimes a difficult matter to get through the streets for the immense quantities of fish, pork, fruit, and vegetables, which crowd the stands in front of the shops. Besides the more common kinds of vegetables, the shepherd's purse, and a kind of trefoil, or clover, are extensively used among the natives here; and really these things, when properly cooked, more particularly the latter, are not bad. Dining rooms, tea-houses, and bakers' shops, are met with at every step, from the poor man who carries his kitchen or bakehouse upon his back, and beats upon a piece of bamboo to apprise the neighbourhood of his presence, and whose whole establishment is not worth a dollar, to the most extensive tavern or tea-garden, crowded with hundreds of customers. For a few cash (1,000 or 1,200=1 dollar) a Chinese can dine in a sumptuous manner upon his rice, fish, vegetables, and tea: and I firmly believe that in no country in the world is there less real misery and want than in China. The very beggars seem a kind of jolly crew, and are kindly treated by the inhabitants."

The name of HONG-KONG is poetical, denoting "the island of fragrant streams." Situated near the mouth of the Canton river, it is about eight miles from east to west, but it is very irregular, some parts being only three miles in breadth, and the land jutting out here and there, forming a succession of headlands and bays. It is entirely mountainous, and slopes in a rugged manner to the water's edge, having deep ravines almost at equal distances along the coast, which extend from the tops of the mountains down to the sea, deepening and widening in their course. The water in these ravines is abundant and excellent, and from this the name given to the island has arisen.

The violent proceedings of the Chinese authorities in 1839 led to the removal of the British vessels from Macao to the harbour of Hong-Kong, where the greater part of the British community continued to live on board. Some slight buildings only were reared, till, in 1841, it was ceded in perpetuity to the British. Its bay is exceedingly fine, it is eight or ten



HONG KONG.

miles in length, and irregular in breadth; all over it there is excellent anchorage, and it is entirely free from hidden dangers. So completely is it sheltered by the mountains on the south, and by those of the mainland of China on the opposite shore, that the shipping can ride out the heaviest gales in perfect safety.

It was not long after the occupation of Hong-Kong by the British, before it presented a very different aspect to that which it had previously borne. The rugged, precipitous shore, which forms the southern edge of the harbour, had the appearance of an European town, which had recently sprung into existence, with regular streets of substantial buildings

CANTON RIVER.

WHAMPOA

rising one above another, and with a line of military forts, barracks, hospitals, and stores. On the north side of the island, and along the shores of this splendid bay, arose the new town of Victoria, having the mountain chain rising precipitously and majestically behind it. A beautiful road, called the Queen's-road, was formed along the shore for several miles, and this was lined with excellent houses, and very good shops. The bazaar is also a most excellent one; containing all the natural productions of China, which are brought regularly from the mainland. Besides these, Mr. Fortune says, English potatoes, green-peas, and several other kinds of foreign vegetables are plentiful at almost all seasons of the year.

A dreadful storm of thunder and rain visited the island in May, 1845, the effects of which are thus described in the *Hong Kong Register*, immediately after its occurrence:—"The damage was very great, both to the recently-formed roads and to many buildings in the course of erection; and had the violence of the rain continued an hour or two longer, many houses must have been undermined and destroyed. As it was, much individual inconvenience has been sustained. About five o'clock the whole of Queen's-road, from the entrance to the large bazaar to the market-place, was completely flooded, to the depth of from two to four feet. All the streets leading upwards to the hill served as feeders for this lake. In Peel-street particularly the torrent rushed along, bearing everything before it; and the street still resembles a dried-up water-course covered with stones and wrecks of buildings. The passage from the Queen's-road to the sea were all full; the one leading through Chunam's Hong for hours presented the appearance of a rapid river, and many of the houses on each side were only saved from the flood by mud-walls hastily raised. About six o'clock the rain moderated, but for some time after the road was quite impassable. A Coolie, attempting to ford the stream rushing down D'Aguilar-street, was borne off his feet but saved himself by catching hold of the frame of a mat-shed. The drain lately formed could not carry off the water, which committed great devastation, flooding a new house in its vicinity to the depth of nearly three feet, and destroying some new walls. A stream from a distant water-course flowed along the road above the bungaloud, occupied by the attorney general, and descending with great fury upon the roof of one of his out-offices, carried away a great part of it. In many places the Queen's-road has been covered with soil, sand, &c. to the depth of more than two feet, and all the cross drains are choked up. The bridge at the Commissariat has been carried away, and that in the Wang-Nai-Chung has also disappeared. Several lives were lost by the fall of a house in which some Chinese resided; and it is said the stream at Pokfowlum burst upon a mat-hut, in which were a number of Coolies, employed upon the new road; three saved themselves in a tree, but many more are missing, and are supposed to have been carried out to sea."

Much has been said as to the unhealthiness of Hong Kong, but as to the suffering and death which took place, Mr. Fortune says:—"My own observation has led me to the following conclusions: Much of the sickness and mortality, doubtless, proceeded from the imperfect construction and dampness of the houses in which our people were obliged to live when the colony was first formed, and a great deal may also be attributed to exposure to the fierce and burning rays of the Hong Kong sun. All the travellers in the East, with whom I have had any conversation on the subject, agreed, that there were a fierceness and oppressiveness in the sun's rays here which they never experienced in any other part of the tropics, even under the line. I have no doubt that this is caused by the want of luxuriant vegetation, and the consequent reflection of the sun's rays. The bare and barren rocks and soil reflect every ray that strikes them; there are no trees nor bushes to afford shade, or to decompose the carbonic acid, and render it fit for the respiration of man; and thus the air wants that peculiar softness which makes it so agreeable even in hot tropical climates. If the principal causes of mortality in our new colony, [illegible] ly will, of course, be apparent to every one."

[illegible] very little flat ground on the island capable of being [illegible] under culture. Indeed, the only tract—and even that more than twenty or thirty acres in extent—is the one the "Wang-Nai Chung," or, by the English, "The Valley." The other plots of ground are extremely small. Formerly, rice and other vegetables were allowed to be grown in the valley; but the permission was withdrawn by government, as the place proved very unhealthy, and the malaria was attributed to the water required to mature the crops.

SEED-TIME IN LISNOMARA.

In Four Parts.

BY SILVERPEN (ELIZA METEYARD).

Part the First.

A long day's journey had been this of Michael Joyce, for at the bidding of his reverence, Mr. O'Sullivan, he had travelled to the nearest town to bear a letter to Mr. Garven, and hear his talk to the small farmers and people about improved cultivation of the land, and crops that would be better for the food of Ireland than potatoes. And truly Joyce had listened with an attentive ear, and stored up what he had heard in his heart, for he was a likely man, as his reverence well knew when he chose him for the performance of such a mission from amongst others of his scattered flock in the wild and inaccessible district of Lisnomara.

Though he had begun his journey at day-break, and it had lain through a region difficult to traverse, it was with a firm and still rapid step that the Galway peasant ascended the loftiest mountain of the district. It was the last upon his journey; and, when he reached its narrow, grassy summit, he stayed to cast his keen gaze across a little bay which swept into the wild shore below. He saw there what gladdened his heart, for he said, as he raised his hat from his damp brow, "Sure, thin, there's me dailint Grace, me daughter—the saints be blessed!"

It was a glorious view on which the peasant's eye rested, for, except in the remote distance, where the open ocean stretched its dark line of haze, innumerable islets of all sizes and of extreme beauty, broke the coast, forming, as it were, a countless number of placid lakes, into which broad and bold headlands of the main shore itself swept out in stern and solitary, yet far from sterile, grandeur. It was a father's eye blessed by the sight of his daughter, for, though Joyce had little more than passed the prime of life, the loveliest girl in all green Lisnomara owned his name.

On the edge of the shore lay one of those corvaghs, or native boats, made of wooden laths, covered by coarse canvas; and, though it looked no more than a toy from the blue distance of the mountain height, it was yet discernible to the peasant's practised eye, and might have been so to that of a stranger, for the setting sun, coming golden from the sea, cast its faintest edge of glory on the girl's blue petticoat and scarlet cloak, as she waited in the corvagh, and showed them in broad relief against the pale green of the still waters. Joyce gave a shout, which echoed far and wide from hill to hill, and was answered by the girl, who, rising in the boat to wave the broad, flat oar, displayed still more the vivid scarlet of her cloak as it brightened richly in the broad gold masses of the flooding sun.

The lapse of twenty minutes brought the peasant to the picturesque shore on to which Grace now leapt and met him.

"An' sure thin it's a blissid journey that I've took me darlint," he said, in answer to Grace's questions, as she stood for the instant in the shelter of his stalwart arms; "for I've not only heard intirely wonderful things, but the jintleman's writ to his reverence, an' be coming himself to talk wid the people. So of this me own journey, the Lord's goodness be in —an' now thy mother, avournech?"

The girl, as she stepped back into the corvagh, with a grace peculiar to the peasant women of Galway, who inherit, it is said, Spanish blood, answered all was well; and that the cottier people were coming far and wide that night to hear of the "grate walk," though their hearts were sore down "wid the famine."

"The times be near, though, I think, a' coushla," said Joyce, as, taking the oars from the girl, he sculled out into the middle of the placid bay, "whin ould Ireland 'll know no more of the famine than she does o' the serpints St. Patrick thrust out.

Mr. Garven, asthe grate gintleman I've to tell of, sid so intirely. An' he sid—good be to his tinder heart—that folks wid their insides empty weren't fit to be listeners to the truth; so out of his pocket he gave me three tinpenny pieces, an' I bought some fish and meal, which, wid the praties, 'll give a plinty to 'em to-night, such as even the blissid saints-days ain't seen the long likes in Lisnomara."

As he spoke, Joyce pointed by a wave of the oar to a large bundle on the seat behind him, which the girl had not noticed in the first eagerness of her greeting, or since, though it held the meal and herrings on which the multitude were to feed that night, when gathered round the peat fire of the farmer's cabin. But the Galway peasant had a large heart and much sound common sense, and since he had so attentively listened to the agricultural instructor's address to the people, a new view of life and duty, both as respected himself and others, had cheered his spirits and brought him back, as he told his reverence in confession that week, "a better man."

The placid bay was soon crossed, and the boat run ashore on a green point of the headland; which, though a visible portion of the main land, was thus more easily reached by the boy than either by the rock-heaped shore or the path of the hills. When the corvagh had been secured beneath the shelter of a lichen-covered rock, the peasant and his daughter went rapidly on once more towards the mountains, and after a lengthened walk through their winding gorges, they emerged upon the wildest, yet loveliest valley in all green Lisnomara. It was large, and naturally fertile, cascades and rivulets flowed down the green acclivities of the mountains which hemmed it in, saving at one point towards the ocean; and the arbutus tree flourished so luxuriantly as to fringe the lucent lake, into which these streamlets fell, with the richest foliage. A more lovely valley cannot be conceived, or one more available for agricultural purposes, as, besides its own deep loamy soil, the headland shore and its fertilising treasures of sea-weed and coral lime-rock were accessible, yet absenteeism, rack-rents, conacre poverty, and, more than all, inconceivable apathy and ignorance, had cursed the land with sterility and with famine in its most awful form.

Michael Joyce was one of the class of small tenant-farmers scattered up and down Lisnomara and the adjoining islets. He had a sort of tenant-right in his holding, for those of his name had held the land for a long term, but subletting to infinite Joyces through all that time, and the allowance of conacre (that is letting out minute fractions for the tenant to crop and use the produce) to the most abject class of the peasantry, had, at last, starved the land into growing little else than weeds. The landlord had been never seen, or was ever heard of; and it might have been fancied that this destitute population of tenants and cottiers were as free in their holdings as the North American Indian in his wigwam, but for the half-yearly visit of the agent or his driver. These visits always brought woe to Lisnomara, for the deeper poverty fell on the stricken people, the more urgent and exacting became the agent's claims.

Still, up to the period of the great famine in 1846-7, Michael Joyce had contrived to meet the rent of his holding, to reap his field of wheat and keep the produce, and to kill a pig and hang it up for bacon in the smoke of his cabin; but two years' potato-crops were lost, and his fortunes, such as they were, fell with those of his neighbours. Without produce, they could not, of course, pay rent for their conacre holdings; and thus, when these dues to himself had to be made good to the agent, the farming stock, such as it was, had to go, together with such wretched implements of husbandry as he possessed. Neither plough nor spade was spared; and the agent's driver would have carted off the reeking dunghill from the door, had it been worth carriage over the desolate paths of the country. Yet, unlike the ordinary Irish peasant, Joyce had not sat down in listless despair beside his cabin fire, or howled for relief at the door of the nearest Union-house, but burnt kelp and dug turf, and carried the produce in any direction and to any distance, where there was a chance of a customer, amongst farmers not yet beggared, or to the houses of such gentry as had common sense enough to prefer one who would work to one that would whine "Give." It was these characteristics in Joyce, despite the hereditary indolence of Irish breeding, and his ignorance of anything which could be called farming, which had struck Mr. O'Sullivan on several occasions of his visit to the valley; and therefore, upon incidentally hearing that the Agricultural Improvement Society of Ireland were sending out public instructors into the most wretched districts of the country, he had made him the bearer of a letter to Mr. Garven.

It was dark by the time Grace and her father reached the valley; but the brightness of the large peat fire, as it gleamed through the cabin-door, and flickered upon the greenness of the distant hills, brought them rightly over the boggy path and skirting rivulets till they were welcomed by a flock of half-naked children and the good mistress, who led the way within. Like her husband, Mrs. Joyce was yet comely, and not far past middle life; and the comparative tidiness of the large cabin, and the brightness of the peat fire in the midst, seemed to give truth to the current saying, that "a grane vilvet gown, or its likes, wouldn't sit ill on Misthress Joyce," as well as to the tradition, that "Misthress Joyce's mother had been a mighty nate lady from county Dublin; and that might be why Grace avourneen kept her cloak, and mighty fine it was, as bright as a rose-leaf. Yes, in thruth, the Joyces were a nate people." Be this as it may, Mrs. Joyce's good-tempered, welcoming looks and kindly words were sweet things to the tired wayfarer. When Michael reached the huge turf fire, and had set down his burden of meal and herrings, he looked around the cabin, and true, as Grace had said, the neighbours were come, but certainly not those who were likely to benefit by what Joyce had to tell them, or either, in a direct sense, by the Instructor's visit. Eventually, the smallest improvements in agriculture would operate favourably in their behalf, but the class who must be gathered together for the occasion of Mr. Garven's visit were the small tenant-farmers like Joyce himself, and not those, with scarcely an exception, starved holders of fruitless conacre, or such as had been evicted from their miserable dwellings by the agent's last visit. A more motley group than that which had now assembled in the farmer's cabin cannot well be conceived, nor the look of gaunt famine pictured on the faces of all.

"Well," said Joyce, with that sympathy which the poor have for the poor, "I'm glad to see ye all, for me heart be light wid what the gintleman sid to me. Sure, he's comin' to Lisnomara, and the brightness o' the day come wid him."

The whole group, or nearly so, interpreted at once these words into the prospect of alms-giving, and therefore instantly commenced their whine of woe—the women more shrilly and clamorously than the men—"Was it male? Was it praties? Was it comin' into Galway port, or Clifden, or, by the long road, into Lisnomara?"

"No!" was Joyce's straightforward answer: "Mr. Garven tould the people mighty plain, that their like in England had helped the people in Ireland till the nest at home was gettin' bare; an' what was left they must keep for themselves. They must be taught to dig and sow their own mighty rich field; an' not to reap that of others when the harvest was ready. An' sure I think meself there was wisdom in what his honour said."

"But didn't we put in the praties?" said several of the men in a breath, "an' didn't the blight come?—the divil be wid it!"

"Yes," was the farmer's ready answer, "but it is'nt to be agin in Ireland that the people is to lean on praties like a lame man on his crutch. His Excellency in Dublin town had sid this, an' sure many a one at the ma'tin' sid he was a jewel of a man, an' worth a mighty lot more to the good of ould Ireland than Misther O'Connell, and his legacy o' repale and rint to the Irish people. This is the way, thin, Mr. Garven an' others like him be going the counthry round to tache the people the gold they hold in their fingers."

"Bad luck to him an' his likes—me wid two childer—a poor widdy too; me wid siven childer, me as haven't tasted male since ye wint on the journey, Misther Joyce;——" is a specimen of the company's muttered talk.

"It's grate an' good luck to him, says I," were Joyce's somewhat angry words; "an' he'll live to say this, ye crathurs. No! Mr. Garven, an' honour be wid him, has a grate heart; as when I wint wid his riverence's letther, an' spake wid a full heart o' the misery in Lisnomara, he sid—gintleman as he was—'I ain't rich, Michael Joyce, for the bits o' thruble which lie in the path o' the likes o' me are many, and nade a lifting—

it take these three tin-penny pieces, an' if it'll buy a male or a few that we'd hunger in Lisnemara, let it; not as a coin from me belt at all, but as a sign that a blessing'll come id me into Lisnemara. An' so ye craiturs," continued Joyce, "this is what the gentleman said! An' so the male I bought—an' the hearty old Pat O'Hara, I met this morning n the hills, as he come wid his pony an' panniers from alway Bay." Speaking thus, Joyce opened the bundle and ewed the company the bag of meal, and the herrings ppe in layers of mountain grass. The moment these were en, nothing could be more extraordinary than the change ought from the listless apathy of hunger not likely to be lieved, to the intense eagerness of hunger in the sight of the od which was to relieve it.

"Ye must be patient," he said, "it's a Christian meal, an' be eaten like one. As me misthress met me at the ouse door, I sint off Grace and me big boy Maurice to find a ale o' praties from the hiding of them. Yit, sorra be it, that tis a better than none be left, though me heart be light that morrow 's to dawn for the likes of us."

As the farmer spoke, Grace and her eldest brother came earing in between them a large willow skef, or basket, filled ith small, and not very good-looking, potatoes. These were pon consigned to two large kettles, the meal made into a sort f sturabout, and the herrings boiled and broken in pieces. When the food was thus ready, it was doled out in such platers or dishes as the cabin afforded; but whether impatiently aiting their turn, or greedily satisfying their hunger, one ommon trait was observable alike in all thus fed—the predominance of self. No generous emotions, either for neighbour, or child, or wife, or husband, seemed to touch their hearts—each one appeared dead to the better feelings of our nature, and no worse picture of suffering, apathy, and degradation, as the offspring of the misrule of ages, could well be conceived. What made it worse, too—if it be possible to darken what is dark—was, that it existed amidst that very fruitfulness of nature which blesses man. For here was a coast swarming with fish, a soil which a little labour and care could renew with fertility, and mountains containing an exhaustless supply of the finest marble in the world, yet all of these were waste and barrenness—for any purpose which could bear relation to the well-being of the wretched, degraded people

By the time, therefore, that these kindly-hearted Joyces had finished their own scanty share of the meal, scarcely more than half a dozen, or, at most, ten of those who had been sohospitably entertained, remained in the cabin, but as these were real friends, and of the better class of cotters, they were glad to draw round the fire and hear further particulars of Joyce's interview with Mr. Garven. When, as the worthy farmer talked, they understood that they could be of real service to him, in respect to summoning the tenant farmers of the more inaccessible and wild parts of Lisnamara and its surrounding islets to the meeting of the following week, when Mr. Garven would arrive, each one, man and woman, eagerly proffered ready aid, though miles of bog and mire, and channels swept by the ocean, or by mountain streams, lay between. A kindly feeling thus established between Joyce and his friends, they sat round the cabin fire and talked till far into the night.

(To be resumed in the next Number.)

VALLEY IN THE ISLAND OF HONG KONG, WITH AN AQUEDUCT IN BAMBOO.

THE CULTIVATION OF TASTE BY MECHANICS, ARTISANS, AND OTHERS.

It has now become an almost threadbare observation that the CRYSTAL PALACE and its contents form an entire new era, not only in the history of England, but of the whole world. So much having been said upon this matter, many suppose that the subject is altogether exhausted. We are not of that opinion; and we may say that we were among the first to speak of the advantages that would arise from this Great Exhibition. In several articles in THE WORKING MAN'S FRIEND we commended it to the special attention of our readers, and we are happy to see that most of the good which we then predicted has already, to a great extent, been realised. One point on which we laid much emphasis has been most satisfactorily illustrated. We have all along asserted that the operatives and labourers of our country have much more taste, and are in a higher state of moral cultivation than has hitherto been admitted by the majority of those who have talked or written about educational affairs; and on this question there can no longer be the least doubt.

Every day our newspapers have dwelt upon the good behaviour, the discrimination, and intelligent observation of the working classes; and England is thus demonstrated to be a century in advance of the state she was said to be in when 1851 commenced. Foreigners have been astounded, that John Bull, who has always been represented on the continent as a mere barbarian and clown,—a sort of boar, or bear, in a human form, should, on actual inspection, have turned out to be as substantially well behaved as any of his neighbours; and such a moral creature, that the Great Exhibition, with all its wealth, can be trusted in his hands without any fear; and that he can walk about at full liberty without the superintendence of a soldier. Had the Crystal Palace been erected in France, Prussia, Austria, or Petersburgh, it would have been deemed necessary to appoint a large body of military to protect it. But in England, no a sword has been needed, and not a depredation has been committed, beyond the pilfering of a very few trifling articles. And not merely the good behaviour and good morals of the masses, but their *taste*, also, has been called forth, and, therefore, we have now more ample material than ever for a paper on this subject.

It may be asked, "*What* is TASTE?" and we reply, that when the word is used respecting manufactures or the arts, it means, "*an intellectual discernment and relish.*" Of course, the term is borrowed from the palate, and seems to intimate that it is as instantaneous and intuitive as the sensation which we experience from the savour of food or drinks. The decision of the palate is as quick as lightning, for the things we taste are instantly approved or rejected, in proportion as they are sweet or bitter, delicious or disagreeable. To enable us to understand mental operations, the attributes of one sense are often ascribed to another, because one may be more acute than the other. There is a text in Isaiah concerning the Messiah, which says, that "He shall be of quick understanding in the fear of the Lord;" the original is, "He shall be *quick-scented* in the fear of the Lord;" and nothing could be more expressive than this language, because we all know what small particles are perceived by the nostrils, and how very delicate the olfactory nerves of some animals must be. "*A quick-scented understanding*," therefore, gives us an idea of sensitive acuteness which no phraseology can surpass. And the same may be said of the tongue; its judgment is quicker than the twinkling of an eye, and, when in a healthy state, it never makes a mistake, or calls bitter sweet, and sweet bitter. Now, this sense, for the convenience of speech, is attributed to the decisions of the mind respecting what is finished and beautiful, or unpleasant and disagreeable in appearance, in sound, or in style. Hence, we speak of taste in painting, architecture, dress, furniture, gardening, writing, oratory, singing, and music. Thus, we give to the eye, the ear, the hand, and the mind, a quality, which, properly speaking, belongs only to the palate. And this optical, auricular, or intellectual taste, like that of the palate, is *immediate*. No sooner is the note sounded than it charms or tortures the ear of a person who has a delicate judgment in music. And the eye of the skilful painter or architect, is equally quick in its discernment. A man or woman, who has a good taste in dress, never takes any time in deliberating respecting the apparel of either of the sexes; and the same may be said of this faculty generally.

But taste is not merely discernment, it is also a *relish*. The mind is as much gratified with what is exquisitely finished and complete as the tongue is with the most savoury and delicious viands. This mental quality or power, whether it looks out through the eye or listens through the ear, is a source of ineffable enjoyment, and, therefore, to cultivate and cherish the taste of the world would be to add infinitely to its comfort and pleasure. Who has not observed that the same object which has hardly awakened an emotion in one breast, has filled another with transport? And this is often the case respecting music, painting, sculpture, and other works of art generally; so that the cultivation of taste is a most important exercise towards the realisation of the happiness which is to be universally enjoyed in "the good time coming."

We have often heard it inquired, whether there is any "*standard* of taste?" and to this question the only reply is, "*that* NATURE *is the true standard of taste.*" Everything in creation is tastefully finished, and is thus demonstrated to be the work of a mind of infinite accomplishments. Our word "*perfect*," means, "completely wrought," or, "done with exactness throughout;" and our term "*finished*," comes from "*finis*," an end, and intimates that the object or subject to which it is applied, has received its last stroke, so that you can make no addition to it for the better, nor any alteration which would improve its appearance. And this is especially the case with all the productions of Almighty skill. Every tree, shrub, and flower, is a model of exquisite art. And the same may be said of animals, whether we regard their form, their colour, their plumage, or their movements. The worm, the snake, and boa constrictor crawl gracefully; the dog, the horse, the stag, leopard, and the fish of every species, have a gait of their own, which pleases us the moment we look at it; and the flight of the lark, the swallow, or the eagle, are charming specimens of beauty or majesty. All the variety of clouds spread over the heavens, remind us of fields of ether, mountains of vapour of every shade, or drapery of every hue, thrown over the firmament with that artless art, that useless order and exactness, which none but an Infinite mind could accomplish. Our valleys, our hills, our mountains, our meadows, our prairies, our brooks, our rivers, and, beyond all, our seas and our oceans, are all, to say the least that can be said of them, models of taste. Who, that has had the opportunity, has not lingered by the hour to watch and wonder at the grace and sublimity of the foaming billow? And then the rugged, rough, lofty, overhanging, towering rock, grey with age, here and there decorated with the moss, the ivy, or the wild flower, fills us with emotions which must be felt to be fully understood. But on these topics we might fill volumes, and, therefore, shall not enlarge; and we only glance at them here to show that all nature is one grand school of design, from the hand of GOD himself, to call forth and cultivate the taste of all his rational and intelligent creatures.

Everything, then, that is required for the cultivation of

taste is, a due observation of the works of creation. Here we have the Almighty for our teacher, and the most lovely, beautiful, and sublime models for our imitation; and, further, this school is open for all. The savage, the barbarian, the wild children of the glen, the moor, and the forest; the poor rustic cottager's wife, the toiling peasant, and the weather-beaten fisherman, or sailor, are alike admitted to this Divine academy. No douceur to the porter, no letter of admission from the 'squire or marquis, no annual subscription is needed. Open your eyes; look around; look upward and downward; mark what God has done "in the heavens above, the earth beneath, and the waters under the earth;" follow your FATHER, as dear children, by imitating His works, and you cannot help approaching to perfection in taste.

We hear much of the old masters, and we must allow that their painting and sculpture have never been surpassed. It has often been said that the one idea of the ancient Greeks was *Beauty*, and their language, then eloquence, their poetry, their architecture, their sculpture, in fact, every monument and relic they have left behind, confirm this general opinion The *Beautiful* was their idol in all things, and influenced them in their walk, their dress, their speech, their games, and amusements; and if we inquire how it was that they or the Italian artists arrived at such perfection, our only answer is, that *they were the close and constant students of Nature.* What is it that makes us admire a painting, or a piece of statuary, but its close approximation to the reality which it represents? "Is not that natural?" "Is not that beautiful?" are questions which follow in rapid succession; intimating that the *natural* and the *beautiful* are synonymous terms For, although the object represented may not be in itself the loveliest to look upon, yet if it is truly portrayed, or carved, we say it is beautiful If we wanted a gallery of art approaching as near as possible to perfection, all we should ask would be that the objects be natural. "The Descent from the Cross," of Rubens, is a painful subject. The mangled body of the Redeemer; the scars from the thorns, the nails, and the spear; the anguish of his mother, and the women who wept with her, awaken in us the deepest emotions; and yet we say, "It is beautiful" Strange, to talk of the beauties of sorrow, agony, and cruelty! And yet we do use such terms, because every feature and form are *natural*, and the taste of the artist was perfected by this one simple idea,—that he followed *Nature.*

The Crystal Palace is an object of wonder, because of the *taste* displayed in its erection; and in the various works of art with which it is stored. You are there in such a world of beauty as has never before been collected from the works of man; and as you pass through it you find that each object approaches perfection just as it is natural, or is an imitation of nature. Boundless as may be the freaks of the designer, the carver, the artist, or the poet, yet he is not generally approved unless he keeps as close as possible to nature. We give him unbounded license to roam through the universe, he may borrow from everything, and the greater his plagiarism, the more we will praise him; but he must take care that he does not go beyond his *parole*, for should he do so his character is gone, and we shall never trust him again

As to *the taste of the working classes*, we need only say, "Go to the Crystal Palace, and there you may learn that nature has charms for all her sons and daughters. "The Unhappy Child," "The Slaying of the Innocents," "The Mourners," "The Greek Slave," "The Lion in Love," &c. &c., are admired by everyone, and by none more than by operatives and peasants. Every boy who has played with a good-natured dog, and pinched his claw, knows that the artist is correct; and every one who has seen a youngster in trouble for a broken toy, awards to the sculptor his just meed of praise. All children have taste. Who ever saw an infant that was not pleased with a lawn, with a branch of laur[illegible]

[illegible] cultivated or perverted to almost any extent. We wish the working classes, and we wish all other ranks to know, that vitiated taste is unnatural, and arises from the neglect or the misdirection of our education. The clown is as capable of much refinement as the prince. Some of the finest specimens of art and taste in the Crystal Palace were produced by men who belong to the masses. There was a time when Mr. Paxton would have been reckoned by some as a working man. As it is said in the Catalogue of the Great Exhibition,—"*The germs of all the arts are within us;*" and our Creator, in this particular, has not been more bountiful to the rich than to the poor. Let our working friends remember this truth, and resolve to cultivate their taste, as the means of improving their various occupations, of elevating themselves to their proper level, of increasing their wages, of adding vastly to their own happiness, and of ministering to the wants, to the pleasures, and the progress of society; and let the rich also acknowledge this equality of soul, and use their immense influence in raising their poorer brethren and sisters to their proper intellectual and moral standing and usefulness in the world.

ALLAN RAMSAY.

By Parson Frank.

In the author of "The Gentle Shepherd" revived the long-dormant energy of Scottish minstrelsy. The literature of his native land had declined significantly from those days when it numbered among its stars William Dunbar (the versatile author of "The Merle and Nightingale," "The Dance of the Seven Deadly Sins," &c.) and Sir David Lyndsay, "Lord Lyon King-at-Arms," whose satires on the unreformed clergy had pungency enough and to spare, and some worthy successors like Drummond of Hawthornden. During the epoch of the Commonwealth and the reigns of the last two Stuarts, the oracles of Caledonia were dumb, indeed England could then boast of its Waller and Cowley, its Milton and Dryden, its Butler and Marvell; and, in prose, of its Locke and Fuller, Barrow and Walton, Clarendon and Temple, Burnet and Bunyan, Boyle and Evelyn. But Scotland shows, perhaps, only a single name of anything like eminence—Sir George Mackenzie, historian and essayist, who founded the valuable library of the Edinburgh Faculty of Advocates. Allan Ramsay is one of the first and best of the palingenesia or new *régime*. Mr. Lockhart remarks that no man can point out any Scottish author of the first rank in all the long period which intervened between Buchanan and Hume. "Time, however, passed on, and Scotland, recovering at last from the blow which had stunned her energies,* began to vindicate her pretensions with a zeal and a success which will ever distinguish one of the brightest pages of her history."† The dynasty of the lean kine was not to be for ever; the fat kine arose, and fed in large pastures, and grew and multiplied till they became as the cattle on a thousand hills, and testified to the prosperity of the land. When Ramsay appeared, the long drought was near its close. A cloud sailed across the sky, no bigger at first than a man's hand; a breeze uttered its voice, burdened with the sound of abundance of rain, and swelling in depth and grandeur and volume as it rolled on its way, and swept the length and breadth of that hill-country until it became in very truth a rushing mighty wind, whose sound is gone out into all lands,

* This blow, according to Mr Lockhart, was the Legislative Union, and its immediate consequences to Scotland, which, by the removal of its leading men to England, ceased for a time to have a separate literature of its own.

† Life of Burns.

and its music to the ends of the world. The last century of Scottish literature comprises a host of distinguished names—Thomson, of the "Seasons;" Blair, the elegant author of "The Grave," Smollett, the rival of Richardson and Fielding; Hume, the acute metaphysician and popular historian; Beattie, of the "Minstrel;" M'Pherson, of Ossianic renown; Falconer, of "Shipwreck" fame and fate; Bruce and Logan, Hamilton and Mallet, all skilled in the accomplishment of Scottish verse; Fergusson, the so-called laureat of Edinburgh, whose descriptions of the men and manners of his own romantic town are so highly entertaining; Home, the author of "Douglas;" Henry Mackenzie, widely and deservedly admired for his "Man of the World" and "Man of Feeling;" Robertson, of standard repute in the dignified paths of history; Reid and Brown, Dugald Stewart and Sir William Hamilton, known wherever ontology is known, and elsewhere too; Blair and Campbell, familiar names in ethics and rhetoric; Adam Smith, the patriarch of political economy; Robert Burns, the chief singer of his "Israel;" Thomas Campbell, who sang of hope so sweetly, of household love so tenderly, of patriotism with such inspiriting and contagious power; Sir Walter Scott, true Wizard of the North, whose spells and enchantments retain their virtue to this hour, James Grahame, the burden of whose strains was—

"Hail! Sabbath, thee I hail, the poor man's day,"

Robert Tannahill, ill-fated songster of many a beautiful lyric, especially "Gloomy Winter's now awa'," and "Jessie the Flower o' Dumblane," Sir Alexander Boswell, also a fine minstrel and an ill-fated man; Joanna Baillie, second to none in the modern drama, Sir James Mackintosh, an able historian and moral philosopher; Lockhart, the classical author of "Valerius," and editor of the "Quarterly Review," John Wilson, whose brilliant genius has immortalised the imaginary "Nights" at Ambrose's, to say nothing of his graceful poetry, his refined fictions, and delightful criticism manner, like Thomas Carlyle, that quaintest, queerest, most earnest of Hero-worshippers, that shrewd but one-idea'd investigator of Past and Present, that unscrupulous expositor of Clothes'-Philosophy; Francis Jeffry, presiding genius of the "Edinburgh Review," Thomas Chalmers, as great a philanthropist in the streets as he was an orator in the pulpit; together with no lack of such poets as Pollok, the Ettrick Shepherd, Allan Cunningham, Richard Gall, Hector M'Neill, Tennant, of "Anster Fair," William Motherwell, Robert Gilfillan, Willie Laidlaw, Robert Nicoll, David M'Mon, Thomas Pringle, and Thomas And (whom we have "mangle-mangled" together as indiscriminately, we fear, as did the weird sisters the ingredients of their cauldron); and such novelists as Mrs. Hamilton (that intelligent sanitary commissioner of the Cottagers of Glenburnie), Jane and Anna Maria Porter, Miss Ferrier and Mrs. Brunton, Mrs. Johnstone and Mrs. Crowe, John Galt the "Parish Annalist," and Andrew Picken the "Dominie," Michael Scott and Captain Hamilton; and such "miscellaneous" talent as confessedly pertains to the names of James Boswell, Sir David Brewster, Professor Nichol P. F. Tytler, Alison, William Mure, George Combe, W. E. Aytoun (the editor of "Blackwood"), M'Crie, George Moir, Chambers, Loudon, &c. With such a goodly company, the Land o' Cakes can afford to defy depreciators of her authorship; and in literature, as well as politics, may take *Nemo me impunè lacessit* for her motto.

The names thus congregated in honourable alliance are those of writers who, though of Scottish birth, have not in many instances identified themselves with the characteristics of their fatherland; but Allan Ramsay is emphatically a Scottish author, as illustrating native manners and adopting his native dialect, in those works whereon reposes his well-earned fame. The last fourteen years of the seventeenth century, and the first of his life, were spent by him in the neighbourhood of Crauford-muir, where his father superintended Lord Hopetoun's mines—as he tells us, he was

"Of Crawford-muir, born in Lead-hill,
Whose mineral springs Glengoner fill,
Which joins sweet-flowing Clyde."

Born poet as he was, he does not seem to have taken to the gentle craft until five-and-twenty summers were come and gone. But he was no unobservant denizen of wild secluded scenes, and was at liberty, like Wordsworth, in his boyish days, to bound like a roe o'er the mountains, by the side of deep rivers and lonely streams, and wherever nature led—haunting day by day the fresh rural spots, from familiarity with which he was educated for his mission as a pastoral poet. The light-hearted Lanarkshire boy knew well what it was

"To wade through glens wi' chorking feet,
When neither plaid nor kilt could 'fend the weet;
And blythely wad he bang out o'er the brae,
And stend o'er burns as light as ony rae"

What a change for him when, at fifteen, he was transferred from this village independence to the shop of an Edinburgh hair-dresser!—what a translation from poetry into prose!—what a vicissitude from nature to one of the least imposing provinces of art! Allan was of small make and vivacious demeanour—personal qualifications perhaps for the wig-maker's apprentice; but with his growing *penchant* for the *belles lettres*, he could not take kindly to the profession, nor properly mind his P's and Q's—if that phrase, as a writer in "Notes and Queries" contends, really stands for *toupées* and *queues*. As to his personal appearance—at a later date indeed—he describes himself after this fashion:—

"Imprimis, then, for tallness, I
Am five foot and four inches high;
A black-a-vied snod dapper fellow,
Nor lean, nor overlaid with tallow,
With phiz of a Morocco cut . .
Then for the fabric of my mind,
'Tis mair to mirth than grief inclin'd
. .
I hate a drunkard or a glutton,
Yet I'm nae fae to wine and mutton.
. . . .
Proud to be thought a comic poet,
And let a judge of numbers know it,
I count occasion thus to show it"—

the "occasion" being an epistle to his friend Arbuckle. From twenty-five to forty-five he cultivated the Muses with enthusiasm, his "Pegasus wad break his tether e'en at the shagging of a feather." He wrote addresses for his Jacobite comrades of the "Easy Club," and penny sheets of verses on local topics, the fun of which seems to have been recognised by an extensive sale and increasing demand—the last circumstance a weighty one in the judgment of Allan, who had a very steady eye for the main chance, and was quite intent on securing pudding as well as praise. His Jacobite predilections enhanced his favour with Pope, Gray, and other tory magnates in England, but he took care not to let them mar his hopes of patronage from those who had a long purse, and were willing to fee a literary client. Great was the applause which greeted his continuation to "Christ's Kirk on the Green," the celebrated poem ascribed to James the First of Scotland, and to which Ramsay added two cantos abounding in natural comedy, illustrative details, and richness of Doric idiom. Scotland gave promise of renewing her forgotten lease of glory; here she was, arising like a giant refreshed with wine, about to be herself again, and to prove that she was the mother (barren though she had been for long years past) who had nourished and brought up children like Barbour and Blind Harry, Dunbar and Wyntoun, Lyndsay and King Jamie, in the old, old times, Allan, her youngest-born, elated with the compliments of his countrymen, and the prospects of fresh triumph in his divine art, thought it time to forswear the wig-maker's shop. It shop he *must* keep, of some kind or other, let it be the one of closest affinity to literature—the one with most scope for refinement, the one which Apollo (were he upon earth, and distressed for a livelihood) or any other Olympic gentleman in difficulties would choose to keep. let it be a bookseller's shop. So Allan turned bookseller, and set up the sign of the Mercury's head; and here used to come and lounge the literati of the day—(as a latter generation of them used to do in John Murray's back-shop, to hear and laugh over Lord Byron's last)—and here Gay, while in Edinburgh, would sit and chat about the "Gentle Shepherd," and tell Ramsay how much Pope admired it, and ask him the meaning of some of the "cottieisms, that he might tell Pope when he got home again.

Meanwhile, Ramsay came out as an editor, in which capacity he published a collection of songs, partly original called

"The Tea-table Miscellany;" and another called "The Evergreen," professedly consisting of ancient Scottish songs—some of which, however, were as nearly related to himself as were the "Rowley MSS." to Chatterton, and the "Ossianic Fragments" to Macpherson. Ramsay's taste and judgment as an editor did not rank very high; but in his own land both these publications had a run, and were specially dear to studious childhood and romantic youth. Sir Walter Scott mentions in his autobiography, that "The Evergreen" was the first book of poetry he ever read; and during the time he spent at Sandy-Knowe, a helpless little invalid, out of the two or three books which lay on the window-seat of the farm-house parlour, the lame boy's partiality was divided between an odd volume of Josephus's "Wars of the Jews," and Allan Ramsay's "Tea-table Miscellany." Besides this labour of compilation, Ramsay composed several detatched pieces of various merit, a series of poetical epistles to his friends, and the germ of the "Gentle Shepherd" (under the title of "Patie and Roger"), all of which he printed in one volume and presented to an eager public in 1721. Four years afterwards appeared the "Gentle Shepherd" in its entirety—and both poet and public were delighted. After this we find him moving to a better shop, and changing the sign of the thievish god for one emblazoned with the heads of Ben Jonson and Drummond of Hawthornden—a sort of paraphrase of the sign of English Rose and Scottish Thistle (though apter emblems of the poets respectively might be named);—then increasing the debt his country owes him by founding a circulating library, the first established north of the Tweed, then undertaking to build a theatre in Carubber's-close (another novelty for Scotland), where the legitimate drama was to be acted, and the performers to be kept together by what he calls the "pith of reason;" but, as Mr. Chambers remarks, Allan did not calculate on the pith of an Act of Parliament in the hands of a hostile magistrate; the statute for licensing theatres prohibited all dramatic exhibitions without special licence and the royal letters-patent; and on the strength of this enactment, the magistrates of Edinburgh shut up Allan's theatre, leaving him without redress. Several years after this mishap, the anti-theatrical spirit of Scotland was illustrated in a yet more decided manner by its treatment

so determined was the hostility he excited, by the fact of his writing a play, that he was compelled to give up his living—an object of almost execration and of absolute excommunication in the eyes of the potent, grave, and reverend presbytery. Ramsay's mortification in this dramatic enterprise was not of pecuniary kind only. Contemporary authors and authorlings who envied his fame, and severe precisians who were shocked at his innovating audacity, combined to read him a merciless lecture, one sect on the folly, the other on the criminality of his ways. Ten years afterwards, he had the consolation of witnessing performances in a new theatre in the Canongate; but in the interval he had not only to suffer in purse, from the ruined playhouse, "which laide," he complains (in the "Gentleman's Magazine")

> ——"Lies on my single back,
> And I maun pay it ilka plack,"

but in pride and feeling also, assailed as he was by *jeux d'esprit*, lampoons, and indignant denunciations.* He tried to coax

* The title of one of these tracts for the times was, "The Flight of Religious Piety from Scotland, upon the account of Ramsay's lewd books, and the hell-bred playhouse comedians," &c. Allan, himself, alludes in the following terms to some of the lampoons —"It is not to be doubted that I have enemies; yes, I have been honoured with three or four satires; but such wretched stuff, that some of my friends would allege upon me that I had wrote and [illegible] myself (none of the worst politics, I own) to make the world believe I had no enemies but fools." And, again, after a few lines to his sympathisers, he writes —"

> "These to my blythe, indulgent friends,
> Dull faes nought at my hands deserve;
> To pump an answer's a' their end,
> But not a line if they should starve."
> *Reasons for not answering hackney Scribblers.*

president Duncan Forbes and his judicial brethren into compliance with his appeals for compensation, but apparently without success. The shop repaid his diligence better. He prospered sufficiently to build himself the celebrated "Goose-pie" house near the Mound, in which he spent the last dozen years of his life,—looked up to in Scotland just as Addison or Pope was among the Southrons, and dying full of years and honours in 1758.

His poetical reputation centres, of course, in the "Gentle Shepherd." By this admirable work he is entitled to rank with the very best of the world's pastoral poets,—with those "bucolics," ancient and modern, upon which Mr. Leigh Hunt comments so charmingly in his "Jar of Honey from Mount Hybla," a book which better appreciates Allan Ramsay than do many of his fellow-countrymen. The "Gentle Shepherd" is free from that affectation and false glare and French polish which are sadly apt to signalise modern pastorals, those of Shenstone not excepted. The trees are not transplanted from the Champs Elysées. The pastures are not of pasteboard. The streams are not worked by machinery, nor supplied from the fountains at Versailles. The sheep are not impossible creatures with curled wool of perplexing whiteness, and with sky-blue ribbons round their necks. The shepherds are not stylish Damons and lisping Corydons, nor the shepherdesses insipid beauties who sit languidly in the shade, holding an elegant crook, and mincing sentimental small-talk. The poem, or pastoral comedy, or whatever may be its most appropriate name, starts at once in the artless, free, natural spirit which belongs to it as a whole—introducing us to two youthful shepherds, Patie and Roger, lying on the gowans,

> "Tenting their flocks ae bonny morn of May"—

such a sunny morn as cheers the blood, and makes nature herself jovial, while the plants seem to grow as you gaze, and the birds are carolling on every tree, and the gay shepherd breaks out with the fine old air of "The Wawking of the Faulds," to which his words are,

> "My Peggy is a young thing,
> Just entered in her teens"—

and in sooth Patie has "sae saft a voice, an' slid a tongue, that he's the darling o' baith auld an' young." Poor Roger is a love-sick swain, who is consumed, even in the tranquil braes of Habbie's Howe, with a green and yellow melancholy—who wears his blue bonnet with a pensive air, and dresses with the scrupulous solicitude, though not the eccentric taste, of Malvolio, but who, according to the daft lassie he loves, is a sheepish herd, who can neither sing nor say,

> "Except, 'How d'ye?'—or, 'there's a bonny day.'"

"He glow'rs an' sighs," quoth Jenny,

> "——an I can guess the cause;
> But wha's obliged to spell his hums and haws?"

The individuality of the characters is well defined and cleverly sustained; Patie, light-hearted and strong-minded, ever leal to his plighted troth; Roger, sighing like a furnace, whose frighted heart begins to fail whenever he would whisper its secrets in Jenny's ear; old Sir William, who comes in masquerade to observe his unconscious son, to try him, and to make him and all Habbie's Howe gladsome of heart; Symon and Glaud, the knight's honest old tenants, whose neighbourly "cracks" are some of the best things in the poem; Bauldy, the hynd, whose thwacking from the stalwart hand of Madge constitutes the main comic business of the piece; kindly auld Maggie, "a wife wi' wrinkled front," sitting in her green kail-yard, where water poplin springs, who, puir body, has to bewail her

> "Hard luck, alake! that poverty and eild,
> Weeds out o' fashion, an' a lanely beild,
> Wi' a sma' cast o' wiles, should, in a twitch,
> Gie her the hatefu' name, *A wrinkled witch.*"

Peggy and Jenny, too, are finely-discriminated characters: the one, retiring, gentle of speech and manners, and artlessly confiding; the other, coquettish, witty, self-willed, and *piquante*, but warm and affectionate for all that. It is a beautiful scene where the two lassies are first discovered, bleaching linen on a flowery holm between two green braes, by the side of

" A trotting burnie wimpling through the ground,
Its channel pebbles shining, smooth, and round."

One of Ramsay's most intelligent critics objects, that, pleasing as his rustics are, he appears rather to have observed the surface of rural manners, in casual excursions to Penycuik and the Hunter's Tryste, than to have expressed the results of intimate knowledge and sympathy; and that his dialect was a somewhat incongruous mixture of the upper ward of Lanark and the Luckenbooths. Our Middlesex ears and experience are not competent to determine the value of these objections. We can only say that a visit to the Pentland hills, and the vicinity of Habbie's Howe (near which Lord Cockburn rusticates in so charming a retreat), only served to enhance a thousand times our enjoyment of Ramsay's pictures of scenery and manners; so that we now read with infinitely greater zest, not only the "clavers" of his *dramatis personæ*, but his descriptions of local objects—such as Glaud's snug thack house, with the green before the door, and barn and byre on either side, and peat-stack adjoining, not forgetting the society of hens on the midding,* and ducks in dubs,†—or Symon's cozy homestead, clean and unpretending, where a clear peat-ingle glances amidst the floor, and we see arranged on shelfs a goodly array of greenhorn spoons and beech luggies, and we hear the hospitable master invite an auld crony to share in the "bow o' maut" he brewed yestreen, and the "twa wethers, prime an' fat" he slew at the same time, and the "furlet ‡ o' guid cakes" his Elspa has just baked; and the "meikle pat" put on

" A mutton bouk to boil; and ane he'll roast,
And on the haggies Elspa spares nae cost,
Sma' are they shorn, an' she can mix fu' nice
The gusty ingans wi' a curn o' spice "

The lyrics interspersed throughout the "The Gentle Shepherd" are less to our mind, and have been properly called an ill-judged imitation of Gay, in his "Beggar's Opera," which had enjoyed such unprecedented popularity in the metropolis and provinces of England. We prefer Ramsay's songs to those of Fergusson, who, as Mr. Lockhart says, was entirely townbred, and smells more of the Cowgate than of the country; but they are greatly inferior in taste, feeling, rationality, and melody to the exquisite lyrics of Burns. Dr. Geddes remarks that Ramsay, like his contemporaries and immediate followers, has not duly discriminated the genuine idiom from its vulgarisms. However this may be, in regard to dialect, it is certain that Ramsay indulges in vulgarisms of thought and expression from which Burns, in his best mood, is honourably free. Yet there are one or two of Allan's songs, both in "The Gentle Shepherd" and among his miscellaneous pieces, of a graceful and simple beauty; for instance—

" When first my dear laddie gaed to the green hill,"

(to the tune of the Yellow-haired Laddie), and

" My Peggy is a young thing,"

and the well-known strains of "Lochaber no more." Allan's place among the poets is secure to him for many generations to come; and a high one it is, in its kind—that of pastoral verse; not quite so high, perhaps, as the worthy bibliopole thought his due—for he sang with Ovid,

" If 'tis allowed to poets to divine,
One half of round Eternity is mine,"

not merely expecting (as he tells Lady Eglintoun) to be classed with Tasso and Guarini, but entitling himself the vicetoy of Phœbus Apollo, and the equal of Homer.

* *Anglice*, dunghill. † Small puddles of water

‡ Four pecks.

MEWS—WHY STABLES SO CALLED.—*Mue* (from the French *muer*, to change), a kind of cage, where hawks are wintered, or kept when they mue or change their feathers; whence those great stables belonging to Whitehall took denomination, that place having been anciently full of mues, where the king's hawks were kept.—*Blount's Dictionary*, 1691.

GLORY.

THE crumbling tombstone and the gorgeous mausoleum, the sculptured marble, and the venerable cathedral, all bear witness to the instinctive desire within us to be remembered by coming generations. But how short-lived is the immortality which the works of our hands can confer! The noblest monuments of art that the world has ever seen are covered with the soil of twenty centuries. The works of the age of Pericles lie at the foot of the Acropolis in indiscriminate ruin. The ploughshare turns up the marble which the hand of Phidias had chiselled into beauty, and the Mussulman has folded his flock beneath the falling columns of the temple of Minerva. But even the works of our hands too frequently survive the memory of those who have created them. And were it otherwise, could we thus carry down to distant ages the recollection of our existence, it were surely childish to waste the energies of an immortal spirit in the effort to make it known to other times, that a being whose name was written with certain letters of the alphabet, once lived, and flourished, and died. Neither sculptured marble nor stately column can reveal to other ages the lineaments of the spirit; and these alone can embalm our memory in the hearts of a grateful posterity. As the stranger stands beneath the dome of St. Paul's, or treads, with religious awe, the silent aisles of Westminster Abbey, the sentiment which is breathed from every object around him is, the utter emptiness of sublunary glory. The fine arts, obedient to private affection or public gratitude, have here embodied, in every form, the finest conceptions of which their age was capable. Each one of these monuments has been watered by the tears of the widow, the orphan, or the patriot. But generations have passed away, and mourners and mourned have sunk together into forgetfulness. The aged crone, or the smooth-tongued beadle, as now he hurries you through aisles and chapel, utters with measured cadence, and unmeaning tone, for the thousandth time, the name and lineage of the once honoured dead; and then gladly dismisses you, to repeat again his well-conned lesson to another group of idle passers by. Such, in its most august form, is all the immortality that matter can confer. It is by what we ourselves have done, and not by what others have done for us, that we shall be remembered by after ages. It is by thought that has aroused my intellect from its slumbers, which has "given lustre to virtue, and dignity to truth," or by those examples which have inflamed my soul with the love of goodness, and not by means of sculptured marble, that I hold communion with Shakspere and Milton, with Johnson and Burke, with Howard and Wilberforce. —*Francis Wayland.*

PERSEVERANCE.

Take the spade of Perseverance,
Dig the field of Progress wide;
Every rotten root of faction,
Hurry out, and cast aside,
Every stubborn weed of Error,
Every seed that hurts the soil.
Tares, whose very growth is terror—
Dig them out, whate'er the toil.

Give the stream of Education
Broader channel, bolder force,
Hurl the stones of persecution
Out, where'er they block its course
Seek for strength in self-exertion,
Work, and still have faith to wait;
Close the crooked gate to fortune,
Make the road to honour *straight.*

Men are agents for the future;
As they work so ages win
Either harvest of advancement,
Or the product of their sin.
Follow out true cultivation;
Widen Education's plain;
From the Majesty of Nature
Teach the Majesty of Man!

Take the spade of Perseverance;
Dig the field of Progress wide,
Every bar to true instruction
Carry out and cast aside;
Feed the plant whose fruit is wisdom,
Cleanse it from the common sod;
So that from the throne of Heaven
It may bear the glance of God.

GENERAL LOPEZ.

*He extraordinary man, whose connexion with the recent piratical invasion of Cuba, untimely and ignominious death a weeks ago, have given to his name so nviable a notoriety, was the son of a ithy landed proprietor in Venezuela of the South American states. He born in 1799, and had the advantage his childhood of the care and instruc- n of his mother, a woman of great ength of mind and moral dignity degree with the manlike virtues of woman's character, her influence upon ier son tended rather to fit him for a life of stormy adventure than an humbler though more useful career of self-denying energy and perseverance in the pursuits of peace. Like all South Americans, he was placed on horseback as soon as he was able to sit upright, and soon became a bold and daring rider, as much at his ease when astride of a wild horse of the *pampas* as when smoking pigtail under a palm tree The revolutionary troubles deprived his father of nearly the whole of his property whilst Narciso Lopez was yet a boy, and his maiden effort in arms was made when he was only sixteen, in defence of his native city, which had taken the side of the revolutionary leader, Bolivar, against the forces of the home government. After the surrender of the place, Lopez was separated from his father, being turned off as a child, while his father was herded with the men supposed, in spite of the capitulation, to be reserved for massacre that night. The boy himself, indeed, escaped that very narrowly With some other companions, he had joined a couple of negroes, slaves of his family, among a great number more who had huddled together in one spot for safety, that class not being usually included in the massacres of such occasions, but, during the night, fortunately issued forth with his two servants, in the hope of being able to do something for his father, or to hear something of him.*

In this hope, indeed, he was mistaken though his father, as he afterwards learned, did succeed in effecting his own escape); but the next morning, on returning to the place which they had left for that purpose, they found the ghastly spectacle of eighty-seven bodies with their throats cut like sheep After hiding about for some time, feeling himself constantly liable to the same fate, and reduced to a condition of entire desperation, he determined to seek safety in the only situation in which it was to be found, by enlistment as a soldier in the army, and selected an opportunity of offering himself to a sergeant of more encouraging - mance than the others, by whom, not without some entreaty, he was accepted as recruit—the sergeant little suspecting hat the boy of fifteen, and small in stature t that, whom he at first told to be off and lay, was hereafter to become one of the ost distinguished officers in the service. The former did not indeed live to see it, r this good-natured sergeant fell shortly fterwards, it having been Lopez's lot to onvey to him, amongst others, the order r the service which was his last. This as on the occasion of the first battle of aturin, when the Spanish General orales, who was defeated, made good his treat only by sacrificing a column which a ordered to defend a certain position— ervice which was certain death in a war which prisoners expected no quarter and were not disappointed. Exactly three months afterwards, a second battle was fought near the same spot, in which Morales was victorious, and they found bodies of the column in question—that is to say, their bleached skeletons—to the number of six hundred, laid out on the ground in regular array by the patriots, in rank and file, as though by a mockery of discipline in death

Throughout the whole course of the v he distinguished himself by his undaunted courage, forethought, and presence of mind, in every emergency At twenty-three he found himself a colonel. The circumstance which led to the first step in his promotion occurred shortly after his enlistment The loyal army was engaged in an attack upon a place defended by field-works, there being two bastions connected together by a curtain of about fifty yards in length. The Spanish force being divided into two portions, engaged in attacking the two bastions, the ammunition of the one portion gave out, and signal being made to the other to that effect, the com... alled for volunteers to lead three ...les, loaded with ammunition, from one end to the other, a service requiring a passage along the line of the ..y, stationed behind the curtain between the two. Lopez was the only one who volunteered, and he set out with the three mules in a string, according to the ...tion of the country, the head of each fastened by a cord to the tail of the one before it At about half the distance across, one of the mules fell dead. The mule killed being unluckily the middle one, it was necessary to untie the cord, and re fasten the first and third together, all under a severe fire, which was anxiously watched by both parties. He succeeded, however, in reaching his destination unwounded, though his gun was broken by one ball, his pantaloons cut by another, and his cap pierced by a third, with the other mules wounded, but not to death, and the place was taken

Honours now flowed in upon him in rapid succession. Placed at the head of a picked body of cavalry, he performed an exploit of such skill and courage as to earn for him the cross of St Fernando—a ... military honour, never bestowed but as the reward of public acknowledgment He had lost half his troops in a severely-contested engagement, and was riding with the remainder, 30 in number, on the flank of the army, when he received an order to harass the rear of the retreating enemy. He had advanced to a considerable distance from his own forces, when the revolutionary leader, Paez, enraged at what he considered the insolence of so small a force, wheeled about at the head of his own chosen corps of light horse, consisting of three hundred men, superbly mounted, and charged at the top of their speed Nothing daunted, Lopez dismounted his men, formed them into a ...re, with their lances pointing outwards, and stood his ground until the arrival of reinforcements.

In 1823, when the revolutionary war was over, he declined going to Spain with the army, but married and settled in Cuba. Some time afterwards, he happened to be in Madrid upon private business, when the Cubist troubles began. He rendered considerable service to the Cristino Government during an outbreak in the Capital, and was immediately despatched to join the army. On one occasion, whilst under-de-camp to General Valdez, he and his party were surrounded in a mountain pass by the terrible Zumald-carregui. Escape seemed impossible, a bird alone, as it seemed, could carry the intelligence to the nearest Cristino division, situated at Ermoa, ten or twelve miles distant, so as to summon it to the rescue Colonel Lopez, however, volunteered to do it, claiming it as his duty and right, as first aide de-camp, and pledging himself to bring up the division at Ermoa The commander-in-chief, though regarding the attempt as desperate, yet yielding to his demand, told him he might then take what force he required for the purpose 'I could not do it with the half of the division" was the answer, "but let me have your piebald horse which you bought on my advice" It was brought, and Lopez mounted it, taking with him only his orderly (a fellow on whom he could trust to follow him over and through anything), the latter being mounted on Lopez's own favourite charger Directing him to keep close to him, and to regulate his pace by his own; and since it as not likely that both would escape, instructing him ... the order to be carried to Ermoa, he set out at full speed from Durango, along a road which passed between two eminences, both occupied by the enemy Slackening then his speed, as he got well clear of the former place and approached the enemy, but riding with entire confidence, he and his companion presented the appearance of deserters, and two squadrons which had at first detached themselves from the enemy on both sides to intercept them, slackened the pace at which they moved down the road for that ... He then, with a nice calculation of the distance at which he might venture it, suddenly clapped spurs to his horse, and rushed through the shower of balls which ... ediately poured down from both sides, and, in the pursuit, cleared the ... ntlet before they could cut him off, and the thing was done In the words of Valdez's certification, "to the astonishment of the enemy and of the army, both of whom were watching the operation, he traversed the line," and the army was saved

*In his political sentiments General Lopez never wavered from his fidelity to the democratic party, known in Spain as the liberal *exaltado* party. As a known and reliable member of that party, he was appointed commander-in-chief of the National Guard of that kingdom, a post created for him at a critical period. He at different periods filled the post of commander-in chief of various provinces.*

In 1839 he returned to Cuba, and gradually worked himself, during his residence there, into the belief that his adopted country was the victim of great injustice and oppression on the part of the Spanish Government.

Having determined, early in 1848, that the proper time had arrived, he was only induced by some friends to postpone his intended rising for a short time, in order to await the result of some communications which had proceeded from a highly-distinguished officer in Mexico, who knew the state of public feeling in the island. This delay led, through an accidental cause, to the discovery of his plan by the Government, and the sudden arrest of his friends, and the necessity of his own precipitate embarkation for America, from whose friendly shores he hoped soon to be able to return. His plan for Cuba has always been Independence and annexation to the American Union After his escape he was condemned to death.

Lopez himself escaped in a vessel called

the Neptune, and soon after landed at Bristol, R.I. From that time down to the attack made on Cardenas, by an armed force of which he was at the head, his name was always mentioned in connexion with the invasion of Cuba On the 15th of May, 1850, three divisions, 609 men, of the Cuban expedition, off the island of Mugeres, near Yucatan, concentrated board the steamer Creole On the 19th May, Lopez, between two and three o'clock in the morning, landed at Cardenas, and, losing between thirty and forty men, and killing many on the island, took the town. Subsequently the invading force abandoned it, and, closely pursued by the Spanish war steamer Pizarro, arrived at Key West, where the Creole was seized by the United States revenue officers On the 27th of May, Lopez was arrested at Savannah for his connexion with the Cuban expedition. No delay being granted by the District Judge to procure evidence against him, he was discharged, amid the cheers of a large crowd. On the 15th of July, 42 of the Contoy prisoners (passengers) were liberated by the Spanish authorities, and were taken to Pensacola by the United States ship Albany Two of them were retained for trial On the 21st of July the grand jury of the United States District Court at New Orleans found a true bill against Lopez and fifteen others for violating the act of 1818 The Government had proceeding out against one or two of the parties, and finally abandoned the prosecution.

From that point the spirit of a new invasion seemed to gain an impetus, and a second expedition was prepared in the summer of the present year With Lopez, at its head, it started for Cuba from New Orleans, in the steamer Pampero, and landed at Morillo, Cuba, at eleven o'clock at night, on the 11th of August. It seems to have consisted of about 160 men, many of whom have paid the penalty of their rashness, either by death or imprisonment. Among these was Lopez himself Worn down with fatigue, he was taken by Castenedo, an agent of the Spanish authorities, at Los Pinos de Ranzel, on the 19th of August, the whole of his forces having been dispersed, and himself, resting after wandering on foot, almost starved, and overcome only by nature herself The details of his death have been given in the public journals. About seven o'clock on the morning of the 1st of September, at Havana, where he had been taken by a guard from San Cristobal, a scaffold, about fifteen feet high, was erected at a spot in the field of La Punta On this Lopez ascended—briefly but firmly addressed the multitude—took his place in the chair of the *garrota*—suffered for a moment—and expired. His last words were, "I die for my beloved Cuba!"

"TECHNICAL EXPOSITOR"

In consequence of the earnest wish expressed by a great number of our readers to have the "Technical Expositor" continued *the same size* as heretofore, it will be removed from the enlarged pages of THE WORKING MAN'S FRIEND, and continued in the MONTHLY SUPPLEMENT, in which four pages will be given monthly.

COLUMNS FOR YOUTH.

HOW TO BE MISERABLE.

"How to be *Happy*," is a very common heading to an article addressed to the young. I have seen it in the papers so often that I should not think of writing upon it. But I believe I have never seen anything in print to tell young folks *how to be miserable*.

"How to be miserable! Well, I guess we don't want to be miserable"

Don't want to be miserable? How so? Then why do you take so much pains to be miserable? I cannot think how a child or a youth, who is free from care and trouble and full of buoyant spirits, can be miserable without trying very hard to be so But, as I have seen a great many young persons who not only seemed determined to make themselves miserable, but everybody around them also, I thought, perhaps, they would thank me for telling them how they may do it easier

In the first place, if you wish to be miserable, be *selfish* Think all the time of yourself, and of your own things. Don't care about anybody else Have no feeling for any one but yourself. Never think of enjoying the satisfaction of seeing others happy, but the rather, if you see a smiling face, be jealous lest another should enjoy what you have not Envy every one that is better off in any respect than yourself, think unkindly towards them, and speak slightingly of them Be constantly afraid lest some one should encroach upon your rights, be very watchful against it; and if any one comes near your things snap at him like a mad dog Contend earnestly for everything that is your own, though it may not be worth a pin, for your *rights* are just as much concerned as if it were a pound of gold Never yield a point

Be *very sensitive*, and take everything that is said to you in playfulness in the most serious manner Be jealous of all your friends lest they should not think enough of you. And if at any time they seem to neglect you, put the worst construction upon it you can, and conclude that they wish to "cut" your acquaintance, and so, the next time you meet them, put on a sour look, and show a proper resentment You will soon get rid of them, and cease to be troubled with friends. You will have the pleasure of being shut up in yourself

Be *very touchy and irritable*. Cultivate a sour, cross, snappish disposition Never speak in good nature if you can help it Never be satisfied with anything, but always be fretting Pout at your father and mother, get angry with your brothers and sisters, or, if you are alone, fret at your books or your work or your play Never look at or admire anything that is beautiful and good; but fix your eyes on the dark side of everything, complain of defects in the best of things, and be always on the look-out for whatever is deformed or ugly, or offensive in any way, and turn up your nose at it. If you will do half of these things you will be miserable enough.

BEWARE OF THE FALLS!

A boy, two years old, was carried over the Falls of Niagara a short time ago. He was playing on a board at Street's factory, on the Canada side, in company with an elder brother; their father saw them and chided the elder one, who suddenly jumped off, when the other was precipitated into the rapids, and the father hurried to rescue him, but in vain—the boy went over the Falls.

Alas! how many have we seen go over the falls—for there are other fatal falls besides those of Niagara

We one day saw two little boys playing around a public house, one heard a warning voice, gave heed, fled, continued sober, and became a good man, the other neglected the warning, and went over the Falls.

Another time we noticed two little boys swearing boldly, one suddenly broke off, became moral, and escaped, the other became more and more profane, and went over the Falls.

Again we saw two little boys playing at cards Both became expert gamblers One had a warning from his father, and never played again, the other had no such warning, kept on, and went over the Falls

Two little boys were fond of smoking From morning to night a cigar was in their mouths Both were warned. One threw away the filthy weed, and became a sober, steady youth, the other, from smoking took to drinking, and from drinking to swearing, and soon he was over the Falls

There is no certainty, that two little boys, beautiful in their play, and innocent in all their habits, will grow up alike One listen to the voice of reproof, the other slights it harden his heart, and perish O let the simple beware of the dangers. An innocent and lovely youth may perish amid the fascinations of the destroyer How certain the ruin of him who stops his ears and hears no warning The little boy was precipitated by accident over the Falls If you go over, it will not be by accident, but because you will not be warned, and will not take heed to your ways

HUMOROUS SELECTIONS.

A DOUBTFUL CURE.—An Irish journal says—"The following bull was presented by a farrier to a gentleman—'To *cure* your pony that died, *I'll* is.'"

RATHER EQUIVOCAL.—A negro once gave the following toast—"De gubernor ob de State—he came in wid berry little opposition, he go out wid none at all"

SYMPATHY.—An Irish counsel being questioned by a judge to know for whom he was concerned," quickly replied, "I am *concerned*, my lord, for the plaintiff, but I am employed by the defendant."

THE DIFFERENCE BETWEEN COMMON LAW AND EQUITY.—"Pray, my lord," said a gentleman to a late respected and rather whimsical judge, "what is the distinction between law and *equity courts*" —"Very little in the end," replied his lordship, "they only differ so far as *time* is concerned At common law you are done for at once—in equity you are not so easily disposed of The former is a ball, which is instantaneously and most charmingly effective—the latter is an angler's hook—which plays with its victim before it kills it. The one is prussic acid—the other is laudanum."

THE REASON WHY.—Lord Newton, one of the Scotch judges, was seen by a friend staggering homewards so early as nine o'clock on a fine summer evening, in Edinburgh "How now?" queried the individual, "you're early up *from* your dinner the day?"—"True enough, stuttered the judge, "but then, ye mann ken, that we sat down *yestreen*."

NEW AND INTERESTING PUBLICATIONS

ISSUED BY

JOHN CASSELL, 335, STRAND, LONDON;

AND SOLD BY ALL BOOKSELLERS.

Now Publishing, in Weekly Numbers, ½d., and in Monthly Parts, of Four Numbers, price 8d., or Five Numbers, price 10d.,

THE ILLUSTRATED EXHIBITOR, a Tribute to the World's Industrial Jubilee.—This splendid work has attained a circulation of One Hundred Thousand. It may truly be termed the Literary and Pictorial Wonder of the Age. Though published at Twopence, each Number is filled with well-executed Engravings of objects and scenes in the Great Exhibition of All Nations. "The Illustrated Exhibitor" will form a monumental record of the World's Industrial Jubilee, which every family ought to possess. The Monthly Part for October, price Eightpence, contains upwards of One Hundred Engravings of Machinery, Works of Art, Sculpture, Needlework, &c., together with an interesting Description of the Manufacture of Cotton, with accurate Illustrations of the Machinery employed; also of the Machinery used in the production of Nottingham Lace, &c.

Parts I., II., and III., forming One Book, containing nearly 300 Engravings, price 2s. 2d., is now ready.

NOTICE TO ADVERTISERS.—The Wrapper of the Monthly Part of "The Illustrated Exhibitor" offers the most invaluable medium for Advertisements, which must be received by the 18th of each month.—Circulation, 40,000.

Thirty-first Thousand, Fourth Edition, price One Shilling,

THE LONDON CONDUCTOR—The Strangers' and Visitors' Guide through London. Embellished with a splendid Map of the Metropolis and its Suburbs, measuring 38 inches by 22; also Engravings of the principal Buildings in London. This work will guide the visitor to every place of Amusement, and to every Exhibition, both free and otherwise, and contains a description of each, with every other necessary information calculated to make the Stranger familiar with the Great Metropolis.—A PLAIN EDITION, 9d.

A FRENCH EDITION of the LONDON CONDUCTOR is also published, price 1s. 6d.

COMMERCIAL, POLITICAL, AND RELIGIOUS FREEDOM.

THE STANDARD of FREEDOM is one of the most talented and vigorous Advocates of Liberty, Commercial, Political, and Religious. As a Family Paper, it blends the useful with the entertaining, giving not only the state of the Provision Markets, but a judicious and instructive Digest of Weekly Occurrences, and Notices of every Movement and Invention likely to advance Social Progress or to increase Domestic Comfort. As a Commercial Paper, it reports faithfully the fluctuations of the Markets, condition of Agriculture, Trade, &c. As a Journal, of Philanthropy and Morals, "The Standard of Freedom" proves its sympathy with all the efforts that are now made, whether to advance Education, to abate the rigours of the Penal Code, to promote the Temperance Movement, to establish Peace and Universal Brotherhood, to diminish Pauperism, Juvenile Delinquency, and General Crime, or to maintain and perpetuate the practice and extension of Religious Truth.—"The Standard of Freedom" is published regularly every week, price 5d.—A Country Edition is published on Friday Evening, for delivery in the Provinces early on Saturday Morning. A Town Edition is published on *Saturday Morning*, in time for the Morning Mails; and a Third Edition is issued at three o'clock, containing the Latest Intelligence, Foreign and Domestic, down to the hour of going to press.

It is requested that all who wish to take in "The Standard of Freedom" will give an order to the nearest Newsvender or Bookseller, or it can be ordered direct from the Publisher, by sending a quarter's subscription, 5s. 6d., in advance. All Money-orders to be made payable to the Proprietor, JOHN CASSELL, 335 Strand.

JOHN CASSELL'S LIBRARY.

Now ready, in stiff covers, price 7d., Vol. II. of

A NEW and POPULAR HISTORY of IRELAND, derived from Authentic Sources. The Two Vols. in One, neatly bound in cloth, 1s. 6d.—This work will be found to be not only one of the cheapest, but the most expeditious and interesting History of Ireland ever published.

THE NATURAL HISTORY of MAN; or Popular Chapters on Ethnography. By the Rev. JOHN KENNEDY. With Illustrations. Price 1s. 6d., neatly bound in cloth, and lettered.

TWO ESSAYS on the Adaptation of Temperance to the Working Classes, for which Prizes of £20 and £10 were awarded by the Committee of the National Temperance Society. *Price 1s.*

Printed and published by JOHN CASSELL, at his Office, 335, Strand, London. October

THE
WORKING MAN'S FRIEND
AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. I., NO. 2.] SATURDAY, OCTOBER 11, 1851. [PRICE ONE PENNY.

CHINA AND THE CHINESE.

THE EMPEROR, COURT, AND GOVERNMENT OF CHINA.

INTERIOR OF A MANDARIN'S HOUSE AT FLKIN.

ch
as executive department of the state. So august is the Emperor considered, that the mandarins and other natives not only prostrate themselves when in his presence, but also before a tablet with the inscription, "The Lord of a Myriad Years." In his character as a patriarch, his Imperial Majesty is not only regarded as the father of that multitudinous family, the population of his empire, but is also considered the sole dispenser of the blessings of heaven; the chief canon of belief being, that "the duty of affording to the people sustenance and instruction is imposed on *The One Man;*" while, on occasions of national calamity, he publicly confesses his errors, and acknowledges his misconduct to be the cause of the divine displeasure.

It has often been a question, "How do the Chinese, ignorant as they must be of the science of political economy, and destitute as they are of the knowledge of Christian ethics, manage to keep such a mass of people in order, and preserve their empire free from encroachment and diminution?" The answer is—the secret of their success in political matters is the establishment of the patriarchal system of government, founded on the basis of filial obligation. As the first principle in their moral code is the duty of children to submit to their parents, and the right of parents to dispose of their children; so on this claim is grounded their political code also. The parallel between the relations in which every person stands to his own parents and to the Emperor, is carried out from the most important functions of the legislature down to the minutest observances of ceremony, all of which are regularly prescribed by law. The union of the avenger with the father in the Emperor, is well illustrated by the following fact. A man and his wife had severely ill-used the mother of the former, whose

sufferings were reported to the Emperor, and what was the result? The principal offenders were put to death, the mother of the wife was bambooed, branded, and exiled, for the daughter's crime, the scholars of the district were not permitted to attend the public examinations for three years, thus arresting their course of promotion, the magistrates were deprived of their office, and banished; the very place where the crime was committed was made accursed, for, says the imperial edict published on the occasion, *"I intend to render the empire filial."* The fatherhood thus assumed is designed to be truly imperial. To create an impression of awe there is a resort to every device. Attired in a robe of yellow—the colour worn, say the Chinese, by the sun—the Emperor is surrounded by the highest pageantry and state. All ranks must bow the head to a yellow screen of silk. In his Majesty's presence no one must speak except in a whisper; his person is considered too sacred to be often exhibited in public; and even an imperial despatch is received by the burning of incense and prostration. All this state has, however, its personal inconveniences. The Emperor is not allowed to lean back in public; to smoke, to change his dress; or, in fact, to indulge in the slightest relaxation from the fatiguing support of his dignity.

The Emperor dwells in the interior of his palace, secluded from the gaze of the populace, and surrounded by extensive parks and gardens. This edifice is within the northern enclosure of Peking, the capital, which covers an area of twelve acres, while the southern has an acre of fifteen square miles; the two constituting the entire capital. There are, in fact, three sub-divisions; an outer, a middle, and an inner portion. The latter contains the imperial palace, and the dwellings of the different members of the sovereign's household; the second is chiefly inhabited by Chinese merchants; and the third, or outermost portion, constitutes the open city. The Chinese describe the palace as a very superb residence, with "golden walls and pearly palaces." To persons who have not their prejudices it presents a glittering appearance: its tiles, varnished with a brilliant yellow, seem, under the rays of the meridian sun, to glow like a roof of burnished gold. Within are spacious courtyards, and apartments richly decked with gay colours and gilding, constituting altogether a gorgeous fabric. "There reigns," says Father Hyacinth, "among the buildings of 'the forbidden city' a perfect symmetry, both in the form and height of the several edifices, and in their relative positions, indicating that they were built upon a regular and harmonious plan." Of course these excellences would not accord with English taste; to our eyes the imperial residence appear in striking contrast to the palatial abodes of our [illegible] sovereign; but by our rules Chinese dwellings are not to be judged.

The grand entrance to the imperial city is by the southern gate, through the central avenue, or "Meridian Gate," of which the Emperor alone can pass. The gate opens into a large court, adorned with bridges, balustrades, pillars, and steps, with varied sculptures of fine marble. Beyond this is the "Gate of Extensive Peace;" a superb edifice of white marble, one hundred and ten feet high, ascended by five flights of steps, the centre of which is exclusively appropriated to the Emperor. On special days, as that of his birth and the day of the new year, he receives here the congratulations of his officers, who prostrate themselves in the imperial presence. Other halls and flights of steps conduct to the palace itself, which is called the "Tranquil Palace of Heaven," while that of the Empress is styled the "Palace of Earth's Repose." No one can enter the secluded residence of the Emperor without special permission, where he gives audience to those who are so far favoured, and arranges his imperial plans.

This palace is described as the loftiest, richest, and most magnificent of all. A tower of gilded copper, adorned with a great number of figures, beautifully executed, stands before it. A large vessel, of the same material, in which incense is burned day and night, is placed on each side of the tower. This accords with the effort often observable to keep up the impression that the connexion is inseparable between the powers of [illegible] Emperor, who is indeed regarded by the people [illegible] ave and counterpart of the former. How [illegible] is the vanity that is thus cherished! how profound [illegible] rance which can present such adulation! Beyond the [illegible] of the Emperor and Empress is the imperial flower-garden, interspersed with sheets of water and rising rocks, laid out in beautiful walks, and adorned with grottoes, pavilions, and temples. One of these is visited by the Emperor on certain occasions, to obtain blessings from the manes of his ancestors, and to show his filial piety. Beyond this garden is a library of immense extent, and further on stands the gate of the flower-garden, which forms the northern outlet to "the forbidden city." Six palaces are occupied by the princesses of the imperial family; and other ranges of building constitute the residence of the Emperor's stewards, &c.; besides which there are halls for councils, courts, &c., and a large painting establishment.

There is, after all, but little of pomp or splendour in the imperial residence. To quote the words of Barrow:—"The buildings that compose the palace, and the furniture within them, if we except the paint, the gilding, and the varnish, that appear on the houses even of plebeians, are equally void of unnecessary and expensive ornaments. The palaces of Peking, like the common habitations of the country, are all modelled after the form of a tent, and are magnificent only by a comparison with the others, and by their number, which is sufficient indeed to form a town by themselves. Their walls are higher than those of ordinary houses, their wooden columns of greater diameter, their roofs are immense, and a greater variety of painting and gilding may be bestowed on different parts but none of them exceeds one story in height, and they are jumbled and surrounded with mean and insignificant hovels. The stone or clay floors are, indeed, sometimes covered with a carpet of English broadcloth, and the walls papered; but they have no glass in the windows, no stoves, fire-places, or fire-grates in the rooms; no sofas, bureaux, chandeliers, nor looking-glasses; no book-cases, prints, nor paintings. They have neither curtains nor sheets to their beds; a bench of wood, or a platform of brickwork, is raised in an alcove, on which are mats or stuffed mattresses, hard pillows or cushions, according to the season of the year. Instead of doors they have usually screens, made of the fibres of the bamboo."

Within the meridian gate of the capital the imperial council chamber is situated, where the ministers of the Sovereign assemble to deliberate on national affairs. They are six in number—three Tsetsi, who take precedence, and three [illegible]. They are designated "worshipping assistants"—[illegible] have done obedience on being appointed to office, by knocking heads, an initiatory ceremony similar in its import to that of kissing the hand of our own Sovereign. A variety of official titles has, however, been borne by them. The most ancient one, under the dynasty Hea, denoted "objects of complacency and confidence." Nobles of the first rank, who conducted the sacred music connected with the state ceremonies, were styled "great and perpetual,"—expressing their desire that the power whom the imperial family worshipped would perpetuate its dominion through all ages. Ministers have also been denominated "great assistants," "great preservers," and "great learned scholars."

Mandarin, a word derived from the Portuguese, and primarily from the Latin, and meaning "to command," is generally applied by visitants of China of the European races to native titled and governing men. The whole body of Chinese mandarins consists of twenty-seven ranks. The constitution recognises the following steps of titular or privileged states, in descending gradations:—1. Imperial blood. 2. Length of service. 3. Illustrious deeds. 4. Talent and wisdom. 5. Distinguished abilities. 6. Zeal and assiduity. 7. Nobility. 8. Birth. In this scale we see that their estimations are nearly in the inverse order of ours. Mandarins are either civil or military. Although the mandarins are inferior in rank to the higher class of nobility, whose dignity partakes of a personal character, they form the effective ministry and magistracy of the country. The Chinese equivalent of *mandarin* is *kouon*, which signifies, literally, a public character.

Six supreme courts, tribunals, or boards, exist, as the principal springs of the machinery employed in the operations of the Chinese government. The first is the *Board of Civilians*, for superintending officers of all ranks, from the Emperor himself down to a writer in a government office. The next in order is the *Board of Revenue*, having the charge of all the taxes imposed on the people. The *Board of Rites* has under its charge the etiquette for which China stands pre-eminent

the nations of the East. It directs the insignia of in superintending the public buildings connected with the rank, and the persons by whom they are to be worn. imperial palaces, gardens, temples, tombs, and the national

IMPERIAL MESSENGER.

etts and movements of official personage, with the number of prostrations, kneelings, reverences, and other gestures, are all described with the greatest minuteness. Some of our readers will probably remember a circumstance in connexion with these ceremonies relating to our own country. In July, 1817, Lord Amherst arrived at Spithead from his embassy to the Court of Peking, after an absence of seventeen months. He was foiled in the object of his mission chiefly from refusing to conform to the Chinese ceremonial of prostration, or "head-knockings," in the presence of his Imperial Majesty. The *Military Board* has an extensive jurisdiction, including the naval and merchant service, the imperial hunting, the police, and the post-office departments, as well as the army. China maintains a large standing army, not much fewer than 800,000 men, with a corresponding number of officers, of whom all the higher grades, and a large number of the soldiers, are Tartars. The *Board of Punishments* bears a name sufficiently descriptive of the range of its authority. The *Board of Works* is occupied altars. The *Board of Music* is instituted to direct the rejoicings and festivals at the palace. There is also a *Colonial-office*, composed of Manchoos and Mongols, so that the respective tributary princes may have confidence in referring whatever concerns their interests to their own countrymen. To each of the provinces a viceroy is appointed, and every town is presided over by a magistrate. Subordinate officers superintend the lesser divisions. All these functionaries are removed every three years; and that no ties of kindred may interfere with the strict discharge of their duties, the viceroys and magistrates are forbidden to form any alliance with a family within the limits of their rule. The *Thsing Leu Lee*, being the fundamental laws, and a selection from the supplemental statutes of the penal code of China, has been ably translated by Sir George Staunton, so eminently qualified to do it justice. Of it a competent witness has said:—"The most remarkable thing in this code is its great reasonableness, clearness, and consistency—the business-like brevity and directness of the various provisions, and the plainness and

ARMED MANDARIN AND SOLDIER.

moderation of the language in which they are expressed. There is nothing here of the monstrous verbiage of most other Asiatic productions; none of the superstitious delineation, the

COSTUME OF A MANDARIN AND HIS WIFE.

miserable incoherence, the tremendous *non-sequitur*, and eternal repetitions, of those oracular performances, nothing even of the turgid adulation, the accumulated epithets, and fatiguing self-praise of other Eastern despotisms, but a clear, concise, and distinct series of enactments, savouring throughout of practical judgment and European good sense, and, if not always conformable to our improved notions of expediency in this country, in general approaching to them more nearly than the codes of most other nations." Still the Chinese code has very serious defects. It gives laws for trifles, is often extremely vague, and contributes, in many instances, to gross injustice. Corporal punishment is the universal penalty. Offences the most grave, and the most trivial, whether committed by persons in the highest or the lowest ranks, are alike visited by so many strokes of the bamboo!

The magistrate, who is to be found in all towns and cities, is habited in what is termed a court, or full dress, with court beads. The badge which appears on his breast is repeated on his back. The knob on the top of his cap denotes rank: this is known by its being a *gilt* knob, a *white glass* knob, or a *cornelian* stone. A peacock's feather attached to the cap is a gift from the Sovereign, and indicates his sense of the officer's merit. The secretary wears in his girdle a handkerchief, a case containing his chop-sticks (two long slips of ivory or wood with which he raises his food to his mouth), and his purse for containing a few coins, or a little tobacco.

The magistrate being always in court, a culprit is no sooner taken, and his accusers in attendance, than he is put on his trial, and the secretary records the accusation. If it be a light offence, and he is unable to pay a fine, he is laid on the floor, and the punishment of blows inflicted with a long flat bamboo. If the punishment is not excessive, he rises and walks home, and the following day he is able to follow his employment. "I remember," says a resident for some years in China, "seeing one morning, while residing next door to the Hoen magistrate's office at Macao, a respectable-looking Chinese, who had on thin shoes, rush down three flights of steps and along the street as fast as he could run; he was followed by the petty officers of the court, who wore thick shoes and had they not made a great noise, inducing other persons to stop the prisoner, he would have effected his escape. Having got hold of him, four of them shouldered him, while the fifth held him tight by the tail, at which he tugged most unmercifully. In an hour's time I saw the culprit limping homewards at liberty. He had been well bastinadoed; and the five petty officers who accompanied him, were laughing heartily at the joke, and calling him a fool for attempting to escape."

The following scale of punishment, taken from the Penal Code, shows the manner in which the infliction is increased according to guilt. In former times the lowest punishment was *ten* blows; it is now reduced to *four* blows: so of the others: thus—

The first	nominally a punishment of	10 blows	of which only	4 blows	are to be inflicted
The second		20 blows		6 blows	
The third		30 blows		10 blows	
The fourth		40 blows		15 blows	
The fifth		50 blows		20 blows	

The second degree or division of punishment is inflicted with the larger bamboo, and is subdivided in the following manner —

The first	nominally a punishment of	60 blows	of which only	20 blows	are to be inflicted
The second		70 blows		25 blows	
The third		80 blows		30 blows	
The fourth		90 blows		35 blows	
The fifth		100 blows		40 blows	

The third division is that of a temporary banishment to an distance not exceeding five hundred lee—ten lee being usuall estimated as equal to three geographical miles—with a view t

ARMED MANDARIN OF THE CAVALRY.

afford opportunity of repentance and amendment. Of th species of punishment there are five gradations:—

Banishment for	1 year, and 60 blows	with the reduce
	1½ year, and 70 blows	
	2 years, and 80 blows	
	2½ years, and 90 blows	
	3 years, and 100 blows	

Perpetual banishment, the fourth degree of punishments in order of severity, is subdivided as follows, and is reserved for cases wherein even for considerable offences, the life of the criminal is spared by the lenity of the laws; a hundred blows with the bamboo, and perpetual banishment to the distance of 2,000, 2,500, or 3,000 lee. On reaching this destination, the banished offenders may follow their callings, but they are required once a week, or once a month, to appear before the magistrate of the place and report themselves.

The fifth and ultimate punishment ordained by law, is death, either by strangulation, or beheading.

All criminals, capitally convicted, except such atrocious offenders as are expressly ordered to be executed without delay, are retained in prison for execution at a particular period in the autumn; the sentence passed on each individual being first duly reported to and ratified by the Emperor.

The ordinary punishment resorted to for women, is slapping them on the cheek with a solid piece of leather; but, generally speaking, as women live a secluded life, few of them are punished in China.

It is honourable to the Chinese that for the various state offices merit alone is the qualification. Their highest honours and emoluments are open to individuals of the humblest rank. Tartar birth, though conferring on its possessor a considerable advantage, does not necessarily conduct to pre-eminence, nor do family distinctions descend from father to son, except in the case of the imperial kindred.

Promotion has therefore been described as the *summum bonum* of a Chinese. In one instance we are told of 8,000 candidates for the literary degree of *Keu-jin*, the legal number of successful aspirants being seventy-two. Before being qualified to compete at the triennial examination, held only in Peking, candidates must be graduates of the lowest degree conferred in the capital city of each department. Each one, thus prepared, enters the building appropriated to the examination, which is carefully guarded by soldiers to prevent all communication from without. Here a cell is assigned him, which is also as narrowly watched, that no undue help may be afforded him. There, on three different days, he writes a theme, or composes a short poem, excluding every allusion either to the policy of the rulers, or the present dynasty. The test of merit is accordance in style and sentiment with the ancient authors of China, and is therefore fatal to all inventive power. It has been well said by Lord Bacon, that the antiquity of past ages is the youth of the world, and that it is an inversion of the right order to look for greater wisdom in some former generation than there should be in our present day." The time in which we now live," says this great philosopher, "is properly the ancient time, because now the world is ancient; and not that time which we call ancient when we look in a retrograde direction, and by a computation backward from ourselves." But this right order is inverted in China. There Lord Bacon has no disciples. Genius is crushed in the bud. No ray of physical science ever sheds its radiance on the lore of the so-called "Celestial" country. A very narrow boundary is placed to intellectual effort. The course pursued is one that condemns the people to a kind of perpetual childhood.

Nor is it less evident that there may be literary honour with no aptitude for the exercise of the functions of government. To the mode adopted in China there are therefore the most weighty objections. But so great is the interest there in the successful effort to gain the higher literary degrees that there have been instances of individuals persevering through a long series of disappointments, even till their seventieth or eightieth year. Instances, too, have occurred in which such degrees have been obtained by fraud, but only to involve their possessors, when detected, in dishonour. The first intimation the candidate has of success is on reading his feigned name or motto posted against the walls of the public office of the lieutenant governor. That functionary comes forth from his palace at a certain hour; the usual discharge of guns takes place; the official paper is posted up; and having bowed to the names of the successful candidates, he retires. A public banquet, honoured by the presence of the highest authorities of the province, is given to the newly-made *Keu-jin*, and, while the thousands of unsuccessful candidates return disappointed to their homes, on those are lavished applause and honour, and their names and compositions are sent to the Emperor at Peking.

With their names and triumphs published throughout the empire, they are courted and caressed; and they become *ipso facto*, eligible to all the offices in the gift of the sovereign. The most learned are appointed to the highest degree of literary rank, the "Han-lin," literally "the forest of pencils," or membership of the national college. All this means that the Emperor may "pluck out the true talent" of the land, and employ it in the administration of Government. The fourteen thousand civil mandarins are, almost without exception, the *beaux esprits*—the best scholars of the realm. The highest literary graduate is entitled to wear a white stone, brought from India, on the cap, as a distinguishing mark. The attainment of the rank of "Keu-jin" is described as "plucking a branch of the fragrant olive," because that flower is in blossom in autumn, when the examination occurs.

THINGS "LIGHT AS AIR," TREMBLING AT EVERY BREATH.

We were once in the ante-room of an exhibition, and among other objects to amuse the visitors who were waiting for the performance, there was a number of little representations of flowers, kings, queens, &c., &c., with the words written over them, "*things light as air*," and in order to test the correctness of the motto you were supplied with a small rod, and invited to touch the seeming realities, but on making the attempt you found that there was nothing, and that "the things" were, indeed, "light as air," for they consisted solely of some magical illusion. We have often been reminded of these optical deceptions. How many things among us which pass for something great are, notwithstanding their cost and expense, "as light as air." "Vanity of vanities," says Solomon, "all is vanity;" and he had more opportunities than most men of testing the pleasures, the riches, and the honours, of the world. We are not going to sermonize, but still we may say that there are few persons who have lived to be threescore, or threescore years and ten, who do not perceive that the wise man was not far from the truth respecting the vanity of the greater part of those objects and pursuits which agitate and disturb the souls of the sons and daughters of wealth, pleasure, and ambition.

We have often thought that there are numbers of things in the world which make a great show and noise in our time on which the motto we have quoted might very properly be inscribed. And we come to this conclusion from the care with which they are guarded by those who set a high value upon them. For this very care seems to intimate that they are remarkably brittle and frail. We have frequently seen various productions of wax, &c., covered with a glass or some other case, lest you should touch and destroy them; and you were thus admonished that, however beautiful the objects might be, still they would not bear handling, or scarcely the most gentle treatment. Hot-house plants need artificial heat, and generally a good deal of watching and protecting, but the oak and the cedar seem rather to invite than to dread the winter and the storm.

In a recent paper we showed that everything in England is in danger of being assailed, and that to this very circumstance we owe our happiness, peace, and stability. We are not a wax-work sort of people. Our Constitution is not made of stubble or thistledown. Everything of this sort is generally tried, winnowed, and swept away by the whirlwind of public opinion. Somehow or other we have learnt to distinguish the wheat from the chaff. In some countries when the people are exasperated, they have no more discrimination than an angry bear would use in a china shop if he had the misfortune to be stung by a bee.

Some tell us that the Greek word "*Krinein*" "*to judge*," whence we obtain our terms, "discern," "discreet," "discretion" "discrimination, "crime, "crisis," &c., &c., originally meant, "to sift," or "to use a sieve." In reviewing the history of our country, we perceive that John Bull has for ages been in possession of a good *mental sieve*, and has employed it very freely and extensively; and hence it is that we have so much of what is really true, just, and right among us, and therefore our empire is built on immutable and, we had almost said, omnipotent foundations. The poets of old, in singing of the perpetuity and eternity of the Roman empire, showed that they had no correct idea of the principles which give stability to thrones and immortality to sceptres. A little information respecting justice, morality, and the rights of man, would have satisfied them that the elements of decay were never more vigorously at work than at the very time when the most fulsome flattery was bestowed upon Augustus. It is a striking fact that, while Republican principles are spreading around, the English monarchy stands firmer than it ever did during the whole period of its existence. Here John Bull has used his sieve, and therefore knows how to distinguish royalty from its accidents. The sovereign with us is simply the chief magistrate, crowned to see that the laws made by the sanction of the people are duly executed. She is, in fact, the head and embodiment of our national, republican, or democratical constitution. In many other lands the monarchy is the antagonist of democracy; in England it is its head, and the centralisation of all its *legal* power. We have lately seen that a president may set himself in a state of antagonism to the Republic which has elected him; and, therefore, the prestige of that name is gone for ever; for facts have shown that you may enjoy much more freedom under a royal sceptre than from the supposed protecting wing of a crownless president. With us, all that is wrong in the monarch is the fault, not of the sovereign, but of the people. The income of the Queen is fixed by the Commons, and can be raised or diminished at pleasure, and so of everything else. Hence our faults are the faults of the people and not of the prince, and these truths are so generally understood, that we feel that the chief reform needed among us, is a reformed Parliament, and this we can have as soon as the people firmly and unitedly demand it.

Had we time we could prove that everything else which is stable in our country, is secure because it has been exposed to the storms and tempests of public opinion. We have hardly a good but has been reviled, cursed, mocked, laughed at, satrised, applauded, and condemned by the pulpit, the press, and the stage. Our oaks have not been more stricken by the winds of heaven than have our institutions by the virulence of adversaries; and the consequence of this mighty winnowing is that what is really substantial remains firm, and what was worthless is to a great extent blown away. But *in other lands* matters are not so, and therefore everything has to be guarded by bayonets, fines, imprisonment, and death. The throne and the church have, as it were, to be kept under a glass case; for, if we may believe their supporters, they are "things light as air," and a mere breath would sweep them away.

With us in England, however, things are different. All people speak out, and all sects are exposed to the free criticisms of their neighbours, and few seem to be afraid of the result. You may be always sure that there is weakness in the creed or in the faith of those who profess it, when people rely on any other defence beside argument and persuasion, and wish to sew up the lips of those who differ from them. Those who thus depend upon physical force must necessarily imagine that their cause is so feeble that a mere breath would sweep it away.

We may make similar remarks concerning foreign rulers. Mr. Cobden, in one of his peace speeches, observed that you generally see all monarchs and princes on the Continent dressed in regimentals. This shows that they are afraid to trust themselves abroad without a sword. The English must be rather proud that they have a sovereign whose sex forbids her wearing military accoutrements—whose modesty spurns the thought of becoming an Amazon—and whose confidence in her people enables her to dispense with the array of bayonets that surround the dwellings and the movements of such despots as the Emperors of Austria and Russia. Here, as we have said, the monarch is the head of the people, and is therefore supported by it; but abroad, every throne totters, because there is no sympathy between the rulers and their subjects. The princes, dukes, and presidents are conscious of injustice, and consequently of weakness. "Every man," says Cain, "who meets me will slay me." How could he dream of such a thing? Abel never had a thought of the kind, and never feared any one. But then Abel was innocent and Cain was guilty, and in this lay the great difference between them. And thus is it with the despots of Europe; they are all weak, and tremble because they know nothing of that confidence and security which the "*mens conscia recti*" inspires. Like Cain, they are terrified lest everyone who meets them should slay them. An Englishman going abroad is astounded to find every place guarded by armed men. All the towns and cities appear as if they were in a state of siege. Take away the soldiery, and there is scarcely a crowned head in Europe but would have to fly to Old England for refuge. Hence, with all their glare and splendour, with all their regimental glitter, their myriads of troops, and the thunder of their artillery, they are after all only "things light as air." A breath would sweep them away. And of this fact they are so conscious, that no public meetings are allowed—no free expression of opinion is permitted—every book must be read by a censor, and the press must be guarded with the strictest care. The pen is but a feather, and human speech is only a breath, and yet military despots know that each of these is sufficient to overthrow them for ever.

We might greatly extend this paper by referring to various other bodies which make a great show and boast loudly, but still are too feeble to bear the stroke of a feather or the breath of popular opinion, and therefore have to be guarded like wax flowers or delicate pottery. But we need not enlarge, and shall conclude by congratulating our countrymen that Old England is not a hot-house plant, but a solid oak which can brave the heat of summer, the snows of winter, the blasts of Boreas, and by its shade promises to our children for ages to come the blessings of peace, prosperity, and pure religion.

NEVER DESPAIR.

The opal hued and many-perfumed morn
From gloom is born,
From out the sullen depth of ebon night
The stars shed light;
Gems in the cayless caverns of the earth
Have their slow birth,
From wondrous alchemy of winter hours
Come summer flowers,
The bitter waters of the restless main
Give gentle rain,
The fading bloom and dry seed bring once more
The year's fresh store;
Just sequences of clashing tones afford
The full accord,
Through many ages, toil of strife and ruth,
Thought reaches truth,
Through efforts long in vain, prophetic need
Begets the deed
Nerve then thy soul with direst need to cope
Life's brightest hope
Lies latent in fate's deadliest foe—
Never despair.

SCENE IN A LONDON "NIGHT-HOUSE."

LONDON "NIGHT-HOUSES."

READER,—Were you ever in a London "night-house?" For your own sake, and for the sake of morality, religion and virtue, we hope you can answer in the negative; for in places such as the graphic pencil of the artist has described, are nourished all the worst vices of our fallen nature—intemperance, falsehood, irreligion and crime. Look at the picture; *is it not true to life*—*life in its most repulsive forms*—the life of the depraved, the intemperate, the idle, and the [illegible]—the life of "men about town?" If there is one man to be avoided, it is your gentleman blackguard. Examine the specimen in the foreground of the picture—he beside the rather raw-looking young man with the long hair and plaid trousers. They are both men about town—samples of the same class—differing only in degree of vice. The elder man, faultless in dress, smooth of chin, plausible in manners, interesting in conversation, is one of the greatest scoundrels in the Metropolis. He is the type of a large class—well educated, clever, indefatigable in pursuit of anything he takes in hand, and yet as thorough-paced a rascal as ever fleeced a greenhorn. He makes his living at cards, dice, billiards, horse-racing, betting, and such like pursuits, at all of which he is equally clever and equally successful. And yet that man, strange as it may appear, has received an university education. We are drawing no fancy picture; for men such as he can be found in every "night-house" in town. He comes of a good family, too, and can boast at least a baronet amongst his relations. Look at him again, as he converses with the would-be "fast man,"—the pigeon and the crow—didst ever see a more plausible-looking fellow?—didst ever talk with a more accomplished villain?—didst ever take measure of a more refined blackguard? But yet he is quite a moral man in his way; never gets drunk. Oh, no, he is too clever for *that;* it is only his victims, his promising pupils in vice, who drink deeply as they deal the cards or rattle the dice-box.

Glance round the room. There is music—such music as the withered old man in the spectacles can thump out of the piano before him; and song—such song as the dissipated-looking fellow standing at the top of the room can furnish—song in which vulgarism and obscenity appear without disguise. And the creature comforts, too, are by no means neglected in the "night-house," for there are chops, and steaks, and Welsh-rabbits, and kidneys, and strong drinks, and pestiferous tobacco to be had in any quantity for the paying for them.

These places are open nightly after the theatres are over, and to them resort the old and young, the hoary in sin, and the stripling in folly. Here may be seen, joining in the chorus of some roaring song, the man who leaves his wife at home to weep; the son for whom the fond poor mother has denied herself that her dear boy might have enough; the youth fresh from the country, who in such scenes takes his first step in crime; the London *roué*, whose days are passed in bed, and whose nights are spent in shameless riot; the father, to whom the word HOME is no longer sacred; the tradesman, who is spending his creditor's money without compunction; the old bachelor, who fancies he is revenging the seeming neglect of the world by "potations pottle deep;" the hack-writer who seeks a public for his works only among the depraved; the broken-down actor, who lives his little life of popularity over again among such boon companions; the sheriff's follower, who grants his prisoner a short indulgence before he conveys him to the sponging-house, only on the receipt of money, no matter how obtained; the inexperienced, who are beguiled hither by those who wish to profit by his newness to London life, and, in fact, they—and they only—who have no mental resources, no homes, no friends, no reputations, and alas! no acknowledged God!

Suppose we could read the history of each individual in the motley group depicted by the artist—and we can almost, so vividly has he caught the lineaments of vice—how more strange than fiction would they not appear. And yet of all the shameless multitude assembled, there is not one who was not once a little laughing smless child upon its mother's knee. Oh home how desecrated! oh virtue how outraged! oh truth how disfigured in strange garments! oh morality how forgotten! oh religion how disregarded! oh man, made in the image of his Maker, how debased, how vile, how lost thou art become; how low thou hast fallen! Take a single figure from the group. Could the mother, think you, of that villanous-faced man at the foot of the left-hand table recognise in those vice-worn features the little child she taught to lisp a prayer? Or could the wife—long since gone to Heaven, it may be—of that bald old sinner, discover in those leering eyes, and that false palsied lip, the lover of her spotless youth? Draw we a veil over the picture.

Why has the artist drawn it, and why have we inserted it in our pages? Vice, we are told by the poet, to be hated, needs but to be seen; let us hope, however, that not a working man among all our readers may see it in this guise. There is a warning and a moral in its every touch and lineament; and while we admire the power of the painter, let us profit by his teaching. The pencil is more eloquent than the pen; and yet there are men who would find in this picture nought but incentives to its dearly-purchased pleasures. Pleasures! they are bought at the expense of all that is holy in life, all that is hoped for in death. Bought at the cost of health, reputation, and religion. Pleasures! the price of which is ruin, body and soul!

We remember a little story how a youth, such an one, it may be, as he who sits beside the old man at the right of the picture—was induced to visit a scene like this; how night after night he frequented its unholy revels, how home, friends, virtue, and the gentle girl who had given him her love, were sacrificed at the shrine of vicious pleasures; how he fell a victim to the arts of older villains than himself; and how, to find means to pursue the life he had adopted, he fell into crime, and was taken in the fact. We were present at his trial and visited him in prison. Beside him sat the dear one he had betrayed, whispering such comfort as was only hers to offer. Oh woman, wronged, insulted—

> "Oh, woman, in our hours of ease,
> Uncertain, coy, and hard to please;
> But when affliction wrings the brow,
> A ministering angel thou,"

and she, a ministering angel indeed, was with him in his shame. His head was bowed, and his spirit broken. He was barely thirty; but the deep lines of dissipation crime were on his forehead; the recklessness of unrepented sin was in his eyes. On the morrow he died. Died by the hands of the common hangman, before the faces of a silent multitude, ten thousand strong. And his last words were—"DRINK HAS DONE IT ALL!"

* * * *

Working men of Great Britain, whatever of crime and misery there is in great cities; whatever of vice and folly are in the streets; whatever of immorality and ungodliness you witness in your pilgrimage through life, be sure that drinking practices have had something to do with all. Grave judges from the seat of justice, ministers of religion from their places in the temples of God, senators in the legislative councils of the nation, authors in their studies, and painters at their easels—nay, the Majesty of England from the very throne itself—have declared, as with one voice, that drunkenness is the prolific parent of vice. When you see a man unsuccessful in business, careless of his family reckless of the future, thoughtless in life, and despairing in death, make inquiry, and the chances are ten thousand to one, that—DRINK HAS DONE IT ALL.

SEED-TIME IN LISNOMARA.

In Four Parts.

BY SILVERPEN (ELIZA METEYARD)

Part the Second.

At an early hour in the morrow, Joyce, accompanied by Grace, left the headland in the corvagh, the girl knitting (for the Galway peasant woman is renowned for "taming the needles"), and a basket, containing a few eggs and a goat's milk cheese, for his reverence, resting in the shallow bows. Mr. O'Sullivan's residence lay on the north shore of the headland; and this they reached about noon. Landing in a sort of quay rudely formed of wood, Grace and her father pursued a sandy road—evidently more trodden by pigs and goats than by visitors—and this led them to a true Irish village, consisting of some thirty or forty mud cabins, most of which looked in the last stage of delapidation, saving the one occupied by the priest. This, though no larger or better built than those usually tenanted by the class of small farmers, was in a state of decent repair, the ordinary dunghill of an Irish cabin did not reek at the door, and the land fenced round it by a hedge of gorse was clear of weeds and stones. As yet this newly enclosed plot of ground was only partially dug up; but Joyce found his reverence busy with the spade.

"And isn't me heart sore and me sight sore stricken to see yer honour's riverence doing the likes o' this," were Joyce's first hearty and indignant words. "Where be the Lisnomara boys, or where—"

"Indignation is quite useless, Joyce," interrupted Mr. O'Sullivan, as with a smile he greeted the worthy mountain farmer: "as the Lisnomara boys have just for the present a contempt for husbandry. They say they're fishermen, and if Dublin folks 'll send 'em nets and boats they'll fish, but they won't dig—it's beneath the pride of Lisnomara boys—so they lounged back to their cabin fires."

"The—" began Joyce, reddening with anger.

"Stay," spoke Mr. O'Sullivan wildly, "Ireland, not Irishmen, will be made better by threats. We must set them an example, and show them what comes of WORK, and *then* teach them to do it. But now of Mr. Garven. Is he coming, eh? You see I am turning farmer, and need instruction myself?"

"Yis, yer riverence, he's coming next wake by a boat from Galway, and here be his letter, an' a mighty pleasant gintleman he is, an' spoke to the people like a prophet, asy to understand, though axin' yer pardon for saying as much" Joyce here gave the priest the letter, and drew respectfully aside whilst he read it. When he had done so, Mr. O'Sullivan waved his hand, and led the way towards the house, which, *par excellence*, it might be called, seeing that it was the best in the village. He talked with Joyce as he went onwards.

"So there was a great meeting," he said, "and the people seemed to understand Mr. Garven."

"As plamly, yer riverence, as a schoolboy his A B C, for he spoke to the people in their own tongue whin they didn't understand the English. An' sure, thin, it was mighty wonderful to see some o' the crathurs, when they heard o' turnips, an' carrots, an' cabbages, fall on their knees an' bliss God that he'd hilp the people by miracles in their starvation—for they'd never seen thin, or heard thin, of more than the praty." The priest here stayed abruptly in his walk, and looked earnestly into the fine weather-beaten face of the Galway peasant.

"It's thruth though, yer riverence," continued Joyce; "for I hadn't meself heard of the carrot an' mangle-wurzdle, or some sich name. But, yer riverence, many as 'll come to the matin'—an' the large part, be sure, 'll be no da'per in wisdom—'ll ask about the thurnips as childer about the pomegranates in Scriptur. Why, yer riverence, doesn't Dick O'Roon, in Savan Island, yit plough with the plough tied to the mare's tail? an' isn't there people to yer knowin' in Lisnomara that can't dig wid the spade?* Sure, I know it as I know yer riverence's face."

"Well, Joyce, more the need then that each of us should try to enlighten the ignorance of our neighbours. I'm only sorry that I am come so lately amongst you, and am so much a mere scholar myself in farming. But you, in your district of Lisnomara township, and I in mine, may do much in the way of instruction and example, when we have taught ourselves. For it is needful everywhere that some one should begin the work of improvement; it won't grow or make progress by itself."

They had now reached the house door; but a change in the tone of the farmer's voice made Mr. O'Sullivan turn quickly round to regard him.

"Ye see, yer riverence's honour," spoke Joyce, when he observed this, "one thing, though, or more throubles me in this matther. The one is, whin we git the knowledge, we've no sade for the ground. nixt, whin we have the bether crop, it 'll be but for the agent, I'm thinkin', to make the rint bigger than iver. Ill luck to 'em, I niver had a good crop but he raised me."

"Make your heart easy, Michael Joyce," replied the good priest, "and dig and sow in joy—for a new time is coming for Ireland to reap the fruits of her honest labour. A law is now in force by which estates loaded with debt can be sold easily and speedily; and this large one of Lisnomara—so loaded with debt as to be only a cost to the owner—will soon have passed into other hands, it is said into those of a great English agriculturist. If so, I have been well assured any improvements made by the tenantry will be generously met."

In spite of Mr O'Sullivan's presence, Michael Joyce could not refrain from an Irish caper; a performance which brought both Mrs. Murphy, the priest's housekeeper, and Grace to the door, though the laugh of the latter was checked by respect for his reverence.

And won't I," cried Joyce, as he followed his reverence respectfully into the kitchen, "dig, an' sow, and rape, as a Joyce never did before! Och! sure I will! Whin a man's got the dead weight of a beggar off his back, he runs wid a new foot—that he does."

Grace had now retreated to the kitchen-hearth, and brought from her basket, standing there, her mother's present of stockings to his reverence; whilst Mrs. Murphy, opening a cupboard close by, displayed the goat's-milk cheese, with which she seemed as pleased as though given to herself. After he had thanked Joyce and his daughter with a grateful warmth, which brought tears into the eyes of both—for the good gentleman well knew the deep poverty which lay within the farmer's cabin—Mr Sullivan withdrew to the inner room, or parlour as it might be called, to write out some needful instructions respecting the meeting and the reception of Mr. Garven. Whilst writing, it occurred to him that the meeting would not only be best held in the valley where Joyce lived, but that also Joyce's cabin would be Mr. Garven's most convenient home. He accordingly called in Mrs. Murphy, and giving her needful instructions, she returned, and whilst Joyce and his daughter partook of a meal of hot buttermilk and potatoes, packed such things as could be well spared from his own scanty housekeeping. When these were ready, they were carried down to the corvagh, and there, receiving Mr. Sullivan's last instructions his blessing, and his promise to be with them on the day Mr Garven would reach Lisnomara, Joyce and his daughter departed on their way home, the setting sun sinking on the sea, so that the oars seemed not to dip in water, but into molten gold!

A small one-sail boat, hired in Galway Bay, and manned by three young Galway fishermen and a boy, brought Mr Garven to Lisnomara on the appointed day. Though he arrived early, for the boat had sailed from Galway the previous afternoon, such a gathering as that which met him on the shore of the headland, and accompanied him to Joyce's cabin in the mountains, was not remembered by one in Lisnomara, and this too of the class Joyce's messengers had summoned, for the more abject class of peasantry, understanding that nothing would be given, held aloof lest they should be entrapped into some forced system of labour. One good, however, had been effected by the meal Joyce had bestowed—it left them peaceable, as from the source whence one dole had come another might follow. As Joyce's cabin would not contain a tithe of the people, it was soon agreed to hold the meeting in the

* Plenty of evidence to this effect may be gathered from the Parliamentary Report on Lord Devon's commission. One of the first things Lord George Hill had to do, at Gweedore, in Donegal, was to teach the people how to dig.

open air on the flat-turfed border of the mountain lake, particularly as the day for that declining season was unusually fine. Garven was just the man to address a gathering of the kind—men bowed down by poverty and dispirited by calamity, yet deeply attached to the soil. Knowledge was what they needed—and knowledge of the best plain practical sort, suited to the climate, the soil, and their peculiar position as occupiers of the land, was what he could give.

With a deep insight into the influences which govern rude, uneducated, yet clear-headed men, he began by telling them somewhat of his own history. How he was born in Ireland, and taken thence to England, when quite an infant. How his parents had died there; how from a parish apprentice to a farmer, he had become a ploughboy earning wages, from that to be a general farm servant, and so on progressively till he was raised to the post of under-steward. How in this position he had saved money, which enabled him to procure further instruction from some of the best practical farmers of England and Scotland. How when so capable, he filled the situation of steward to a great and wealthy Irish landed proprietor; but that when once he had witnessed the misery and degradation of his countrymen all other personal considerations became mean, compared with the growing desire of assisting to clear away the dense ignorance, and for this reason squalid misery, of the small Irish farmer. For this purpose he gave up his valuable and lucrative post, and engaged himself as one of the employed instructors of the Royal Agricultural Improvement Society of Dublin; and in such capacity he had already traversed immense tracts of country, and had come amongst them, the tenant-farmers of Lisnomara, to teach them, as a mother teaches her children, confident that Ireland would yet be as prosperous as by nature she was fertile, when once her people were taught to make use of the wealth which was theirs.

He then, in the simplest language, told them what improved agriculture had done for England. That the introduction of green crops there marked an era in the country's history, and a change in the condition of the people, which no mere improvements of an ordinary character could have effected, as they had doubled and tripled the supply of food and the productive power of the soil. He then described what green crops were—the turnip, the carrot, the cabbage, and beet root, amongst others; and, finally, remarked that the turnip was the vegetable which had so largely aided the advance of agriculture, and the supply of food to the people.

"What, thin, is this wonderful thurnip, will yer honour plase till us?" cried several small tenant-farmers of the remoter islets—a fine race, though gaunt and abject through poverty and hunger.

As plainly as he could, Mr. Garven described what the turnip was, its cultivation and uses, and how this vegetable, with the others mentioned, had, by permitting a rotation of crops, done away with the old system of fallows; as it was found that, through a due attention to the course of succession and the use of manures, those particles which one vegetable extracted from the soil were replaced during the growth of another, and thus production was carried on, and fertility secured. He said all this in plainer language than we can give in a mere abstract of his address to those poor farmers of Lisnomara, who often, where the English words appeared difficult to their understanding, asked to have them re-delivered in the Irish dialect of Galway. So at last all present fully understood that other things beside the potato were given for the food of man; and that Ireland, till she raised her people above a slavish dependence on one root, through a succession of green crops eminently suited to her climate and soil, would be never wholly free from famine and its consequences.

Two-thirds of the people—chiefly those from the more inaccessible mountain valleys and islets of the district—were amazed and at first almost incredulous at what they heard; the potato was all they knew of—no tidings had ever reached them that such marvels as turnips and then like existed in the stores of nature.

Mr. Garven then went on to speak of farming in general; draining, trenching, digging, ploughing, harrowing, manuring, sowing; and the best system to be pursued with respect to their own small occupations.

"But sure, yer honour," interrupted several farmers at once, "it's good to be hearin what may be done wid the land; but a bit o' tachin' wid yer own hand would be life and sowl to us."

"You shall have it, if you wish it, in the best manner my time will afford," was Mr. Garven's answer. "On my way from the shore here I arranged with your good priest, Mr. O'Sullivan, to stay a fortnight or three weeks in this part of Lisnomara; and showing Joyce how to work his farm, such as desire—and I hope many present do—will come and take a practical lesson. What is more—I will visit some of your farms, and give further discourses on general farming business."

The ready response spoke favourably in behalf of the general wish to be instructed. But a difficulty started itself in the minds of many. It passed verbally from bystander to bystander, and was at last put in the form of a general question to Mr. Garven: "Sure God's goodness was grate in feedin' his people wid many things, but where were the likes o' thim to git the seed?"

Mr. Garven begged them to keep their minds easy. He had brought with him from a benevolent gentleman importer in Galway, to whom he had spoken of the deep poverty in Lisnomara, a plough, some spades, and a small sample of seed-corn for present service; and further, when he had shown them practically the best use of both spade and plough, there was a fund in Dublin which supplied green crop seed at half the first cost; and to this fund he would apply in their behalf, when he had tested the character of their desire for improvement. They could not begin to sow green crops till February; it was now October, and it was not till the first week in July that turnips, for winter fodder, were sown.

At the conclusion of his address Mr. Garven walked over the valley with Mr. O'Sullivan, Joyce, and the other farmers, and marked out the site of his coming practical lessons. From thence he returned to the shore of the headland, to see how far applicable the marine weeds and friable rock were as manures, and found both excellent. Here Mr. O'Sullivan, as well as some of the poor tenant-farmers of the adjacent islets, departed on their way home, when a day had been fixed for the first practical lesson, and the rest, with the three fishermen who had brought the boat from Galway, followed Mr. Garven and Michael Joyce back to the valley, to share such good cheer as the poverty of the poor farmer could afford.

(To be resumed in the next Number.)

LETTERS FROM CALCUTTA.—No. IV.*

In our early intercourse with the natives of India, there is no subject that comes more frequently before us, or is more troublesome, than caste—and especially as regards our domestic servants. Our ignorance, and the advantage they take of it, invest it with much more importance than it really possesses; because, though the divisions of labour are kept very distinct, yet there are many things which they lead a new-comer to suppose nothing would induce them to do, which nevertheless they would not dream of refusing to a person well acquainted with them.

The word *caste*, from the Portuguese *casta*, is the English synonyme for the Indian word *zat*, meaning sect, class, or tribe, and refers particularly to hereditary religious sects, each having peculiar laws regarding meats and purifications. As the food eaten by one caste is impure to another, it prevents social intercourse to a very great extent; and in the original constitution of the scheme and the high post assigned to the Brahmans, it bears evident marks of priestcraft. The subject of caste is far too extensive, and involves too much learned research, to render it practicable for me to give you a description of it in a short letter, and indeed I doubt if it would much interest you, but you may like to know that there were originally four divisions, viz.,

1. Brahman, priest or legislator.
2. Kshatriya, warrior
3. Vaisya, agriculturist and trader.
4. Soodra, servile.

* For the former letters, see The Working Man's Friend,

These are said to have proceeded severally from the mouth, arms, legs, and feet of Brahma, the Creator and Supreme God of the Hindoos. Two of these divisions only remain, the Brahman and the Soodra, while many assert that only Brahmans have pure descent, and that all others are without real caste; and so great is the change in their relative circumstances, that although they are still regarded with great veneration, yet many poor Brahmans serve opulent Soodras, and waiving, if not forgetting, their high pretensions, submit to the necessity of supplying their own daily wants.

There are thirty-six divisions of Soodras, the highest being the Vaidya, or medical men, and the lowest Mulicha, a sect who make no distinction of clean or unclean food. Among these they include all whose sacred writings are in any other language than Sangskrit, or, in fact, whose manners differ from those of the Hindoos; and the name is therefore very politely applied to the Europeans. Family names generally determine to what caste the individual belongs, and some are distinguished by necklaces and bracelets, while the Brahmins and a few of the higher classes of Soodras wear the Poita, or Brahminical thread.

There are five religious sects among the Hindoos, and these are distinguishable by certain marks on their faces made by various-coloured clay, and which by no means improve their general appearance. In fact, a tattooed New Zealander can scarcely look more uncivilised and revolting than many a proud Rajah whom I have seen returning from making offerings at the shrine of his god, and thus disfigured by the officiating priest. The inhabitants of India seem infatuated in their attachment to these social distinctions, for even the Mussulmans, who constitute a very large and in many parts the most influential portion of society, have adopted them, and impose on themselves the burden of observances from which they were originally free. The influence association, which has subjected the Mussulmans to the restrictions of caste, has, on the other hand, introduced from Persia and Arabia into Hindoo society the practice of polygamy and the seclusion of women

In the present day, the original divisions (always excluding the priests) are replaced by a multitude of mixed castes, which generally coincide with trades—as, the carpenter caste, the brazier caste, &c. The children always follow the same trade as their parents, and marry among their own set; and so long as this state of things exists, there is for them no possibility of advancement. They are, however, something more than contented with these arrangements; the degraded Palkee-bearer would not, if he might, follow any other calling than that of his father, and the lowly sweeper is as proud of his broom, which is the emblem of his trade, as the Brahman is of his poita. All these castes make laws of their own which are maintained with great strictness, and they are held together as companies by hereditary chiefs, who settle all their disputes. Community of caste and trade generally go together, though a trade in one city will not always acknowledge common caste with that of another. Their laws are entirely opposed to all our notions of free-trade, progress, and individual liberty; and though apparently intended to protect, are productive of constant jealousies, quarrels, and injuries. When a man breaks any law, he is outcasted, and to procure re-admission is compelled to pay certain fees and give a dinner to the whole caste, which is often ruinously expensive. Of course, when a feast is desired or a private spite is to be gratified, a victim is soon found, for whom there is no escape, as it is held sufficient for the forfeiture of caste that one member should publicly accuse another, and he is excommunicated till he can clear himself and give a dinner. Individuals have been outcasted for not employing a sufficient number of Brahmans to perform the religious ceremonies, resembling Roman Catholic masses, which usually follow the death of a relative, and have been restored as soon as the money was paid. How clearly is the work of the priest seen here! Eating with persons of a lower caste, or intermarrying with them, or touching them publicly, or working for a member of another trade, and a variety of similar reasons, are deemed sufficient cause for excommunication. For a change of religion no penance will atone, and liberty of conscience is unknown among them. The only good thing in connexion with these unions appears to be the provision they are bound to make for all the sick and unemployed of their body. But they do not carry this too far, and when any member, even a nearest relative, is considered near to death from disease or old age, or has lived too long for their convenience, he is disposed of by being exposed on the banks of the Ganges, where, if not the jackalls, his mouth and nostrils are filled with sacred mud; or, worst of all, he is delivered to the Sunyassees, or burners of the dead, out of whose hands he cannot escape, as they pretend to believe that the soul will inevitably be lost if the subject survive this funeral visit to the sacred river. I heard a gentleman accuse a Hindoo of high rank of having murdered his father in this manner. "Ah!" said the smiling Rajah, "you do not understand our principles. We did it for his good: his soul went straight to heaven!" There is no doubt but that many a murder is committed under this cloak. Many instances might be recorded in which this strange superstition has served as a cloak for the gravest crimes, such as murder and parricide. A person who has thus lost caste being literally dead to the rest of the world, no inquiry is made into the causes or truth of his disappearance; and in most cases where he does escape, his return is unwelcome to his dearest relations. The following circumstances have recently occurred, and are in other respects singularly characteristic of Hindoo society:—

Some years since there lived in the south-eastern part of Bengal a Rajah who possessed very extensive estates and influence. He had an only son, whose mother died soon after his birth, and when the child was about eight years old, the Rajah married again. This second wife soon assumed a powerful influence over him. He appeared to become incapable of managing his own affairs, and in a very short period the whole of his estates were under the control of this woman and her uncle, who took the management of them. In a few years the Rajah died. It is a rule of Hindoo law that where there are no sons the estate belongs to the widow for life, but if a son survives, the widow is entitled only to maintenance. The Rajah's property was immense, and estimated to produce an annual income of several lacs of rupees, and the means adopted to secure it to the widow and her family were such as perhaps would have been ventured upon in no other country. The young Rajah continued to live with his stepmother, and is said to have been at that period—about twenty years ago—a strong and healthy child. At first he was treated with the consideration and honour due to the station he might be expected to occupy. After a little time his health began to fail, and the manner of his stepmother towards him was changed. He was fed with insufficient food and repeatedly chastised, till he became depressed in mind, and in a few years was reduced almost to idiocy. In this condition he was literally turned out of doors, and would have perished, but for the care of an old friend of his father, who, though a poor man, was the only one found with sufficient courage to brave the resentment of a powerful family. While residing with him, the circumstances of the case came under the notice of the magistrate of the district, who was, however, obliged to content himself with giving some pecuniary aid and sending his own medical attendant. After several visits, Dr ——'s suspicions were excited that there had been foul play, and at length he came to the conclusion that the young Rajah had been reduced to his present condition by a long course of ill treatment, and a systematic administration of a slow poison for the purpose of destroying his intellects and ultimately his life. No actual proof could be adduced, but the stepmother and her relations became alarmed, and again received the young Rajah as a resident in his own house, where they appeared to treat him with extreme care and kindness. He was now approaching his majority, which the Hindoo law fixes at sixteen years, and in the event of his attaining it, it would become necessary to deliver up the estates to him, as no rent could be recovered from the Ryots and tenants of the property without his authority. Before that period, however, the report was spread that the young Rajah had died. A costly funeral was prepared, and, in accordance with the family custom, the body was actually taken, accompanied by some of the stepmother's relations and a large body of dependants, to Sangor, the most sacred spot at the mouth of the Ganges, for the purpose of being burnt. It was then delivered to the Sunyassees, whom I have mentioned as a set of fanatic devotees, on whom the performance of this ceremony devolves; and the funeral rites having been commenced, the relations left the place to perform their own religious acts, and returned home. While the preparations for his burning were going on, the young Rajah, who had been under the influence of a strong opiate, revived. The Sunyassees, who were never before known to spare any human being, would not complete the burning of the poor victim: and as his caste was irrecoverably lost by the interruption of the funeral rites, they took him amongst themselves, intending, it is supposed, to initiate him into their own detestable community. He continued with them five or six years, during the

whole time in a state of almost hopeless idiocy, which probably caused his preservation, and which deprived him alike of a sense of his own sufferings and of the personal knowledge of the occurrences of this protracted period. At length his reason returned, and he went back to his native place to seek redress for his injuries and the punishment of his persecutors; but on his arrival there, and on his demanding his patrimonial estate, he was at once met with the charge that he was an impostor, that the real Rajah had been long since dead, and that his stepmother was the rightful possessor of his estates. The friend who had succoured him before was dead. He was told that if he had not been burnt he ought to have been so, and no one could be found to receive an outcast, or to incur the anger of a family known to be as unscrupulous as they were powerful. The magistrate and physician who had formerly aided him were gone to a distant part of the country, and amidst these disheartening circumstances he commenced a suit in the Civil Court at Madnapore, which has already lasted eight years, and with such a system of fraud and perjury as are universal in Hindoo proceedings, promises never to terminate.

THANKSGIVING FOR THE HARVEST

O THANKS, Thou Maker—Great Supreme!
For all thy works we see,
The heart's response, our highest theme,
Is great full praise to Thee
Thanks for Thy shade and sunlight blent
O'er heaven's cerulean dome,
Whereby Thy wondrous grace hath sent
A plenteous Harvest Home!

O thanks that in the spring time Thou
Didst give refreshing showers,
And hang thy bright o'er-arching bow
O'er Summer's fruits and flowers,
The morning ans, the dews of even,
The flashing streamlet's foam—
But chiefly that Thy grace hath given
A plenteous Harvest Home!

We bless thee for the radiant hours
That crowned our Summer's noon,
The sunny days, the fragrant flowers,
The still calm nights of June;
The streams that fertilising flowed,
With hopes of good to come,
But chiefly for thy gift bestowed,
A plenteous Harvest Home!

Thanks for the glorious forests all
That shade Thy creatures so,
The hills from whence the waters fall
To fruitful vales below,
The cattle in the silent vales,
Delighting still to roam,
The flowers, the fruits, the ripened sheaves—
A plenteous Harvest Home!

While fanning airs their odours breathe
O'er all our fields so fair,
The daughters of our land shall wreathe
The wheat-ears in their hair,
And fairy feet the dance prolong
While mirth and gladness come,
And grateful voices hymn the song
Of glorious Harvest Home!

Outbreaking thanks and grateful praise
In every breast be found,
That Thou did'st precious treasures raise,
To bless the fertile ground,
That Thou did'st cause each open field
A sea of corn become,
And to thy breathing creatures yield
A plenteous Harvest Home! *W. Sinclair.*

KNOWLEDGE is not mental power. The mind is not formed in cells, but in free social action with affairs, interests, and temptations, which call forth the exercise of judgment, reflection, moral restraint, and right principle.

A SKATER CHASED BY WOLVES.

SOME winters ago I sallied forth one evening, to skate on the Kennebec, in Maine, by moonlight, and having ascended that river nearly two miles, turned into a little stream to explore its course. Fir and hemlock of a century's growth met overhead, and formed an archway radiant with frostwork. All was dark within; but I was young and fearless, and, as I peered into an unbroken forest that reared itself on the borders of the stream, I laughed with very joyousness; my wild hurrah rang through the silent woods, and I stood listening to the echo that reverberated again and again, until all was hushed. Suddenly a sound arose, it seemed to me to come from beneath the ice; it sounded low and tremulous at first, it ended in a low, wild yell. I was appalled. Ne before had such a noise met my ears. I thought it none than mortal, so fierce, and amidst such an unbroken solitude, it seemed as though from the tread of some brute animal, and the blood rushed back to my forehead with a bound that made my skin burn, and I felt relieved that I had to contend with things earthly and not spiritual, my energies returned, and I looked around me for some means of escape. As I turned my head to the shore, I could see two dark objects dashing through the underbrush at a pace nearly double in speed to my own. By this rapidity, and the short yells they occasionally gave, I knew at once that these were the much dreaded grey wolf.

I had never met with these animals; but, from the description given of them, I had very little pleasure in making their acquaintance. Their untameable fierceness, and the untiring strength which seems part of their nature, render them objects of dread to every benighted traveller.

There was no time for thought, so I bent my head and dashed madly forward. Nature turned me towards home. The light flakes of snow spun from the iron of my skates, and I was some distance from my pursuers, whence their fierce howl told me I was their fugitive. I did not look back; I did not feel afraid, or sorry, or even glad, one thought of home, of the bright faces awaiting my return, of their tears if they should never see me again; and then every energy of body and mind was exerted for escape. I was perfectly at home on the ice. Many were the days that I had spent on my good skates, never thinking that at one time they would be my only means of safety. Every half minute an alternate yelp from my ferocious followers told me too certainly that they were in close pursuit. Nearer and fearer they came, I heard their feet pattering on the ice nearer still, until I could feel their breath and hear their snuffling scent. Every nerve and muscle in my frame was stretched to the utmost tension. Th along the shore seemed to dance in the uncertain light, and my brain turned with my own breathless speed; yet still they seemed to hiss forth their breath with a sound truly horrible, when an involuntary motion on my part turned me out of my course. The wolves, close behind, unable to stop, and as unable to turn on the smooth ice, slipped and fell, still going on far ahead; their tongues were lolling out, their white tusks glaring from their bloody mouths, their dark, shaggy breasts were fleeced with foam; and as they passed me, their eyes glared, and they howled with fury.

The thought flashed on my mind, that by this means I could avoid them—namely, by turning aside whenever they came too near, for they, by the formation of their feet, are unable to run on the ice except in a straight line.

At one time, by delaying my turning too long, my sanguinary antagonists came so near that they threw the white foam over my dress as they sprang to seize me, and their teeth clashed together like the spring of a fox-trap.

Had my skates failed for one instant—had I tripped on a stick—or caught my foot in a fissure in the ice—the story I am now telling would never have been told.

I thought all the chances were over; I knew where they would take hold of me if I fell; I thought how long it would be before I died, and then there would be a search for the body that would already have its tomb; for O! how fast man's mind traces out all the dread colours of death's picture, only those who have been so near the grim original can tell!

But I soon came opposite the house, and my hounds—I knew their deep voices—rouse by the noise, bayed furiously

from the kennels. I heard their chains rattle: how I wished 'they would break them!'—and then I should have protectors that would be peer to the fiercest denizens of the forest. The wolves, taking the hint conveyed by the dogs, stopped in their mad career, and, after a moment's consideration, turned and fled. I watched them until their dusky forms disappeared over a neighbouring hill; then, taking off my skates, wended my way to the house, with feelings that may be better imagined than described. But, even yet, I never see a broad sheet of ice in the moonshine without thinking of the snuffling breath and those fearful things that followed me so closely down the frozen Kennebec.—*Evenings at Donaldson's Moor.*

THE LION ENTRAPPED.

Among the animals in the public gardens at Cape Town, says a recent traveller, was a real wild lion, not long taken, and bearing his imprisonment with a very bad grace, having received from nature an irritable disposition, not improved, perhaps, by the deceit practised in his capture. He had been taken somewhere on the northern frontier when full grown. The lion is particularly fond of Hottentot flesh—probably from its being of a more gamy flavour than other meat. A Hottentot in the service of a boer, had frequently observed that he was followed by a lion, probably from his possessing in a higher degree than others of his race, the relish which the lion delighted in. As the man naturally desired to be relieved of these polite attentions, he readily lent himself to a scheme for capturing his enemy. There was a hill in the neighbourhood of the boer's house, which sloped gradually on one side, and ended in a precipitous cliff on the other. This seemed a favourable spot for this experiment. A strong net was made, something in the nature of a cabbage-net, of two-inch rope, and the meshes sufficiently small to prevent the lion from dropping through. A very strong rope was then run through the upper meshes, and fastened to stakes driven into the ground at the edge of the cliff, the net hanging down over the precipice, and its mouth kept distended by slender rods or branches, not of sufficient strength to impede the lion, but merely to keep open the mouth of the purse which was to receive him.

All things being ready, the Hottentot went about his usual avocations, keeping, however, a bright look out for his would-be consumer, and taking especial care to avoid the bush and keep in the open plain as much as possible. One afternoon he felt, rather than saw, that the lion was on his trail—his senses being, no doubt, sharpened by consciousness of his own attractions. He was along way from home and from the trap, and it became a question whether the lion would not waive ceremony, and run in upon him before he could reach it. He hastened anxiously forward, turning round occasionally to see how his pursuer got on. The lion kept his motion concealed as well as the ground permitted him to do so, stealing with belly crouched to the ground, and, when the Hottentot stopped, lying down till he resumed his walk—his large muzzle resting on his paws, and his ample mouth watering with the expected enjoyment; while just the very end of his tail was flirted convulsively to and fro, indicating the seriousness of his intentions.

The faster the Hottentot got on the nearer the lion approached him—probably the better to enjoy the whiff of his coming meal, as we find the smell of the kitchen becomes more savoury as the meat gets hot. The Hottentot is now ascending the hill, and the guest invited to dine upon him scarcely twenty yards behind, lashing his tail, and anxious to sit down to dinner. The Hottentot goes over the edge of the cliff, slipping down between the net and the rock to a place contrived for him, but pausing, to give the lion a notion that he was sitting down to rest himself; then, depositing his hat upon the very edge, hastened to his hiding-place. The lion, seeing the hat stationary, naturally imagines that the man is below it, and, crawling up to within a few yards, makes his spring. Finding nothing to stop him, over the cliff he goes right into the purse-net, which sinking with his weight, draws the ropes tight, and he hangs suspended in his net. Plenty of assistance is, of course, at hand, and with strong ropes the lion's legs are tied, and he is put into a waggon and brought to Cape Town, where I saw him fretting, no doubt from the trick which had been played him.

SCENERY OF LAKE SUPERIOR.

Few portions of America can vie in scenic attractions with this interior sea. Its size alone gives it all the elements of grandeur, but these have been heightened by the mountain masses which nature has piled along its shores. In some places these masses consist of vast walls of coarse gray or drab sandstone, placed horizontally until they have attained many hundred feet in height above the water. The action of such an immense liquid area, forced against these crumbling walls by tempests, has caused wide and deep arches to be worn into the solid structure at their base, into which the billows rush with a noise resembling low pealing thunder. By this means, large areas of the impending mass are at length undermined and precipitated into the lake, leaving the split and rent parts from which they have separated standing like huge misshapen turrets and battlements. Such is the varied coast called the Pictured Rocks.

At other points of the coast volcanic forces have operated, lifting up these level strata into positions nearly vertical, and leaving them to stand like the leaves of an open book. At the same time, the volcanic rocks sent up from below have risen in high mountain piles. Such is the condition of things at the Porcupine Mountains.

The basin and bed of this lake act as a vast geological mortar, in which the masses of broken and fallen stones are whirled about and ground down till all the softer ones, such as the sandstones, are brought into the state of pure yellow sand. This sand is driven ashore by the waves, where it is shoved up in long wreaths till dried by the sun. The winds now take it up and spread it inland, or pile it immediately along the coast, where it presents itself in mountain masses. Such are the great Sand Dunes of the Grande Sables.

There are yet other theatres of action for this sublime mass of inland waters, where it has manifested perhaps still more strongly, if not so striking'ly, its abrasive powers. The whole force of the lake, under the impulse of a north-west tempest, is directed against prominent portions of the shore, which consist of the black and hard volcanic rocks. Solid as these are, the waves have found an entrance in veins of spar or minerals of softer structure, and have thus been led inland, and torn up large fields of amygdaloid and other rock, or left portions of them standing in rugged knobs or promontories. Such are the east and west coasts of the great peninsula of Keweena, which has recently become the theatre of mining operations.

When the visitor to these remote and boundless waters comes to see this wide and varied scene of complicated attractions, he is absorbed in wonder and astonishment. The eye, once introduced to this panorama of waters, is never done looking and admiring. Scene after scene, cliff after cliff, island after island, and vista after vista, are presented. One day's scenes are but the prelude to another, and when weeks and months have been spent in picturesque rambles along its shores, the traveller has only to ascend some of its streams and go inland to find falls and cascades, and cataracts of the most beautiful or magnificent character. Go where he will, there is something to attract him. Beneath his feet the pebbles are agates. The water is of the most crystalline purity. The sky is filled at sunset with the most gorgeous piles of clouds. The air itself is of the purest and most inspiriting kind. To visit such a place is to draw health from its purest fountains, and to revel in intellectual delights.—*Henry Rowe Schoolcraft.*

Truth. The temple of truth is built indeed of stones of crystal, but, inasmuch as men have been concerned in rearing it it has been consolidated by a cement composed of baser materials. It is deeply to be lamented that truth herself will attract little attention, and less esteem, until it be amalgamated with some particular party, persuasion, or sect; unmixed and unadulterated, it too often proves as unfit for currency as pure gold for circulation. Sir Walter Raleigh has observed, that he that follows truth too closely must take care that he does not strike out his teeth; but he that follows truth too closely has little to fear from truth, but he has much to fear from the pretended friends of it. He, therefore, that is dead to all the smiles and to all the frowns of the living, he is equal to the hazardous task of writing a history of his own times, worthy of being transmitted to times that are to come.

FOR THE YOUNG

THE DEATH'S-HEAD MOTH.—This creature was formerly considered as one of our rarest insects, and it was doubtful whether it were truly a native of this country, but for the last thirty years it has become much more common. By naturalists it is called *acherontia atropos*. The changes of this insect are very uncertain—the larva will sometimes become the chrysalis in July, and produce the moth in October, but generally the chrysalis remains unchanged till the ensuing summer. The larva, or caterpillars, excite attention by their extraordinary size, being not unusually five inches in length, and as thick as a man's finger. Superstition has been particularly active in suggesting causes of alarm from the insect's aid—the yellow and brown-tinted moths, the death's-head, snails crickets, and all beetles, are in some way connected with man's fears, and in many instances have awakened terror and dismay. And the death's-head moth is one of these ominous insects. The markings on its back represent, to the fearful imagination, the head of a skeleton, with the limb bones crossed beneath, its cry becomes the voice of anguish—the moaning of a child—the signal of grief, it is regarded not as the creation of a benevolent being, but the device of evil spirits—spirits enemies to man, conceived and fabricated in the dark, the very shining of its eyes is thought to represent the fiery element from whence it is supposed to have proceeded. This insect has been thought to be peculiarly gifted in having a voice, and in squeaking like a mouse; but no insect that we know of has the requisite organs to produce a genuine voice. They emit sounds by other means, probably all external. The grasshopper and the cricket effect their well known and often wearisome chippings by grating their thighs against their wings, and this *acherontia atropos* appears to produce the noise it at times makes by scratching its mandible against its horny chest.

EAGLES.—Eagles are found in Ireland, in the Faroe Isles, in Shetland, in the Orkneys, in the Western Isles, on the wild and rocky shores of the west of Scotland, and in many other places. They are a numerous race, and are remarkable, not only for their superior strength, but for superior powers of endurance. Over the fresh-water pools and morasses the eagles hover, attacking the water fowls and small quadrupeds, and sometimes sheep and deer, especially in the early part of the season, when those animals are weak and sickly.

"High o'er the watry uproar, silent scene,
. . . . . sailing sedate, in majesty . . . .
Glides the bald eagle, gazing calm and slow,
O'er all the horrors of the scene below,
Where the huge stag upon the rocks lies dead."

The golden eagles inhabit the pinnacles of the rocks. Their eyries are placed upon some wild elevation. The place is in general slippery with the refuse of their prey, and when the young are there is stored with provisions. It was a popular belief that, when an eagle perceived its young ones so well grown as to venture upon flying, it hovered over their nest, and excited them to imitate it, and take their flight, but when it saw them weary or fearful, it would take them upon its back and carry them, so that the fowler could not hurt the young without piercing the body of the old one. In allusion to the care of the eagle, it is said, Exod. xix. 4, that God bore his people upon eagles' wings. Among the fishing eagles, the ash-coloured eagle (*A. Cinereus*) is common to many places on the seaborders of England. It is often called the hire-tailed eagle, from the colour of its tail. The sea-eagle of England is called (*aquila ossifraga*), or the bone-breaking eagle. There is one species of eagle which has its head quite bald. Eagles were declared unclean by the law of Moses—Lev. xi. 13. It was supposed that they lived and retained their vigour to a great age moulting even then, and "renewing their strength." The eagle is, indeed, a splendid bird, the true bird of poetry, contending with the mountain storm, while he sits upon the pinnacle of the rock, beaten by the wind and pelted by the snow.

SWALLOWS.—When the swallows and other small birds are congregated for their departure, about the end of September, the instant a hawk makes his appearance, they troop after him, apparently exposing themselves to unnecessary danger, but in reality, it should seem, with the design perplexing and distracting their enemy by their numbers, their perpetual changes of direction, and their uniform endeavours to rise above him—indeed, he is usually, in such cases, completely out-manœuvred and baffled, being unable to fix upon the single victim; and, after exerting all his address, he is often compelled to relinquish the pursuit.

THE CRICKET.—Those who have attended to the habits of the hearth-cricket (*gryllus domesticus*), know that it passes the hottest part of the summer in sunny situations, ensconced in the crevices of the walls and heaps of rubbish. It quits its summer abode about the end of August, and fixes its residence by the fireside of the kitchen or cottage, where it multiplies its species, and is as merry at Christmas as other insects are in the dog-days. Thus do the comforts of warm hearth afford the cricket a safe refuge, not from death, but from temporary torpidity, which it can support for a long time when deprived by accident of artificial warmth. If a colony of crickets, for example, be deprived in winter of the usual warmth of the fire around which they are established for some weeks, they will all disappear into their holes and hiding-places, but no sooner is the fire re-lit, and warmth diffused, than the crickets again begin to bestir themselves, and shake off their torpor.

INVENTORS.

Gaze on the lonely thinker in his cell—
One with the noblest gift of God endowed,
A mind by which the elements are bowed
To do the work of man, and serve him well!

. . . . . mals of remotest time may tell
Of mighty benefits to mortals done
By thoughts, which from this solitary one,
In naked strength, like gems new-quarried, fell.
But shall he reap in life rewarding fame,
And have due laurels planted on his grave?
Too oft he is the lake amid the hills,
Untalked of and unseen, the while its rills
Feed noble streams that ample honours have
From those who of the source know not the . . . .

HUMOROUS SELECTIONS.

THE DEGREES OF COMPARISON.—"Gentlemen," exclaimed a chartist at a public meeting, during a foaming speech about the "five points" and the charter, "is not one man as good as another?"—"Uv coorse, he is," shouted an excited Irishman in the crowd, "and a good deal better."

BETTER TURN OVER A NEW LEAF.—It being reported that Lady Caroline Lamb had, in a moment of passion, knocked down one of her pages with a stool, the poet Moore, to whom this story was told by Lord Strangford, observed, "Oh nothing is more natural for a literary lady than to double down a page. "I would rather," replied his lordship, "advise Lady Caroline to turn over a new leaf."

A LAWYER'S TOAST.—At a recent dinner of a provincial law society, the president called upon the senior solicitor present to give as a toast the person whom he considered the best friend of the profession. "Then," responded the experienced solicitor, "I'll give you the man who makes his own will."

A PUZZLE ABOUT NOTHING.—We clip the following out of an exchange paper, which fathers the trifle upon Dr. Whewell—

You 0 a 0, but I 0 you,
O 0 no 0, but O 0 me,
O let not my 0 a 0 go,
But give 0 0 I 0 you so!

The solution turns on the word *cypher*.

You *sigh-for* a *cypher*, but I *sigh-for* you
O *sigh-for* no *cypher*, but O *sigh for* me
O let not my *sigh for* a *cypher* go,
But give *sigh for sigh, for* I *sigh-for* you
so.

A WISH.—An advertisement in a London paper seriously announces a new song with the modest request, "Oh, give me back but yesterday!" A companion to the above, "Oh, could you spare tomorrow, love?" is in preparation, to be afterwards followed by the sequel lyric of "You havn't got such a thing as next week about you, have you?"

ANECDOTE OF CURRAN.—During one of the circuits, Curran was dining with a brother advocate at a small inn kept by a respectable woman, who, to the well ordering of her establishment, added a reputation for that apt and keen reply which sometimes supplies the place of wit. The dinner had been well served, the wine was pronounced excellent, and it was proposed that the hostess should be summoned to receive them compliments on her good fare. The Christian name of this purveyor was Honoria, a name of common occurrence in Ireland, but which is generally abbreviated to Honor. Her attendance was prompt, and Curran, after a brief eulogium on the dinner, but especially the wine, filled the bumper, and handing it, proposed a toast, "Honour and Honesty." His auditor took the glass, and with a peculiar, arch smile, said, "Our *absent* friends," and having drank off her amended toast, she curteseyed and withdrew.

JONES ASTONISHED.—A quaint old gentleman, of active stirring disposition, had a man at work in his garden who was quite the reverse. "Mr Jones," said he to him one morning, "did you ever see a snail?"—"Certainly," said Jones. "Then," said the old boy, "you must have met him, for you could never overtake him."

NEW AND INTERESTING PUBLICATIONS

ISSUED BY

JOHN CASSELL, 335, STRAND, LONDON

AND SOLD BY ALL BOOKSELLERS.

r Publishing, in Weekly Numbers, at 2d, and Monthly Parts, of Four Numbers, price 8d.; Five Numbers, price 10d,

THE ILLUSTRATED EXHIBITOR, a Tribute to the World's Industrial Jubilee —

of One Hundred Thousand. It may ly be termed the Literary and Pictorial Wonder of the Age. Though published at Twopence, h Number is filled with well-executed Engravings of objects and scenes in the Great Exhibition of All Nations "The Illustrated Exhibitor" will form a monumental record of the orld's Industrial Jubilee, which every family ght to possess The Monthly Part for October, ce Lightpence, contains upwards of One Hundred Engravings of Machinery, Works of Art, ulpture, Needlework, &c. together with an teresting Description of the Manufacture of tton, with accurate Illustrations of the Machinery employed; also of the Machinery used in e production of Nottingham Lace, &c.

Parts I., II., and III., forming One Book, containing nearly 300 Engravings, price 2s 2d, as w ready.

NOTICE TO ADVERTISERS —The e Illustrated Exhibitor duable medium for Adver ed by the 18th o ch month.—Circulation, 40,000.

Thirty-first Thousand, Fourth Edition, p Orders etc.,

THE LONDON CONDUCTOR —The Strangers' and Visitors' Guide rough London Embellished with a splendid ap of the Metropolis and its Suburbs, measuring inches by 22, also Engravings of the principal uildings in London. This work will guide the isitor to every place of Amusement, and to every xhibition

ription of each, with every other necessary dculated to make the Stranger mliar with DITION, 9d

A FRENCH EDITION of the LONDON ONDUCTOR is also published, price 1s. 6d.

COMMERCIAL, POLITICAL, AND RELIGIOUS FREEDOM

THE STANDARD of FREEDOM is one of the most talented and vigorous of Liberty, Commercial, Politic , d Religious As a Family Paper, it blends the seful with the entertaining, giving not only the tate of the Provision Markets, but a judicious nd instructive Digest of Weekly Occurrences, nd Notices of every Movement and Invention ikely to advance Social Progress or to increase Domestic Comfort As a Commercial Paper, it eports faithfully the fluctuations of the Markets, onditions of Agriculture, Trade, &c As a Journal of Philanthropy and Morals, "The Standard of Freedom" presents its sympathy with all the efforts that are now made, either to advance ducation, to abate the rigours of the Penal Code, to promote the Temperance Movement, to establish Peace and Universal Brotherhood, to luminish Pauperism, Juvenile Delinquency, and riminal Crime, or to maintain and perpetuate the practice and existence of Religious Truth — "The Standard of Freedom" is published regularly every week, price 5d.—A Country Edition is published on Friday Evening, for delivery in the Provinces early on Saturday Morning A Town Edition is published on *Saturday Morning*, in time for the Morning Mails; and a Third Edition is issued at three o'clock, containing the Latest Intelligence, Foreign and Domestic, down to the *hour of going to press.*

It is requested that all who wish to take in "The Standard of Freedom" will give an order to the nearest Newsvender or Bookseller; or it can be ordered direct from the Publisher, by sending a quarter's subscription, 5s 5d., in advance. All Money-orders to be made payable to the Proprietor, JOHN CASSELL 335 Strand.

JOHN CASSELL'S LIBRARY.

Now ready, in stiff covers, price 7d., Vol. II. of

A NEW and POPULAR HISTORY of IRELAND, derived from Authentic Sources. The Two Vols. in One, neatly bound in cloth, 1s. 6d —This work will be found to be not only one of the cheapest, but the most compendious and interesting History of Ireland ever published.

THE NATURAL HISTORY of MAN; or Popular Chapters on Ethnography By the Rev. JOHN KENNEDY. With Illustrations Price 1s. 6d., neatly bound in cloth, and lettered.

THE GREATNESS of the BRITISH EMPIRE traced to its SOURCES By BENJAMIN PARSONS. Complete in Double Volume, neatly bound in cloth, 1s. 6d.

THE PEOPLE'S BIOGRAPHICAL DICTIONARY · a Picture Gallery of Great Men of all Ages and Countries; especially of such as have lived within the Last Century, and by their own efforts raised themselves and benefited their species By J. B. BEARD, LL.D Complete in Two Double Volumes, containing upwards of 600 pages, 2s 10d., neatly bound in cloth

THE NEW and POPULAR HISTORY of ENGLAND By Dr R FERGUSON. Complete in Two Double Volumes, cloth, 2s 10d. Or, on fine paper, with a Portrait of the Author, in One Volume, elegantly gilt, 4s.

SAILINGS OVER the GLOBE; or, the Progress of Maritime Discovery. Complete in One Double Volume, bound in cloth, 1s 4d.

FOOTPRINTS of TRAVELLERS Co bound in cloth, 1s

The above include the whole of the Works at present published in this LIBRARY The "History of Ireland," just completed, will be followed (on Nov 1) by the First Part of

NEW and POPULAR HISTORY of SCOTLAND. By Dr. ROBERT FERGUSON, of Ryde, Isle of Wight.

THE WORKING MAN'S FRIEND FROM THE COMMENCEMENT —The First Seven Volumes of this extraordinary work are now ready, price 1s. 6d. each volume, neatly bound in cloth and lettered They contain a great number of Original Papers bearing on the Condition, Character, and Conduct of the Working Classes; interesting Narratives illustrative of the Trials, Sufferings, and Virtues of Operatives; a Series of Familiar Lessons in the French Language, and a large collection of Miscellaneous Articles, in prose and verse, alike interesting and instructive

THE LITERATURE of WORKING MEN, being a Monthly Supplement to "The Working Man's Friend," price 1d. Each Number contains articles on subjects exclusively contributed by Working Men; thus tending to elevate and develop the Intellectual Capacity of the Industrial Class

Now ready, in a neat wrapper, price 6d.,

A SERIES OF LESSONS IN FRENCH, on an entirely Novel and Simple Plan, by means of which a perfect Knowledge of the French Language may be acquired without the Aid of a Teacher. Reprinted in a revised form from "The Working Man's Friend."

ALMANACKS FOR 1852

THE ILLUSTRATED EXHIBITOR ALMANACK, price 6d, will be ready for delivery with the Magazines for November, and will form a superb book of reference and ornament to the table. It will contain the following SUPERB ILLUSTRATIONS Twelve of Phenomena, or Remarkable Appearances of nature, Twelve beautiful Engravings, designed by Harvey, of the Months of the Year, as observed in various Nations, namely, January, New-Years' Gifts in China, February, Sledging in Russia; March, Peat-cutting and carrying in Ireland, April, the Harvest in Palestine; May, Fruit Market in Paris, June, Hayfield in England; July, Mountain Pastures in Norway, August, Return from the Vintage in Italy· September, the Emigrant, Canada, October, Orange Gathering in the Azores, November, Deer-Stalking in the Highlands of Scotland, December, the Christmas Tree, Germany; also, the Four Seasons of the Year, by Tony Johannot—A View of the Champs Elysées, Paris—Twelve Engravings (from Drawings in the Cottonian Library) of the Anglo-Saxons during the Twelve Months—The Twelve Signs of the Zodiac—Foucault's Experiments to prove the Rotation of the Earth—The Avalanche—The Eternal Worker, &c The original matter will consist of articles explanatory of the above-named Engravings, in addition to which will be given the Calendar, Astronomical Notices, Eclipses, Lists of Members of both Houses of Parliament, Government and Civic Officers, Bankers, Post-office Regulations, the Census of 1851, Abstracts of Recent Acts of Parliament, and other matters interesting to Tradesmen, Families, &c.

THE ILLUSTRATED PROTESTANT DISSENTERS' ALMANACK is in course of preparation, and will be published Nov 1, price 6d —A new and striking feature in the popular

rial Illustration, accompanied by Reflections of the most Remarkable Events in History of Protestant Nonconformity Almanack will contain—in addition to the C dar, Eclipses, Astronomical Notices, and the many other points to which

of Protestant Dissenters, with the Bun and Educational Institutions supported by the Lists

and Marriages recorded and selected, illustrative of the Progress of Civil and Religious Liberty In order to render the "Protestant Dissenters' Almanack" truly a Keepsake, the page will be larger than those of the previous years, the paper and typography will be correspondingly improved, and the whole will be presented in such a style as to render it worthy of preservation in every Nonconformist Family

THE PENNY ILLUSTRATED PEOPLE'S ALMANAC

This Almanack, in addition to the usual matter, a correct List of Fairs, &c, contains a series of original articles on subjects deeply interesting to the British People, and numerous Pictorial Illustrations. A liberal allowance to the Trade

THE TEMPERANCE PENNY ALMANACK, with Pictorial Illustrations and several articles explanatory of the Principles and Progress of the Teetotal Movement, will be ready shortly The Members of every Temperance Society should possess and circulate this Almanack

TWO ESSAYS on the Adaptation of Temperance to the Working

awarded by the Committee of the Temperance Society. Price 1s

Printed and published by JOHN CASSELL, at the Working office, 335, Strand, London. October 4, 1851.

THE

WORKING MAN'S FRIEND.

AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. I., No. 3.] SATURDAY, OCTOBER 18, 1851. [PRICE ONE PENNY.

REVOLUTIONARY LITERATURE.

IN the last number of the "Quarterly Review," under the general head of "Revolutionary Literature," a reference is made to THE WORKING MAN'S FRIEND AND FAMILY INSTRUCTOR. The "Quarterly" does us the honour of stating that the publication referred to "is the most respectable of its class." But it intimates that we are revolutionary; it hints the desirableness of such literature being—to borrow a phrase from Sir Peter Laurie—"put down;" and it calls on the ministers to save the Queen and the country from impending ruin. The writer seems a remarkably well-informed gentleman. Lamartine's conduct is actuated by envy and ambition. The Haynau affair was a regular attack organised by foreign democrats and their English [illegible]. Something terrible is coming—the writer does not know what. All he knows is that we are in a dreadful

The day is gone by when the dictum of a Quarterly Reviewer carried much weight with it. Poor Keats, were he alive now, would laugh it to scorn. It has long been deposed from its pride of place and power. "What, think the reader, has been our crime?" Why, that on the 20th of September we inserted an article on "The People and the Parliament," in which the draft of a petition is inserted

BLAST OF WEALTHY CHRIST. (*See Page* 36.)

stating that "after the high hopes excited in the breast of the nation, anything short of Household Suffrage, Universal Suffrage, as the case may be, will greatly disappoint the majority of non-electors, and beget feelings of distrust and discontent, which might be dangerous to the safety of society." And this is called revolutionary; and for writing this we are to be branded as dangerous men, and to be

ngu

discontent, would be dangerous to society. It is not we who are revolutionary, but such writers as those in the

a resolute denial of the great law of human progression. They change what might be a peaceful reform into a revolution, tinged with blood and crime. The world's history is but a repetition of this truth. With the traditions of ages in their favour, with their armed men, with their resources drained from the people, their rulers have too often played themselves in an antagonistic position, and rebellion has been the result. England has had its Stuarts; France its Bourbons. Had they read the signs of the times, had they done homage to the spirit of the age, in their hands would have been yet the sceptre, and their's would yet have been sovereign sway. That revolutions came and laid waste the earth; that their crowns tottered to their fall; that their sceptres were grasped by other hands, was attributable to them alone.

The literature of the people is not revolutionary. A people with a literature is only to be feared by the advocates of class legislation and wrong. In old times we had the swinish multitude; we had a people degraded and oppressed—demoralised by the vices of their superiors—scorned for the degradation which had been forced on them against their will. A long struggle took place before the man relinquished his birthright, and sank into a savage or a sot. Frederick the Great, the philosopher, writing to Voltaire, said—"I look upon the people as the herd of deer in a rich man's park, whose only business is to people the enclosure." Then came the revolutionary storm which in its fury burst on every land. The ancient landmarks were removed—ancient institutions were rooted up—ancient beliefs abandoned. In the language of scripture—"Old things had passed away—all things had become new." The storm over, the political emancipation of the people as an idea was achieved; and the people—no longer dumb, inarticulate, without intellectual life, conscious of its divine destiny—became what it is. The clouds of ignorance were dispelled—wisdom lifted up her voice in the streets—knowledge tabernacled on earth. Hence the spread of a literature for the people—suited to their wants and capacities—a literature they can buy and read and understand.

The *Times* says our cheap literature is a demoralised and a demoralising literature. The Quarterly Reviewer says it is a revolutionary literature. To both charges we give an emphatic denial. Our answer is, the charges are false. We appeal to the experience of men engaged largely in catering for the reading of the people, and we find them affirming the reverse. In the report of the select committee on newspaper stamps, recently published, we have some valuable testimony as to the preference by the people of good literature to bad. Mr. Whitty, the proprietor and editor of the *Liverpool Journal*, states, "that it is a very curious illustration of the appetite of the people for what is good and correct, that the whole of

the language up . . . think that the good will always drive out the bad, and that if you referred back ten or twelve years you would find that the penny scurrilous publications, instance the *Penny Satirist* and *Cleaves' London Gazette*, circulated to a large number, and that, inasmuch as they have been driven out of circulation, it has been by a better class." Mr. Morris, the manager of the *Times*, admitted that so far as newspapers are concerned, there has been an improvement in the press since the reduction of duty in 1836. Mr. Abel Heywood, the large paper of Manchester, also gave similar evidence. The increase in circulation was decidedly in the best papers—"I think," he continued, "that the good publications put down the bad. The bad publications are attempted, and they are carried on for a while under various methods, and after getting deeply into debt, they are obliged at last to go out, and perhaps knock up the publisher at the same time." Mr. Cassell also gave similar testimony. Now these men are quite as respectable in their way, and quite as worthy of belief as anonymous Quarterly Reviewers. They are connected with the people—they are sprung from the people—they are bone of their bone and flesh of their flesh—and what they say has on it the stamp of truth. To write for the people, a man must write well. A cheap book must be a good book, or it will not pay. A cheap copy of Burns's poems might be sold with a profit. If Mr. Murray were to publish a cheap reprint of the *Quarterly*, containing the article on revolutionary literature, we fear it would occasion him a considerable loss. The trashy three-volume novel, if it command a limited sale, will pay; but it would produce a very different result were it published in the cheap form now so deservedly popular. A cheap publisher must have an extensive sale, and he cannot have that unless he provides a good article for the public. Our sterling writers—the classics of our land—are all published in a cheap form, so as to suit the pockets of the people. Some of this literature undoubtedly is light literature; nor is this to be wondered at. A man who buys something to read while he is travelling must buy something light, or he cannot read at all. The book that requires thought is not for the rail, but the study; but even grave scholars and painful divines read what is light and amusing. The mind requires rest; it cannot be always on the stretch. The necessity thus created, cheap literature supplies; but this is no sign of evil, but the reverse. The truth is, that light reading spreads side by side with reading of real merit—that if the novel be read, so also is the popular history or scientific discourse.

After all, revolutionary in a good sense we are, and ever mean to be. We believe in a revolutionary religion—in one, the first preachers of which were said to seek to turn the world upside down. Revolutions are the appointed agencies of the world's progress. Moses effected a revolution when he led forth the Hebrews from their house of bondage. When the appointed hour had come—when the sceptre had departed from Judah, and the law-giver was no more, another revolution was effected. Science now coming forth on her mission and labouring for man as man—with her railways—with her steamships—with her electric telegraphs, is now revolutionising the face of the earth. Nor can we be other than revolutionary. In the old strife of right with might—of the weak with the strong—of justice with injustice—of God with the Devil—we trust thankfully to join and valiantly to do our part. In this sense a revolutionary career is before us. To this we are urged by the signs of the times—by the spirit of the age—by the memory of the past—by the hopes of the future.

"By the thoughts that shake mankind."

A mouse, that had lived all his life in a chest, says the fable, chanced one day to creep up to the edge, and, peeping out, exclaimed with wonder "I did not think the world was so large." The first step to knowledge is, to know that we are ignorant. It is a great point to know our place: for want of this, a man in private life, instead of attending to the affairs of his "chest," is ever peeping out, and then he becomes a philosopher! He must then know everything, and presumptuously pry into the deep and secret councils of God not considering that man is finite, he has no faculties to comprehend and judge of the great scheme of things. We can form no other knowledge of spiritual things, except God has taught us in His word, and where He stops we must stop.

A WONDERFUL CHILD.—RICHARD, SON OF JOHN EVELYN.

Of John Evelyn's children, one son, who died at the age of five, was almost a prodigy. The particulars of his extraordinary endowments, and the deep and striking manner in which his admirable parent was affected by his death, may be seen in his *Memoirs and Correspondence*. The following are the notices of this wonderful child:—

"1652. 24 Aug.—My first child, a sonn, was born precisely at one o'clock Sep. 2, Mr. Owen, the sequestered divine of Eltham, christened my sonn by the name of Richard.

"1657-8. 27 Jan.—After six fits of quartan ague, with which it pleased God to visite him, died my deare sonn, Richard, to our inexpressible griefe and affliction, five yeares and three days old onely, but at that tender age a prodigy for witt and understanding; for beauty of body a very angel; for endowment of mind of incredible and rare hopes. To give onely a little taste of them, and thereby glory to God, sense of God. he had learned all his catechisme who out of the mouths of babes and infants does sometimes perfect his praises; at two years and a halfe old he could perfectly read any of ye English, Latine, French, or Gothic letters, pronouncing the three first languages exactly. He had before the fifth yeare, or in that yeare, not onely skill to reade most written hands, but to decline all the nouns, conjugate the verbs regular, and most of ye irregular; learn'd out "Puerilis," got by heart almost ye entire vocabularie of Latine and French primitives and words, could make congruous syntax, turne Englishe into Latine, and *vice versa*, construe and prove what he read, and did the government and use of relatives, verbs, substantives, eclipses, and many figures and tropes, and made a considerable progress in Comenius s *Janua*, began himself to write legibly, and had a stronge passion for Greeke. The number of verses he could recite was prodigious, and what he remembered of the parts of playes, which he would also act, and when seeing a Platus in one's hand, he asked what booke it was, and being told that it was a comedy, and too difficult for him, he wept for sorrow. Strange was his apt and ingenious application of fables and morals, for he had read Æsop, he had a wonderful disposition to mathematics, having by heart divers propositions of Euclid, that were read to him in play, and he would make lines and demonstrate them. As to his piety, astonishing were his applications of Scripture upon occasion, and his early understanding of the historical part of ye Bible and New Testament, to a wonder, and how Christ came to redeem mankind, and how comprehending these necessaries himselfe, his godfathers were discharged of their promise. These, and the like illuminations, far exceeding his age and experience, considering the prettinesse of his addresse and behaviour, cannot but leave impressions in me at the memory of him.

"When one told him how many days a Quaker had fasted, he replied, That was no wonder, for Christ had said that man should not live by bread alone, but by ye Word of God. He would of himself select ye most pathetic psalms, and chapters out of Job, to read to his mayde during his sicknesse, telling her, when she pitied him, that all God's children must suffer affliction. He declamed against ye vanities of the world before he had seene any.

"Often he would desire those who came to see him to pray by him, and a yeare before he fell sick, to kneel and pray with him alone in some corner. How thankfully would he receive admonition, how soone be reconciled! how indifferent, yet continually cheerful! He would give grave advice to his brother John, beare with his impertinences, and say he was but a child.

"If he heard of, or saw any new thing, he was unquiet till he was told how it was made; he brought to us all such difficulties as he found in books to be expounded. He had learn'd by heart divers sentences in Latine and Greeke, which on occasion he would produce even to wonder. He was all life, all prettinesse, far from morose, sullen, or childish in anything he said or did. The last time he had been at church (which was at Greenwich) I asked, him, according to custome, what he remembered of ye sermon: 'Two good things, father,' said he, '*bonum oratiæ* and *bonum gloriæ*,' with a just account of what ye preacher said.

"The day before he died, he called to me, and in a more serious manner than usual, told me that for all I loved him so dearly, I should give my house, land, and all my fine things, to his brother Jack; he should have none of them; and next morning, when he found himself ill, and that I persuaded him to keep his hands in bed, he demanded whether he might pray to God with his hands unjoyn'd; and a little after, whilst in greate agonie, 'whether he should not offend God by using his holy name so often calling for ease?'

"What shall I say of his frequent pathetical ejaculations, uttered of himselfe, 'Sweete Jesus, save me, deliver me, pardon my sinns, let thine angels receive me!' So early knowledge, so much piety and affection! But thus God, having dressed up a saint fit for himselfe, would no longer permit him with us, unworthy of ye fruites of this incomparable hopefull blossome. Such a child I never saw: for such a child I blesse God, in whose bosom he is! May I and mine become as this little child, who now follows the child Jesus, that Lamb of God, in a white robe whithersoever he goes. Even so, Lord Jesus, *fiat voluntas tua!* Thou gavest him to us, thou hast taken him away from us. Blessed be the name of the Lord! That I had anything acceptable to Thee was from thy grace alone, since from me he had nothing but sin; but that thou hast pardon'd! blessed be my God for ever! Amen.

"In my opinion he was suffocated by ye women and maids that tended him, and cover'd him too hot with blankets as he lay in a cradle, near an excessive hot fire, in a close roome. I suffer'd him to be open'd, when they found that he was what is vulgarly called liver-growne. I caus'd his body to be coffin'd in lead, and deposited on the 30th, at eight o'clock that night in the church at Deptford, accompanied with divers of my relations and neighbours, among whom I distributed rings with this motto, *Domnus abstulit*, intending, God willing, to have him transported with my owne body, to be interred at our sepulchre at Wotton Church, in my dear native county of Surrey, and to lay my bones and mingle my dust with my fathers, if God be gracious to me, and make me as fit for him as this blessed child was. The Lord Jesus sanctify this and all other my afflictions. Amen! Here ends the joy of my life, and for which I go even mourning to my grave."

In the preface to Mr. Evelyn's "Translation of the Golden Book of St. Chrysostom," concerning the education of children, is likewise given a very interesting account of this amiable and promising child. In the second volume of the "Memoirs and Correspondence," are two letters occasioned by his death. One of these from Dr. Jeremy Taylor is a beautiful specimen of the language used by one learned and pious man to another, on an occasion in which the sympathy of friends, next to religious consolation, is most soothing to the feelings. Evelyn's mind was remarkably calculated for the endurance of such trials; and is Christian faith and resignation were soon again put to the test. It was only a few weeks after the above event, that the following entry was made in his diary —

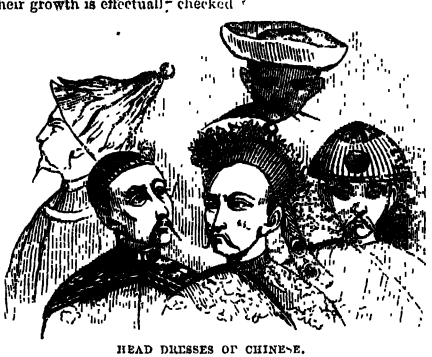
"Feb. 15.—The afflicting hand of God being still upon us it pleased Him also to take away from us this morning my youngest sonn, George, now seven weeks languishing at nurse, breeding teeth, and ending in a dropsie. God's holy will be done! He was buried in Deptford Church ye 17th following.

25.—Came Dr. Jeremy Taylor, and my brothers with other friends, to visite and condole with us.

CARLYLE ON LAUGHTER.—No man who has once heartily and wholly laughed can be altogether and irreclaimably bad. How much lies in laughter—the cipher-key wherewith we decipher the whole man! Some men wear an everlasting barren simper; in the smile of others lies a cold glitter, as of ice, the lowest are able to laugh, but only sniff and titter and snigger from the throat outwards, or, at least, produce some whistling, husky exhilaration, as if they were laughing through wool. Of none such comes good. The man who cannot laugh is only fit for treasons, stratagems, and spoils, and his whole life is already a treason and a stratagem.

FILIAL RESPECT.—When Sir Thomas More was Lord Chancellor of England, and Sir John, his father, one of the judges of the King's Bench, he would, in Westminster-hall, beg his blessing of him on his knees.

CHINA AND THE CHINESE.



VARIOUS RANKS OF CHINESE.

A SOBER neatness pervades the apartments of a wealthy native in China. The hall for the reception of guests is open in front, and has a screen at the back. A square table serves either as an altar for offerings of meats and incense, or for a board at which the host and his friends are entertained. A row of chairs, with high and perpendicular backs, is placed about the table. As a visitor advances, he is invited to sit down; he does this with some hesitation, taking the lowest seat—the one at the bottom of the line. Immediately he is asked to "come up higher;" on his doing so, the host takes the seat immediately below him; and thus awards to him the more honourable place.

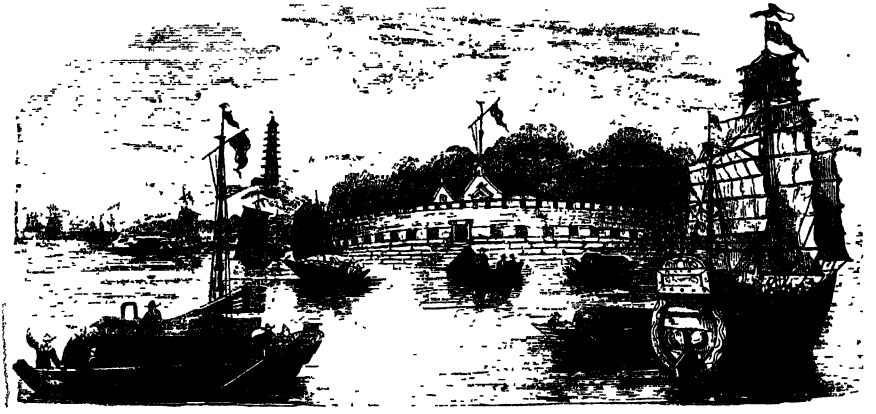
HEAD DRESSES OF CHINESE WOMEN.

No welcome is offered, however, by the ladies of the household, though the guest is presented with a cup of tea exhaling aromatic odours. It seems to us the natural gift of a female hand, but the Chinese have not yet allowed woman to take her proper rank. On two gentlemen, one of whom was well known to the writer of this article, calling on a Chinese of high literary attainments, he indulged the females of his house so far as to allow them to come and gaze at the foreigners. But, ignorant of European habits, he thought it necessary to apologise for his departure from ancient custom, and in so doing he told an untruth. Though it was evident that the ladies appeared on his invitation, and retired at his command, he declared that they were wanting in propriety. Chinese propriety, and of that only he could judge, was certainly, in this instance, fully observed. The hair of Chinese ladies, turned up on the back of the head in bunches, and, fastened with two bodkins crosswise, is gaily adorned with wreaths of flowers. There is considerable variety in their dresses, but they are all of the richest materials, and splendidly embroidered. Among those of high birth it is considered indecorous to show even their hands, and ordinarily these are covered with their large sleeves. The fingers are long and taper, and, in some instances, the nails are allowed to grow to a length at variance alike with our ideas of beauty and utility. A British officer, after a terrible siege and carnage, observed the body of a lady lying on the ground. "While looking at her," he says, "I observed what appeared thin brown slips of bamboo loosely fastened round her wrists; and remarked to the chief interpreter, how singular it was that they should have found it necessary to bind her. But he exclaimed, 'These are her nails!' and true enough it was, as I found when I looked close." It appears that fine ladies are in the habit, when going to bed, of softening their nails in warm water, and then winding them round their wrists, to prevent their being injured. The feet are distorted by turning the toes under the soles in early life, and confining them in that position by tight bandages, till their growth is effectually checked.*

HEAD DRESSES OF CHINESE.

When a gentleman makes a feast, he sometimes entertains his male friends in a tent reared for their accommodation; at others, he receives them in his hall of audience. The guests seat themselves round small tables placed in different parts of the room, which are garnished with fruits and flowers. The first course consists of a certain number of basins or saucers of painted porcelain filled with soups and stews, often of the most far-fetched and costly sort. One of these soups is prepared with the famous birds'-nests in which the Chinese are such epicures. The lichen used by the birds in fabricating their dwellings is the principal ingredient that renders them edible. They are reduced to very thin filaments, as transparent as isinglass, and resembling vermicelli; but to an European palate they have little or no taste.

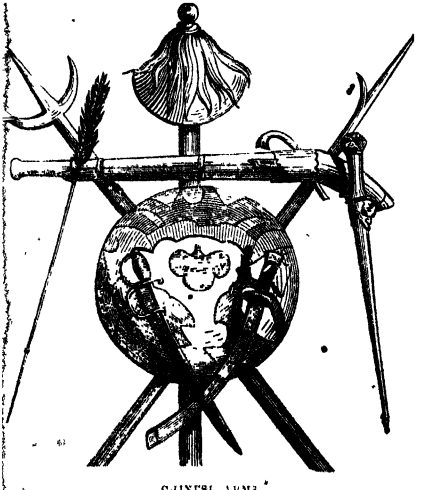
HANDS, FEET, AND SHOES, OF CHINESE LADIES.



"Seated," says Captain Laplace, of the French navy, to whom and a party a dinner was given, "at the right of our excellent *Amphitryon*, I was the object of his whole attention; but, nevertheless, found myself considerably at a loss how to use the two little ivory sticks, tipped with silver, which, together with a knife that had a long, narrow, and thin blade, formed the whole of my eating apparatus. I had great diffi-

* For more ample details of this cruel practice, see an article in "The Working Man's Friend," Vol. VII., page 161.

culty in seizing my prey in the midst of the several bowls filled with gravy, in vain I tried to hold, in imitation of my host, this substitute for a fork between the thumb and the two fingers of the right hand; for the chopsticks slipped aside every moment, leaving behind them the unhappy little morsel that I coveted." The master of the house came, however, to



articles in pastry and sugar; in the midst of which was a salad composed of the tender shoots of the bamboo, and some watery preparations, which exhaled, as the French captain thought, "a most disagreeable odour."

Up to this point certain "relishes" had been the sole accompaniments of every course. Among these were salted earth-

[illegible] and, after a little while, worms, prepared and dried, but so cut up that he fortunately thought he [illegible] with [illegible] enable propriety. Wine did not know what they were until he swallowed them; salted regulated freely, and toasts followed each other in rapid succession. In the second course, on the edges of four bowls, smoked fish and ham, both of them cut into extremely small slices, besides which there was what the Chinese called Japan

CHINESE ARMS.

ranged in a square, three others filled with stews were laced; they were surmounted by an eighth, which thus ormed the summit of a pyramid; and, singularly enough, the ustom is for the guests to touch none of these, even though ey do to partake of them by the host. On the refusal of the arty the whole disappeared, and the table was covered with

ARMED CHINESE INFANTRY.

leather—a sort of darkish skin, hard and tough, with a strong and far from agreeable taste, which seemed to have been mace-

ded in water for some time; and a liquor which the captain recognised to be soy, made from a Japan bean. Now, for the first time, bowls of plain rice were placed before each of the guests. I regarded," he says, "the two little sticks, with which, notwithstanding the experience acquired since the commencement of the repast, it seemed very doubtful whether I should be able to eat my rice, grain by grain, according to the belief of Europeans regarding the Chinese custom. I therefore waited until my host should begin, to follow his example, foreseeing that, on this new occasion, some fresh discovery would serve to relieve us from the truly ludicrous embarrassment which we displayed: in a word, our two Chinese, cleverly joining the ends of their chop-sticks, plunged them into the bowls of rice, held up to the mouth, which was opened to its full extent, and thus easily shovelled in the rice, not by grains, but by handfuls. Thus instructed, I might have followed their example; but I preferred making up with the other delicacies or the few attractions which, to my taste, had been displayed by the first course.

"The second lasted a much shorter time. The attendants cleared away everything. Presently the table was strewed with flowers, which vied with each other in brilliancy; pretty baskets, filled with the same, were mixed with plates which contained a vast variety of delicious sweetmeats as well as cakes, of which the forms were as ingenious as they were varied. Napkins, steeped in warm water, and flavoured with otto of roses, are frequently handed to each guest by the servants in attendance. This display of the productions of nature and of art was equally agreeable to the eyes and the tastes of the guests. By the side of the yellow plantain was seen the litchi, of which the strong, rough, and bright crimson skin defends a stone enveloped in a whitish pulp, which, for its fine aromatic taste, is superior to most of the tropical fruits when dried, it forms an excellent provision for the winter. With these fruits of the warm climates were mingled those of the temperate zone, brought at some expense from the northern provinces, as walnuts, chesnuts, apples, grapes, and Pekin pears, which last, though then in a lively colour and pleasant smell attracted the attention, proved to be tasteless, and even retained all the harshness of wild fruit.

At length, the party adjourned to the next room to take tea, the indispensable commencement and close of all visits and ceremonies among the Chinese. According to custom, the servants presented it in porcelain cups, each of which was covered with a saucer-like top, which confines and prevents the delicious aroma from escaping. No sugar or cream is ever added to it in China.

While the master of the house is entertaining his friends in the hall, or a separate tent, the lady receives her female acquaintances in one of the retired apartments, where she welcomes them to dainties as costly and as choice as those offered by her husband to his guests. In the dwellings of the poor the wife is on a parity of condition with her husband. She is ready to trudge to the hills to fetch fuel, or to engage in any kind of labour. She prepares the meal, and partakes of it with her husband and children. The common people are, indeed, excellent cooks, they not only dress their rice in a way almost inimitable to us, but a variety of meats and vegetables so skilfully, that they often have a wealthy man's board in miniature.

So much courtesy prevails that the humblest individual will scarcely allow a stranger to pass the door without asking him in, and should he comply, the pipe is instantly filled and presented to his lips, and the tea poured out for his refreshment. Even in such circumstances the master of the house does not presume to sit down until his guest is seated. The style of address is equally marked. A stranger is accosted as "honourable brother," "venerable uncle," "virtuous companion, or "excellent sir," while, instead of the pronoun I, which figures so prominently among ourselves, "the worthless fellow," "the stupid one," or "the unworthy disciple," are phrases of common occurrence.

The bond that links a child to his parents in China is not merely the obligation which he owes for his food and clothing, but the respect he has been taught to feel for them ever since he was capable of instruction. According to ancient doctrine, every father is a magistrate in his own house, and it is argued, if he be not equal to its government he is not fitted to rule the people of a neighbourhood or province. The Chinese writers have recorded numerous instances of filial affection. One of these is not a little singular. The parents of a boy, eight years of age, were so very poor that they could not afford to procure a kind of curtain, which is commonly used in the hot countries of the East to defend persons in bed from the troublesome insects called mosquitoes, and which is thence named a mosquito curtain. The poor boy strove, in various ways, to protect his parents from the bites of the mosquitoes, but in vain. At length, he seated himself by their bed, stripped off his clothes to the waist, and suffered the mosquitoes to settle upon him without driving them away. "When they have filled themselves with my blood," said he, "they will not disturb my parents!"

Mr G T Lay—who had visited China, and was afterwards appointed one of the British consuls in that country, where he died—says—"I have sometimes admired the conduct of a son when he has brought an aged parent to the hospital, the tenderness with which he conducted him to the patient's chair, and the feeling with which he detailed his sufferings, showed how deeply rooted filial affection is in the heart of a Chinese. At Macao, a Chinese shoemaker, who had done some work for me at Singapore, called to ask for some further encouragement. 'Why,' said I to him, 'did you leave Singapore, where you had a good business?' 'My mother,' he replied, 'is getting very old, and will have me to live near her.' In obedience to the commands of a parent he had given up the certain pursuit of a livelihood abroad, and returned to take a very precarious chance at home. The reader will not be sorry to hear that this man used to come, from time to time, for a stock of New Testaments, to distribute among such of his countrymen as were likely to make a proper use of them."

The duties of children towards their parents are not limited to the duration of the lives of the latter, in the estimation of the Chinese. During the period of mourning for them which is twenty seven months public officers are forbidden to perform any kind of public business. It is not uncommon for a family to expend the whole of the property left behind by a parent on his funeral, and when children are not in circumstances to bury a father in a respectable manner, they will keep his coffin for several years. These observations will serve to illustrate the following narrative —

A man, having been apprehended on a charge of committing an offence against the state, escaped from the custody of his guards, and sought refuge in the house of a friend. His retreat was discovered. The friend was imprisoned, and preparations were making for his trial, when the younger brother of the friend came forward. "It is I who harboured the fugitive," he said, "and of course I ought to die, and not my brother." The friend, on the other hand, declared that he alone was guilty, and that his brother had falsely accused himself. The judge cross questioned the young man with such skill as to involve him in contradictions, and at length he was obliged to confess the imposture. "Alas!" said he, "I had strong reasons for acting thus. It is a long time since our mother died, and we have not been able to pay her the duties of sepulture. We have moreover, a sister unmarried. My elder brother alone has it in his power to provide for these exigencies, so that it were better for me to die in his stead. I conjure you, therefore, to receive my evidence." The judge was deeply affected, and reported this instance of filial affection and of brotherly love to the supreme tribunal, and the Emperor pardoned the culprit.

The arms of the Chinese consist of various kinds of lances, bows, swords, and matchlocks. They seem to have an idea that the deeds of a weapon must bear a proportion to its size, and the fierceness of its aspect. As their country presents no chalk-cliffs, and hence they have no gun-flints, their machlocks are not to be compared with English muskets. Of military tactics the Chinese know but little. From a native encyclopædia, which touches on such subjects, it appears that they have a great fondness for the number five, and hence soldiers were grouped in fives. Ten such groups formed a company of fifty men, either of horse or foot, each company having five ensigns and five supernumeraries, and eight companies form a *chun*, or battalion. A variety appears, however, in the numbers of a company, as, when the soldiers are marshalled in battalions, they sometimes consist of thirty-two companies, who are so placed as to give a certain configuration to the army

It is usual to call any such configurations by some high-sounding name, as "a flying dragon," or "a scudding cloud." When the Chinese lose their weapons, they have recourse to their

---

The soldiers are enrolled in the corps quartered in the provinces in which they are born, and which are never quartered anywhere else The government are of opinion that soldiers living with their families will exhibit greater bravery in defence of their country, should any occasion arise for their services, than they would if restricted to barracks or fortresses, and constantly subject to strict discipline and to martial law The troops are only embodied at certain periods, and are at other times at their own disposal. The officers are all raised from the ranks, and are looked upon by the civilians as little better than police agents, but, like the latter, they are obliged to take their regular degrees to obtain promotion

The Chinese navy scarcely deserves the name It is considered to include about 1,000 sail These "soldier ships," as they are styled, are about 200 tons burden, with two masts, and as many sails, which are hoisted and lowered in a series of turns or folds Their form is more compact than that of the common junks, but they are still very awkward and unwieldy The usual practice of the Chinese is to employ a great quantity of timber—enormous beams running from stem to stern—to keep the different parts of the structure together The bulwarks, or parapet, are high towards the ends of the vessel, and are cut away in the middle, where the guns are ranged The guns few in number and inconsiderable in size, are mounted on wooden carriages, and can neither be raised nor depressed The imperial navy is commanded by three high admirals and their subordinate officers, who have, however, but little intelligence and skill in such matters

The merchant vessels are better managed than the Chinese ships of war And yet to say this can scarcely be called a compliment, for though each one has, nominally, a commander, his authority is very commonly disregarded and every one who puts any part of the cargo on board is considered a sort of shareholder and does nearly what he pleases With the mariners compass the Chinese have, however, been long acquainted The earliest allusion to the magnetic needle is found in the traditionary period of their history about 2,000 years before Christ, when the celebrated Emperor having passed his way, invented a carriage upon the top of which was a figure surmounted by a little figure pointing to the south which ever way the carriage turned It appears, therefore that at that far distant period the polarity of the needle was known in China and actually applied to useful purposes

In this they were greatly in advance of Europeans The name of a *magnet* is derived from Magnesia a district in Lydia, in which a natural magnet was first found, as lodestone is derived from the Saxon *lodestone*, or leading stone It was not till about the beginning of the fourteenth century that the power of a magnet to give a needle or shivered from its own tendency towards the poles of the earth, was observed and out of this arose the mariners compass, which gave a new impulse to the science of navigation

At a later period, according to Dr Medhurst, we have a more credible account of this discovery in the reign of Ching Wang, B.C. 1114, when it is said that some ambassadors came from the modern Cochin China, affirming that having experienced neither storm nor tempest in that country for three years, they imagined it was in consequence of the sages then existing in China, and, therefore, had come to pay court to them On the return of these ambassadors they knew not what course to take, and the Prime Minister gave them five close carriages, all provided with instruments that pointed to the south, with which they were enabled to find their way, and in a year arrived at their own country "Hence," adds the historian, "these south pointing carriages have ever since been used as guides to travellers"

This instance of Europeans being anticipated by the Chinese does not stand alone For in the time of Confucius, B.C. 600 books were formed of slips of bamboo, on which they wrote with the point of a style, Paper was invented about one hundred and fifty years after Christ, when the Chinese wrote on rolls and formed volumes. A.D. 745, books were first bound up into leaves, and 200 years after they were multiplied by the art of printing It appears, therefore, that they could actually print more than nine hundred years ago, while we discovered the art of paper-making only in the eleventh century, that of printing in the fifteenth century

There is yet another fact which belongs to the same class. Soon after the commencement of the Christian era, the Chinese were in the habit of using what they called, singularly enough, "*fire-medicine*" Thus was gunpowder, which they employed for making signals, and also for amusement in rockets and other fireworks About 1200 years elapsed before the invention of "fire-engines," described as machines for throwing stones, in which powder was used, made of saltpetre, sulphur, and charcoal

In the sciences the Chinese take but a humble place, though in some respects they are not inferior to other nations of the East To astronomy they have always paid some attention, and even during the reigns of their earliest kings, the five planets, the twenty-eight constellations, and the twelve signs of the Zodiac were well known About nine hundred years ago, an eclipse of the sun, predicted by astronomers, did not take place, but the failure was made the occasion of an Eastern compliment, the courtiers offering their congratulations to his Majesty with the suggestion that the very heavens had altered their courses in honour of his virtues! There have been principally four eminent writers on medicine in China One lived in the third century of the Christian era, who wrote an original work on fever, which the Imperial College of Physicians considered was not indebted to any preceding publication for a single sentence He originated prescriptions, but erred in giving immoderately large doses of medicine He is probably the first and greatest physician of the Chinese. A gentleman, wishing to obtain all the works in medicine which could be procured in Canton made a collection of no fewer than 892 volumes But doubtless, at a large part of their contents our doctors, whether homœopathists or allopathists, would be inclined to smile Unhappily the practitioners are still numerous in other countries as well as China, of whom it may be said They pour drugs of which they know *little* into a body of which they know *less*' Of botany the Chinese have a sufficient knowledge to enable them to collect and arrange a vast number of plants but their descriptions and classifications are alike wanting in science

In China the people give the loftiest epithets, as "the flowery nation" "the region of eternal summer," "the land of the sages" "the celestial empire" The soliloquy of one of the people is not a little characteristic "I reiterate myself that I was born in China, and constantly think how very different it would have been with me if born beyond the seas, in some remote part of the earth, where the people, deprived of the conveniences, maxims of the ancient kings, and ignorant of the domestic relations are clothed with the leaves of plants, and would dwell in the wilderness, and live in holes of the earth though living in the world in such a condition I should not have been different from the beasts of the field But now, happily, I have been born in the middle kingdom I have a house to live in, have food, drink, and elegant furniture, clothing cups, and infinite blessing, truly, the highest felicity is mine!"

CATCHING A TIGER.—When the trick of a tiger has been ascertained, which, though not invariably the same may yet be known sufficiently for the purpose the peasants collect a quantity of the leaves of the *pavana*, which are like those of the sycamore, and are common in most underwoods, as they form the larger portion of most jungles in the north of India These leaves are then smeared with a species of bird lime, made by bruising the berries of an indigenous tree by no means scarce they are then strewed with the gluten uppermost, near to that shaded spot to which it is understood the tiger usually resorts during the noontide heats If by chance the animal should tread on one of those smeared leaves his fate is considered decided He commences by shaking his paw, to remove the incumbrance but finding no relief from that expedient, he rubs the nuisance against his face by which means his eyes, ears, &c., become smeared over with the gummy matter, which occasions such an uneasiness as causes him to roll, perhaps among many more of the smeared leaves, till at length he becomes completely enveloped, and is deprived of sight In this situation the hunters find no difficulty in shooting him.

CHINESE CLOTHS. (See Page 36)

LOUIS KOSSUTH.

In 1836 the Hungarian Diet closed, after sitting for three years, during which they had endeavoured with partial success to beat down some of the old bulwarks of feudalism. They accorded to the peasant the right of selling his own property, of moving freely from place to place; they protected him from the arbitrary exactions of his seigneur, and even took away from the latter the right of exercising judicial power. With the view also of leading the way to uniformity and consistency in the official acts and publications of a country comprising so many different races, they made the Magyar the language of the courts of law, as that spoken by the majority of the population.

Before the conclusion of the sittings, an occurrence took place which produced a profound sensation all over Hungary. Two deputies rose in their places, and after condemning in strong language the conduct of the Austrian Court in employing the Hungarian regiments in the oppression of Italy, declared that the question of Polish Independence was one which well deserved the attention of the Diet, and called upon them to do their utmost to save a sister nation from destruction. An address was accordingly drawn up, and forwarded to the Emperor, praying the Cabinet of Vienna to do all in its power to assure the existence of the Polish people. A cold official reply, promising nothing, was of course received; but that generous appeal was not without its effect, though it could do little for the salvation of a nation already labouring in the throes of death.

LOUIS KOSSUTH.

During these exciting discussions, there sat, alone, apart in a corner of the Chamber, a young man, who followed with profound attention, we might almost say with religious fervour, the turns and changes of this parliamentary drama, worthy of figuring amongst the most glorious records of the age. He was a plain gentleman not more than thirty years of age, and of unassuming manners. His profession was that of journalism, one held in little repute at that time amongst the Magyars, and its members were, of course, suspected and even persecuted by the Austrians. The young man was Louis Kossuth. His parents came originally from Upper Hungary, in the county of Turocz, a district inhabited by the Slaves, or Slovacks, and in which a village named Kossuth is still to be found, which at one time, in all probability, formed part of the patrimony of that family. About the beginning of the present century the father of Kossuth, who had become thoroughly "Magyarised," left his native country and established himself at Bodrog-Szerdahely, in the county of Zemplin. While there he had great difficulty in providing for the wants of his rapidly-increasing family. With his elder sister Louis distinguished himself from his earliest years by his lively and precocious intelligence, his impassioned impetuosity, and easy and graceful manners. He was born on the 27th of April, 1802. He lost his father very early, and Madame Kossuth's impoverished circumstances scarcely afforded her the means of giving her sons a solid or extended education. Louis, however, after pursuing the elementary branches at the colleges of Sarospatah and Eperies, passed through a course of law and jurisprudence at the University of Pesth.

After he had obtained the diploma of an advocate, a ceremony corresponding to "calling to the bar" in our own country, Kossuth was sent to the Diet of Posonia, as a proxy for an absent "Magnate," which procured for him the payment of his expenses of living, and a seat and vote in the Lower Chamber. About three hundred advocates supplied in this way the places of absent "Magnates." A witness of the oratorical triumphs of Szechenyi, Kossuth saw in them an incentive to emulation which might aid in the development of his intellectual faculties, which were just now beginning to bud. His *début* in the Chamber was, however, by no means fortunate. If the lives of many of our own great lawyers and statesmen did not furnish us with many instances of failures of similar kind, which afterwards proved to be but the preludes to brilliant success, it might excite our surprise that the first address of a man who owed his political elevation above all to his dazzling eloquence, should have been delivered with diffidence and difficulty, and have been passed over unnoticed by his auditory. The check and discouragement which he thus received caused him to turn his attention to other means of acquiring a public reputation. He conceived the idea of publishing a journal which should record the proceedings of the deputies, of which no printed report had hitherto been given to the public. He put his project immediately into execution, and as he was attracted to the Liberal party with all the ardour of youth and the sincerity of the deepest conviction, the speeches of the leaders of the Opposition were published at full length, often amplified, and sometimes even embellished. The paper soon circulated over the whole of Hungary, but the Government immediately took alarm, and attempted to place it under an interdict. The Minister, Chancellor Count Reviczki, was, however, obliged to give way before the clamours of the Opposition, and the absolute interdict was replaced by a permission to publish reports of the sittings of the Diet in manuscript copies only. The Opposition, still more irritated —for the censorship of the press was hitherto unknown to the Hungarian laws — redoubled their efforts to promote the circulation of the journal. The excitement caused by these events not only raised Kossuth into a position of importance, but was the means of procuring him important benefits of a personal nature. But there was one circumstance in connexion with these proceedings which was fraught with interest, from the influence it was destined to exercise upon the struggle that followed. A great number of young men who were employed in making copies of the paper became, from that time, the ardent admirers and devoted adherents of the man who, from the nature of their duties, was at the same time their chief and their benefactor.

After the close of the Diet, Kossuth, whose perseverance and zeal had gained force in proportion to the obstacles thrown in his way by the Government, resolved, in order to give unity to the efforts of the Liberal party, to publish also manuscript reports of the proceedings and deliberations of the assemblies of the *comitate*, or counties. The publicity given to the debates, which had previously died without an echo; the desire of political amelioration; the thirst for celebrity; the ardour of the young men who at that time crowded to the Comitial Assemblies,

excited throughout the country an unparalleled ferment, and every day brought new recruits to the ranks of the Liberal party. The suspicions and fears of the Viennese Cabinet now aroused in right earnest, and they gave orders to the Archduke Palatine to arrest Kossuth upon a charge of high treason. The personal freedom of a Hungarian noble was guaranteed by the Constitution; but armed force paid no regard either to the law or the constitution, and the terrible journey was seized in the mountains of Buda, where he had been staying for the benefit of his failing health.

Kossuth was conducted to Pesth, and shut up in a sort of citadel called the *Neuhaus*, built by Joseph II. of Austria specially for the confinement of the Magyar nobility. While there he devoted his whole time to perfecting himself in foreign languages—English in particular. Works treating of political subjects, and in particular of the French Revolution, became his favourite study, and helped to develop within him the germs of the wonderful activity which he afterwards displayed, and to decide his vocation as an agitator on behalf the people.

In place of intimidating the Magyars, the persecutions against Kossuth and his friends only served to augment the number of the malcontents. Whilst the Diet was sitting, some young men had formed a society to be devoted to the discussion of political questions. Suspected from its foundation, it was at last openly attacked by the Government, and its leaders thrown into prison. Almost at the same time a prosecution was set on foot against the Baron Vesselenyi, the intrepid defender of Hungarian liberty and of the people's rights. Endowed with a spirit as stern and vigorous as his body was strong and robust, his freedom of speech and brusqueness of manner, terrified the Austrian Ministry, and rendered useless then hypocritical protestations. The treason alleged against him was, that during the last Diet he had, at the Comitat Assembly of Szathmar, in severe terms denounced the oppressions inflicted by the nobility and priestly aristocracy upon the people, calling the former "leeches, who gorged themselves with the life-blood of the poor." He was soon after arrested, and condemned to three imprisonment. His health, during his confinement, suffered in consequence of the rigours to which he was subjected. He was permitted to reside at Graefenberg. But the wounded lion could never forgive his enemies the injury he had received, and even after his restoration to freedom, he remained in the advanced guard of the struggling band of Magyar patriots. Struck with blindness in these gloomy dungeons, he bequeathed to Kossuth his implacable hatred to Austria.

Our space will not permit us to enter into the details of the struggle as it went on during Kossuth's confinement in the Neuhaus. He was liberated under a general amnesty granted in 1840, and took up his residence in a small modest-looking house in Pesth, and occupied himself for some time in his studies. A printer named Landerer had, by force of money, obtained permission to publish a journal, and he came to propose to Kossuth to undertake the editorship, as it was a high value on his name in a commercial point of view. Kossuth, on his part, the old conductor of the manuscript journal, burned with eagerness to have the direction of a new organ authorised by Government, which would supply him with the means of exhibiting the richness and brilliancy of his intellectual power as a political writer and agitator. Landerer was obliged to the conditions he imposed as to the spirit and independence of the paper; and he yielded the more readily because he naturally supposed that the indomitable energy and "courage never to submit or yield," which the young lawyer had previously displayed, would never again show itself through fear of imprisonment.

In the meantime, prudent and circumspect at the commencement, Kossuth did not open up his grand batteries until usage had thoroughly established a privilege, which was at first little better than an accidental concession; but then he came out stronger and more terrible than ever. Never had a people a more powerful interpreter of its feelings and its wishes. Full of the fire of youth, tempered and subdued by a discretion that is generally found only in company with maturer years, Kossuth knew how to make use of the fierce energy of passion, and at the same time to avoid the imprudences which it often entails. In possession of a courageous talent, a soul tried by fortune, a fiery spirit, a keen and cutting irony, a chaste style, carved and adorned like the hilt of a poignard from the hands of a Cellini—such was Kossuth, the journalist and agitator. His life was a series of combats.

At this time he was forty years of age, and married to Theresa Meszlenyi, the daughter of a noble Magyar of Gyôr. Imprisonment had injured his naturally weak constitution, but there was no one who looked upon that calm, pale, sweet, and expressive face who did not feel himself drawn towards him by a strange sympathy. He was the true type of the fine Slavonic race of the Slovackian mountains. His fair hair scarcely covered the top of his head, and his oval face, surrounded by a magnificent dark beard, had a manly but melancholy aspect. His lofty forehead, and large blue eyes, arched over by finely pencilled eyebrows, and often fixed upon the heavens, gave his physiognomy an inspired and prophetic cast. His slender nose, straight and perfect in its outline, announced the courage, as his mouth small and well-formed, covered with a fine moustache, and his chin gracefully rounded, betrayed the hidden sweetness of a manly, loving soul. He had little muscular strength, but a well shaped form, and his hands had a softness, whiteness, and tapering beauty seldom found with a man. In his ordinary moods his conversation was cadenced like the metre of poetry, at one time smooth and meditative, at another vibrating like a lyre, with patriotic fervour. His voice, soft, sonorous, and pure in its intonation, penetrated men's inmost souls with an indescribable power, and none ever heard him once without yielding to the all-powerful fascination of his magic eloquence.

He continued his labours with great success for some time, until a disagreement with his publisher deprived him of the voice of his journal. He gave all his attention to the projects for the material amelioration of the country, and in the midst of these occupations he was found when the Diet was convoked in November, 1847. In the great county of Pesth, the names of Szentkiralyi and Kossuth stood first upon the list of candidates. The former proved no obstacle in Kossuth's way, but he had to contend against the intrigues of the Court, who, fearing his talent and energy, had put every engine in motion to prevent his return. Bribery, corruption, intrigue were all employed against him, but the liberal party were on the alert, and determined to secure his triumph at all hazards. Count Louis Batthyani, although opposed to the views of Kossuth upon many political questions, threw the whole weight of his fortune and influence into the scale to promote the election of his friend. But it was not the men alone who exerted themselves in his behalf. With a touching devotion worthy of the best days of old Rome, noble and beautiful women took upon themselves the office of canvassers for the man of the people. The Countesses Karolyi, Batthyani, the Baroness Csekonics, above all, were seen in the drawing rooms, in the public streets, vying with one another in zeal and earnestness, entreating, and even upon the basses by the threefold fascination of their beauty, their grace, and their patriotism. The court party were beaten.

After the election came the discussion on the address to the throne. The Conservative party wished to adhere to the hackneyed language of compliment. The Liberals, headed by Kossuth, who was now Minister of Finance, and inspired by his eloquence, voted an address, complaining of the outrage upon their liberties committed by the Government, in placing its own creatures at the heads of the countries, instead of the legal and popular Comtes. The magnates refused to sign it, and the Liberals placed the whole of the facts upon the journals of the diet, and left the Emperor unanswered. In 1848, Baron Jellachich, at the head of a large army of Croats, fierce, savage, the hereditary foes of the Magyars, entered Hungary, plundering, burning, and slaughtering as he proceeded. The Emperor, in peril from the revolt of the Viennese, repudiated the acts of this monster, and announced that an army would march to the protection of the Hungarians. Kossuth exposed the wretched subterfuge, and declared his belief that there was an understanding between Jellachich and his master and the event proved that he was right. Arrived under the walls of Pesth, the former, still breathing out vengeance and slaughter, threw off the mask, and produced the imperial commission, authorising him to dissolve the Diet and

arrest Kossuth and all the other leaders The crisis was terrible; all the Hungarian army was absent in Italy, fighting the battles of Austria against Charles Albert. At home, only 8,000 men were available. The Diet voted arms and money, and declared that the Emperor had forfeited the Crown, and Kossuth, the lawyer, scholar, statesman, took the field in person, at the head of this handful of men, and beat Jellachich in a pitched battle under the walls of Pesth. Previously to this he had been named President of the National Defence Committee.

The war had now been fairly commenced, but not before every possible overture had been made to the Emperor. But all petitions were disregarded; remonstrances produced additional violence and insult, and the Hungarian deputies were sent back irritated and unsatisfied Georgey, Bem, Dembinski, and a number of other able men were placed at the head of the Hungarian armies, which were composed principally of levies hastily raised, half armed, and ill-disciplined. But the zeal of all classes overcame every obstacle, and men of all ranks flew to arms with a fiery ardour that carried everything before it. Then commenced that brilliant series of victories, which fixed upon Hungary the gaze of all Europe, and exhibited a romantic bravery, combined with an amount of able generalship and steady, prudent statesmanship which has no parallel in the history of the world. Pain would we rehearse, if space allowed us, the particulars of half those brilliant fields, in which the Austrian generals, grown grey in war, at the head of veteran soldiers, were driven from post to post back to their own frontiers, by the fiery valour of the Magyar hussars and honveds, striking home for Hungary and liberty, with the might of a host in every single arm, of the terrible storming of Buda, where raw troops, mused to war, rushed to the onset, while from [illegible] ramparts a thousand guns belched forth destruction, and thousands of Croat muskets rained lead and iron upon their serried ranks, and how as the dead choked the ditch and dropped from the ladders, new men filled up their places, clambering, with wild hurrahs, over the bodies of their slaughtered comrades, to meet hand to hand, with the foe until imminent deadly breach, and how when the citadel was won the [illegible] fought from house to house in sullen desperation, [illegible] inch by inch of ground, till the streets grew slippery with gore, and the dead grew putrid under the warm spring sun, until from that, as from every other fortress all over Hungary, the tricolor flag floated in proud triumph, the sign of hope to the oppressed of every land.

Austria, as every one knows, was at last obliged to call in the assistance of Russia, and whilst the negotiations were going on, the Hungarian Diet to provide for this new emergency, named Kossuth Governor General of the Kingdom, Barthelemi Szemere President of the Council, Casimir Batthyani Minister for Foreign Affairs, and Georgey, who was also Commander-in-Chief of the Army, was appointed Minister of War. But the army was obliged to retreat before the overwhelming forces of Austria and Russia combined, and to increase the difficulty Georgey's jealousy of Kossuth's popularity prevented the military and executive powers acting in concert. As a last resource, in despair of healing the differences between them, or bringing the war to a successful issue, Kossuth, in an interview at Arad, resigned into Georgey's hands his dictatorial power, a noble act, and one worthy of better results. Georgey only availed himself of his newly acquired authority to put into execution an idea he had long cherished to [illegible] to his long series of treacheries, by surrendering his army to the Russians. The rage and despair of the Hungarian soldiers when this resolution was made known to them knew no bounds. The officers broke their swords across their knees, and cast the pieces at the feet of their craven general, others shot themselves with their pistols; and the hussars slaughtered their horses to prevent their falling into the hands of a foe they

Batthyani was executed, Georgey retired into private life, to endure the pangs of remorse and the reproaches of his countrymen, and Kossuth fled to Turkey, but Hungary had fallen, we would fain believe soon to rise again.

Such is a brief and necessarily imperfect sketch of the career of Louis Kossuth, the most remarkable man of his age, the hero of a sad but romantic story—the Bayard of modern times, "*sans peur et sans reproche.*" Emerging from obscurity with difficulty, he had rapidly acquired unbounded influence by the pointed, practical character of all his movements, the wisdom of his amendments, his great polemical tact and power, his rapid, sparkling, brilliant oratory, overpowering all opposition, and carrying conviction to the breasts of all who heard him, by the marvellous clearness of his arguments, and the justness and solidity of his views. He has at length finally escaped from the toils of his enemies, and has reached England with his wife and three children. Let us hope that the reception he has met with may prove to all the world that whatever some "persons of quality" may say or do, the heart of England is sound, and that her people have not swerved from that ancient and true faith which millions of brave men have sealed with their blood since the first ages of history; and which teaches us to look with a sure and certain hope for the final triumph of human freedom and the downfall of all oppression. Ah! that the shout of welcome with which we have greeted him could bring light and life to the great hearts now cold in death on the far off plains they loved so well in life, or comfort and consolation to the wearied spirits that pine and sicken in the filthy dens of Naples, or the dark dungeons of Spielberg and Olmutz, but if we have struck terror and misgiving into the tyrants who parade their crimes and enormities in the garish light of day, even our welcome will not have been uttered in vain.

We perceive in a recent number of the *Times* a cold-blooded and malignant article, written evidently with the design of throwing cold water, if possible, upon the preparations [illegible] side for the reception of Kossuth in this

How far the authority of a journal is to be depended [illegible] sions of foreign politics, which, in 1848, upheld King Bomba of Naples as a very model of a prince, and in 1849 thought the Pope the most harmless, and ill-used of all men, and the Romans the wickedest of all wretches, and the peoples of the Continent all in the wrong and the princes all in the right, we leave our readers to determine. But in the present instance it takes advantage of its great wealth, great influence, and undeniable talent, to make an attack upon the private as well as the public character of a defenceless exile. It becomes the people of England to repudiate the sentiments of this shabby Salmoneus, which saw its through the well-watched post offices of the kingdom, [illegible] at a much lower rate of postage than honester journals.

The great cause of offence now is that Kossuth, instead of allowing the Hungarian Diet to make a snug little bargain for a constitution with the Austrian Emperor, hurried them to extremes, "until he arrived at the catastrophe which has ruined and enslaved his unhappy country." So Hungary, after all, is "ruined, enslaved, and unhappy"! What a confession! To our astonishment we discover, that instead of being placed in the hands of a most tender and paternal Government, which only administers the smallest possible quantum of needful correction, she is "ruined, enslaved, and unhappy," and all owing to Kossuth. What a wretch he must be, not to allow her to negotiate for a constitution with an Emperor and a ministry whom no oath can bind, who are, before all Europe, perjurers of the blackest dye to their own people, who grant constitutions, swear to them and revoke them as suits their convenience, their cowardice or their strength, and who hold human life and human liberty at but dust in the balance when weighed against their avarice their lust, and their ambi

slug of women, plundering of hous
of gratifying chagrin worthy of this

SEED-TIME IN LISNOMARA.

In Four Parts.

BY SILVERPEN (ELIZA METEYARD).

Part the Third.

THE Joyces' cabin contained three rooms, one of which was appropriated to the agricultural instructor; and considering the usual character of Irish accommodation, it was, thanks to the kind care of Mr. O'Sullivan and the few things Mistress Joyce had received in dowery from the "nate Dublin lady," not amiss. The entertainment was set forth in the largest room; and though, as Joyce said, "it gra'v'd his heart intirely him, to put such a beggar's dish before the company—sa'm' that the Joyce's had been known for generations through Lisnomara for the open hand"—the only kid, the four last fowls, and such kindly offerings as several poor farmers had brought from their distant cabins, made it tolerable, and by no means scant. As Mistress Joyce, too, had cooked in the best style of the "nate lady," and promised "what was lift, wid God's blessing, to them as waited patiently outside the door till all was done," the meal passed off in peaceable decorum, particularly, too, as, Mr. Garven being a "timperance man," the whisky was kept in the rearward till he should have retired to the "wonderful nateness of Misthress Joyce's bist room." When it was over, and the glow of the peat fire lighted the cabin with the brilliant effect of a hundred wax candles, the company gathered round it, to listen to what this earnest man had to say—for unless some form of relief could be pointed out, or be afforded them till the new crops were down and fit for food—half the wretched population of Lisnomara would be swept off by famine through the coming winter, for foregone destitution had left them no resources as in other seasons, and many men, including Joyce, spoke these fears.

"But you have fish in the bay," replied Mr. Garven quietly; "all this west coast of Ireland swarms with them, and they abound particularly in these calm island channels."

"Yit sure, yer honour," was the answer of several at once, "we're not fishermen—it isn't for the likes of us, to know both wather an' land."

"When one dish is empty," said Mr. Garven, still in that quiet way so marvellous in its effects on his undisciplined yet kindly-hearted hearers, "the wise man blesses God that he has another on his table, and helps himself therefrom. In England there is a proverb, 'Where there's a will there's a way,' a proverb which, turned to a practical use by the people, has done more to make them prosperous and their country great than half the laws on the statute book. So, instead of supinely starving, why can't you fish? I know that it needs proper boats and expensive nets for the deep sea fishing; but in quiet channels like these round Lisnomara the matter is no more than one of industry and will."

"We've no net," said Joyce; "sure enough the agent's diver—bad luck to him—took off the last, and poverty be ridin' us too hard to git others.

"Nets of this sort for in-shore fishing are woman's work," remarked Mr. Garven.

"But the taching is what be naded, sir," interrupted Mrs Joyce; "nift an' me Grace, avourneen, can thum the na'dles wid the bist in county Galway; but as for the fishin' nets—"

"If I may say as much, and axin' pardon for spakin' whin yer brith is not cold, Misthress Joyce," said one of the Galway fishermen, "it's work that the small fingers of the likes of ye might do. For sure ould Kitty O'Neil—grandmother o' the Galway boy lift wid the boat on the shore—took to the nettin' whin her son was lost at say; and a grate thrue heart had the ould crathur. An' she's tach'd many schoolmasters and the like, as had been wishin' to git their counthry a help—an' one among the many she'd the tachin of was a rale lady from county Donegal wid waxen fingers."

Here the conversation was changed, but not the eager earnestness of one who listened breathlessly as she sat on a pile of dry turf, beside the fire, a model of female loveliness, even for beauty so renowned as that of the women of Galway. When the meal had been cleared away Grace Joyce, had sat down to knit in the warmth of the glowing turf, for she had a [illegible] form though the pay was hard; but by degrees her knitting had dropped from her fingers, and with absorbed attention she listened to the talk of the fishermen and Mr. Garven. Sometimes when the instructor looked towards the fire, her own gaze drooped, and again her tremulous fingers turned the yarn and needles, though only to raise her eyes, and stay her moving hands, when she might do so unobserved. When this conversation respecting the fishing nets had ceased, Mr. Garven retired to his share of the cabin to write some letters which the fishermen would take on their way back to Galway at break of day; and the rest in true Irish manner betook themselves to pipes and tobacco."

As soon as Mr. Garven had departed, Joyce's daughter rose and, putting on her mother's cloak, went to an adjacent shed in which the goat whose kid had been sacrificed for the meal was tethered, and milking it into a bowl, brought the contents back to the cabin. Here she mixed meal with the milk, boiled the mixture in a kettle, poured it back into the bowl, and with some eggs roasted in the glowing turf, went forth unnoticed with both beneath her cloak—for even if her mother heeded the "darlint" she would be sure it was a meal some wandering creature had asked; and the rest were too busy to be observants

Though the day had been so bright for one in the wane of the year, the night was dark, and the wind swept wildly in the sea. Avoiding the road which led to the several cabins that dotted the valley, the peasant girl made her way rapidly towards the shore, and as unerringly as if it were broad day, though the path was precipitous and wild in the extreme. The tide was in, and beat roughly round the headland, whilst scarcely more than its white line of surf could be distinguished. Yet knowing where the little open fishing boat lay anchored, she kept along the narrow edge of the shore, the waves meanwhile sweeping in eddies round her naked feet, to where the shelving rocks, retreating inwards, left a sheltered space dry and untouched by the tide. Here, as she expected, was the boy left in care of the little boat; who, quitting it as night closed round, had made a fire beneath the rocks. He now lay stretched asleep beside it, covered by the boat's sail, but Grace awakened him when she had set the bowl of porridge and the eggs to warm in a portion of the embers, and roused the rest into a blaze by throwing on a knot of dry seaweed. He at once recognised her, for he had seen her on the shore that day, and thankful for the meal, eat it whilst she sat down beside him and talked. When he had finished, he told her all she asked concerning his grandmother, and that though her sight had lately failed, she yet earned enough, by making and mending the smaller nets for in-shore fishing, to support herself and her old bedridden husband. Besides this, she had, since the days of the famine, taught many of those who were desirous of making Inishmen help themselves.

"Sure thin, Dan," said Grace, bending close to the sea-boy so as he could hear, for the waves roared wildly against the adjacent rocks, "can ye keep a saicret, an' not be tellin' 'im whin they come back."

"Grandmother," replied the lad in Irish, "has said often, 'Sorra be to 'im which spakes agin the hand from which its fed.'"

"I'll tell thee thin intirely, Dan O'Neil," spoke Grace with a pathos which was as genuine as it was hesitating; "the gintleman ye brought from Galway town has been spaking of nets we nade; and that if we don't git the fishin' till the wonderful new crops be sprung, and ready in place o' the praties, Lisnomara will have no food of its own on the mountains, and no hand for the corvagh's oar. So I've been thinkin'—and me heart is big and warm wid the thought—that if I come over the mountains—for I can thrid a bog and wade a strame wid the best of 'im, maybe yer grandmother 'll tache a poor girl like Grace Joyce to make and min'd a net. Oh! sure she would, Dan—and here be a pretty pair o' stockin's ye may take her; and be tellin' her that whin the days be betther, I'll be rewarding her before I get the crookit comb me heart's bin longing for since Mary Boyle came to me grandmother's wake wid one."

As she spoke, Grace took from the loose bosom of her gown a pair of stockings of her own knitting, and gave them to the sea-boy—a propitiatory offering not needed—as Dan had but to tell his blind old grandmother, that the Lisnomara girl had come two miles from the mountains to the rugged sea shore

when the tide was in, to bring him a meal, to insure not only an Irish welcome—though dark days and poverty were Kitty O'Neil's—but as pure a guardianship as the angels themselves could give. The sea-boy said this, and much more in his eloquent Irish, as he cowered to the warmth of the fire, and looked into the girl's sweet face. He pictured blind old Kitty's room, which was as quaint as any in that quaint old town of Galway, her devotion to her paralytic bedridden old husband, her ceaseless industry, though blind and feeble, her good old-fashioned charity to those poorer than herself, that Grace felt, that in knowing so much of Kitty, half the difficulties of her purpose were overcome. The boy strove to persuade her to sail with the fishermen on their way back to Galway on the morrow early; but Grace had her father and her mother's consent yet to gain, and asked Dan to do no more than mention her to his grandmother, and crave her kindness to the Lisnomara girl.

She then made her way back to the mountains, and reached her father's cabin just as the guests had departed; some to a night's lodging in the cabins round, and others to their own houses in the surrounding hills. Maurice had gone to his temporary bed in the barn—to a stable which in brighter days had sheltered the poor farmer's cow and pony, so Grace sat down beside the fire and told her parents of the "grate thought which was big in her heart," and of her desire to go to Galway town and learn net-making of old Kitty O'Neil.

"Sure, thin, me darlint," said Joyce, when Grace with earnest voice had asked his consent to her journey across the hills to Galway, "it's a blessed thought of ye, and one that the Holy Powor himself must have put into your thrue heart; but it's a long way, avourneen; winther is crapin' on us, and bog's moist wid rain. And more, a' cushla, meself and Maur must be workin' wid the gintleman early an' late, and wouldn't kape yez steps, me darlint."

"Father," interrupted Grace, the cloak dropping from her shoulders as she spoke, and her beautiful hair thus escaping from the hood, and, heavy with the sea-mist, falling round her lovely natural figure like a sweeping veil, "cannot Joyce take care of herself? an' will harm come to one who'd have no fear wid her? An' cannot I, by the way, stop and beg a sate by Terence M'Carthy's fire, an' the same from the Widdy Grady, it'll be enough to say that I'm Michael Joyce's daughter, to get a welcome."

"Thrue, Grace, avourneen," spoke her mother, "we've always walk'd wid honest fa'te; an' the good ye'd be bringin' to the homes of us would be mighthy; but ye'll be askin' the gintleman—he'll say the likely thing it is."

"No, no, mother dear, no—for the life of ye, no," said the girl, as, regardless of the bright flame, she thrust her arm across the fire and took her mother's hand; "if the thing be worth the doin', it is for its own sake -an' to be askin' the gintleman 'll be like braggin' of a thrue thing before it be begun. No! mother dear—no—say not a word except to his reverence or Maurice: whin I come home wid the power in me fingers to be helpin' ye it'll be time to be spakin' of me and me little doings."

The honest farmer thought so too. So presently gaining the consent of both parents, and their promise of secrecy, Grace, assisted by her fond mother, made such few preparations as were needful for the start at daybreak, these principally consisting in a due selection of finery from the wardrobe bequeathed to her descendants by "the nate lady from Dublin." Though the last one who went to rest that night, Grace was, with the exception of her father, the first astir in the morning—even before Maurice or the younger children. But her mother soon rose, and made the breakfast porridge; when this was eaten, her cloak on, and her bundle ready, the young [illegible] kissed the still sleeping children, and went into the little barn—to say good bye to Maurice. He was yet asleep in his bed of dry mountain grass, to which the goat had crept; of the [illegible]

parents; but feigning a lighter heart than she possessed, she tripped away from the cabin door, her bundle and her shoes in

[illegible] afraid of being seen, or questioned concerning her walk that early morning, she hurried onward, and did not again look back till she had reached the last green heights from which the valley might be seen. Here she paused, and waved her hand to those still lovingly watching her from the cabin door.

The sun by this time lay broadly on the many islets and their sea-washed channels; and from the height on which she stood she could discern the Galway fishing boat bearing round the farthest southern headland with swelling sail. She now passed on, and was following a sheep track leading to the head of the bay, from whence the road wound still more deeply amidst the mountains, when she perceived amidst the grey mists curling from the shore, some one ascending from the point where the Galway boat had been moored the previous evening. It was Mr. Garven, and in a few minutes he met her face to face. As grave and self-contained as when addressing the Lisnomara farmers on the previous evening, there was interest, though not surprise, in his looks as he stayed to speak. He did not ask whither she was going, or the purpose of her journey, but only wished it might be a pleasant one. He then asked, as he passed on a step or two, when she would return.

"By God's goodness, sir, in three wakes—if luck be wid me. Sorrow would be in the heart of me to lave the Lisnomara cabin more."

"You will be back, then, before I go. Be sure you be: and now God prosper you as he will—good by."

Making the lowliest courtesy, and burning with a million blushes that were not less intense though mirrored only in the cool greenness of the mountain sward, she passed on without a word in reply, and rapidly descending, crossing the stepping-stone of the cascade which swept down upon the shore, then ascending the steep mountain path, she only paused for breath when fairly shrouded from all human view in the deep overlying shadows of the hills.

Mr. Garven's practical instructions were begun in earnest that day. Far and wide the Lisnomara farmers came to learn the handling of both plough and spade; to see digging and trenching, and the preparations for tile draining, and the manufacture and adaptation of manure to the hunger of the exhausted soil. Peat, coralline rock, and sea-weed were burnt, and the dunghills which for half a century—ay, a whole one—had reeked before the wretched cabin doors, and added to periodic famine the woe and curse of pestilential fever, were turned to their legitimate use. When he had fairly given the first practical lesson, and set the majority of those desirous of instruction to work under the care of Joyce, the cottiers as a body shirking labour and keeping aloof except when a chance of alms-giving offered, Mr. Garven visited the several farms of the district, and of many of the surrounding islets. His advice and instructions were, as a general rule, well received; and this, owing in many instances to the good example of Mr. O'Sullivan, who was himself a willing scholar, and the first to sow a large breadth of his land with the seed corn brought from Galway. He did more, he accompanied Mr. Garven in some of his journeys amidst the more desolate mountains, roused the energy of his despairing, miserable people, and painted in glowing language the reward industry and resolution would bring. These journeys were productive of many new hearers to the agricultural addresses, which were generally delivered at Joyce's cabin every alternate evening; for when once the visits for the purpose of inspection and practical advice were over, it was found needful that Mr. Garven should concentrate his operations on one spot, and that the most central one in the district—Joyce's valley.

Through these means, and the aid of so many assisting scholars—thus learning digging, ploughing, and drainage—Michael Joyce's holding soon bore a new aspect. It was trenched and dug ready for the green crops; as much corn could be spared was sown over the best alluvial portions of the valley, and drainage advanced so far as tiles could be procured from the neighbouring barony. It is true thus much was not accomplished without difficulty; there was supineness, long standing indolence, and almost incredible ignorance, and worse than all, when operating upon circumstances of this kind, a scant supply of food. But the larger portion of the tenant farmers showed a laudable zeal for the elementary knowledge of which they stood so much in need. Some came considerable distances, bringing their food with them, and

lodging in the neighbouring cabins during the time the instructions lasted, whilst not a few, who had the means, added to Joyce's scanty store in such way as they best could. Thus the difficulties met with arose not so much from the body of tenant farmers who sought information, as from the utterly destitute mass of evicted cottiers and starved holders of barren conacre. Hope and fear seemed unknown to them, and the destitution which is one of the common incentives to industry to any ordinary class of the labouring population seemed only to sink them into the last deep of servile apathy. They scorned to work whilst there was a chance to beg; and day by day they loitered round the busy plough and active spades, as if the farmers were the serfs, and they a race of feudal lords. But if there was any likelihood of a meal as a gift, not one amongst them lacked activity in limb or tongue. No beggars on earth knew their trade better. Yet, as Mr Garven plainly told the farmers, the remedy to this state of things lay not so much with him as with themselves severally —they must set an example of energetic industry, and steadily refuse any assistance to the able-bodied, except as payment for so much task work done. However, to give assistance in any shape was almost next to an impossibility, money or labour alike scarce in the district, and the prospects for the coming winter were dreary beyond the power of words to depict. There might be grounds for fearful forebodings for the dwellers in Lisconare and the other wretched villages.

Still, in Joyce's poor hovel the hope of [illegible] ation, brightened the hearts of one or two. For Grace been scarcely absent ten days, when a letter [illegible] to the neighbouring islands by a Galway boat, and thence by a kindly hand, gave honest Michael and his wife good tidings of their darling child. This letter, written by Grace herself—for she was a scholar in a humble way told them of a successful journey, of the hospitality of Terence M'Carthy and the widow Grady, of her reaching Galway, and the great joy of Kitty O'Neil "to receive the darlint to her bist male, sorra though it was not the bist in ould Ireland"—and of the net-making and her approaching [illegible]—which, as Kitty said, "was a wonderful [illegible], couldn't have him, but that the blissed Power had warmed her heart thereto"—and Grace asked of her parents secrecy, for she should be home soon.

(To be concluded in the next Number)

SALERNO.—The great beauty of Salerno is its bay. We returned to our hotel, and, sitting down on a balcony that overlooked it, drank in the fresh evening air, and feasted on the quiet beauty of the scene. The sun went down over Amalfi, pencilling with its last beams the distant mountains that curved into the sea beyond Pæstum. Along the beach, on which the ripples were laying their lips with a gentle murmur, a group of soldiers, in their gay uniform, was strolling, waking the drowsy echoes of evening with their stirring bugle-notes. The music was sweet, and at such an hour, in such a scene, doubly so. They wandered carelessly along, now standing on the very edge of the sand where the ripples died, and now hidden from sight behind some projecting point, where the sound, confined and thrown back, came faint and distant on the ear, till, emerging again into view, the martial strain swelled out in triumphant notes till the rocks above and around were alive with echoes. It was a dreamy hour; and just then, as if on purpose to glorify the whole, the full moon rose up over the sea, and poured its flood of light over the waters, tipping every ripple with silver, and making the whole beach, where the water touched it, a chain of pearls. One by one my friends had dropped away to their rooms till I was left alone. . . . Every vagrant sound had ceased, except the very faint murmur of the swell on the beach. The gray old mountains were looking down on Salerno, and Salerno on the sea, and all was quiet as night ever is when left alone. And yet, quiet and peaceful as it was, it had been the scene of stirring conflicts. There were the moonbeams sleeping on the wall against which Hannibal had once thundered with his fierce Africans: and along that beach the wild war-cry of the Saracen had rung, and women and children lain in slaughtered heaps. But the bold Saracen and bolder African had passed away, while the sea and the rocks remained the same. I turned to my couch, not wondering the poets of the Augustan age sang so much and so sweetly of Salerno.

A RHYME FOR THE CLOSE OF THE GREAT EXHIBITION.

BY THE AUTHOR OF "PROVERBIAL PHILOSOPHY"

'Glory to the God of Heaven—
Peace on earth, tow'rds men good will!'
Now shall honours due be given
To the best of human skill
Always will we deal with others
As we would they dealt with us,
And rejoice, as men and brothers,
To befriend each other thus.

Nobly hast thou fruited, Labour!
Brightly hast thou flowered, Art!
Well has England hail'd as neighbour
Every nation to her heart!
Yes—for all on earth are brothers,
High and low, and far and near,
And the more we see of others
All the more we hold them dear.

[illegible]
[illegible]
[illegible]
While we feel that all are brothers
Children dear of One
And the more we know of others
All the more we live in love.

For it is a glorious teaching,
Albert, thou hast taught mankind—
Greatly to perfection reaching,
And enlarging heart and mind,
Stirring us to generous deeds,
Thus to [illegible]
And with all the zeal of brothers
Help the Family of Man!

God be thanked! that thus united
All the world for once has been,
Crowding, welcome and delighted,
Round the throne of England's Queen
God be thanked, that we and others,
England with the world around,
[illegible]
And [illegible] found!

Alburg, Guildford. MARTIN F. TUPPER.

THE PIG.—Sir Francis Head, in his "Bubbles of the Brunnens, of Nassau," writes, "There is, perhaps, in creation no animal which has less justice, and more injustice done to him by man than the pig. Gifted with every faculty of supplying himself, and providing against the approaching storm, which no creature is better capable of foretelling than the pig, we begin by putting an iron ring through the cartilage of the nose, and having thus barbarously deprived him of the power of searching for and analysing his food, we generally condemn him for the rest of his life to solitary confinement in a sty. While his faculties are still his own, only observe how with a bark or not [illegible] you approach him, and mark what shrewd intelligence [illegible] his bright twinkling little eye; but with pigs, as with mankind, idleness is the root of all evil. The poor animal, finding that he has absolutely nothing to do—having no enjoyment—nothing to look forward to but the pail which feeds him, naturally most eagerly, or as we accuse him, most greedily meets its arrival. Having no natural business or diversion—nothing to occupy his brain—the whole powers of his system are directed to the digestion of a superabundance of food. To encourage this, nature assists him with sleep, which, lulling his better faculties, leads his stomach to become the ruling power of his system—a tyrant that can bear no one's presence but his own. The poor pig, thus treated, gorges himself—sleeps—eats again—sleeps—awakens in a fright—screams—struggles against the blue apron—screams fainter and fainter—turns up the whites of his little eyes—and dies. It is probably from abhorring this picture, that I know of nothing which is more distressing to me than to witness an indolent man eating his own home-fed pork. There is something so horribly similar between the life of the human being and that of his victim—their motions on all occasions are so unnaturally contracted—there is such a melancholy resemblance between the strutting residence in the village, and the stalking confinement of the sty—between the sound of the dinner bell and the rattling of the pail—that when I contrast the 'pig's countenance' in the dish with that of his lord and master, who, with outstretched elbows, sits leaning over it, I own I always feel it so hard that one should have killed the other."

MISCELLANEA.

IRISH WIT.—General Washington stopped at a hotel with a squad of subordinate officers, and attracted the attention of an Irish servant. Pat was very attentive to the General, and promptly attended to every wish. The General observed the Irishman gazing at him and his officers as they were about departing, and asked Pat, "How he liked the looks of his boys"—"Well, yer honour," replied Pat, "I'm not competent to judge of the stars in the presence of the sun."

POWERFUL EFFECT OF IMAGINATION.—When the waters of Glastonbury were at the height of their reputation, in 1751, the following story was told by a gentleman of the town:—An old woman of the workhouse of Yeovil who had long been a cripple and made use of crutches, was strongly inclined to drink of the Glastonbury waters, which she was assured would cure her lameness. The master of the workhouse procured her several bottles of water, which had such an effect, that she soon laid aside one crutch, and not long after the other. This was extolled as a most miraculous cure, but the man protested to his friends that he had imposed upon her, and [illegible] from ordinary spring. I need not [illegible] reader that the force of imagination had spent itself, and she relapsed into her former infirmities.

THE GLASTONBURY THORN.—It is handed down that when Joseph of Arimathea, during his mission in England, arrived at Weary-all hill, near Glastonbury, he struck his travelling staff into the earth, which immediately took root, and ever after put forth its leaves and blossoms on Christmas-day, being converted into a miraculous thorn. The tree had two trunks, was preserved until the time of Queen Elizabeth, when one of the trunks was destroyed by a Puritan; the other met with the same fate during the Great Rebellion. Throughout the reign of Henry VIII its blossom was esteemed such great curiosities of nature, and its reign specifies as to become the object of gain to the merchants of Bristol, who not only disposed of them to the inhabitants of their own city but exported them by sea to different parts of Europe. They were in addition to the [illegible] avoiding the evil eye, for rooting out charlock and all weeds in corn with similar specifics, which were considered at this time the best of all property.

SIR JOHN ROSS'S CARRIER.—The *Ayr Observer* says:—"Our readers will recollect our announcing, in October last year, the supposed arrival at Annan-hill, near Kilmarnock, of a pair of the carrier pigeons which Sir John Ross took with him in the Felix. The lady by whom the birds were presented to the navigator, and others who had seen them in this county, were confident that one of the two which were caught at Annan-hill was one of the four pigeons given to Sir John. Incredible as it seemed that the birds could have returned a distance of two thousand miles, we saw no reason to doubt it, and the fact seems now almost confirmed by what we learn on the arrival of the Felix in Stranraer. The pigeons were to be despatched when the party got into winter quarters, they were despatched. As yet we have not obtained an exact date, but they were sent off about the beginning of October, upon an evening about five o'clock. Two of the small balloons with which Sir John was furnished were made use of for the purpose; the old pair were attached to one, the young to another, secured in such a way, that when a slow match, ignited at starting, had burned to a certain point, the birds were liberated. The match was calculated to burn for twenty-four hours. A slight breeze was blowing from the north when the balloons were sent up; one went away steadily to the south, an accident happened to the other. The young birds were in that which got away and it was one of the young birds which was recognised at Annan-hill, on the 15th October, as having been taken away by Sir John."

MATERIALS FOR THINKING.—What we are to be hereafter, will be the effect of what we are here. Though a tree be ten thousand cubits in height, its leaves must fall down and return to its root.—As continued health is vastly preferable to the happiest recovery from sickness, so is innocence to the truest repentance. Lord, grant that we may stand a grade higher for a grade we make a great deal, at least [illegible] Never shrink from doing [illegible] which you [illegible] [illegible] [illegible] after of right, [illegible] ally believes, and it can be no part of one man's religion to coerce the religion of another, since religion, if not received voluntarily, is not received at all.

FRENCH NOTIONS OF JOHN BULL.—Notwithstanding the constant communication between England and France, notwithstanding the vast number of Frenchmen who have visited London [illegible] number of [illegible] always residing at Paris—the French seem to be as much convinced as ever that [illegible] John Bull is utterly unlike all the rest of humanity in his way of thinking [illegible] whatsoever. There is not a week in which their newspapers do not [illegible] one of his sons the hero of some absurd adventure. The other day, for example, it was gravely stated that one English [illegible] on passing a provision shop, was [illegible] burst into tears at the sight of a quarter of venison, he having recognised by a peculiar mark, that it was that of a deer named Billy who he had tenderly reared in the mountainous parts of [illegible] into the [illegible] with [illegible] notes" to purchase the haunch and preserve it from the profanation of being cooked. A *feuilletoniste* had up for matter always brings forward some extravagant *conte bleu* perpetrated by a *mal*

On the stage our countrymen are almost invariably represented as carrying with them a huge bottle of Prussic acid, that they may be able to commit suicide when-

Royal there was lately in performance a piece which the Parisians consider a faithful picture of English manners. A French artist, on his last legs, makes his fortune by buying at Smithfield-market two wife of his landlord, and selling her immediately after to a peer for thirty-fold the cost price. The said peer (he wears a red Turkish cap as a mark of his dignity) afterwards sells her back to her husband, in order that he may marry the daughter of his own brother, who is a policeman!

ANSWERS TO CORRESPONDENTS.

In consequence of the numerous questions constantly addressed to us, we beg leave to state that, for the future, Answers to Correspondents will form a feature in THE WORKING MAN'S FRIEND. Of course, we shall not feel bound to answer every question that may be addressed to us, but simply to notice such as we think likely to interest or instruct the large body of our readers.

AN EMIGRANT.—The [illegible] Australia must be [illegible] the Australia was [illegible] gular industry, now [illegible] plans and habits are abandoned, the shepherd [illegible] ay.

SARAH.—Plate [illegible] Reformation [illegible] and [illegible] but we [illegible] [illegible] [illegible]

WORKS PUBLISHED BY
JOHN CASSELL, 335, STRAND, LONDON.

THE ILLUSTRATED EXHIBITOR.—On January 7, 1852, will be published, price 2d., the First Number of a New Series of this beautiful work, under the title of "The Illustrated Exhibitor and Magazine of Art." Though published at so small a price, it will surpass everything that has yet appeared, even at double or treble that sum. First-rate Artists will be employed upon the Illustrations; and the Printing and all the details will be executed with the greatest care.

THE ILLUSTRATED EXHIBITOR ALMANACK for 1852.—This superb Book of Reference contains, besides the Calendar, Astronomical, and other Information, upwards of Forty Illustrations, by eminent Artists. Price Sixpence.

A NEW AND POPULAR HISTORY OF SCOTLAND. By Dr. Robert Ferguson, of Ryde Vol. I., price 7d. Vol II., completing the Work, on Dec. 1.

A MANUAL of the FRENCH LANGUAGE. A most important Work for all who wish to make Progress and attain Perfection in the French Language. Comprising a Compendious Grammar, and Easy and Entertaining Dialogues and Reading Lessons in parallel columns, English and French, with Explanatory Comments upon all difficult points. By the Author of the "Lessons in French," published in "The Working Man's Friend." Price 2s. [Preparing for publication

A SERIES of LESSONS in FRENCH. Reprinted in form from "The Working Man's Friend" Price 6d., in a neat cover.

STEPHENS' DYES FOR STAINING WOOD, &c. &c. And as a Substitute for Paint,

FOR DECORATING CHURCHES, Large Public Rooms, and Theatres, as well as Private Dwellings, giving the effect of Oak, Mahogany, or Satin Wood.—When economy in expenditure of material and time is of importance, these Dyes will be found of great advantage, as they give a rich colour to plain woods, while they all the beauty of the natural graining, which is far superior to imitations by art, and, at the same time, avoid the disagreeable smell and deleterious consequences of paint. These Stains are also extensively used as a colour fashionable mode of embellishing Picture Frames by Leather Embossments, to which they give a rich and beautiful finish.

The Dyes, or Stains, are prepared and sold by HENRY STEPHENS, 54, Stamford-street, Blackfriars-road, London, in bottles of 6d and 1s each, and at 8s. per Gallon. They may be obtained in powder at 8s. per lb., which dissolves in water to form the liquid, and 1 lb. will make one gallon of Liquid Stain. THE TRADE SUPPLIED.

SILVER SUPERSEDED by RICHARD and JOHN SLACK'S CHEMICAL PURIFIED NICKEL SILVER.—A good Substitute for Silver has long been sought after, and numerous have been the attempts to produce a perfect metal that will retain its colour when in use. How fruitless the attempts have been, the Public know too well from the fact that all their purchases have, after a few days' wear, exhibited a colour little better than brass. The very severe tests that have been applied to our metal (which in all cases it has withstood) at once places it pre-eminent above all others, and, from its silver-like appearance—its intrinsic and valuable properties—gives us confidence in asserting that it is, and must remain, the only Pure and Perfect Substitute for Silver.

	Fiddle Pattern.	Strongest Thread Fiddle Pattern.	King's Pattern.
Table Spoons and Forks, per dozen ...	12s. and 15s.	20s.	28s 30s.

CHINA AND THE CHINESE

THE ARTS OF THE CHINESE

In the midst of Thai-hou, one of the largest lake China, rise two mountains They are distinguished from one another by the addition of the words *east*, and *west*, indicating their position. That represented in is the Eastern Thong-Thung-Chan, and was sketched by the British officers during the last war. It is situated in the

called Sou-tcheu-fou, the General Mo-li, who lived under the dynasty of the Soui (in the 6th century of the Christian era) dwelt for a long time upon this mountain, and gave

It is also called Sin-nuon, or *the Mother of Sin*, because the celebrated Tsou-Sin departed from her upon this mountain

middle of the lake Thai-hou, to the south-west of the town of Juhién. The Emperor Khien-long, visiting the pa of he South in the 16th year of his reign (1751), composed a cot of verse upo ipont of yu hich that nountain presente itself According to the la y of the own of Kou-sou, It is ather smaller than the Western Thong-Thung-Chan, but it esembles it very c in the boldness of its peaks, the height f its precipices, and al ese last are found the ec. According to the history of the town of Suh ow eighteen

Anciently, it was called the *Mountain of the Tigers*, because the king of Ou reared tigers there for some time It w under the dynasty of the Thangs (618—901) that it received the name it bears at present

Western Thong-Thung-Chan is remarkable for the cu ne grotte at its base, by which one can pe dred paces under the bed of the lake These are eight ad open on the side of the hill, a short di abo water This natural cavern has been called *Bay of the Earth* The as the ninth of the eighteen ex ed Chinese mythologists. It is

recorded in the history of the mountain that Ho-lu commissioned a man, endowed with supernatural knowledge, or second sight, to explore its inmost depths. Being provided with candles, and every other necessary for so long a journey, he travelled under ground for seventy days, and returned without having reached the end. "In the interior," continues the legend, "he found upon a rock a work in three books, which he carried back to Ho-lin, who being unable to read it, begged of Confucius to explain it to him. That philosopher said, "This book was written by the Emperor Yu, of the dynasty of Hia, (2205—2198 B.C.); it treats of the spirits of the Immortals." The explorer was called Mao, and at the present day a house is shown on the mountain as belonging to him. It is cut in the rock. The principal [illegible] has three gates. The most remarkable of its [illegible] called, "The House of Stone," "The Chamber of Silver," "The Hall of Gold," &c.

Architecture makes no progress in China. Here, as in other circumstances, the people are "incurable conservatives." They have not altered the shape or plan of their dwellings from the earliest times. A Chinese city, it has been said, is nothing more than a Tartar camp, surrounded by mounds of earth to preserve themselves and cattle from the depredations of neighbouring tribes, and a Chinese habitation is the Tartar tent, with its [illegible] repeated by rules, except that the people have [illegible] with brick and tile the roofs of their houses.

Everything in the country being regulated by law, the building of houses forms no exception to this rule. Millions of people live in mud hovels, but of these a great number are faced with brick, while in places where granite abound, the cabins are composed of solid rock, which the Chinese possess great skill in cutting and joining, so that a seam is scarcely visible. Huts in woody districts are built of planks. But there is no material so much employed as bamboo, not only for building purposes, but for every other. Fires are seldom used, except for cooking, the requisite warmth in winter being supplied by fur clothing. The interior of a Chinese pauper's house consists of one room, to serve every purpose both of his family and domestic animals, among which a pig is always to be seen. In many respects, indeed, there is a resemblance between a Chinese and an Irish cabin.

It is in the great houses in the interior of the towns that we must study the domestic architecture of the Chinese. These houses arrest the attention of the stranger at once, by the peculiar form of the roof, covered with semi-circular tiles, which form a very graceful arch. This form is derived, as has been stated, from that of a tent, which was anciently the only sort of habitation known to the nomade [illegible] from the west of Asia, at last established themselves in China. The predominating characteristics of Chinese architecture is its extreme [illegible]. The structures are in general elegant, coquettish-looking, and often adorned with sculptures of the most delicate workmanship, but they are entirely wanting in solidity. So, also, China is greatly deficient in [illegible] monuments.

The houses of the rich never exceed two stories in height, and are surrounded with, and concealed by, high stone walls. At the entrance [illegible] is occupied by a [illegible] often a small garden [illegible] with [illegible]. The principal [illegible] [illegible] are adorned with inscriptions, either drawn upon a lacquered plank with gilt letters, or written upon paper. This is the place of devotion, or hall of ancestors. An idol and incense-stand are almost always found in the principal room of a respectable Chinese.

To the right and left of this stand or altar, there are usually two passages which lead into a second court, over which there is a great square balcony, which runs the whole length of the building. Very often, however, there is only a single court, and the two doors of the hall of reception lead directly into the interior of the mansion. Straight stairs [illegible] communicate with the different stories; the chambers small and numerous, are furnished with stands, large square arm-chairs, with straight backs. Curtains or drapery are never seen but around their beds.

In sculpture the Chinese distinguish themselves far more by the exquisite delicacy and finish of their workmanship than by the beauty or symmetry of their designs. With a great deal of ingenuity and [illegible], they combine the same taste for the horrible and [illegible] which shows itself in Egyptian works of art. We present our readers with engravings of two large bronze [illegible], at present in the Museum of the Louvre at Paris, which certainly possess more interest than is usually found in the objects of that great Chinese collection. In the first is represented the historical epoch, when the Chinese empire was divided into a number of petty kingdoms, all tributary to the dynasty of Tsin. The emperor is seated majestically under a portico built in the architectural style of the pagodas, and around him are placed in ranks sixteen vassal princes, each of them holding in their hands a banner, upon which is inscribed the names of their respective principalities. The upper fillet has as its only ornaments the objects attributed to the Eight Immortals—a gun, a pipe, a gourd bottle, some castanets, a sword, a sounding triangle of stone, a divining quoit, and a sort of lute. The other bas-relief, has for its [illegible] the apotheosis of King Iuwan, and upon the three [illegible] [illegible], riches, and good fortune [illegible] by the Eight Immortals and their servants.

These two bas-reliefs having the form of two massive heavy tables, were modelled at Macao in 1845, and from the front of an altar of the Bhuddist temple. They would cost about thirty or forty pounds—a very moderate sum, when we take into account the [illegible] bestowed upon them—but large enough in a country [illegible] China, to buy even the originals themselves, if the guardian of the temple once saw the pictures glittering before him.

"Chinese temples or pagodas usually contain a great [illegible] hall or interior courts. They are, for the most part constructed of brick, covered with coloured tile, often [illegible] shod, and are distinguished from other buildings by their [illegible] roof, and the more abrupt elevation of their roofs [illegible] [illegible] are almost the same, there is not much difference, except in the splendour of the ornaments. The buildings of most of these temples are numerous, and with the gardens occupy a space equal to six or eight English acres.

The exterior gate the name of the temple is inscribed in [illegible] characters. The interior [illegible] walls adorned by statues of deified heroes. In [illegible] [illegible] are placed the superb statues of the [illegible] past, the present and the future. The hall in which they are placed is covered round with altar and statues. In the temple of Honan at Canton, there are in the surrounding halls gilded statues. That of the Goddess of Mercy is the most remarkable. In the midst of hideous figures one sometimes [illegible] with some very graceful, and in [illegible] taste.

Behind the temple there is an extensive garden, at the extremity of which is a mausoleum, where the ashes of the priest are deposited once every year. There is a furnace also for burning the bodies, and a little cell for receiving the urns, until the time comes for opening the mausoleum. There are also tombs for private persons who pay large sums for interment in the holy place. Amongst a people so celebrated [illegible] [illegible] would expect the temple of the god to be not only the most splendid architecture, but preserved in the highest state of repair. But they are everywhere seen in a state of decay. China, like other countries, has had its pious and liberal devotees, who have built and endowed temples, but they were [illegible] neglect to preserve them. The [illegible] of the subsequent points them origin to the same date. At the present day, they build no more sacred edifices, and neglect those that are built. Sometimes appeals are made to the piety of the worshippers, and subscriptions raised, but no one ever hears anything of the money afterwards.

The famous porcelain tower at Nanking, of which we give an engraving, belongs to one of the pagodas. It is called "The Pagoda of Gratitude," and is unquestionably finer than any similar structure throughout China. It is an octagonal building; it consists of nine equal storeys, communicating by a spiral staircase running up the centre of the building, and each comprising one saloon, painted, gilt, and having num[illegible]

The outside wall is white, made of the white bricks commonly used in China, a kind of carved gallery, or verandah, ornamented with lightly-tinkling bells, runs round each storey, and the whole is surmounted by a gilt conical roof,

the height of which, from the base, somewhat exceeds two hundred feet. It was completed in 1132. This edifice is merely roofed with porcelain, and not, as might be supposed, constructed of that material.

As the Chinese have a great number of canals, bridges are necessary and numerous. Many of these are of a light and fanciful, but elegant construction. Some of them stride across the canal with one bold, lofty arch, while others have three, five, or seven arches—the central one being frequently from thirty to forty-five feet wide, and sufficiently high to allow the passage of vessels without striking their masts.

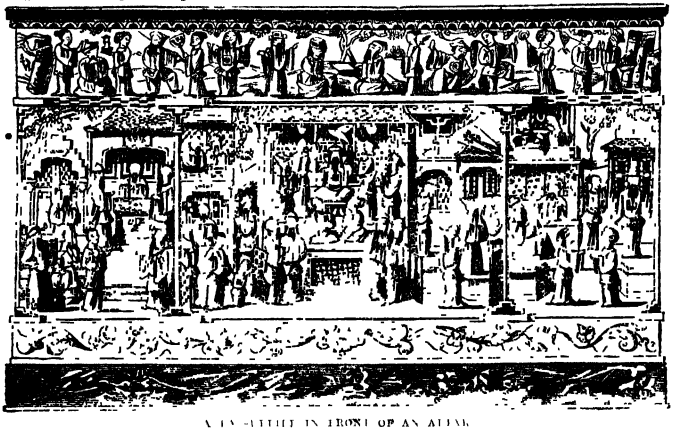
But these canal-bridges are unsurpassed in magnitude, and occasionally in beauty, by the bridges thrown over rivers, or long swamps, and places exposed to inundations. Some of these are of prodigious extent, and have triumphal arches over them, built of wood, in the pagoda style, and splendidly painted. The stone bridges of the Chinese are constructed in a solid and substantial manner. The style, buttresses, breakwaters, and other parts, remind the English visitor of the structures of his own country. The slabs of stone, which form the level of these bridges, are frequently fourteen feet long by four or five in breadth, how they manage to place them in their proper positions appears extraordinary, as no machinery for the purpose has been found, and the Chinese assert that these depend are accomplished, merely, by manual labour. It is remarkable that they construct arches without key-stones. An immense bridge—that of Lovang, built of one sort of blue hewn stone. Another majestic bridge over an arm of the sea, is built of yellow and white stone. It is 2,475 feet long, and 34 feet broad, has one hundred very lofty arches, and is adorned with sculptures of lions and other animals, in the prevailing taste of the country. A similar bridge has been described of nearly twice the length.

The Chinese have, besides, numberless bridges of boats, which correspond with those used in Europe, and they had, long before we adopted them, suspension-bridges, built on the same principle as those with which, at Hammersmith, Hungerford, and other places, we have become familiar.

The surface of China, properly so-called, is about 1,298,000 square miles in extent, or about three-fifths of the Russian empire, or two-fifths of Australia. Its population, as far as can be ascertained, is about 367,000,000 inhabitants. If we compare this with the space occupied, the number is not so large as it would seem at first sight, it is nearly three acres and one-third of land for each individual, or little more than the average in England and Wales, which is about two acres to each person.

But the pursuits of agriculture are rendered of very great importance to the Chinese, from the vast numbers of the people, and the very limited extent of their commerce. Special rewards and distinctions are, therefore, bestowed on the tillers of the soil. In the ranks of society the husbandman having precedence of soldiers, merchants, artisans, and others, takes his station next to the man of letters, or state officer. Even soldiers, whenever their service permits, and priests, wherever their establishments are endowed with lands, are practical agriculturists. "The grand science," as it is called, "of the citizen and the prince" receives honour from the Emperor himself, for at the vernal equinox, he repairs to the field, ploughs a few ridges of land, and casts in the fructifying seed.

Among the dignities he claims is that of universal landowner. But though he is the sole proprietor of the soil, the tenant is never liable to be dispossessed if he regularly pay his rent to the crown, which is calculated at about one-tenth of the produce of the farm or farms. In case any agriculturist has more than he and his family can cultivate, he lets it to another, on condition of receiving half the produce out of which he pays the whole of the Emperor's taxes. On these terms land is cultivated by the greater part of the poor peasantry. No great farmers exist in China. Every grower carries his own produce to an open and free market.



One part of the economy of the Chinese is specially worthy of notice, that is, their method of irrigation. Wherever through want of rain or the water that descends from the upper lands, they are prepared to catch the rain or the water that descends from the upper lands, and then they distribute over the fields that require it, by means of delicately balanced frames, aided by pulleys and sometimes by the human hands and feet. In like manner the Chinese are particularly attentive to the collection and use of manure. Even the hair of the head and the shavings of the beard are preserved for the purposes of agriculture. Barbers are a numerous body in China, where, all the head being shaved except a lock behind, few persons have sufficient skill to shave themselves. Every one of this class is, therefore, provided with a bag, in which he carefully deposits the locks and shavings he cuts off, which are indeed considered excellent manure. Even the swine are described as being shaved. "In short," says Mr Barrow, "it may literally be said in this country that nothing is permitted to be lost."

The average produce of the rice-lands, taking the whole empire, may be about thirty or thirty-five measures for one of seed; that of corn-lands is very inferior, being not much above fifteen for one. One of the defects of the Chinese agricultural policy is, the excessive cultivation of rice to the exclusion of other grain, for though rice yields, in favourable seasons, a more abundant, and perhaps an easier crop, it is more liable to fail than most others. A deficiency of water in its earlier stages, and a surplus of water in its maturer ones, are alike fatal to the produce. Of the scourge of locusts, it is said, and that with truth, by a Chinese writer: "Their prodigious multitudes cover the whole canopy of heaven; they are so close that their wings touch each other, their number is so vast, that, in lifting up your eyes, you might fancy you saw a high green mountain inverted over your head, and the noise they make in flying is like the beating of many drums." The cultivation of entire provinces is literally laid waste by these destructive insects.

The culture of the tea plant of China involves much that is interesting, at which we can only glance. It will not succeed well, if it have not a rich soil for its growth. The continual gathering of the leaves of the shrubs is very detrimental to their health, and, in fact, ultimately kills them. A principal object with the grower is, therefore, to keep his bushes in as robust health as possible, and this cannot be done if the soil be poor. The tea plantations in the north of China are always situated on the lower and most fertile sides of the hills, and never on the low lands. The shrubs are planted in rows, about four feet apart, and about the same distance between each row, and look, at a distance, like little shrubberies of evergreens. The farms are small, each consisting of from one to four or five acres, and the poorer cottagers have their own little tea garden, the produce of which is generally sufficient for their family, and the surplus of which is given in exchange for clothes, which are spent on the other necessaries of life. The same system of small farms is adopted in all that relates to Chinese agriculture.

Some idea of the varieties of the tea-plant may be gathered from those lately exhibited by Mr P. W. Ripley, of Canton, in the Chinese compartment of the Great Exhibition. There were no fewer than twelve varieties of what are called "*physic* teas." One is said by the Chinese to be used as "an universal medicine," another, "to dispel huskiness, to quiet troubled feelings, to clear the mind, to brighten the vision, and to moisten the lungs," a third, to prove a specific for rheumatism and fever, a fourth, to be taken in hot days to cool the blood, a fifth, as effectual in removing all kinds of inflammatory diseases, as also those arising from the impeded circulation of the fluids; and so of the rest, each one of which has the credit of some curative power. Not to mention others, of Nukon teas two varieties were shown—the plain Caper, and the plain orange Pekoe. The Canton made teas included the scented Caper, the aroma of which is produced at great expense with flowers, the scented orange Pekoe, each leaf of which is so twisted that it looks like a wire, a small quantity being sufficient to flavour many pounds of any other tea. Then there were Young Hyson, small leaf Hyson, Imperial, and Gunpowder, all very curious and of very great rarity. Nankin teas comprehended specimens of Lo-shan, Hyson, Hyson-skin, Young Hyson, Imperial, and Gunpowder, all of which are the produce of one plant. Under the class of Nankin Teas were also exhibited spurious scented Caper and spurious Gunpowder made in Canton from tea-dust and rice-water, without a leaf of the plant in them, and appropriately called by the Chinese "*lie* teas." The collection included a box of Cumshau, made up in the shape of balls, faggots, and cigars. The examples exhibited are seldom to be met with, and are said to be grown by

the priests on the different hills in the tea district. When the Royal Commission recently visited Liverpool, they inspected, among the other sights of that great seaport, the new Albert Dock, where, in one warehouse, they saw 20,000 chests of tea, which they were assured supplied only one week's consumption

whole country What an immense provision for the tion of

"The cup that cheers but not inebriates."

as, in the very heart of the Chinese collection, and within

a few glass-cases, there were about *forty* specimens of the plant, a large proportion of which have hitherto been unknown to the most enthusiastic of its admirers and advocates!

No implements of agriculture seem to be in an advanced state among the Chinese. The plough in common use is

CHINESE SCULPTURE, FROM THE LOUVRE AT PARIS.

a very simple machine, and inferior to the very worst of ours half a century ago. But a drill-plough is described as consisting of two parallel poles of wood shod with iron to open the furrows; these poles are placed on wheels, a small hopper is attached to each pole to drop the seed into the furrows,

which are then covered with earth by a transverse board fixed behind, which sweeps the surface of the ground. Then animals of draught appear to be very inferior and weak, and it is said that the mules and asses could not draw our improved ploughs, if the Chinese had them.

stunted appearance of their cows and horses. The flesh of flocks and herds is scarcely tasted except by the rich, and the Chinese do not use either milk, butter, or cheese. There is, accordingly, no people in the world, except the Hindoos, that consume so little meat, or so much fish and vegetable food,

SEED-TIME IN LISNOMARA.

In Four Parts.

BY SILVERPEN (ELIZA MILTEYARD).

Part the Fourth.

Time passed, and Mr. Garven had now been three weeks in Lisnomara. Most of the tenant-farmers had returned home —wiser for the lessons of their able teacher, though leaving much sore poverty behind in Joyce's valley. Not a meal of potatoes was left; for the past day or so even Mr. Garven had shared with the people such roots as could be found in the bogs or on the mountains; and now that he was about to leave them again to the stern desolation of misery and hunger deeper seemed both than experience had yet shown. As the hour of his departure drew near, even the most wretched and apathetic began to have some idea of his worth, and self-denying goodness.

It was evening, and he sat beside the common fire of the cabin, giving Joyce directions about the sowing of the oats, beans, and peas in February, in case he sent the supply of seed instead of bringing it himself, which he should not be able to do if his instructions from the Dublin Board took him to another district of Ireland, in place of returning to the western coast. Whilst thus talking, a crowd drew round the cabin door, of which a few gaunt and starved wretches asked permission to come in and speak for the rest.

"Sure, yer honour," said the foremost man, "ye'll not be lavin' us again to our dape poverty. Ye'll be spakin' of us an' our dape nade to the powers in Dublin town—honour bid im."

"An' ye'll be tillin' im wid a quick tongue -for sorra has a male, save the bitther weeds, passed me lips these four days."

"Not mine, nor mine," cried a dozen or more in a breath.

"I am truly sorry for you, my friends," replied Mr Garven, *with much feeling*, "*but I am a poor man myself*—and the English Government will give nothing more, and as I think rightly—except through the machinery of the poor-laws. There is nothing to prevent your travelling to the nearest union-house, and the relief which will be afforded you there will keep you from starvation. But I want you to do something better than this—to secure and use the gifts of God which are around you. This is what an Englishman would do in preference to seeking the union, though it were the best in the country. Now, just listen! On my return to Galway I will send you a net or two, and some one with them to teach you in-shore fishing. Though perhaps you won't use them if I send them—many and many a time your countrymen have served me so."

"But we will, your honour we'll be helpin' Misther Joyce for the sake of ye—if a net was here we'd be helpin' now, the hunger be so sore wid us."

At this moment Maurice pushed his way through the crowd round the door, and entering the cabin, told us parents that a small fishing boat had come into the bay, and that it might bring Grace, as it had from the south. It was more than an hour ago that he saw it from the headland-point, and if his sister had come by it she must now be near at hand. At hearing this, Joyce and Maurice hurried; but they had not been absent more than ten minutes, when they returned, accompanied by Grace and the Galway sea-boy.

Oh! how the brave girl clung to her stalwart father, and in a moment more was nestled in her loving mother's arms—then as quickly she stood abashed before the crowd, and before Mr. Garven. But she had a bundle beneath her cloak of which she was proud, and her quick eye and her warm Irish heart—both told her that it was for food these lingering supplicants asked. Yet they were moving to go—courteous even in despair.

"Stop wid ye, stop wid ye" she said, "I've had luck in that which I went on. See, I've brought ye a net of me own makin' intirely, an' I can mind it an' make ye more. I've the learnin' in me fingers, an' the want shall be comin' to ye no more in Lisnomara."

Saying these words, Grace Joyce placed the bundle she carried on the ground, untied it, and stretched out widely with both hands an ordinary net; but it betokened coming food, food which the next hour could give, and to procure this absorbed almost all [other emotions, saving what could be expressed in the readiest words of wonder, gratitude, and joy, though there were a few, who, grasping the honest farmer by the hand, said, with broken voice:

"Misther Joyce, we've bin standin' out, bad luck to us, against ye and yer dom's, but we'll yet turn a thrue hand to the spade for ye, for yer delicate flower has had a thrue heart for us—the Powers reward her!"

"Don't be stayin' now when ye be hungry," interrupted the girl, as she raised the net and gave it to Dan O'Neil. "We came by the Cove, and it's as smooth as the summer's wind, and the moon be shinin' down its great silver light, and Dan here, the darlint, ould Kitty O'Neil's grandson, as knows Galway fishin' like the bist of 'im, saw the wather o' the bay dark wid 'im—so ye've only to draw the net an' ye'll be fed. Dan 'll show ye how, his grandmother minded him to giv' ye the larnin'."

But these words of prompting were scarcely needed, if even heard, for in a few minutes the cabin was empty; leaving Grace and her mother to talk, whilst the children eagerly listened to all concerning Kitty O'Neil and her wonderful goodness.

"An' sure, me darlint," said Mrs Joyce, "The Power was wid ye in gettin' ye to such a crathur as Kitty, luck be to her, and the door she opened to a stranger, yet, Grace avourneen, ma-hould I be for ye to hive lift yer heart in Galway to any one beside the motherly crathur."

"No, mother dear, no," replied Grace, colouring, though looking steadily as she spoke into her mother's clear kind eyes. "Many were the comers to Kitty O'Neil's, spakin' sugared words, an' askin' me the early day to see his reverence and the ring, but I said me heart was in Lisnomara, an' must be given back as it come. But, mother, won t we be gettin' ready the supper? I hear 'im, and yo be in them voices."

Though Grace thus dexterously changed the conversation, here was truth in the causes of interruption, for in a little while her father, Mr Garven, Maurice, and Dan O'Neil, came in with good news concerning their first experiment in fishing—as one haul of the net had not only given enough and to spare to the surrounding cottiers, but also a supply of fine fish for the farmer's household. Most of the hungry people had remained upon the shore to cook and eat their meal there, but were now wisely returned home, where his good mistress, assisted by Grace and Maurice, and, putting into practice culinary knowledge derived from the "nate Dublin lady," had soon a welcome supper steaming on the table, round which the farmer's family and their visitor sat, and partook of with grateful hearts. After which, and the peat fire burnt up anew with fragrant fuel, Grace again related the events of her journey to and her stay in Galway. Before they parted for the night it was arranged that Mr Garven would remain yet a day or two in Lisnomara, to give Dan O'Neil and the man who had accompanied him time to show Joyce and the people all that was needed in the management and care of nets, and then return to Galway by the boat.

On the morning of his departure, and whilst the boat was making ready, Mr. Garven came into the large room of the cabin, where Joyce and his wife were alone, the latter preparing some meal cakes for her visitor's use during the day, and her husband waiting to carry them down to the shore when ready.

"Well," he said, approaching them, "I hope that you will remember me, good friends, I shall, I am afraid, not be able to see you in February, but must send the oat and tare-seed for sowing then, and the carrot seed for use in April. But if I come in the end of June, or the beginning of July—the time when I intend the large breadth of turnips shall be sown—I hope you will give me a welcome?"

"Ay! that we will," said honest Joyce and his wife in a breath, "we are but poverty-taken crathurs, but ye shall have the heart of us to welcome ye." And "continued Mrs. Joyce, "me and me Grace 'll be earnin' somethin' by the net work, and we'll have the hins, an' there'll be eggs. Och! soul! if I'd the wealth of a queen, and it isn't a poor welcome I'd giv'."

"Yet, Mrs. Joyce," replied the instructor, "though you have not a queen's wealth, I have come now to ask a gift of you and honest Joyce."

"Sure, what can we giv' yer likes," replied Mrs. Joyce, with a quick flash of her old humour, "barrin' it's the odd punchback watch me grandfather had in Dublin litt—why sure—"

"Keep the watch, Mrs. Joyce," interrupted Mr. Garven, with an earnest smile, "but give me your daughter. I admire her, and wish, above all earthly things, to make her my wife."

"You're only jokin' wid us," were Mrs. Joyce's first words of surprise.

"I was never more serious in my life," he replied, "and I think I have shown you that I am a plain, straightforward man. I love Grace, she has a better dowry than riches—a pure warm heart—and an industrious hand."

Mrs. Joyce said no more, but in the pride of her joy fell a crying, and the honest farmer tried to say something about poverty, and the two great honours, but [illegible] speech—so Mr. Garven had time again to ask "May I have her?"

"Sure, then ye may can, an' heaven be wid ye," was the dual consent of both parents, though to such was added, "it ye've the word of her, for sorra should we be to bring one wather drop in her tinder eye."

"And so should I," was the answer, "but where is she? I have spoken to you first." The mother, as she leant against her husband, could not speak for tears, but only point to one of the brown water jars upon the floor, which the Lisnomana women, like those of Connemara, use.

In a moment more Mr. Garven was gone. Once singing the valley in the lee of the cabin, he soon reached a spring, dripping from the green heights above, and screened in by the grey mass of lichen-covered rock as formed its basin. There Grace stood bare-footed in the waters of the spring, waiting till her jar was filled. She heard approaching footsteps, and, turning, beheld Mr. Garven.

She was prepared for the instructor's kind and, for his manner, though to them had always been civil and obliging, yet the little he had said in commendation of her journey to Galway, as more and result, made his offer of marriage, which came out word by word, as though he were asking a favour of the greatest lady in the land, as unexpected as it was startling to her. He had to repeat his words several times, as though she were dead, or not listening. At length she raised her drooping face, and said, quietly, though with a pathos eminently touching, "I'm but a Lisnomana peasant girl, the honour is too great for me entirely, that would have nothin to give wid me hand, but me heart."

"That is all I ask, and all I need, dear Grace," was the lover's ready answer, "that will be my best blessing. When I came into Lisnomana I no more thought of marrying than of walking the sea. I certainly was struck by your loveliness, but that alone wouldn't have won me. It was [illegible]

"Oh! did the gone to Galway town, I base you? Will the boss nets be all the good I made to Lisnomana?"

"They will, dear Grace. They will be the means of giving partial food whilst the green crops are springing. Yes! I loved you every step of the way, for I had learnt from Dan that morning I met you, why, and where you were going."

"Sure, sure, then, sir," [illegible] her face again, "me heart said a true thing when it [illegible] Oh! that I knew more, and was worthy of thee, Mr. Garven."

"This is a confession, is it Grace? well, God bless and thank you for it. I shall come back at the time of turnip-sowing and marry you, and after that you shall go with me into the south of Scotland for three or four months, and learn from a clever friend of mine there, the management of a dairy—"

"Yes," Grace interrupted, "but me heart will be sore in spite of its pride and its love, to lose green Lisnomana from me eyes."

"It shall not, dear Grace. By the time the great turnip crop is ready a pleasant little home shall be yours in this valley. This estate is going to be sold. I am already appointed resident steward by the intending purchaser, and you shall settle down amongst your friends, dear Grace, to be a blessing to Lisnomana and to me."

The girl could not restrain the flow of her grateful tears.

"And in the meanwhile, Grace, you can do much to instruct yourself and others, and cheer your father's heart if it grow sad in the winter season. I will send you a cow and some dairy utensils, and a few little books, such as are used in the [illegible] school, and you must learn dairy-work, and [illegible], as well as show to the Lisnomana women how the nets are made and mended. Ay! and many other things your heart will prompt to. You'll do so, dearest Grace?"

"Oh! sure I will—me heart will love you so entirely, Masther Garven—an' I'll ask the schoolmaster to improve me penman ship, and so be writin' ye letters, dear!"

In a few months more the Lisnomana peasant girl and the instructor had promised their faith to one another beside the dropping spring, and then, side by side—the water-jar for[illegible] in the cabin, where honest Joyce joined their [illegible] to another the beautiful flower of his heart.

Modestly, Grace lingered behind, and did not go so far as the shore with her lover, but from the loftiest height in Lisnomana watched the boat till its filled sail was lost to view in the shadows of the horizon.

All that winter Joyce kept steadily at work. There was enough to do mending nets, [illegible] and manuring land, and in cutting mud, coral sand, and decayed sea-weed, from the shore. The neighbouring farmers zealously followed his example, when at full, coming to him for further instruction. In February the consignment of green crop seed came from Galway, and in the same boat in Aldermen cow and calf, and appropriate dairy utensils, for Grace Joyce. There was a general gathering of the Lisnomana people to receive the seed, and I guess was then wonder that, with such evidence of the bounty of heaven before them, any set of demagogues—either of Conciliation Hall, the Irish press, or the British senate—could for an instant have cried, "Woe! woe!" when out of Ireland's many fruitful resources *but* one had failed. Courage—the courage of knowledge—came into their hearts as they scattered the blessed seed upon the fresh-tilled land.

Through the aid of fishing, the early cabbage-crop, and an occasional supply of meal by boat from Galway, the whole district of Lisnomana was kept free from famine, till, in the middle of June, Mr. Garven [illegible] to the [illegible] the spare of the people and [illegible] greatly surprised him, used as he was to progress, when founded upon the energy, knowledge, and industry of a people. In the [illegible] the [illegible] crop was sown in all the [illegible] the general inspection of all [illegible] Grace were married by Mr. O'Sullivan, with an amount of ceremony that quite eclipsed all former and [illegible] Joyce, great as that was. And Grace, [illegible] a wedding-ring, "a rale white pop[illegible] club, that were the words of every guest.

After a full week's merry-making, Mr. Garven and his beautiful young wife retired to the Lodmans, and when Grace returned, in October, it was to find Lisnomana fruitful and thriving. Her father, the tenant of a worthy landlord willing and anxious to assist his people, and her husband agent and agricultural steward of the district—with a home made ready to receive her in a new stone cottage built in the loveliest nook of the valley.

By the date the tenant-farmers, as well as a portion of the cottiers, had formed a small agricultural association, which met for the first time when the general and great success of the turnip crop was known. At this meeting Mr. Garven spoke, and concluded his address thus:—"You have now practically tested the value of honest, patient industry, and the blessing of overcoming ignorance and prejudice by knowledge. Proceed onward in the same humble, untiring, yet hopeful course. Ireland wants this sort of service, beyond all other, from her people, for her resources are not only many, but among the noblest in the world, and as capable of prolific result, when Irishmen, as a nation, bring to bear upon the necessities of their country the same qualities which, to your honour, you made yours in the Seed-time of Lisnomana."

LONDON GIN "PALACES."

We lately directed attention to one of those houses, of which there are but too many in the Metropolis, into which respectable and virtuous young men are frequently allured, to the destruction of their health, their property, their morals, and their reputation We trust that the *ad vitam* sketch we furnished of "London Night-Houses" will deter many a youth from entering such places. We now furnish an equally truthful sketch of another class of houses, which, as well as the former, abound in the Metropolis, and which are the resort of large numbers of our population, though—as our illustration shows—of those usually accounted less "polite and respectable" than the frequenters of our night-houses and taverns.

Gin-shops present few of the attractions common to taverns and public-houses. They are entered, chiefly for the love of the drink, by those who have acquired a fatal passion for the fiery compounds therein dispensed, or by those who induce others to accompany them thither, from mistaken kindness, or with a nefarious design. Though the doors of these temples of Bacchus stand invitingly ajar, the inmates are not exposed to public gaze The windows are generally placed high, or else the lower panes are curiously engraved, or have opaque curtains drawn across them, so that passers-by cannot see what is going on within. In this respect the venders of ardent spirits differ from all other tradesmen. Bakers, confectioners, ham and beef sellers, butchers, cheesemongers, fruiterers, to say nothing of linendrapers, hatters, shoemakers, and scores of other *useful* and *necessary* trades, are anxious to have their windows as low and as transparent as possible. Each is eager to display his wands or his goods to the best advantage, and large sums are expended expressly *for* this purpose. But with the proprietors of "Gin Palaces" it is otherwise. Is it because they are ashamed of their company?—or is it because they know that much of the business transacted there would not bear exposure to the public Justly have these haunts of dissipation been compared to "whited sepulchres." The tasteful architecture and costly decorations seem to place in dark and horrid contrast the ill-clad, dirty, miserable wretches, whose hardly gained pence pay for these expensive exhibitions. Who wishes to look at dead bones, worms, and corruption, so carefully concealed from the eye by the classic skill of the sculptor? And yet the sight of a human body in a state of putrescence would be less painful than the living death and the revolting moral putrefaction which is hourly fed by the proprietors of our gin palaces aye, even by that smooth-faced, smiling, respectably-clad individual who stands behind the counter and deals out the liquid fire—the distilled and deadly poison to the maudlin, ghastly beings, who throng around him

At the left hand of our engraving a sad scene presents itself Here you behold a miserable mother pouring gin into the mouth of her innocent infant and thus the child is being drenched with death by the very woman who ought to be its guardian angel, and perhaps still, notwithstanding the ravages strong drink have perpetrated upon her own body and soul, yet views with some lingering affection the helpless offspring whom she is madly destroying Thousands of children are thus annually poisoned by their infatuated parents! It has long ago been shown that these liquors are the source of almost every kind of disease. We should not exceed the plain intimations of science, if we asserted that no one can use them, even moderately, without shortening his days None who habitually partake of them die a natural death. The firmest constitution cannot, in the end, resist their baneful influence what, then, shall be said of the delicate digestive organs, intestines, liver, nerves, and brain of an infant? Here you have the body and the mind poisoned with the same glass, and what is more appalling, all this is done by a mother, at least, if that pitiable-looking woman, with her bonnet half off her head, can deserve such a name, for we cannot help thinking that both language and humanity are outraged when we apply the endearing word mother to a miserable woman who enters a spirit-shop, and especially to one who carries her infant there, and poisons it with gin.

Nearly all the characters portrayed by our artist, have an idiotic, a haggard, or a demoniacal sort of visage; showing that strong drink has committed sad havoc on their physical, mental and moral constitutions. There is not a natural, or benevolent or happy countenance among them. It is true that one or two of them are *laughing*; but, then, their hilarity looks more like the fiendish grin of a tormented spirit than the cheerful mirth of innocence and love Pe ple talk of wine and strong drink "*cheering* the heart of man," but we have never yet seen the assertion verified. We have heard of multitudes who have become low spirited, melancholy, and deranged, from the use of these beverages, we have visited numbers who have refused to be comforted, because these liquors had paralysed or destroyed every avenue both in mind and body through which any word of consolation could enter. We have known many who were boisterous in their joy so long as these poisons set them on fire, but who sunk into utter wretchedness as soon as the poisonous spirit had evaporated from their frames. If such liquors could produce real and substantial pleasure, one would suppose that a gin-shop would be a picture of paradise, and yet this is the place, above all others in the world, to see hunger, thirst, rags, nakedness, ill-temper, misery, and crime of every description, written in legible characters on all the frequenters of these abodes of woe. Our artist has been guilty of neither exaggeration nor caricature in the faces he has delineated, and should any doubt our assertion, let them only stand for a short time opposite any gin palace in London, and witness the dress, the features, the language, the gestures, of the men and women who visit these scenes of corruption, and they will no longer accuse our picture or expressions of having gone too far And yet all these people were made to be happy, and were happy before they became fond of these drinks, yes, and have spent enough in these liquors to make themselves and their families happy, aye, and we may add, that all of them might yet be happy, if they would abandon the glass, and reform their habits.

In contrast with that seemingly well-dressed woman who stands near the bar with the glass in her hand, on which she is casting an eye of so much satisfaction, let our readers look at the outlandish face at her right hand, and, above all, notice that miserable little girl who is dressed in rags, and has no stockings or shoes on, but is exerting every nerve to reach up to the counter and push her mother's gin bottle into the hand of the well-dressed, buxom landlady. Is it any wonder that London is still a disgrace to Christendom, that trade is bad, that seamstresses for want of work submit to the exactions of tyrannical and avaricious employers; when the money that should be spent in clothing is thus wasted in poisons? Is it a marvel that we have ragged schools with pickpockets, or mere infant street-walkers for scholars, when we find the young thus early educated in crime and wretchedness? We are told on high authority that "woman is the glory of man," and history elucidates the assertion, for where females are degraded, there men are base, sensual, and depraved Heaven has ordained that the stronger sex shall not rise, if the weaker is corrupted or depressed In barbarian, and in some civilised countries, women are slaves, and there the men are indolent, cruel, savage, and vile Woman makes home, home; woman softens, refines, and ennobles the rougher natures of the "lords of creation" Solomon tells us that the "husband of the good wife is known in the gate," the assembly, or the parliament, "when he sitteth with the elders." We earnestly entreat our friends to bear these facts in mind, and then ask—What hope society can indulge from the future life of that miserable object represented in our engraving, who is so earnest in handing up her gin bottle? What wife or mother will she make? What will her future history be? And yet there are thousands of these young mumbling spirits of Bacchus haunting the gin palaces of our country, and thus preparing themselves and others for a life of crime and a hereafter of woe. And sorry are we to add, that with all our philanthropy and professed regard for the poor, yet the drinking habits of our country are chiefly supported by those who boast of their moderation, and wish to be thought the benefactors of their species.

Before we close our observations on the mournful exhibition we have depicted, we would call attention to that decently clad wife, whose face is the picture of grief, and who is trying to drag away from this living hell, that idiot-looking, drunken

monster who calls himself her husband. His little daughter is nursing in the work, and grasps his right arm, while a guilty companion is attempting to make him stay, the pot-boy is looking on and apparently mocking, and the very dog is disgusted at the scene. Here is national education with a vengeance. What sort of a man will that pot-boy make? How that deteriorate must have every delicate feeling outraged, and what corruption will infect that [illegible] of the contaminations of the gin-shop! Who can, this world can predict the end of that wretched, filthy drunkard who has thus attracted his wife and female child to this haunt of depravity? The thoughts that crowd upon us as we gaze on these various characters, might fill volumes with weeping and lamentation.

The most composed, or rather the most pleased and gratified persons in the scene, are the master and mistress of the establishment. Squalor, filth, and misery are constantly before them, and are nourished and brought to fruitful maturity by the strange compounds they supply so readily, but what of that? "By this craft they have their wealth." The "fools' pence" enable "mine host" of the "Queen's Arms," his wife, and their children to flaunt in silks and broad cloth, and to "fare sumptuously every day," and what have they to do to care for diseased bodies or broken hearts—for deserted wives or neglected children? But the reckoning day will come, a heavy responsibility rests somewhere, and heavy will be the condemnation. In the mean time let every individual take care of himself, and avoid the gin-shop and the use of the mysterious compounds manufactured and sold there, as he would avoid "plague, pestilence, and famine!"

OBSERVATIONS ON HOW TO WALK.

Of all the exercise walking is the most complete and easy. The weight of the body rests on one foot while the other is advanced, it is then thrown upon the advanced foot while the other is brought forward, and so on in succession. In this mode of progression the slowness and equal distribution of motion is such, that many muscles are employed in a greater or less degree. Each acts in unison with the rest, and the whole remains compact and united. Hence the time of its movements may be quicker or slower without deranging the union of the parts or the equilibrium of the whole. It is owing to these circumstances that walking [illegible] much of the character of the walker, that it [illegible] in women and children, steady and grave in men or elderly persons, irregular in the nervous and irritable, measured in the affected and formal, brisk in the sanguine, heavy in the phlegmatic, proud or humble, bold or timid, &c., in strict correspondence with individual character. A firm yet easy and graceful walk, is by no means common. There are few men who walk well if they have not learned to regulate their motions by the lessons of a master; and this instruction is still more necessary for ladies. Walking may be performed in three different times—slow, moderate, or quick, which somewhat modify its action.

The Slow Walk, or March.—In the march the weight of the body is advanced from the heel to the instep, and the toes are most turned out. This being done, one foot, the left for instance, is advanced, with the knee straight and the toe inclined to the ground, which, without being drawn back, it touches before the heel; in such a manner, however, that the sole, towards the conclusion of the step, is nearly parallel with the ground, which it next touches without its outer edge. The right foot is then immediately raised from the inner edge of the toes and similarly advanced, inclined and brought to the ground, and so on in succession. It must be observed that the toe's [illegible] in the march gives to [illegible] vigour, or gaiety, and that, when the [illegible] laid aside, and the whole sole of the foot is planted on the ground, it requires a character of sobriety, severity, or gloom, which is equally proper [illegible] on occasions. This observation is, in a less degree, applicable to the following paces.

The Moderate Pace.—Here the weight of the body is advanced from the heel to the ball of the foot, the toes are turned out, and it is no longer the toe, but the ball of the foot which first touches and last leaves the ground, its outer edge, or the ball of the little toe, first breaking the descent of the foot, and its inner edge, or the ball of the great toe, last projecting the weight. Thus, in this step less of the foot may be said actively to cover the ground, and this adoption of nearer and stronger aids of support and action is essential to the increased velocity [illegible] of the pace. The mechanism of this [illegible] only attended to. People pass from a slow march to the quick pace they know not how, and hence arises the awkwardness and embarrassment of their walk when their pace becomes moderate, and the misery they endure when this pace has to be performed by them, unaccompanied in the middle of a long and well [illegible] room, where the eyes of a brilliant assembly are exclusively directed to them.

The Quick Pace. Where the weight of the body is advanced from the heel to the toes, the toes are least turned out, and still nearer and stronger points of support and action are chosen. The outer edge of the heel first touches the ground, and the sole of the foot projects the weight. It is important to remark, as to all those paces, that the weight is successively more thrown forward as the pace [illegible] less turned out. In the general [illegible] of the [illegible] ought not to exceed the length of the foot, the leg should be put forward without stiffness, in about the fourth position, and without any effort to turn the foot out, as it throws the body away, and gives the person the appearance of a professional dancer. The arms should fall in their natural position, and all their movements and oppositions to the feet should be easy and unconstrained, and the pace should be neither too slow nor too quick. The gait should be in harmony with the person, natural and tranquil, without giving the appearance of difficulty in advancing, and active, without the appearance of being in a hurry. Nothing can be more ridiculous than a little woman who takes innumerable minute steps with great rapidity to get on with great speed, except it be a tall woman who throws out her long legs as though she would dispute the road with the horses.

THE GREATNESS OF LONDON

Magnitude is the distinguishing characteristic of London, as grandeur of natural position and scenery is that of Naples—beauty, that of Florence—moral interest, that of Rome—shops, plate-glass, splendour, that of Paris. But in no city does the peculiar characteristic of a place so force itself upon one's notice as in London. There you are reminded of magnitude whichever way you turn. You become presently insensible to the beauty of Florence, to the shops of Paris, to the moral glory of Rome, but you never forget for one single moment how big London is—how multitudinous its population. When you find, after spending your first week, or more than that, in doing nothing else than scouring the capital from end to end, in order to catch some general notion of the place, that you are as much a stranger as when you began your travels, that, though you have gone so far, you have made no progress—though you have seen so much, you know and can remember nothing—that the city is still as new and unsolved as ever—you receive a very lively and even painful impression of its enormous size. Everything else is subordinate to size. Churches are nothing, you pass St Paul's, and give it only a careless look. Columns and statues, Nelson's and the Duke of York's pillars, even *Peacock's* Duke, you overlook. Magnitude alone interests. This not only intercepts—it astonishes, absorbs, [illegible] annihilates every other feeling. Queen, Lords, and Commons are nothing by the side of the immeasurable vastness. As a stranger, this is the first topic of conversation, and its interest never flags. Yet it is not you, after all, who are so much interested by the size as the Londoner himself, who is proud of it, and forces the subject upon you. His topics are not of art, pictures and statues, books, literature—they are not so much to his taste—but of London, its streets, squares, and parks, its extent, the masses always abroad, the crowds in the streets, the number [illegible] across it, the number of miles around it, its growth, even at present, like that of New Orleans or San Francisco, the countless omnibusses, the packing and tangling of carriages and other vehicles, fifty times a-day, where Great Farringdon-street crosses over to Blackfriars-bridge, and the admirable police for keeping all these

masses in order. In the presence of London, it is just as it would be if you should meet a man fifty feet high, and of a weight proportionable. You would be in a state of perpetual astonishment. In other capitals, your admiration is directed to the palaces of some of the nobility, one here, and another there; sometimes to the houses of a few of the commoners, sometimes to a street of palaces, as in Genoa. But in London you note these signs of wealth, not only here and there, but really everywhere — not only in this street and another, but in street after street beyond counting. And, in certain parts of the city, the population seems wholly composed of those who dwell in palaces. The rest of mankind have no place provided for them. And one begins to feel as if that were, there at least, the natural state of man, and as if he himself, when he returns home, will find himself locked in the same way, that you feel particularly in the purlieus of Eaton and Belgrave Squares, and anywhere, in short, at the West End. This has the finest feature of grandeur about it imaginable—this indefinite multiplication of splendid residences. There is nothing like it, nothing that approaches it elsewhere. It makes a deeper impression than either the shops of Regent-street and Piccadilly, the warehouses on the docks, the beer breweries, or the shipping on the Thames, and comparisons with other cities in these respects are not to be thought of.

THE QUADRATURE OF THE CIRCLE.

By the time Bacon had attained to the venerable age of sixty, many men of great talents, and possessing wonderful energy and perseverance, spent their whole lives in endeavouring to solve problems which all now acknowledge to be incapable of solution. There is hardly a tale of the middle ages in which one of the numerous tribes of alchemists is not brought upon the stage as the very embodiment of mystery and magic, and represented as constantly employed in the pursuit of the "philosopher's stone," which was to possess the property of transmuting all metals into gold. That such a body does not exist, every child now knows. It has been recently shown, however, that science is under far greater obligation to the alchemists for their many discoveries than modern men have hitherto fully acknowledged.

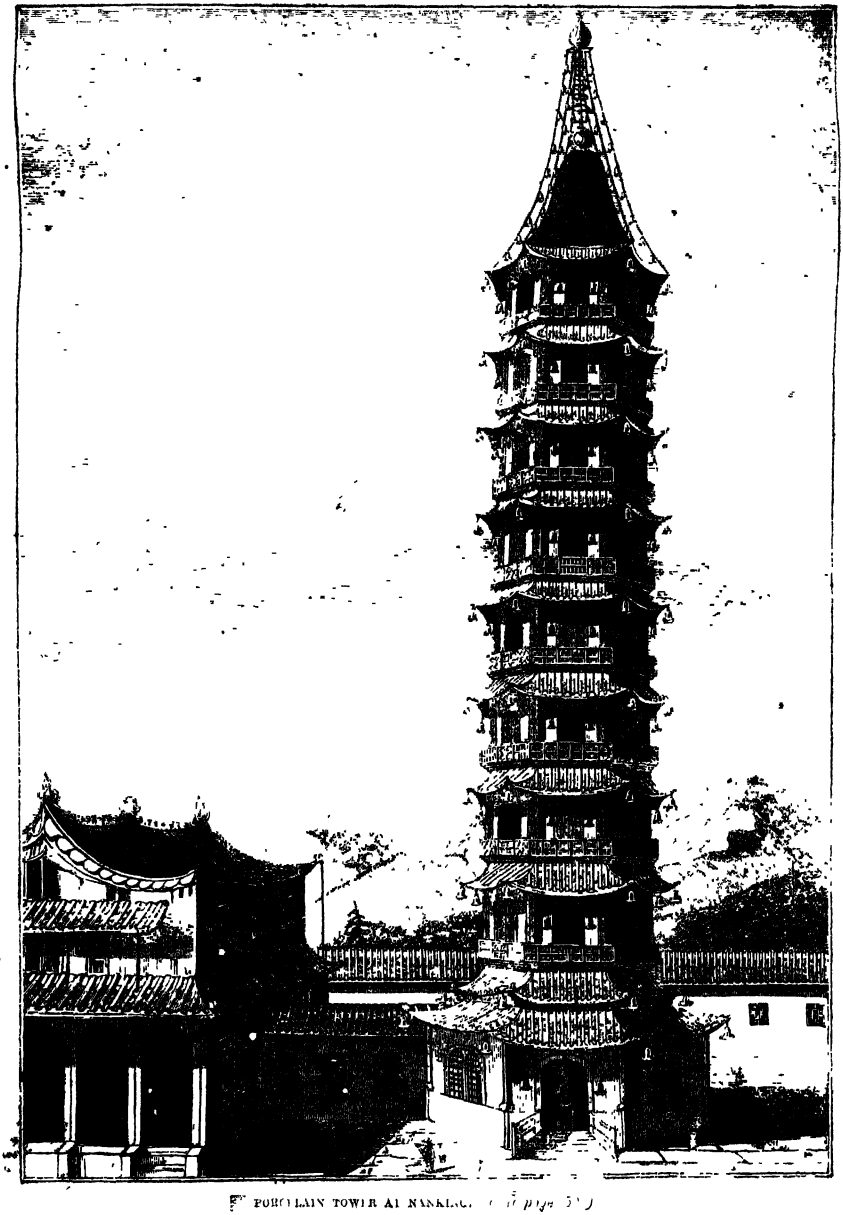
Another "splendid phantom of this kind [illegible] perpetual motion, which should possess the property of continuing to move for ever independent of all foreign aid. As this would require the entire prevention of friction from axle or other bodies, it is needless to say that no success has attended the efforts of the explorers in this department of science.

The *Quadrature of the Circle* is, however, a problem which has engaged the attention of many more scientific men than either of the preceding, and many whose opinions were of great weight, entertained at various times strong hopes that it might eventually be accomplished, and to some it may seem at first sight that nothing can be easier. For the benefit of those of our readers who may not exactly understand what is meant by the *quadrature of the circle*, we may explain that it is the construction of a square which shall contain exactly the same extent of surface as that of a given circle. Persons having no knowledge of mathematics may, however, satisfy themselves of the difficulty of doing this, by simply endeavouring to draw on a piece of paper a square and a circle of exactly the same area. They will find that if the lines of the square touch those of the circle, the former will be larger by the space at each of the four *corners*, and if it be drawn *inside* the circle, it will of course be much smaller. They will see the impossibility of satisfying even the most scientific mind, not to speak of rendering the problem capable of being solved by a mathematical demonstration.

This difficulty or impossibility has never been ignored by our great geometers, and many of them have obtained results more or less closely *approximating* to the truth. But there has always existed a class of men less enlightened who, unable to distinguish between what they *wish* to do, and what they are *able* to do, have pretended from time to time that they have discovered the quadrature of the circle, &c.

The problem is probably as old as geometry itself, and has formed the subject of the incubations of many of the best minds of Greece, the cradle of mathematical science. Anaxagoras occupied himself with it in prison, into which he had been thrown for declaring that there was but one God. Aristotle, in one of his satirical comic dramas, introduces *Meton* upon the stage, and endeavours to throw ridicule upon the philosophers by making him promise to square the circle. Archimedes was the first to discover the relation existing between the length of the circumference of a circle, and that of its diameter and radius. Apollonius obtained the relation with still greater exactness.

Cardinal de Cusa was the first of the modern *Alchymist Geometers*. He imagined that he had discovered the quadrature of the circle by rolling a cylinder upon a plain, and the circumference thus described would form the sides of the required square. He was convinced of his error by Regiomontanus.



The celebrated Joseph Saliger, engaged also in these calculations, as he had an extremely low opinion of geometers generally, and wished to show them the superiority of a learned man like himself. Viete, Clavius, and others having demonstrated the falsity of his mathematical logic, he became violently enraged with them, and was pursuaded still more firmly that no geometer had one ounce of sense.

There are many other instances upon record of attempts of this kind. One of the most remarkable, perhaps, was that made by a manufacturer of Lyons, named Mathuton, who after having announced to the geometers and mechanicians his discovery of the quadrature of the circle, and of perpetual motion, defied them to prove that he was mistaken, and deposited at Lyons a sum of 3,000 francs, to be given to any one who should refute his demonstration. M. Nicol, a member of the French Academy of Sciences, proved beyond all doubt that he had reasoned falsely, and demanded the promised reward. Mathuton, however, demurred, and said he should also show the falsity of his theory for producing perpetual motion, before he could obtain it. The affair was brought before the courts of law, and decided in Nicol's favour, who handed the money over to the hospital of the town.

About fifty years ago the courts at Paris had to decide upon a similar case. "A man of quality" challenged the whole world to prove the falsity of his quadrature of the circle, and deposited in the bank a sum of five hundred pounds, to be awarded to the person who should succeed in doing so, each having a stake in a wager on the subject. From his solution of the problem he deduced a plain explanation of the Trinity, and said it was evident that the square was the *Father*, the circle the *Son*, and a third figure the *Holy Ghost*. Our readers may, and many doubtless will, come to the conclusion that this "man of quality" was mad, and some others may hint, in a dry waggish way, that he was not the first, but we must remember that metaphysicians hold that there are certain heights of genius, and when a man reaches them, he stands over the abyss of insanity—one step, and he falls in. Such may have been the case in the present instance, and we must therefore preserve our gravity, whilst we relate that this wonderful demonstration was also, in the opinion of its discoverer, fully competent to remove all mystery from the doctrine of original sin, to prove the rotundity of the earth, and exhibit the causes of the declination of the magnetic needle!

Five hundred pounds was no small prize, and there was forthwith a host of competitors. Amongst others was a lady, who thought she could by the aid of common sense alone refute the challenger, and brought the affair before the courts of law. The judges, however, without expressing any opinion with regard to the quadrature of the circle, refused to sanction the disposal of the defendant's money in such a way, at the same time hinting some doubts as to his sanity, whereat he was greatly enraged, and bequeathed his "name and memory to the next age" for justification. The French Institute was, until very recently inundated with voluminous packets, purporting to contain solutions of the quadrature of the circle, so that they have now passed a rule to receive no more on the subject.

About the year 1830 the members assembled in great state to open a paper, which, by desire of the author, had remained under seal for a great number of years, as he alleged that it contained a precious discovery. It was found to be the quadrature of the circle!!

PORCELAIN TOWER AT NANKING.

VISIT TO AN ENCAMPMENT OF LAPLANDERS.

THE writer of an interesting account of a voyage from Leith to Lapland, while sojourning on the island of Tromso, learning that on the neighbouring mountains some Laplanders were encamped, resolved to pay them a visit. For this purpose he procured a boat and rowed over to the opposite shore, where he met with a Lap youth and a Lap girl engaged in driving a herd of reindeers to the encampment. He says:—"The youth had very bright, playful, hazel eyes, rather sunken, and small regular features of an interesting cast. His hands, like those of all Laps, are as small and finely shaped as those of any aristocrat. The simple reason for this is, that the Laps, from generation to generation, never perform any manual labour, and the very trifling work they necessarily do is of the lightest kind. His pæsk (the name of a sort of tunic invariably worn by the Laplanders) was of sheepskin, the wool towards, reaching to his knees. His boots were of the usual peaked shape, a few inches higher than his ancles, and made of the raw skin of the reindeer, the hair being nearly all worn off. On his head was a round woollen cap, shaped precisely like a nightcap, with a red tassel, and a red worsted band round the rim. This species of cap is the favourite one worn by the Laps.

"The dress of the girl was similar in shape, but her pæsk was of very coarse light-coloured woollen cloth, a material frequently used in summer for the pæsks of both sexes, as being cooler than reindeer-skin or sheep-skin. Her head was bare, and her hair hung low over her shoulders. Her features were minute, and the prettiest and most pleasing of any Lap I ever saw either before or since. The complexion was a tawny reddish hue, common to all Laplanders. The legs of the nymph in question were bare from the top of her boots to the knee, and were extremely thick and clumsy, furnishing a striking contrast to the delicate shape of her hands. The twain were accompanied by three little reindogs, and were very leisurely driving the herd onward, each having a branch of a tree in hand, to whisk about, to urge the deer on. The girl had a great coarse linen bag slung round her neck, and resting on her back. This she filled with a particular kind of [illegible] she went along. I asked her what she gathered it for, and she gave me to understand it was used in milking the reins, but in what manner was as yet to me a mystery. I found both the girl and the youth very good-natured. Eyes of the latter especially sparkled with merry humour. They could speak only a very few words of [illegible] understood some of my questions [illegible] readily answered them. They were driving the herd to be milked, and on my telling them I was an Englishman, come from afar to see them and their reins, they repeated the word "Englesk" several times in a tone of surprise, and regarded me with an interest and curiosity somewhat akin to what the appearance of one of their people would excite in an English city. Yet I must remark that, except in what immediately concerns themselves, the emotions of all Laplanders, so far as my opportunities of judging enable me to conclude, flow in a most sluggish channel. I asked the girl to show me the moss the reins eat, and she did so, after a little search, and gathered me some. It is very short in summer, but long in winter. In Sweden I learn that this most admirable provision of nature for the sole support of the deer during nine months in the year (and, in consequence, the existence of the Laplanders also depends on it) grows much more abundantly, and is of a greater length; which is the reason most Laps prefer Swedish Lapmark for their winter wanderings. Coming to a marshy spot where a particular long, sharp, narrow grass grew, I plucked some, and asked the Laps if they did not use that to put in their boots in lieu of stockings. They instantly responded affirmatively. This is the celebrated bladder carex, or cyperus grass (the *carex vesicaria* of Linnæus). I gathered some, and afterwards found it in several parts of the Island of Tromso; but it only grows in marshy spots. The Laps at all seasons stuff their boots quite full of it, and it effectually saves their feet from being frost-bitten.

"Onward we went, driving the herd, in which I gleefully helped, the three little dogs at times barking and fetching up stragglers. The Laps occasionally gave a short cry or urging shout to the reins, and I burst forth with my full-lunged English hallo, to the evident amusement of my companions. The scene was most exciting, and vividly brought to my recollections the forest scenes in "As You Like it." The brilliant sun light, the green grass, the sparkling, murmuring Ely, the picturesque glen, the figures of the Laps, the moving herd of reins, the novelty of the whole was indescribably delightful.

"We at length drew nigh the Lap encampment, consisting of two large *gammes* (summer huts), most rudely constructed of earth, stones, and trunks of trees, and also of a summer tent. Besides these, were two or three extraordinary erections of trees and branches, which I shall hereafter describe. Between us and the encampment flowed a head of Tromsdal Elv, and on the north side of this (the side we were on) were enclosed, circus-like, open places, each of a diameter of one hundred and fifty feet, as nearly as I could estimate. They were formed by stumps of trees and poles, set upright on the ground, and these were linked together by horizontal poles, and against the latter were reared bunch poles and branches of trees, varying *from six to ten feet in height, without the* [illegible] the whole being as rude as well [illegible] enclosure was sufficiently secure to answer the purpose of its builders. On the south side of the Elv, and about one hundred yards distance, was a third similar enclosure.

"Soon we were joined by the whole Lappish tribe, who came by twos and threes, bringing with them all the instruments and appliances necessary for the important business of milking. These consisted of long thongs of reindeer-skin, and also tempen cords of the manufacture of civilised men, for noosing the reins, and of bowls, kits, &c., to receive the milk. The bowls were thick, [illegible] things, round, and of about nine inches in diameter, with [illegible] hand-hold. They [illegible] probably each hold [illegible] and the edges inclined inwards, so as to prevent the milk from spilling over during the operation of milking. The large utensils for receiving the milk from these hand-bowls consisted of four wooden kits, with covers, one iron pot, and a long keg, or barrel.

"All the Lap huts I have seen are furnished with one or more small barrels, containing a supply of water for drinking. [illegible] apa[illegible]

[illegible] lose bes de the fence in the inner portion of the circle, and in their midst was placed another object, which I regarded [illegible] child's cradle! This was the last thing brought from the encampment, which then did not contain a living animal, men, children, and dogs being all assembled in the enclosure. The cradle was ingeniously made entirely of reindeer skin, shorn of hair, and, as it appeared to me, also hardened or tanned by some process. Its shape much resembled a huge shoe of the fashion of the middle ages, having a high back, and turned up at the foot or toe. It was just large enough to contain a child of a few months old, although, indeed, the Lap infants, like those of the "unfortunate" servant gal in one of Marryatt's works, are "such very little ones!" It reminded me strongly of the bark-cradles of the North American Indians, and was equally adapted to be slung at the mother's back on a journey or to be hung up in a gamme, or on a tree, out of the reach of hungry dogs or prowling wolves. The head of the cradle was spanned by a narrow top, from which depended a piece of coarse, common, red check woollen stuff, drawn so tightly over the body of the cradle that one would have fancied the little creature in some danger of suffocation, and it was only by an occasional feeble struggle under the cloth that I was apprised of the existence of a living creature beneath it. Evidently this cover was necessary, for I saw a huge mosquito, the summer pest of the north, settle repeatedly upon it, as though longing to suck the blood of the innocent little prisoner.

"The entire number of Laps now assembled could not be less than forty, men, women, and children included, and the three dogs had been joined by at least a score of their brethren. The men generally, were attired in rough and ragged pæsks either of reindeer skin or of sheep skin; the hair of the latter being worn inwards, but of the former outwards. The women had all pæsks of cloth, but their appearance was so strikingly similar to that of the men, and the hair of both sexes hung down over the shoulders and shaded the face so much that it was in some cases difficult at the first glance to

distinguish the sex of the younger adults. The heads of the women were bare, and they all wore girdles of leather studded with [illegible] brass ornaments, of which they are excessively proud. The men wore caps, as already described, and plain belts, [illegible] with a knife attached in a sheath, and in some instances the women also wore a small knife. The children had miniature pesks of sheep skin, their only clothing. I had read of the generally diminutive stature of Laplanders, and found them to be a truly dwarfish race. On an average the men did not appear to exceed five feet in height, and the women were considerably less. They were most of them very robust, however, and probably the circumference of their chest nearly equalled their height. The complexion of all was more or less tawny, their eyes light-coloured, and their hair either reddish or auburn, and in long lank masses added much to the wildness of their appearance. Some of them wore moustaches and beards, but nature had apparently denied the majority such hirsute signs of manhood.

"The gait or bearing of the Lapps is indescribably clumsy when they are walking on level ground, and is unsteady as that of a person under the influence of liquor; but they appear in the exercise of awkward when engaged in the avocations incident to their primitive life. They are exceedingly phlegmatic in temperament, greedy, avaricious, suspicious, very indolent and filthy, and by no means celebrated for strict adherence to truth. The Nordlanders one and all spoke of them, in answer to my questions, with implied distrust and contempt, and my own limited experiences most assuredly did not tend much towards impressing me with a more favourable opinion. The countenances of most of the Lapps present a combination of stolidity, low cunning, and obstinacy, so as to be decidedly repulsive, yet it is undeniably true that crimes attended with violence rarely occur among them, though I take that as no decided proof of the mildness of their disposition. They also are strict in their attendance at church, whenever opportunity serves, but their conduct immediately on quitting the sacred edifice too frequently evinces that hardly a spark of genuine religion has lightened up the darkness of their souls. Drunkenness has long been and is still their besetting sin, but I am assured that this failing, so common to all uncivilized races, is rapidly decreasing."

DIVISION OF TIME

The origin of the division of weeks, or of computing time by sevenths, is greatly controverted. Some will have it to be taken from the four quarters or intervals of the moon between her changes of phases, which, being about seven days distant, gave occasion to the division. Be the exact way, the division is certainly very ancient. The Syrians, Egyptians, and most of the oriental nations seem to have used it from all antiquity, though it did not come into use in the West till Christianity brought it in. The Romans reckoned their days not by sevenths, but by nunths, and the ancient Greeks by decades, or tenths, a mode of calculation adopted by the French but soon relinquished.

The Jews divided their time by weeks, but it was upon a different principle from the other Eastern nations, God himself having appointed them to work six days, and to rest the seventh, in order to keep up the use and remembrance of the creation, which being effected in six days, he rested the seventh.

Some authors suppose that the use of weeks to the other Eastern nations proceeded from the Jews; and from that the septenary division of days among the heathens of the East was a remnant of the tradition of the creation, and others again imagine it to have been derived from the Egyptians.

The days of the week were denominated by the Jews from the order of them succession from the Sabbath. Thus the next day after the Sabbath they called the first of the Sabbath, the next the second of the Sabbath, and so of the rest, except the sixth, which they call [illegible] preparation of the Sabbath.

The Arabians, [illegible] Turks, the Christian Arabs, Persians, Hindoos, [illegible] Germans, heathens denominated the days of the week [illegible] second, which names are still generally retained among the Christians of the West.

Sunday, from sun and day, was thus denominated by our idolatrous ancestors because set apart for the worship of the sun. It is now more properly called the Lord's-day, because kept as a feast in memory of our Lord's resurrection on this day, and Sabbath-day, because substituted under the new law in the place of the Sabbath in the old law. Sabbath is a Hebrew word signifying cessation or rest. It was the seventh day of the week, held as a feast among the Jews in memory of God's resting on the seventh day of the creation. It was appointed from the beginning by God himself, and was set apart from works of labour, and to be employed in public worship and acts of charity.

WHAT IS NOBLE?

What is noble? To inherit
Wealth, estate, and proud degree?
There must be some other merit
Higher yet than these for me!
Something greater far must enter
Into man's high plan,
Fitted to create and centre
True nobility in man!

What is noble? 'Tis the finer
Portion of our mind and heart,
Linked to something still diviner
Than mere language can impart;
Ever prompting—ever seeing
Some improvement yet to plan
To uplift our fellow being,
And, like man, to feel for man.

What is noble? Is the sabre
Nobler than the humble spade?
There's a dignity in labour
Truer than e'er pomp arrayed!
He who seeks the mind's improvement
Aids the world, in aiding mind.
Every great commanding movement
Serves not one—but all mankind.

O'er the forest's bent and ashes,
O'er the engine's snorting head,
Where the rapid shuttle flashes,
And the spindle whirls its thread
There is Labour lowly tending
Each requirement of the hour,
There is genius still extending
Science—and its world of power!

Mid the dust, and speed, and clamour,
Of the loom-shed and the mill,
Midst the clank of wheel and hammer,
Great [illegible] are [illegible]
Though, [illegible]
Work [illegible]
Commerce [illegible]
Industry is not a shamed.

What is noble? That which places
Truth in its enfranchised will,
Leaving steps, like angel traces,
That man's mind may follow still!
Lo! O[illegible]
Pio[illegible]
He's the noble—who advances
Freedom, and the cause of man.—CHARLES SWAIN.

NOT AFRAID TO BE POOR.—After Dr Gill had written against a gentleman whose publications he considered erroneous, he was waited on by some of his friends, who endeavoured to dissuade him from persevering, and among other things, they intimated to him that he might lose the subscriptions of some wealthy persons. "Do not tell me of losing," said the doctor, "I value nothing in comparison of the gospel. I am not afraid to be poor."

OUR HOPE IS IN THE CHILDREN.—It is said that, when Peter the Great, of Russia, desiring to introduce English manners into his kingdom sent a number of young men into England, his jester called him a fool. Peter threatened to have him tossed in a blanket if he did not make the assertion good. The jester called for a sheet of paper, and folding and rubbing it hard, desired Peter to remove the impressions there made. His Majesty could not. "Why, then," said the jester, "do you send young men already impressed with Russian habits to England? Send children." The jester was right.

MISCELLANEA.

LITERAL INTERPRETATION.—"Ma," said Wilhelmina, 'I don't think Solomon was so rich as they say he was.'—"Why, my dear?" said her astonished ma.—"Because he 'slept with his father.' I think if he had been rich he would have had a bed of his own."

AN ACCOMMODATING TAR.—A letter was recently received at a custom-house on the Tyne from a free and easy Jack, requesting a certificate to be sent to his address, at the Sailors Home in Liverpool, or "*wherever, at the time, he may be pleased.*"

EARLY HOURS.—The stately dame of Edward the Fourth's court rose with [illegible] orchard [illegible] were [illegible] [illegible] [illegible]

NOTICE.

Persons can be Members of the Land and Building Society, or of the Benefit Society, or of both Societies, as they think proper.

Great and Important Benefits to the Working Classes.

Office—13, Tottenham-court, New-road, St Pancras, London

UNITED PATRIOTS' NATIONAL BENEFIT SOCIETY, for Insurance against Illness, Accidents, with Medical Attendance, Old Age, Death of Member, Wife of Member, or Nominee, Loss by Fire, and other Casualties of Life.

According to the Payments of Members, the following important Benefits are Assured:

	£	s	d	£	s	d
Illness or Accidents, per week ..... from	0	7	0	to 0	18	0
Old Age or Superannuation ..... from	0	4	0	to 0	6	0
Death of Member ..... from	2	10	0	to 20	0	0
Death of Member's Wife or Nominee from	0	0	0	to 10	0	0
Loss by Fire ..... from	0	0	0	to 20	0	0

INSTITUTED 7TH FEBRUARY, 1848.

Enrolled in conformity to the Friendly Societies Act of Parliament.

Paid to Members and their Friends since its commencement Benefits in Sickness, Superannuation, Loss by Fire, and Deaths, the sum of £12,401 18s 6d

Secretary—Daniel William Ruffy, residence at the Office.

Treasurer—John Smith, Brewery, Stamford-hill, Stoke Newington

Bankers—Commercial Bank of London Branch 6, Henrietta-street, Covent-garden

For further information, Entrance Fees, Payments, &c., refer to the Secretary, enclosing three postage-stamps.

Agents required to form Branches in all parts of the Country. Commission Five per Cent., reasonable compensation allowed for extra services

PRESENT CAPITAL, above £3,500

PRESENT NUMBER OF MEMBERS, about 2,500

Land and House your own; or Every Man his own Landlord.

BRITISH EMPIRE BUILDING AND LAND SOCIETY.—Enrolled, and empowered to extend over the United Kingdom.—Office, 13, Tottenham-court, New road, St. Pancras, London

Manager and Secretary—Daniel William Ruffy, residence at the Office

Treasurer—John Smith, Brewery, Stamford-hill, Stoke Newington.

Bankers—Commercial Bank of London Branch 6, Henrietta-street, Covent-garden

INVESTMENT DEPARTMENT.

A Monthly Payment of 10s 6d will, at the end of 12 Years, secure to the Investing Member £124

A Monthly Payment of 5s will, at the end of 12 Years, secure 60

A Monthly Payment of 2s 6d will, at the end of 12 Years, secure 30

Deposits of £1 and upwards bear Four per Cent. Interest on all sums when they amount to 10s and upwards.

LOAN DEPARTMENT,

For Members to purchase Freehold or Leasehold Property on the Payment of Subscriptions payable to the Society in the shape of Rent to a Landlord—

£100 advance for 5 Years	Monthly Repayments	£	1 2
£100 „ for 10 Years	„ „		1 4 8
£100 „ for 15 Years	„ „		1 0 8

Surveyor, for examination of Property, and Expenses of Conveyance, for executing Deed of Mortgage, paid by the Society.

EXAMPLE.

If a man can purchase a house for £300, upon which before purchase he pays a yearly rent of £30, he borrows from the Society £300 for ten years, and pays yearly £14 8s, or £144 less than he paid for rent, for which in ten years he purchases the house, and has no more rent to pay. Other examples of less payments over a longer period of years can be taken (see Table)

For further information, apply to the Secretary, enclosing three postage stamps

Agents required, to form Branches in all parts of the Country. Commission, Five per Cent., reasonable compensation allowed for extra services

NEW AND INTERESTING PUBLICATIONS

ISSUED BY

JOHN CASSELL, 335, STRAND, LONDON.

On Nov 1 will be published, price 8d., the FIFTH MONTHLY PART of

THE ILLUSTRATED EXHIBITOR, a Tribute to the World's Industrial Jubilee—This splendid work has attained a circulation of One Hundred Thousand. It may truly be termed the Literary and Pictorial Wonder of the Age. Though published at Twopence, each Number is filled with Engravings of objects and scenes in the Great Exhibition.

THE ILLUSTRATED EXHIBITOR ALMANACK, price 6d, is now ready, and forms a superb book of reference and ornament to the table. It contains the following SUPERB ILLUSTRATIONS Twelve of Phenomena, or Remarkable Appearances of Nature; Twelve beautiful Engravings, designed by Harvey, of the Months of the Year, as observed in various Nations, namely, January, New Years' Gifts in China, February, Sleighing in Russia, March, Peat-cutting and carrying in Ireland, April, the Harvest in Palestine, May, Fruit Market in Paris, June, Hayfield in England, July, Mountain Pastures in Norway, August, Return from the Vintage in Italy, September, the Emigrant, Canada, October, Orange Gathering in the Azores, November, Deer Stalking in the Highlands of Scotland, December, the Christmas Tree, Germany, also, the Four Seasons of the Year, by Tony Johannot—A View of the Champs Elysées, Paris—Twelve Engravings (from Drawings in the Cottonian Library) of the Anglo-saxons during the Twelve Months—The Twelve Signs of the Zodiac—Foucault's Experiments to prove the Rotation of the Earth—The Avalanche—The Eternal Worker, &c. The original matter consists of articles explanatory of the above-named Engravings, in addition to which is given the Calendar, Astronomical Notices, Tide Tables, List of Members of both Houses of Parliament, Government and Civic Officers, Bankers, Post-office Regulations, the Census of 1851, Abstracts of Recent Acts of Parliament, and other matters interesting to Tradesmen, Families, &c.

JOHN CASSELL'S LIBRARY

On November 1st will be published, price 5d., Volume I of

A NEW and POPULAR HISTORY of SCOTLAND By Dr Peter Ferguson, of Ryde, Isle of Wight.

A NEW and POPULAR HISTORY of IRELAND, derived from Authentic Sources. The Two Vols in One, neatly bound in cloth, 1s 6d—This work will be found to be not only the cheapest, but the most stupendous and interesting History of Ireland ever published.

THE GREATNESS of the BRITISH EMPIRE traced to its SOURCES. By BENJAMIN PARSONS Complete in One Double Volume, neatly bound in cloth, 1s. 6d.

THE PEOPLE'S BIOGRAPHICAL DICTIONARY a Picture Gallery of Great Men of all Ages and Countries, especially of such as have lived within the Last Century, and by their own efforts raised themselves and benefited their species. By J R Beard, D D Complete in Two Double Volumes, containing upwards of 600 page, 2s 10d, neatly bound in cloth.

THE NEW and POPULAR HISTORY of ENGLAND By Dr R. Ferguson Complete in Two Double Volumes, bound in cloth, 2s 10d Or, on fine paper, with a Portrait of the Author, in One Volume, elegantly gilt, 4s.

SAILINGS OVER the GLOBE; or, the Progress of Maritime Discovery. Complete in One Double Volume, bound in cloth, 1s. 4d.

FOOTPRINTS of TRAVELLERS. Complete in One Double Volume, bound in cloth, 1s. 4d.

Now Ready,

THE ILLUSTRATED PROTESTANT DISSENTERS' ALMANACK, price Sixpence—A new and striking feature in this popular Almanack is the introduction of Pictorial Illustrations, descriptive of the Early Struggles and Martyrdom of the Puritans and Nonconformists. This Almanack contains—in addition to the Usual Chapters of Astronomical Calculations, Tide Tables, &c.—Historical and Biographical Sketches of Eminent Men, and numerous portraits to Memorable Events connected with Protestant Dissent, with the Lives of Puritans, Dissenters, and Nonconformists, and Articles, original and selected, illustrative of the Principles and Progress of Civil and Religious Liberty. In order to render the "Protestant Dissenters' Almanack" truly a Keepsake, the pages are larger than those of the previous issues, the paper and typography are considerably improved, and the whole is presented in such a style as to render it worthy of preservation in every Nonconformist Family

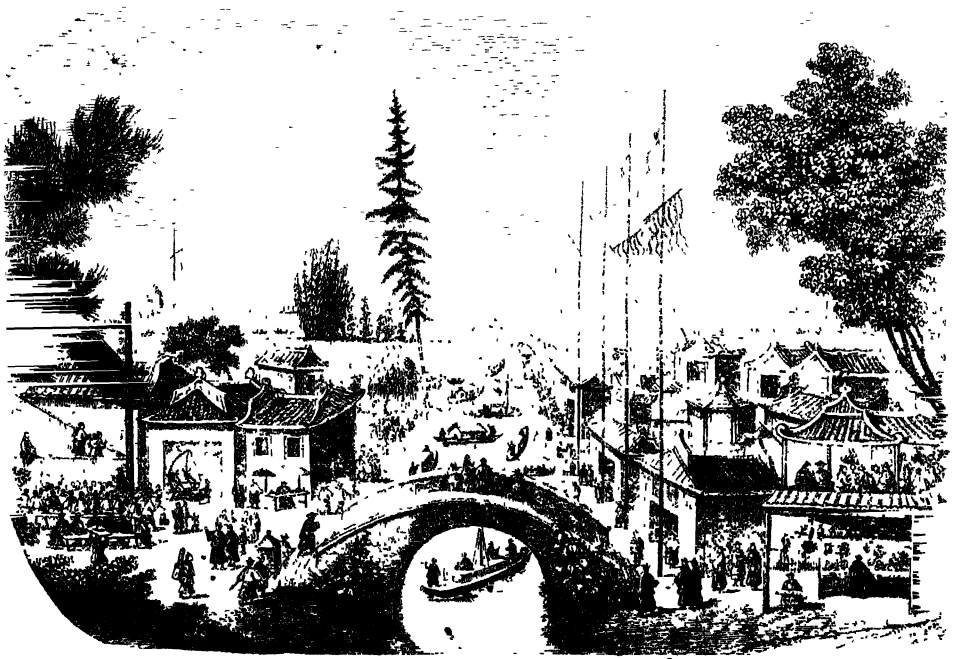
Now ready, in a neat wrapper, price 6d,

A SERIES of LESSONS IN FRENCH, on an entirely Novel and Simple Plan, by means of which a perfect Knowledge of the French Language may be acquired without the Aid of a Teacher. Reprinted in a revised form from "The Working Man's Friend"

THE LITERATURE of WORKING MEN, being a Monthly Supplement to "The Working Man's Friend," price One Penny. Each Number contains articles on various subjects exclusively contributed by Working Men, thus tending to elevate and develop the Intellectual Capacity of the Industrial Classes.

Printed and published by JOHN CASSELL, at his Printing-office, 335, Strand, London.—October 25, 1851

THE
WORKING MAN'S FRIEND
AND FAMILY INSTRUCTOR.



NEW SERIES.—VOL. I., NO. 5.] SATURDAY, NOVEMBER 1, 1851 [PRICE ONE PENNY

CHINA AND THE CHINESE

THE ARTS OF THE CHINESE

As to clothing, the lower orders of the Chinese generally wear an untanned sheep-skin jerkin and nether garment of cloth. The summer clothing of the upper ranks is a long loose gown, of thin silk or gauze, sometimes confined to the waist by a girdle, the sleeves loose, and the neck bare. The breeches are of ample dimensions. The legs are protected by woven stockings of cotton or silk, and the feet by cloth, satin, or velvet boots. As the leather is not sufficiently tanned to exclude wet without many layers, the soles of boots and shoes are very thick. In winter fur jackets and leggings are added to the summer clothing. On the commencement of the cold or hot season, the viceroy of each province puts on his winter or summer cap. The summer cap is a cane of bamboo or chip, covered with a large quantity of red horse-hair, or with silken threads; at the apex is the button, which indicates the rank of the wearer. A dome of velvet or fur, with a broad brim, sharply turned up all round, is used in winter.

The Chinese especially excel in the manufacture of silks. Their exquisite texture and brilliant hues render them the most splendid article of dress among that people. All ranks, from the noble to the peasant, are desirous of wearing silks, and they are employed not only in robes and trowsers, but in caps, boots, and shoes. The silks generally worn by the Chinese are plain, but they are manufactured in every colour, and adorned with beautiful figures. The manufacture, beautiful as it is, is not produced by any elaborate machinery,

EAST GATE OF KOU-SOU, INTERIOR WALLED PART OF THE TOWN OF SOU-CHOU, WHERE THE ROYAL WOOLLEN WORKSHOPS ARE

on the contrary, it is woven in very simple looms, like those of the ancients.

In China the culture of the silkworm and the weaving of silk may be traced to a remote antiquity. The soft wool of the Chinese is celebrated by Virgil as being combed from trees. The manufactures of this substance—then more costly than gold—were patiently unravelled by the artists of Greece, who re-manufactured it with a mixture of some less expensive material. The fabric thus produced, styled "woven air" and "textile cloud," was extremely thin, and Roman moralists were not wanting to denounce its use as indecent.

On the destruction of the Parthian empire in the third cen-

tury, restrictions previously existing were removed; the supply of silk increased, and a rich Roman might escape the charge of extravagant luxury when he was attired in the gorgeous and expensive fabrics of the East. A change was, however, advancing. Two Persian monks, during a long residence in China had carefully considered the advantages which might accrue to the Western World could the silkworm be introduced, instead of the costly and precarious importation of its produce. Their proposal was eagerly embraced by the enlightened Justinian in the sixth century, and after some peril and many attempts, a sufficient number of eggs were enclosed in a hollow cane, and successfully conveyed to Constantinople. Anticipating this result, plantations of mulberry trees had been prepared; after some unproductive attempts, silk enough was produced to show that a proper method had been adopted; the artists of Greece gradually improved, and it was not long before they equalled or surpassed those of China. The profitable monopoly thus acquired, of supplying the Christian world, was retained by the Greeks until the twelfth century, when the Norman Roger, after his conquest of western Greece, carried off among prisoners a number of silk-weavers and spinners, whom he settled at Palermo. Sicilians were now instructed in the process; it was soon acquired by Italians, and the manufacture, in consequence, speedily spread itself over the Western World.

The ancient monarchs of China, who, in their traditionary history, play the part of gods, are said to have been the inventors of the silk manufacture. In remote ages, an example of industry was annually given by the Empress, who fed silkworms with the leaves gathered by her own hands, from trees growing within the walls of the imperial palace. Their produce was afterwards spun and woven by herself. This royal practice appears to have been retained as a pleasant occupation long after its full effect as an example had been produced. A part of the palace is still stocked with silkworms and mulberry trees, for the amusement of the royal ladies, and the Government patronise the manufacture, but the ancient custom of the Empress was discontinued on the accession of the present family.

The velvet of China is surpassed by that of Europe; but their damask, sarsnet, satin, crape, and shawls, are considered superior to the products of these far distant climes. Considerable skill is also displayed by the Chinese in the manufacture of cotton goods, and in a variety of stuffs made of silk and cotton, which are very costly. In the northern provinces, carpets are made of the most elegant description; and in the same district they imitate our woollens, but with little success.

Chinese lanterns are of almost every imaginable form and size. They are made of horn, silk, glass, and paper, and sometimes of a netting of fine thread, overspread with a thick coating of varnish. The frame-work is often carved in the richest manner; the silk which covers it is elegantly embroidered or painted with landscapes, representing nature in her gayest moods and the various decorations of the lanterns are in a corresponding style. As a national ornament peculiar to the Chinese, the lantern does not give place to any similar display, in any other country.

For the working of iron and steel, the Chinese have never attained any celebrity. Their instruments and utensils are all very clumsy. Their steel is badly tempered; and their knives and razors have but an indifferent polish. Their needles, locks, and similar articles are of an inferior description; and they are unable to make good springs. But, whatever they want in skill, they often supply by economy and perseverance. Their implements are adapted for saving every particle, and they are parsimonious with the very filings of their metals. They understand casting in iron, and many of their kitchen utensils, for which we use copper, they make of this metal. Their iron cannon founderies are very numerous, and even the barrel of a matchlock is cast.

The Chinese work in tin very neatly; of this they cast and beat a great variety of utensils. As it is cheaper than copper, it often serves as a substitute for that metal. Chinese braziers and coppersmiths are not, however, frequently met with, because the Government prohibits the use of copper and brass, except for the casting of coin. Their work is therefore restricted to a few unimportant things. Tin plates are imported, chiefly for the fabrication of lacquered ware, in which the people produce a great variety of articles.

Many of the articles in the Great Exhibition were sent from a very ancient manufactory of porcelain. Father Entrecolles, a French missionary, who resided there in the beginning of the last century, states, in his published letters, that there were in 1712 not less than 3,000 ovens, which gave the town during the night the aspect of a vast furnace, with a multitude of chimneys. The chief ingredients appear to have been two kinds of earth, called *petuntse* and *kaolin*, by the combination of which a paste is made. A rich Chinese merchant told the father that the English and Dutch having purchased a quantity of *petuntse*, conveyed it to Europe, for the purpose of making porcelain; but the attempt failed, because they obtained none of the *kaolin*. With a smile at foreign credulity, he added "They wanted to form a body, the flesh of which should support itself without bones."

At that period ancient pottery was in great demand, and bore extraordinary prices in China. The vessels obtained in tombs and other ruins bore marks of high antiquity. Thus it is related that vases were found which gave evidence of having belonged to emperors who reigned between two and three thousand years B.C. Examples are also produced of vases of Chinese origin found in ancient tombs at Thebes, which appear by their inscriptions, to have been manufactured eighteen centuries before the Christian era. One of these is in the British Museum, and another is in the museum at Alnwick, both brought into this country by Sir J. G. Wilkinson. It was not, however, till a comparatively recent date that the fine porcelain, afterwards so celebrated, and so much esteemed in Europe, was fabricated in China.

Ivory is wrought with great elegance, and some Chinese products in this substance are exceedingly ingenious and curious. Thus a thin ball may sometimes be seen containing six, eight, or ten other balls, each one beautifully carved, and yet with no two patterns alike. The writer has seen one which contained no fewer than seventeen concentric spheres. The sort of lace-work which some of these present is very surprising. In looking at them the question arises, How can they be produced? It has been replied, They are made in hemispheres, which are afterwards fastened together in pairs. But, in order to test this, they have been subjected to the action of boiling vinegar, yet without effect. On the other hand, it has been asserted, and that with far more probability, that each set of balls is cut out of a solid mass of ivory. The artist first reduces the substance to a spherical form; he then makes four holes at the four points of the globe, about half or three-quarters of an inch in diameter, but only to the depth, which corresponds with the thickness which the outer globe is to have, and he cuts out through these apertures, with sharp crooked instruments, the second globe. This he treats in the same way; and then a third, a fourth, a fifth, or sixth, and any further number he may intend the primary globe to contain. It is through the four holes, successively formed in each ball, that he contrives by slow, careful, and long-continued labour, to give to all but the first the curious and often elaborate pattern which each one ultimately bears. The first receives easily any design. The average time consumed in carving each ball is said to be about one month.

The Chinese have many musical instruments. One of them called the *kin*, may be styled in English the scholar's lute, from its being generally played upon by men of learning. It has seven strings, with thirteen studs, sometimes of mother-of-pearl, to direct the fingers as to the proper positions they should take. In playing, the left hand presses down the string, while the right hand gives it the requisite touch. The chief peculiarity in the style of performance consists in the shifting and sliding movement of the left hand while the string is sounding. To manage this with grace and variety forms the most admired perfection of the player. The notes are said to be pretty when the instrument is touched by a native; but there is a wild and melancholy dromishness about them which, when heard amidst the rural retreats of the Chinese, might make an imaginative person think he was suddenly carried back some two or three thousand years, and was listening to some of the first efforts of mankind towards art and improvement.

Several kinds of guitar are used by the Chinese. One of

their instruments is string with fourteen double wires, which pass over two bridges, so that there are several notes in duplicate. It is struck with two very delicate hammers, prepared from the bamboo. The violin exists amongst them in its rudimentary state. The clarinet, which is blown with a reed like that of our own military bands, but unlike theirs in having the bell or lower end made of brass and adorned with silken tassels, is a loud and powerful instrument. The Chinese are very fond of the deafening sounds produced by it, and have recourse to them on all exciting occasions of joy, sorrow, or religion. If a native musician is asked to give a foreigner some instruction as to the nature and use of the instruments known among his people, he will try the whole assortment set before him in their turn, but at length he will fasten on the clarinet, and, with looks full of complacency, continue to blow such a peal from the sonorous tube that the visitor is at length obliged to ask that he may be favoured with a truce. The flute is made of bamboo, and has six holes for the fingers, but, like the clarinet, has no key. To other instruments our space forbids us to allude.

Artificial flowers, pillows, and soles of shoes, are made by the Chinese of that delicate material known under the appellation of *rice* paper, from an incorrect notion that rice is employed in its composition. It is, on the contrary, obtained from a malvaceous plant. In the preparation of it for use, the stem of the plant is cut into small pieces in a circular manner, and the cylinder rolled out and flattened. Dr Livingstone first brought from China to Europe a quantity of this substance, which he presented, many years ago, to Miss Jack, who was celebrated for the beauty and accuracy of her artificial flowers. For a bouquet presented by that lady to the Princess Charlotte, she received the royal present of £70. Since that time, not only has the cost of rice paper been reduced, but the size of the pieces increased so as to be upwards of a foot long and five inches across, yet preserving their natural whiteness. The Chinese dye this substance, using the tinted pieces for artificial flowers, and the plain white for their drawings.

These people have a remarkable power of imitation. Give but one of them anything to copy, whether it be a painting, or an old coat, and he will, with uncommon dexterity, soon execute its exact counterpart, even to the holes in the canvas or the patches in the sleeves. The following is an amusing instance of the fidelity of a native artist.—A European lady at Macao was having her portrait drawn, and as the work proceeded she expressed strong dissatisfaction with the performance. "Spose," said the painter, in the peculiar jargon current at and near Canton, "Spose you smile a little, and lookee better." When the picture was done the indignation of the fair one was so great and so discordantly expressed, that the irritated artist naively exclaimed, "If handsome face no got, how handsome face can make?" Our painter Hoppner could have answered the question, as he did when a friend inquired how he was so successful with portraits of ladies of fashion, "I heighten whatever is favourable, and keep down whatever is of an opposite character," and Sir Thomas Lawrence could have repeated and added emphasis to the lesson.

Many of the arts of the Chinese may, in conclusion, be described as ambulatory. Thus the shoemaker carries with him a basket containing his rude tools and his whole stock in trade, a fan and a pipe, with a pair of spectacles, the ends of which have loops attached to them to pass round each ear. Even the blacksmith may become an itinerant. Inclined to try his fortune in a new place, he stows his forge, bellows, anvil, tools, and other articles into a basket, which he slings over his shoulders, and then wends onwards his way. His anvil is slightly rounded at the top; the bellows is a hollow cylinder, with a piston so contrived as to keep up a continuous blast, and with these simple means he will repair cast-iron pots when worn into holes. The cook may be seen in the market, with all culinary utensils for the preparation of viands, while the fruiterer, fishmonger, and butcher are at hand to supply the materials. The streets literally swarm with tinkers of every description, and their occupations extend to the repairing of every article. The dexterity with which they put together pieces of broken porcelain, glass, and other fragile articles, is astonishing. But labour of all kinds is cheap in China. So trifling are the earnings of artisans, that the most industrious do not gain more than about ninepence per day.

It is remarkable that we owe to the Chinese our present systems of bank-notes and banking. Some curious facts on this subject have been gathered by the celebrated Klaproth, from the Chinese annals, which are singularly complete, as the keeping of them has always been a state concern. It appears that in the year 119 before the Christian era, the treasury of the sovereign was so seriously depressed, that its revenues fell below the expenditure of the state. He had, however, a Chancellor of the Exchequer of no ordinary ability, who not only devised, by means of a paper currency, a system of nominal currency. It consisted of pieces of deer-skin, about a foot square, ornamented with painted figures, and with borders, which represented the value of three thousand pieces of sterling, but were only current among the nobles and at court. But of these pieces of deer-skin a large number was issued in a manner which was truly Chinese. From time immemorial, every person who is admitted into the imperial presence, or rather, to speak in the style of the country, into that of the "Son of Heaven," covers his face with a screen or small tablet, because he is supposed to be absolutely unable to bear the blazing light of the Emperor's countenance. At the time now referred to, therefore, whoever was honoured in being invited to the royal repast and entertainments, was obliged to cover the Emperor's screen with one of these articles, or "value in skins," which he was *graciously* permitted to leave behind him.

The plan, thus adopted, appears to have been often followed in after years. In the seventh century so much disorder prevailed in China, that it was nearly without a coinage, and all kinds of things, as clothes cut up, round pieces of iron, and even bits of pasteboard, were used as money. But, in the time of a sovereign, whose reign commenced A.D. 807, he became the founder of banks of deposit and issue. He obliged rich families and merchants who arrived in the capital, to deposit their wealth in the imperial treasuries, for which *paper* receipts were given, that is the time of "voluntary money," and which also became current. Among ourselves banks are generally divided into two great classes—banks of deposit, and banks of circulation. This division, however, is not a very distinct one, for there is no bank of deposit that is not, at the same time, a bank of circulation, and few or no banks of circulation that are not also banks of deposit. But the term, banks of deposit, is meant to designate those which keep the money of individuals and circulate it only, while the term banks of circulation is applied to those which do not thus confine their circulation, but issue notes of their own payable on demand. The Bank of England is the principal bank of circulation in the empire, but it, as well as the private banks in England and Scotland that issue notes, is also a bank of deposit. The establishment of banks, though not without their evils, has contributed, in no ordinary degree, to give security and facility to all kinds of commercial transactions; but in such matters we were preceded, for ages, by the Chinese.

So far back as the tenth, and the early part of the eleventh century, we find, also, that a paper money system, such as it is at present in Europe, was followed in China. Thus there was, at that period, the issue of credit paper as currency, without the guarantee of any substantial pledge, or guarantee whatever. These primitive bank-notes were issued of various amounts. Offices were appointed by the Government everywhere to receive and to issue them. They were to be renewed within seven years, and about one and-a half per cent. was deducted for the expenses of their issue. A scarcity of copper coin is assigned as one reason for this cause; and another is, the want of money to pay the army, which led to this scheme to entice the merchants with the convenience of the practice. The notes thus employed were called "*Coupons*," and from that time to the present, bank-notes have been issued in China under various names; those current now being called "precious paper money." The usual incidents of a paper-money system have appeared in consequence: monetary crises and forgeries have been common for ages, and without the peculiar formalities of our "Gazette," bankrupts have been very numerous.

A Chinese bank-note is a square paper, having on one side an inscription which states the amount for which it is issued, and that it is a note of the Emperor Long-King, of the Ming dynasty. On the other side is an inscription to the following

THE LYRE—OR LABOUR?

Oh, urge me not to strike the Lyre,
Or raise my voice in Song;
It matters not tho' *words* expire,
If *true life* still be strong —
If all my *deeds* be harmony,
Replete with joyous peace,
I *live* a noble melody,
Whose echoes cannot cease.

If, gifted with the power of words,
I weave them into lays,
Upon the wind perchance is heard,
The feeble notes of praise —
Yet, as with tired and toiling feet,
The upward hill we climb,
What heart, in fondness, will repeat
The old, forgotten rhyme?

But if the gracious *act* of good
Fall from my humble hand,
Not all the waters of the flood
Could wash it from the land!
The wavelets, driving on that tide,
Wherein 'all battled strong,'
Shall *tell* it as a living deed,
A fresh, undying song!

Then urge me not in haste to reach
And sound the lyric cords,
Let Labour lend her lusty speech,
To vivify my words!
When, from the sacred depths of all,
A radiant sun shines forth,
A shower of wreathed words will fall,
And *truth* will give them worth.

I would not scatter empty sound,
Melodious though it be,
But seeds, that in a fertile ground
Should gain maturity
Oh Thou! whose wide eternities
With holy hymnings ring,
Teach me, ere this brief being flies,
To *live* the psalm I sing!

THE HISTORY OF THE SUBMARINE TELEGRAPH

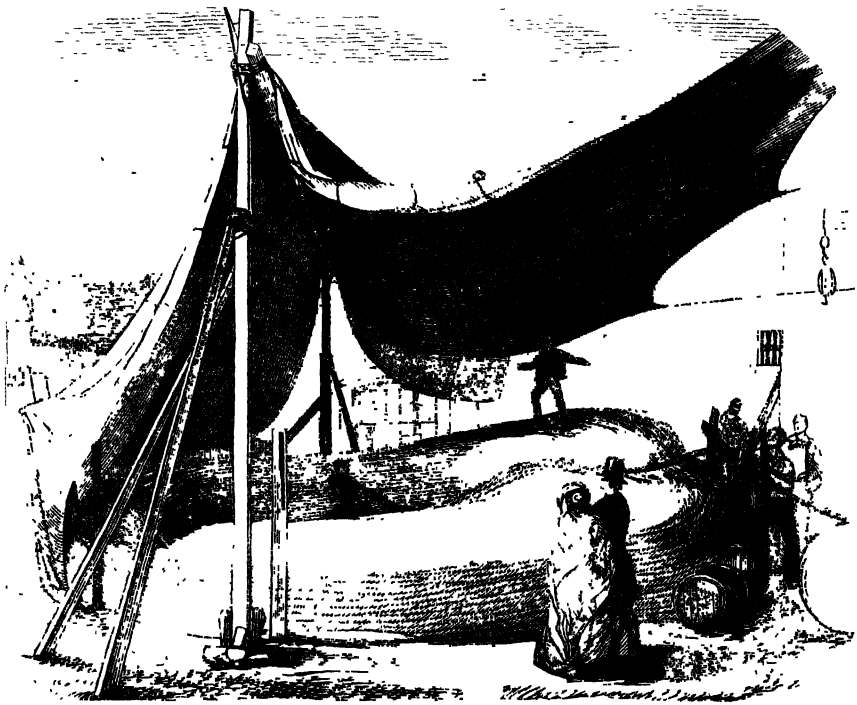
THIS month has just witnessed the completion of what promises to be an important step in bringing about the brotherhood of nations. We refer to the laying down the Submarine Telegraph, which has at length taken place. On Thursday, the 8th of September, the great cable twenty-four miles long, destined to form the key for communication between this country and the continent, was completed at the works of the Submarine Telegraph Company, Wapping. The fabrication of the coil, which employed the workmen day and night for three weeks, was conducted in the following manner. Entering the factory, situated in High-street, the first objects that met the observer's eye were the well-constructed wire-rope machines, each about twenty-feet high, and fifteen feet in circumference, presenting a large iron frame-work in the form of a cupola with a shaft or cylinder in the centre worked by a steam-engine of five horse power. Obedient to the ringing of a bell, lays an eye-witness of the proceedings, the workmen took their places around one of the machines employed in the first process the machines, the action of which was vertical, being set in motion by the steam-engine, the first, or interior, portion of which composite cable consists, was payed out on to the shaft. first layer was composed of four electric copper wires, known as the sixteen wire gauze, each encased in a covering of gutta percha a quarter of an inch in diameter. These placed in the machine, and with the assistance of the manipulators were twisted and plaited in spiral convolutions in the manner of an ordinary rope round the shaft. The next superincumbent coil of this consisted of hempen yarn, previously saturated in a reservoir of prepared pitch and tallow, with the view of what the workmen called "worming" the gutta percha. The gutta percha thus protects the delicate wire, and the hempen yarn, in addition, acts as a cementitious material to the more delicate gutta percha, which ultimately has thrown over it a coat of mail of galvanised wire. This completed the first process; the second part of the performance consisted in hauling off the cable when completed, and passing it, in another compartment of the factory, on to another wire-rope machine, where the cord was completely covered over with ten galvanised iron wires, each wire being about the thickness of a lead pencil, and known as No. 1 galvanised wire gauze. This galvanised iron sheathing, it is believed, will protect and preserve the iron layers from the action of the sea. The appearance of the cable, thus completely encased in a shining coat of galvanised iron, was described as quite silvery. The coil when completed was rolled up into a circle five feet high and twenty feet in circumference, representing a dead weight of 200 tons, the weight per mile of the cable was 8 tons, and its breaking strain 10. Too great praise cannot be given to all parties engaged in its manufacture, especially to the Gutta Percha Company, by whom the gutta percha wires were prepared. The whole of the 100 miles of communication represented by the four wires of 24 miles each were tested, and found true, by Mr. Wollaston in the Regent Canal.

The cable having been thus completed, preparations were immediately made for laying it down. On Saturday, Sept. 20, the Government Blazer arrived at the wharf of Messrs. Blyth and Co., Wapping, for the purpose of conveying it to Dover. The Blazer had her funnel, masts, and boiler removed expressly for the occasion. The transfer of the great mass of cable, though a laborious business, was accomplished very cleverly. This was done by passing it over an elevated revolving wheel above the coil, and thence to another wheel some [illegible] feet in diameter, on to a stage some fifty feet high, overlooking the High-street, and thence through a wooden trough across the street on to the wharf. Here it was hauled, with seamanlike celerity, on to the prow of the vessel over what are termed "chocks," and supporting poles, at the rate of a mile an hour, and then stowed away in coils in the hold. On the following Thursday morning the Blazer arrived in Do when immediately proceedings were commenced at the South Foreland.

At six in the morning Capt. Bullock, R.N., was ready with the steam-ship Fearless and a picked crew to pilot the convoy across the Channel. The morning was calm and sea bright, and the crews of both vessels appeared to be animated with that feeling of adventure naturally enough evoked by an experiment of such enterprise and novelty. The first thing done, there not being sufficient depth of water for the Blazer to be brought near enough ashore, was to convey the extremity of the cable on to the South Foreland coast. The Fearless then steamed ahead, having made fast her towing tackle to the hull of the Blazer, at the rate of two miles an hour out to sea, the men on board the latter vessel paying out continuously the cable over her stern, from whence, by the action of its own weight, it sank into the submarine sand and valley. The track between the South Foreland and Sangate, the corresponding point on the French coast, as presenting, from soundings and surveys, the fewest obstacles and probable disturbances, was marked out by pilot buoys, and was chosen as the best site for the submerging of the wire that could be adopted by those having the best knowledge of naval and marine dynamics. The depth of the sea line at starting points is from 20 to 30 feet, and the maximum depth 180 feet or 30 fathoms. Messrs. Crampton and Wollaston, the engineers, were in charge of the engineering arrangements, and some thirty men, and the necessary batteries being on board, complimentary messages and notifications of progress were sent over the progressing payed out cable, through the waveless depths to Dover. Owing to blunders perhaps not altogether unavoidable, it was found the cable was not long enough; so that, although the French coast was nearly gained, the completion of the undertaking was for a time delayed.

The completion of the undertaking so far was marked with great rejoicings on the other side of the channel. A line of communication between the two coasts was established on Sunday evening, about five o'clock, and the electric wire, after three days had been consumed in stretching it across the straits, was brought up on the French coast at Sangate, about three miles below Calais, whence it was carried underground

to the telegraphic station of the Great Northern of France Railway in Calais. Electric currents were passed from coast to coast, and messages sent the same evening, but on Monday following a series of experiments were tried with the most satisfactory result. Early on Monday morning congratulatory messages to the President of the French Republic were sent direct from England to Paris, also to the King of Prussia, and the Emperor of Austria, at Berlin and Vienna, and messages were also transmitted to London from the principal cities in Europe, who were included in the confidential system of telegraphic communication. During the whole of Monday, the town of Calais presented the appearance of a *fête*, and numbers of the inhabitants crowded on the ramparts, watching with interest and wonder the various experiments which were tried with the submarine wires. In the evening an entertainment was given in the Hotel de Ville, to those English gentlemen, promoters of the undertaking, who were on the spot, and had assisted in its completion. These were Sir James Carmichael, Mr. Crampton, C.E., Mr Wollaston, and Mr. Tatham, of the Gutta Percha Company. M. Mayer, the Mayor of Calais, presided; and, in addition to the English guests, there were present MM. Legros Devot, Reynaud, Le Peple, De Hamel, Councillor of State and Member of the Academy of St. Petersburg; Dupont, Vice-Consul of Russia; and M. Bonhom, British Consul; together with the principal inhabitants of Calais, and the officers of the garrison. During the whole of the proceedings the utmost harmony prevailed, and after dinner the English gentlemen were conducted over the museum of the town, where it was determined that a portion of the electric coil should in future be placed, in juxtaposition with the balloon that the celebrated aeronaut, Blanchard, who, in 1795, made his first *aqua*-marine voyage from Dover to Calais.



On Oct 18 the great cable, for telegraphic communication was at length completed by carrying it up one mile out of the sea, to Sangatte, on the Calais coast. Telegraphic communication between Calais and the South Foreland the latter about three miles from Dover—was practically, and, for the first time through a perfected sea cable, effected between coast and coast, and it is therefore hoped that no interruption will arise to continuous and successful telegraphic intercourse, when arrangements at present pending are completed. On arriving at the point on the French coast where the extremity of the cable, a mile out at sea, was anchored to the pilot buoy, the Lord Hoxer was joined by the Fearless, Capt Bullock, R.N., who has remained upon the spot until the operations should be completed. Here the end of the submerged cable was hauled up by the workmen on board the steamer, and the additional mile spliced on to complete it, the "join" being secured by iron clamps screwed over it. The inner cores of copper wires were braced together, and the overlapping strands of gutta percha, bituminised yarn, and galvanised iron wire securely interwoven. As calm a state of high water as possible was selected by Captain Bullock for the purpose, so as to prevent the pitching of the vessel from affecting so nice an operation. The part of the cable where the "join" occurs is thought to be as strong as any part where nothing of the kind occurs; but it is curious that it should exist at this particular place, where it will have to contend against the abrasion of shingle on the beach, and other casualties, and which in the experiment of last year saved asunder the gutta percha coble on the rocks around Cape Grisnez. The communication is now perfect between coast and coast, though it suited parties and purposes to say it was so before. It is only fair to mention that the unskilful manner in which the cable was payed out, and which resulted in its short-coming, is generally attributed to the engineers and not to those who piloted the expedition, and who state that one of the chief causes of the cable running short arose from the fact that while the Blazer was being towed out by the Fearless at only two miles an hour, the cable at certain intervals was run out at the rate of four and five miles an hour, which necessarily caused it, from want of regularity in the delivery motion, to take the sea bottom in a series of loops or "shanks," thus accounting for each mile of the cable not covering its allotted mile of sea.

It is not yet known at what precise date the wires to connect the cable at the South Foreland with the telegraph office of the South-Eastern Company at Dover will be completed, but this would be only the work of a day or so, as the connecting wires for the purpose have been manufactured. They consist of the usual copper wires encased in gutta percha, the latter, to protect it, being covered with spun yarn, it being known that gutta percha, on exposure, expands with heat and contracts with cold. These wires, forming about a two inch chord in diameter, will have to be run for about three miles along the coast intervening between Dover and the South Foreland. Some negotiations have been going on between the promoters of the Submarine Telegraph Company and the South-Eastern Railway Company, with the view of establishing some working arrangement, but nothing conclusive has been come to, though it is understood that something in the nature of a toll arrangement for working over each other's wires, similar to the working of railways over one another's lines, will be arrived at. On the other hand, it is said that messages of twenty words may be sent from Dover to Paris, by arrangement with the Great Northern of France and other railways, for 1*s*, being about 5*s*. more than is now charged for a similar message between London and Liverpool, or London and Dover; so that probably, although nothing is yet known as to the tariff, the expense of an imponderable despatch of this kind between London and Paris will come to 20*s*. Should no arrangement be made with the South-Eastern Railway, the promoters have power under their charter to run wires between London and Dover along the high road. Considerable difficulty is of necessity experienced in the adjustment of any tariff in connection with an enterprise so novel, nor is the matter found to be susceptible of such careful estimate, as in the carrying out and construction of a railway. For these reasons it has been found difficult to state with certainty the amount of revenue to be derived from the undertaking, to enable it to pay as a commercial speculation. It has been calculated that the submarine telegraph will be capable of printing 100 messages of 15 words each in 100 consecutive minutes, and that the whole of the communication between Europe, Great Britain, India, and America, might be supposed to employ eight wires twelve hours a day, it would give a return of £96,000 per annum, at a tariff of only one shilling per message of fifteen words. It is calculated, however, that when the four or more cables are completed and in full operation the probable return will be £25,000 per annum, after allowing for working expenses and maintenance of telegraphs and works. The cost of the present cable had amounted to about £16,000, or with contingencies to about £20,000. The probability is that the remaining cables intended to be laid down will cost £20,000 each, which will render a costlier scale of tariff necessary. The sources of revenue calculated upon are the Government despatches, the public, the Press, the messages between London and the principal towns, the Stock Exchange, bankers, merchants, Lloyd's correspondents, markets, India mails, and general messages.

The extension of the telegraphic wire to Marseilles is now looked upon in France as an indispensable adjunct to the completion of the submarine telegraph, since the ramification of the wires between Paris and that port would place the capitals of both countries in instantaneous communication with the Mediterranean. The cost of doing this, by completing the link between Chalons and Avignon, is estimated at under £3,000. On the other hand, the telegraphic communication is now completed from Ostend to Trieste, giving a through stretch of telegraphic communication little short of 2,000 miles. Telegraphic extension is also progressing throughout the east of Europe. Three great routes are now being laid down through the interior of Hungary, and the Turkish Government have come to the determination of laying down the telegraph in Turkey, and it already reaches Brussels, Cologne, Berlin, Vienna, and the Adriatic.

It is a somewhat curious coincidence that, although the establishment of a submarine or continental telegraph originates with British enterprise, England will be the last stage in the transmission, and the last recipient of all its European intelligence, although, from the instantaneousness of the method of communication, the intelligence, whatever the boundaries, may be said to be ubiquitous. It is not to be expected, however, complete the international arrangements for the purpose may

be, that the fluid estafette will find its way without a break from France, Belgium, Prussia, Austria, Russia, since unavoidably, another the practical playing of a game of chess, through the wires, between the chess players of London and Paris.

owing to the intervention of agency and language, communications ultimately intended for this country will be ventilated, and so to speak, alembicated through the remoter continental towns and cities first, and finally filtered through France, and in view of the present system of foreign supervision, it remains to be seen how this undeniable and hitherto unconsidered disadvantage will work for England.

Arrangements are being made for trying, through the instrumentality of the submarine telegraph, some remarkably curious astronomical experiments, and it is considered that facilities for a sidereal observation in all parts of the Continent will be greatly increased by means of it. The South Eastern Railway Company, with a view to the promotion of the object, have consented to carry a wire or wires from their telegraph to the observatory at Greenwich, so as to connect it with the submarine wires, which will also be connected with the observatory at Paris, and simultaneous observations be made between the Astronomer-Royal here and Professor Arago in Paris. The transit of a star over the meridian of London and Paris can thus be notified in a minute, together with the time of its transition. The longitude of both places, and of different places on the Continent can also be easily obtained, and the most accurate records of comparative astronomy be recorded and preserved, hitherto undreamt of, because hitherto impracticable [illegible]e in contemplation by means of the submerged [illegible]ne is the firing off guns simultaneously from the [illegible], the heights of Dover, and the Tower of London; and

JOSEPH MAZZINI.

A series of biographies of illustrious men—of men who have nobly dared and done in the sacred cause of freedom—were indeed incomplete did it omit mention of the heroic man whose name heads this article. We propose in this number of The Working Man's Friend to give his portrait and briefly to tell the story of his life.—

Joseph Mazzini was born at Genoa, in the year 1809, at which place his father was a physician, and in the university of which he was a professor. Originally intended for the law, he studied for that purpose at the university of his native

In common, however, with many other distinguished

JOSEPH MAZZINI.

men, such a study was eminently distasteful to him, and he turned aside to other and more congenial pursuits. Before he had reached the age of twenty-one he had become well known and admired for his vigorous contributions to periodical literature, and had already drawn down on himself the suspicious eye of "the powers that be." At this time Carbonarism was in full force in Italy. Mazzini was not long before he perceived the defects of a system which had no creed, no watchword—whose only common bond was that of hatred of the tyrant who ruled with a rod of iron then beautiful and beloved fatherland. Mazzini consequently soon ceased to have connexion with it, and determined instead to found a new national association, which he named "La Giovini Italia," "Young Italy." Its motto was "Dio e Popolo," "God and the People." Its faith was democracy in the fullest and widest acceptation of the term. Nor was this confederacy formed in vain. Around it rallied the truest and noblest of Italia's sons. Of this confederacy Mazzini has ever remained the representative and leader. Its worth and power were seen in the troublous times of 1848, when the Lombard volunteers, and the brave Venetians, and the men of Rome, in its name, struggled and triumphed for a time.

But we are anticipating. In 1830 Mazzini was arrested on suspicion of being connected with the Carbonari by Charles Albert, who, when Crown Prince, was himself a leader of the Carbonari. The authorities at Genoa examined him, and would have set him at liberty. Orders, however, came from Turin, and Mazzini was confined for six months to the fortress of Savona, without being brought to trial, or having any further accusation brought against him. Set at liberty, he commenced that life of exile which has subsequently been his lot. His first resting place was Marseilles. His personal appearance at this time is thus described by a friend who for the first time saw him practising rifle shooting with other strangers in that town. He says—"I went into the ground, and looking round, saw a young man leaning on his rifle, watching

the shooters, and waiting for his turn. He was about five feet eight inches high, and slightly made, he was dressed in black Genoa velvet, with the large republican hat; his long, curling black hair, which fell upon his shoulders, the extreme freshness of his clear olive complexion, the chiselled delicacy of his regular and beautiful features, aided by his very youthful look, and sweetness and openness of expression, would have made his appearance almost too feminine, if it had not been for his noble forehead, the power of firmness and decision that was mingled with them gaiety and sweetness in the bright flashes of his dark eyes, and in the varying expression of his mouth, together with his small and beautiful moustachios and beard. Altogether he was, at that time, the most beautiful *being*, male or female, that I had ever seen, and I have not since seen his equal. I thrilled [illegible] I had heard of what he had done and [illegible] moment I saw him I *knew* it could be no other than Joseph Mazzini."

For nearly two years Mazzini remained at Marseilles, labouring in the cause of Young Italy. A weekly paper was commenced with this title, in which with signal success he made his *debut* as the political teacher of his countrymen. Everywhere enthusiasm was excited. It seemed as if the glorious hour of Italian emancipation was about to dawn.

The following is Mazzini's own testimony to the National Association:—"The Italian youth had found its men. The language which was addressed to it expressed all which it had long felt [illegible] all the secrets of its heart [illegible] its free organisation commenced at every point. In the twinkling of an eye the chain of communication was formed from one extremity to the other of the peninsula. Everywhere the principles of *La Giovane Italia* were preached, everywhere its standard was recognised and hailed. Its members continued to increase, its emissaries were continually in motion, each other crossing from province to province. Everywhere the demand for its publications became louder, presses were set up in one part of the interior, where small publications, dictated by local circumstances, or reprints of what were sent from Marseilles, were thrown off. Fear was unknown, there was no doubt of success. All this was the result of principles, and all this, effected by some young men, without great means, without the influence of rank, without material force, is strong evidence, it appears to me [illegible] ideal they had created."

But Mazzini in Marseilles, a populous [illegible] terior to the powers and principalities of the Continent. The Holy Alliance trembled at the formation of a central Association of Young Europe, consisting of all who, in France, or Germany, or Poland, were struggling against the tyranny by which they were crushed down. Accordingly a demand was made for the expulsion of Mazzini, to which, to the lasting disgrace of Louis Philippe be it known, he readily assented. Nevertheless, for more than twelve months Mazzini managed to elude the police and remain in Marseilles. This, however, [illegible] of some difficulty. During the whole period he never left the room in which he took up his residence, except upon two occasions, when he ventured to take a short walk at night. At length when concealment became hopeless, Mazzini removed to Switzerland, where he organised the expedition to Savoy, which took place in 1834, and failed, owing principally to the treachery of General Ramorino—the same who was shot by order of a court martial at the conclusion of the campaign against the Austrians in 1849." This expedition failing, Mazzini [illegible] for the Swiss Republican Government shamefully stooped to imitate the ignominy of France, and expelled, at the dictation of the absolutist authorities, the men whose only crime was that they had struggled for the possession of their rights. Before leaving Switzerland, Mazzini published in French a small pamphlet which is described by those who have read it, as "the most perfect specimen of his genius," in which the cause of the exile is pleaded with almost supernatural power. About this time also an event took place which led to the infamous charge so often repeated by the despots of the continent and their advocates, that Mazzini sanctioned, or at least connived at, assassination. The real truth of the matter is as follows:—While Mazzini was living in concealment at Ancyron, on the 31st of May a quarrel occurred among the Italian exiles living there, and two of them were killed by a third named Gavioli. The murdered men turned out to be spies of the Duke of Modena, and "the friends of order" pretended that the murder had been committed in obedience to the decree of a secret tribunal of which Mazzini was president. A French paper went so far as to publish the pretended decree, which at the time Mazzini, in a letter published in the *Gazette des Tribunaux*, declared to be a forgery. In the November following Gavioli took his trial for the murder, and a verdict of "homicide without premeditation" was returned. One would have thought here the matter would have ended. On the contrary, however, the lie was eagerly circulated by men who must have known it to be false. Crisquet, the ex-Prefect of Police, repeated it seven years after in Paris and in London. In 1841 the lie was again repeated, but Sir James Graham was obliged to confess that he had inquired into the truth of the story, and *that it was utterly without foundation*. So we may trust, as regards the English people, the lie by this time is altogether dead, we only point to it to show [illegible] the hatred felt for Mazzini by the absolutist powers, and to show consequently how great and powerful must be Mazzini himself. For the next eleven years of his life Mazzini found a refuge on our shores. "For eleven years," says Mr. Shaen, in a well-written series of papers which appeared in a contemporary, "he kept up an uninterrupted communication with all parts of Italy, and never relaxed in his labours to infuse into his countrymen his own firm faith in the future of his country, and to prepare them to insure it by adding to their faith a determined will. His was no easy mission—his name had not the weight and authority which the world willingly awards to [illegible] titled descent, to great wealth, or to striking personal success; for these he had to substitute the authority which [illegible] grudgingly yielded to personal genius, truth, etc. He was poor, yet he had to contribute all his [illegible] only at a distance but under the additionally expensive disadvantages of secrecy and frequent miscarriage caused by the powerful and watchful opposition of the despotic courts with which he had to contend. To obtain funds he devoted a portion of his time to literature, and, in this way, he has left scattered through our periodical press a number of articles of inestimable value, which procured him only of continuing his political work, but of [illegible] swering [illegible] which [illegible] only the most needy and least [illegible] of his [illegible]. Not had he contributed to [illegible] from all the self-styled patriots of Italy which, [illegible] worthy to become his fellow-labourer, he could not have missed, his principle and his practice were of truth, of principles that were too absolute and unvarying to be [illegible] by the worldly, the selfish, and the degraded, from whom no country and no cause can be altogether free. The old organisation of the Carbonari was not yet extinct, although it was rapidly losing both its character and its power, and becoming confined to the most worthless of the heterogeneous elements it had gathered together. Mazzini's Association of Young Italy had given it its death blow, and by those who still clung to it he was never forgiven. Some little time after his arrival in England, he was condemned by its remaining chiefs as a traitor to its laws, and sentenced as such to death. The old forms were kept up, the lot was cast, and the selected man was furnished with the necessary funds, and despatched to England to execute the sentence.

The choice had fallen upon one whose character accorded well with his diabolical mission. When he had got as far as Paris, he delayed a short time in order to take part in a robbery, in which he was detected, and, being tried and found guilty, he was sent to the galleys for life. His employers, however, resolved upon another attempt, and a second emissary was started off, who reached London in safety, and at once proceeded to reconnoitre his ground and lay his plan; for which purpose he assumed a false name, and pretended to be an unfortunate political exile, called upon Mazzini, who was at that time living in lodgings at Chelsea. It is a striking illustration of the extent and perfect organisation of the Austrian [illegible] ing Italy that they were able to send to their distant President notice of every particular of this deep-laid plot as it was formed. On the eventful morning Mazzini was out calling

on a friend who lived not far from his own lodgings, when he received a message that a countryman, newly arrived in England, was at his rooms, exceedingly anxious to see him, and waiting his return for that purpose. He at once returned home, and found in his sitting-room his intended assassin. It was his dinner hour, his servant brought in his dinner, and he sat down and quietly ate it while his visitor told his prepared tale. When it was ended Mazzini turned to him, and fixing upon him a look that at once unnerved him, told him his real name, detailed to him the stages of his journey, and then repeated the instructions with which he had been furnished, and which of course disclosed the real object of his journey. The wretched man gave himself up for lost, and, ready to sink in abject terror, besought Mazzini to give him a glass of water. Mazzini handed one to him and when he had drunk it, astonished him by simply telling him to leave the house. He went, but returned no more to Italy. He remained in England, gaining a miserable subsistence as a spy on the part of Austria."

In 1844 an event occurred that brought Mazzini's name prominently before the English public. Sir J. Graham and Lord Aberdeen had excited the indignation of all true Englishmen by stooping to become the spies of Austria and Russia. It came out that Mazzini's letters had been opened at the Post office by their authority, and that the information thus collected was communicated to the foreign oppressors of Italy. At first this was denied by Sir James Graham and his colleagues. In the House of Lords, on the 4th of July, 1844, Lord Normanby asked the Duke of Wellington, head of the Government, whether Mr. Mazzini's letters had been communicated to any foreign power. The Duke of Wellington replied that "he had no knowledge of it." Lord Aberdeen then rose and said "I can more readily answer that question, and I can assure the honourable lord that *not one syllable of the correspondence has been communicated to any body whatever.*" When, however, a committee was appointed the value of the positive denial of the noble lord's was soon found to be but small. The Lords' Committee report has as follows:—"It is true that Mr. Mazzini's letters were taken from the mail, opened under the warrants of the Secretary of State for the Home Department, and inspected by the Secretary of State for Foreign Affairs. *Certain parts of the information thus obtained were communicated to a foreign Government.*" But the course pursued by Her Majesty's Ministers [illegible] for us to dwell on here. [illegible] had at their door. There is but too much reason to believe that the British Government was the [illegible] to an ignominious death the brothers Bandiera. The manful fate Mazzini at Milan, in 1844 commemorated in an address of singular beauty and power.

Nevertheless, from the infamy of the British Government some good accrued. It became evident that the British Government and the British people were as one on questions of foreign policy, that the [illegible] English people repudiated with scorn the acts of the Secretary for Foreign Affairs—that the time had come for the realisation of Mazzini's dearest hope, a holy alliance of the peoples.

Accordingly, in 1847 was formed the "People's International League," the objects of which were declared to be—

"To enlighten the British public as to the political condition and relations of foreign countries.

"To disseminate the principles of national freedom and progress.

"To embody and manifest an efficient public opinion in favour of the right of every people to self-government and the maintenance of their own nationality.

"To promote a good understanding between the peoples of all countries."

1848, however, found Mazzini and most of the foreign members of the League more active employment than they had anticipated when the League was originally formed. The revolutionary volcano burst, and all the thrones of Europe seemed about to be for ever overthrown. Mazzini, as soon as the revolution at Milan enabled him to do so, hastened to the scene of conflict, and on his way thither, he attended a meeting of Italians at Paris, at which the National Association was founded, and at which it was decided that their programme should be national and republican instead of dynastic. As President of the new association, he went to Milan, where he was enthusiastically received, and where he started a paper called *Italia del Popolo*, "Italy of the People," at the same time keeping himself aloof from Charles Albert and his friends, in whom he could put no confidence. Shortly after we find Mazzini joining the Lombard volunteers, led by Garibaldi, but Austria had recovered, and a national insurrection was rendered impossible. Once more, then, Mazzini found refuge in Switzerland. While there the revolution broke out in Rome, and Mazzini proceeded thither, where he was made a Roman citizen and a member of the Roman National Assembly. Shortly after, as one of the triumvirs, his name became [illegible]. Once more Rome was, [illegible] withering blight of the despot and the [illegible]. We need not tell the sequel. How France added a name from which liberty had hoped so much, and Rome once more became enslaved. Still, however, though fallen, there is yet hope. There are hearts that yet beat with heroic impulses, and hands that yet dare do heroic deeds. At the final sitting of the Roman Assembly on the 4th of July, 1849, a decree was passed to "constitute provisionally, and until the people shall be enabled freely to manifest its wishes, an Italian National Committee composed of [illegible] citizens Joseph Mazzini, Aurelio Saffi, and [illegible], [illegible] to their number, if necessary, two others [illegible], and appealing to all true Italians to assist them by every possible means in the execution of their labours, and to conform themselves as much as possible to any regulations that may issue in the interest of the nation at large."

Upwards of 160 well known Italians have signed this decree, and again a resident in our midst, Mazzini lives to emancipate his country, and to illustrate the old truth—that there are no obstacles, no limits, to the patriot will—that there is a more potent power even than the armed men, or police, or dungeons of the subverters of human rights.

THE PURLOINED LETTER.

Nil sapientiæ odiosius acumine nimio.—SENECA.

At Paris, just after dark one gusty evening in the autumn of 18—, I was enjoying the two-fold luxury of meditation and a meerschaum, in company with my friend C. Auguste Dupin, in his little back library, or book-closet, *au troisième*, No. 33, Rue Dunot, Faubourg St. Germain. For one hour at least we had maintained a profound silence, while each, to any casual observer, might have seemed intently and exclusively occupied with the curling eddies of smoke that oppressed the atmosphere of the chamber. For myself, however, I was mentally discussing certain topics which had formed matter for conversation between us at an earlier period of the evening, I mean the affair of the Rue Morgue, and the mystery attending the murder of Marie Rogêt. I looked upon it, therefore, as something of a coincidence, when the door of our apartment was thrown open and admitted our old acquaintance, Monsieur G—, the Prefect of the Parisian police.

We gave him a hearty welcome, for there was really both as much of the entertaining as of the contemptible about the man, and we had not seen him for several years. We had [illegible] dark, and Dupin now arose for the purpose of [illegible] but sat down again, without doing so, upon G—'s saying that he had called to consult us, or rather to ask the opinion of my friend, about some official business which had occasioned a great deal of trouble.

"If it is any point requiring reflection," observed Dupin, as he forbore to kindle the wick, "we shall examine it to better purpose in the dark."

"That is another of your odd notions," said the Prefect, who had a fashion of calling everything "odd" that was beyond his comprehension, and thus lived amid an absolute legion of "oddities."

"Very true, [illegible] occasion with a pipe, and rolled [illegible]

"And what is the difficulty now?" I asked. "Nothing more in the assassination way I hope?"

"Why, I will tell you," replied the Prefect, as he gave a long, steady, and contemplative puff, and settled himself in his chair. "I will tell you in a few words; but, before I begin, let me caution you that this is an affair demanding the greatest secrecy, and that I should most probably lose the position I now hold, were it known that I confided it to any one."

"Proceed," said I.

"Or not," said Dupin.

"Well, then; I have received personal information, from a very high quarter, that a certain document of the last importance has been purloined from the royal apartments. The individual who purloined it is known; this beyond a doubt, he was seen to take it. It is known, also, that it still remains in his possession."

"How is this known?" asked Dupin.

"It is clearly inferred," replied the Prefect, "from the nature of the document, and from the non-appearance of certain results which would at once arise from its passing out of the robber's possession,—that is to say, from his employing it as he must design in the end to employ it."

"Be a little more explicit," I said.

"Well, I may venture so far as to say that the paper gives its holder a certain power in a certain quarter where such power is immensely valuable." The Prefect was fond of the cant of diplomacy.

"Still I do not quite understand," said Dupin.

"No? Well, the disclosure of the document to a third person, who shall be nameless, would bring in question the honour of a person of most exalted station; and this fact gives the holder of the document an ascendancy over the illustrious personage whose honour and peace are so jeopardised."

"But this ascendancy," I interposed, "would depend upon the robber's knowledge of the loser's knowledge of the robber. Who would dare—"

"The thief," said G., "is the Minister D——, who dares all things, those unbecoming as well as those becoming a man. The method of the theft was not less ingenious than bold. The document in question—a letter, to be frank—had been received by the personage robbed while alone in the royal *boudoir*. During its perusal she was suddenly interrupted by the entrance of the other exalted personage from whom especially it was her wish to conceal it. After a hurried and vain endeavour to thrust it in a drawer, she was forced to place it, open as it was upon a table. The address, however, was uppermost, and, the contents thus unexposed, the letter escaped notice. At this juncture enters the Minister D——. His lynx eye immediately perceives the paper, recognises the handwriting of the address, observes the confusion of the personage addressed, and fathoms her secret. After some business transactions, hurried through in his ordinary manner, he produces a letter somewhat similar to the one in question, opens it, pretends to read it, and then places it in close juxtaposition to the other. Again he converses, for some fifteen minutes, upon the public affairs. At length in taking leave, he takes also from the table the letter to which he had no claim. Its rightful owner saw, but, of course, dared not call attention to the act, in the presence of the third personage who stood at her elbow. The minister decamped; leaving his own letter—one of no importance—upon the table."

"Here, then," said Dupin to me, "you have precisely what you demand to make the ascendancy complete—the robber's knowledge of the loser's knowledge of the robber."

"Yes," replied the Prefect; "and the power thus attained has, for some months past, been wielded, for political purposes, to a very dangerous extent. The personage robbed is more thoroughly convinced, every day, of the necessity of reclaiming her letter. But this, of course, cannot be done openly. In fine, driven to despair, she has committed the matter to me."

"It is clear," said I, "as you observe, that the letter is still in possession of the minister; since it is this possession, and not any employment of the letter, which bestows the power. With the employment the power departs."

"True," said G.; "and upon this conviction I proceeded. My first care was to make a thorough search of the minister's hotel; and here my chief embarrassment lay in the necessity of searching without his knowledge. Beyond all things, I have been warned of the danger which would result from giving him reason to suspect our design."

"But," said I, "you are quite *au fait* in these investigations. The Parisian police have done this thing often before."

"O yes; and for this reason I did not despair. The habits of the minister gave me, too, a great advantage. He is frequently absent from home all night. His servants are by no means numerous. They sleep at a distance from their master's apartment, and, being chiefly Neapolitans, are readily made drunk. I have keys, as you know, with which I can open any chamber or cabinet in Paris. For three months a night has not passed, during the greater part of which I have not been engaged, personally, in ransacking the D—— Hotel. My honour is interested, and, to mention a great secret, the reward is enormous. So I did not abandon the search until I had become fully satisfied that the thief is a more astute man than myself. I fancy that I have investigated every nook and corner of the premises in which it is possible that the paper can be concealed."

"But is it not possible," I suggested, "that although the letter may be in possession of the minister, as it unquestionably is, he may have concealed it elsewhere than upon his own premises?"

"This is barely possible," said Dupin. "The present peculiar condition of affairs at court, and especially of those intrigues in which D—— is known to be involved, would render the instant availability of the document—its susceptibility of being produced at a moment's notice—a point of nearly equal importance with its possession."

"Its susceptibility of being produced," said I?"

"That is to say of being *destroyed*," said Dupin.

"True," I observed; "the paper is clearly then upon the premises. As for its being upon the person of the minister, we may consider that as out of the question."

"Entirely," said the Prefect. "He has been twice waylaid, as if by footpads, and his person rigorously searched under my own inspection."

"I suppose you detail," said I, "the particulars of your search."

"Why the fact is, we took our time, and we searched *every where*. I have had long experience in these affairs. I took the entire building, room by room; devoting the nights of a whole week to each. We examined, first, the furniture of each apartment. We opened every possible drawer; and I presume you know that, to a properly trained police agent, such a thing as a *secret* drawer is impossible. Any man is a dolt who permits a 'secret' drawer to escape him in a search of this kind. The thing is so plain. There is a certain amount of bulk—of space—to be accounted for in every cabinet. Then we have accurate rules. The fiftieth part of a line could not escape us. After the cabinets we took the chairs. The cushions we probed with the fine long needles you have seen me employ. From the tables we removed the tops."

"Why so?"

"Sometimes the top of a table, or other similarly arranged piece of furniture, is removed by the person wishing to conceal an article; then the leg is excavated, the article deposited within the cavity, and the top replaced. The bottoms and tops of bed-posts are employed in the same way."

"But could not the cavity be detected by sounding?" I asked.

"By no means, if, when the article is deposited, a sufficient wadding of cotton be placed around it. Besides, in our case, we were obliged to proceed without noise."

"But you could not have removed—you could not have taken to pieces *all* articles of furniture in which it would have been possible to make a deposit in the manner you mention. A letter may be compressed into a thin spiral roll, not differing much in shape or bulk from a large-knitting-needle, and in this form it might be inserted into the rung of a chair, for example. You did not take to pieces all the chairs?"

"Certainly not: but we did better—we examined the rungs

of every chair in the hotel, and, indeed, the jointings of every description of furniture, by the aid of a most powerful microscope. Had there been any traces of recent disturbance we should not have failed to detect it instantly. A single grain of gimlet-dust, for example, would have been as obvious as an apple. Any disorder in the glueing—any unusual gaping in the joints—would have sufficed to insure detection."

I presume you looked to the mirrors, between the boards and the plates, and you probed the beds and the bed-clothes, as well as the curtains and carpets."

"That of course; and when we had absolutely completed every particle of the furniture in this way, then we examined the house itself. We divided its entire surface into compartments, which we numbered so that none might be missed; then we scrutinised each individual square inch throughout the premises, including the two houses immediately adjoining, with the microscope as before."

"The two houses adjoining!" I exclaimed; "you must have had a great deal of trouble."

"We had; but the reward offered is prodigious."

"You include the grounds about the houses?"

"All the grounds are paved with brick. They gave us comparatively little trouble. We examined the moss between the bricks, and found it undisturbed."

"You looked among D——'s papers, of course, and into the books of the library?"

"Certainly; we opened every package and parcel; we not only opened every book, but we turned over every leaf in each volume, not contenting ourselves with a mere shake, according to the fashion of some of our police officers. We also measured the thickness of every book-*cover*, with the most accurate admeasurement, and applied to each the most jealous scrutiny of the microscope. Had any of the bindings been recently meddled with, it would have been utterly impossible that the fact should have escaped observation. Some five or six volumes, just from the hands of the binder, we carefully probed, longitudinally, with the needles."

"You explored the floors beneath the carpets?"

"Beyond a doubt. We removed every carpet, and examined the boards with the microscope."

"And the paper on the walls?"

"Yes."

"You looked into the cellars?"

"We did."

"Then," I said, "you have been making a miscalculation, and the letter is not upon the premises as you suppose."

"I fear you are right there," said the Prefect. "And now, Dupin, what would you advise me to do?"

"To make a thorough research of the premises."

"That is absolutely needless," replied G——. "I am not more sure that I breathe than I am that the letter is not at the hotel."

"I have no better advice to give you," said Dupin. "You have, of course, an accurate description of the letter?"

"Oh yes!"—And here the Prefect, producing a memorandum book, proceeded to read aloud a minute account of the internal, and especially of the external appearance of the missing document. Soon after finishing the perusal of this description, he took his departure, more entirely depressed in spirits than I had ever known the good gentleman before.

In about a month afterwards he paid us another visit, and found us occupied very nearly as before. He took a pipe and a chair and entered into some ordinary conversation. At length I said,—

"Well, but G——, what of the purloined letter? I presume you have at last made up your mind that there is no such thing as overreaching the Minister?"

"Confound him, say I—yes; I made the re-examination, however, as Dupin suggested—but it was all labour lost, as I knew it would be."

"How much was the reward offered, did you say?" asked Dupin.

"Why, a very great deal—a *very* liberal reward—I don't like to say how much, precisely; but one thing I *will* say, that I wouldn't mind giving my individual cheque for fifty thousand francs to any one who could obtain me that letter. The fact is, it is becoming of more and more importance every day; and the reward has been lately doubled. If it were trebled, however, I could do no more than I have done."

"Why, yes," said Dupin, drawlingly, from behind the smoke of his meerschaum, "I really—think, G——, you have not exerted yourself—to the utmost in this matter. You might—do a little more, I think, eh?"

"How?—in what way?"

"Why—puff, puff—you might—puff, puff—employ counsel in the matter, eh?—puff, puff, puff. Do you remember the story they tell of Abernethy?"

"No; hang Abernethy!"

"To be sure! hang him and welcome. But, once upon a time, a certain rich miser conceived the design of spunging upon this Abernethy for a medical opinion. Getting up, for this purpose, an ordinary conversation in a private company, he insinuated his case to the physician, as that of an imaginary individual.

"'We will suppose,' said the miser, 'that his symptoms are such and such; now, doctor, what would *you* have directed him to take?'

"'Take!' said Abernethy, 'why, take *advice*, to be sure.'"

"But," said the Prefect, a little discomposed, "*I* am *perfectly* willing to take advice, and to pay for it. I would *really* give fifty thousand francs to any one who would aid me in the matter."

"In that case," replied Dupin, opening a drawer, and producing a cheque-book, "you may as well fill me up a cheque for the amount mentioned. When you have signed it, I will hand you the letter."

I was astounded. The Prefect appeared absolutely thunder-stricken. For some minutes he remained speechless and motionless, looking incredulously at my friend with open mouth, and eyes that seemed starting from their sockets; then, apparently recovering himself in some measure, he seized a pen, and after several pauses and vacant stares, finally filled up and signed a cheque for fifty thousand francs, and handed it across the table to Dupin. The latter examined it carefully and deposited it in his pocket-book; then, unlocking an *escritoire*, took thence a letter and gave it to the Prefect. This functionary grasped it in a perfect agony of joy, opened it with a trembling hand, cast a rapid glance at its contents, and then, scrambling and struggling to the door, rushed at length unceremoniously from the room and from the house, without having uttered a syllable since Dupin had requested him to fill up the cheque.

When he had gone, my friend entered into some explanations.

"The Parisian police," he said, "are exceedingly able in their way. They are persevering, ingenious, cunning, and thoroughly versed in the knowledge which their duties seem chiefly to demand. Thus, when G—— detailed to us his mode of searching the premises at the Hotel D——, I felt entire confidence in his having made a satisfactory investigation—so far as his labours extended."

'So far as his labours extended?" said I.

'Yes," said Dupin. "The measures adopted were not only the best of their kind, but carried out to absolute perfection. Had the letter been deposited within the range of their search, these fellows would, beyond a question, have found it."

I merely laughed—but he seemed quite serious in all that he said.

"The measures, then," he continued, "were good in their kind, and well executed; their defect lay in their being inapplicable to the case, and to the man. A certain set of highly ingenious resources are, with the Prefect, a sort of Procrustean bed, to which he forcibly adapts his designs. But he perpetually errs by being too deep or too shallow, for the matter in hand; and many a schoolboy is a better reasoner than he.

"The more I reflected upon the daring, dashing, and discriminating ingenuity of D——; upon the fact that the document must always have been *at hand*, if he intended to use it to good purpose; and upon the decisive evidence, obtained by the Prefect, that it was not hidden within the limits of that dignitary's ordinary search—the more satisfied I became that, to conceal this letter, the Minister had resorted to the

comprehensive and sagacious expedient of not attempting to conceal it at all.

"Full of these ideas, I prepared myself with a pair of green spectacles, and called one fine morning, quite by accident, at the Ministerial hotel. I found D—— at home, yawning, lounging, and dawdling, as usual, and pretending to be in the last extremity of *ennui*. He is, perhaps, the most really energetic human being now alive—but that is only when nobody sees him.

"To be even with him, I complained of my weak eyes, and lamented the necessity of the spectacles, under cover of which I cautiously and thoroughly surveyed the whole apartment, while seemingly intent only upon the conversation of my host.

"I paid especial attention to a large writing table near which he sat, and upon which lay confusedly, some miscellaneous letters and other papers, with one or two musical instruments and a few books. Here, however, after a long and very deliberate scrutiny, I saw nothing to excite particular suspicion.

"At length my eyes, in going the circuit of the room, fell upon a trumpery filagree card-rack of pasteboard, that hung dangling by a dirty blue ribbon, from a little brass knob just beneath the middle of the mantel-piece. In this rack, which had three or four compartments, were five or six visiting cards and a solitary letter. This last was much soiled and crumpled. It was torn nearly in two, across the middle—as if a design, in the first instance, to tear it entirely up as worthless, had been altered, or stayed, in the second. It had a large black seal, bearing the D—— cipher *very* conspicuously, and was addressed, in a diminutive female hand, to D——, the minister, himself. It was thrust carelessly, and even, as it seemed, contemptuously, into one of the uppermost divisions of the rack.

"No sooner had I glanced at this letter, than I concluded it to be that of which I was in search. To be sure, it was, to all appearance, radically different from the one of which the Prefect had read us so minute a description. Here the seal was large and black, with the D—— cipher; there it was small and red, with the ducal arms of the S—— family. Here, the address, to the Minister, was diminutive and feminine; there the superscription, to a certain royal personage, was markedly bold and decided; the size alone formed a point of correspondence. But, then, the *radicalness* of these differences, which was excessive; the dirt; the soiled and torn condition of the paper, so inconsistent with the *true* methodical habits of D——, and so suggestive of a design to delude the beholder into an idea of the worthlessness of the document; these things, together with the hyper-obtrusive situation of this document, full in the view of every visitor, and thus exactly in accordance with the conclusions to which I had previously arrived; these things, I say, were strongly corroborative of suspicion in one who came with the intention to suspect.

"I protracted my visit as long as possible, and, while I maintained a most animated discussion with the Minister, upon a topic which I knew well had never failed to interest and excite him, I kept my attention really riveted upon the letter. In this examination, I committed to memory its external appearance and arrangement in the rack; and also fell, at length, upon a discovery which set at rest whatever trivial doubt I might have entertained. In scrutinising the edges of the paper, I observed them to be more *chafed* than seemed necessary. They presented the *broken* appearance which is manifested when a stiff paper, having been once folded and pressed with a folder, is refolded in a reversed direction, in the same creases or edges which had formed the original fold. This discovery was sufficient. It was clear to me that the letter had been turned, as a glove, inside out, re-directed, and re-sealed. I bade the Minister good morning, and took my departure at once, leaving a gold snuff box upon the table.

"The next morning I called for the snuff-box, when we resumed, quite eagerly, the conversation of the preceding day. While thus engaged, however, a loud report, as if of a pistol, was heard immediately beneath the windows of the hotel, and was succeeded by a series of fearful screams, and the shoutings of a terrified mob. D—— rushed to a casement, threw it open, and looked out. In the meantime, I stepped to the card-rack, took the letter, put it in my pocket, and replaced it by a *fac-simile* (so far as regards externals), which I had carefully prepared at my lodgings—imitating the D—— cypher, very readily, by means of a seal formed of bread.

"The disturbance in the street had been occasioned by the frantic behaviour of a man with a musket. He had fired it among a crowd of women and children. It proved, however, to have been without ball, and the fellow was suffered to go his way as a lunatic or a drunkard. When he had gone, D—— came from the window, whither I had followed him immediately upon securing the object in view. Soon afterwards I bade him farewell. The pretended lunatic was a man in my own pay."

"But what purpose had you," I asked, "in replacing the letter by a *fac-simile*? Would it not have been better, at the first visit, to have seized it openly, and departed?"

"D——," replied Dupin, "is a desperate man, and a man of nerve. His hotel, too, is not without attendants devoted to his interests. Had I made the wild attempt you suggest, I might never have left the Ministerial presence alive. The good people of Paris might have heard of me no more. But I had an object apart from these considerations. You know my political prepossessions. In this matter, I act as a partisan of the lady concerned. For eighteen months the Minister has had her in his power. She has now him in hers—since, being unaware that the letter is not in his possession, he will proceed with his exactions as if it was. Thus will he inevitably commit himself, at once, to his political destruction. His downfall, too, will not be more precipitate than awkward. It is all very well to talk about the *facilis descensus Averni*, but in all kinds of climbing, as Catalani said of singing, it is far more easy to get up than to come down. In the present instance I have no sympathy—at least no pity—for him who descends. He is that *monstrum horrendum*, an unprincipled man of genius. I confess, however, that I should like very well to know the precise character of his thoughts, when, being defied by her whom the Prefect terms 'a certain personage,' he is reduced to opening the letter which I left for him in the card-rack."

"How did you put any thing particular in it?"

"Why—it did not seem altogether right to leave the interior blank—that would have been insulting. D——, at Vienna, once did me an evil turn, which I told him, quite good-humouredly, that I should remember. So, as I knew he would feel some curiosity in regard to the identity of the person who had outwitted him, I thought it a pity not to give him a clue. He is well acquainted with my MS., and I just copied into the middle of the blank sheet the words—

"'—— —— Un dessein si funeste,
S'il n'est digne d'Atrée, est digne de Thyest.'

They are to be found in Crébillon's 'Atrée.'"

THE USEFUL AND THE BEAUTIFUL.—The tomb of Moses is unknown, but the traveller slakes his thirst at the well of Jacob. The gorgeous palace of the wisest and wealthiest of monarchs, with the cedar, and gold, and ivory, and even the great temple of Jerusalem, hallowed by the visible glory of the Deity himself, are [illegible], but Solomon's reservoirs are as perfect as ever. Of the ancient architecture of the Holy City not one stone is left upon another, but the pool of Bethesda commands the pilgrim's reverence at the present day. The columns of Persepolis are mouldering into dust; but its cisterns and aqueducts remain to challenge our admiration. The golden house of Nero is a mass of ruins; but the Aque Claudia still pours into Rome its limpid stream. The Temple of the Sun at Tadmor in the Wilderness has fallen, but its fountain sparkles in its rays, as when thousands of worshippers thronged its lofty colonnades. It may be that London will share the fate of Babylon, and nothing be left to mark its site save mounds of crumbling brick-work. The Thames will continue to flow as it does now. And if any work of art should rise over the deep ocean of time, we may well believe that it will be neither a palace nor a temple, but some vast aqueduct or reservoir, and if any name should flash through the mist of antiquity it will probably be that of the man who *in his day sought* the happiness of his fellow-men rather than glory, and linked his memory to some great work of national utility or benevolence. This is the true glory which outlives all others, and shines with undying lustre from generation to generation, imparting to works something of its own immortality, and in some degree rescuing them from the ruin which overtakes the ordinary monuments of historical tradition or mere magnificence.

MISCELLANEA.

AN EASY REMEDY.—The attendant of Matthews in his last illness intended to give his patient some medicine, but a few moments afterwards it was found that the medicine was nothing but ink, which had been taken from the phial by mistake, and his friend exclaimed, "Good heavens, Matthews, I have given you ink" 'Never mind, my boy—never mind' said Matthews, faintly, "I'll swallow a bit of blotting-paper"

YOUNG AMERICA. — "Father," exclaimed the hopeful son and heir of a gentleman of our acquaintance, not long since, while the latter was congratulating the youth upon his smartness and scholastic studies—the youngster having attained eight years of age— "Father, I'm an American, ain't I?" "Yes, my boy, you are," responded the delighted parent—"Well, father, you aint are you?" "Not by birth, my son. Well, then," exclaimed young America, in a thoughtful manner "when I grow up to be a man, I will be able *to lick two like you* won't I?" The proud parent's answer is not recorded

ADVICE. There is a well-known custom prevailing in our criminal courts of assigning counsel to such prisoners as have no one to defend them On one occasion, the court finding a man accused of theft, and without counsel, said to a lawyer who was present, 'Mr ——, please to withdraw with the prisoner, confer with him, and then give him such counsel as may be best for his interest The lawyer and his client then withdrew, and in fifteen or twenty minutes the lawyer returned into court "Where is the prisoner?" asked the court "He has gone your honour, said the hopeful legal "himself" "You honour told me to give him the best advice I could for his interest, and, as he said he was guilty I thought the best counsel I could offer him was to 'cut and run, which he took at once."

COLERIDGE ON HORSEBACK.—Coleridge was a remarkably awkward horseman so much so as generally to attract notice He was once riding along the turnpike-road in the county of Durham, when a wag, approaching him, noticed his peculiarity, and (quite mistaking his man) thought the rider a fine subject for a little sport, when, as he drew near, he thus accosted Mr C— "I say, young man, did you meet a *mule*) on the road?"—"Yes," replied Mr. C. (who was never at a loss for a rejoinder), I did; and he told me, if I went a little further, I should meet a *goose!*' The assailant was struck dumb while the traveller jogged on.

WITNESSES TO CHARACTER.—"What do you know of his moral character?" asks the president of a court-martial to a sailor in Jerrold's dramatic version of "Black-Eyed Susan" "A good deal," is the answer, "he plays on the fiddle like an angel"—The late Earl Dudley wound up an eloquent tribute on the virtues of a deceased Baron of the Exchequer with this pithy peroration —"He was a good man, an excellent man. He had the best melted butter I ever tasted in my life."

HELP YOURSELF.—Beg, borrow, seek office, fish for place, trust in patronage, wait for old men to do worship to fortune—who does not one or other of these? Who does not expect to rise by the help of others? Help yourself, and God will help you. Nine-tenths of the world live and die infidels of this truth. So destitute are most people of the knowledge or belief of this truth, that give them the slightest indications that they may rely on you, eat you, clothe themselves out of you, and they will do it without mercy. They will drop their tools and their labour, and do it. This it is that makes the world so hedgehoggish The self-helpers know that, in the common run, if they help others they may help and be—eaten up This it is that has spoiled most, if not all, the experiments to apply the science and economies of association to practical human life. Take people as they rise, and put them together in a bee hive community, and one-half of them will turn drones and live upon the rest, because they have not been educated to rely upon themselves, but just the reverse. No wonder that the swarm should be eaten up by these drones, or exhaust itself in an effort to turn them out. Yet men are naturally self reliant The moment a baby can go alone, it [illegible] itself and imitates all kinds of work, proud to be doing something But this disposition is discouraged, and discontinued The rich are ashamed to have their children do anything menial, as if menial and mean were the same word The poor cannot be bothered to teach work to babies, and when their babies get to be old enough they overload them with it unlearned Hence the child comes to maturity educated in sloth, bad health, and reliance on others, or to hate the burden which crushes him, and longs to be relieved entirely from it Self reliance is destroyed every way in work, thought, and opinion Whole classes, we may say races, of men are taught to feed upon others without returning any fair equivalent. They even think themselves generous to leave a little which they don't eat.

RESULT OF CHEMICAL PHYSIOLOGY. Any substance that has to make its way from the human stomach, through the vessels which proceed to the various parts of the body, must be capable of being dissolved by the fluids of the body. An insoluble substance will pass unchanged, or unabsorbed along the alimentary canal and escape from the body in the usual manner, without producing any materially sensible effect A soluble substance, on the contrary, passes into the blood, and if nutritious, nourishes, if poisonous, more or less injuriously affects the functions of life Thus chemists are now familiar with methods by which in their laboratories many soluble poisonous substances can be united with other bodies, so as to become insoluble, and in this new state be rendered capable of being introduced into the stomach without injurious consequences To perform such an experiment in the stomach, is to administer an antidote, of more or less certain efficacy, against a poison which has been previously swallowed. In this way, lime and magnesia are antidotes against oxalic acid, the white of egg against corrosive sublimate, hydrated per-oxide of iron against white arsenic, and so on These several combine with the poisonous substances when brought in contact with it in the stomach, render it insoluble, and consequently inert.

MRS SPECKLES says that the best vegetable pill that has yet been invented is an apple dumpling To destroy a gnawing at the stomach, it is the only pill that can be relied on.

ANSWERS TO CORRESPONDENTS.

MARY.—Your name is a great favourite with all classes. It has been famous both in sacred and profane history It is from the French, and signifies exalted. Its French form is *Marie.*

A STUDENT.—The first number of the "Edinburgh Review" appeared in the 1st of November, 1802. The number of copies printed was 750. This, however, was not enough, and more was speedily printed In 1808 the quarterly circulation was about 9,000, and it is believed to have reached its maximum about 1813, when 13,000 or 13,000 copies were printed

JAMES HARDING wishes us to give him some directions about writing for the press We do so willingly. 1. Use note size paper, but one side of sheet covers the printer's case, and hinders his work 2 Do not write on the back of the paper, as that doubles the time of printing the article—while one side is being "set up," what is written on the back cannot be "gone on with" 3 Write with dark black ink, for faint ink will read with reluctance what he sees with difficulty; and the compositor for the same reason will dislike to set it up 4 Always write a plain bold hand

A POOR MAN'S WIFE.—Dr Rees, late physician of Bellevue Hospital New York, has been making experiments [illegible] the results of the best [illegible] and the whole [illegible] ing the [illegible] out, the wire [illegible] and [illegible] ternal air is one cause of suffering, and the flour thus applied both heals and closes wounds to the atmosphere. The edges of the wounds which remain [illegible] powder, &c, has been most happy in the practice at the hospital.

WIT.—The returns of newspaper stamps published by order of the House of Commons are not to be depended on. One Lincolnshire paper was returned with a circulation of some thousands two years before it was even in existence. One Cheltenham paper is alleged to circulate several is returned with the circulation that [illegible] belongs to the two We have heard of several other cases, but we merely give the [illegible] mens. We believe the returns as regards the London press are more satisfactory We learn from them that the ten daily papers issued morning and evening circulate only [illegible] the number of [illegible] which [illegible] the Times [illegible] the [illegible] the Daily News, [illegible]

A LONDONER.—The present area of the Metropolis, according to the census returns, is 11 850 [illegible] are [illegible] 70 [illegible] females. [illegible] which [illegible] 1,889 were [illegible] and [illegible] March of the present year there were 1 817 houses in the course of erection. In 307,722 houses there resided 2 [illegible] persons, at the rate of 7·7 persons per house, and the estimated value of property rated to the relief of the poor is about £30,000,000 To have a better idea of the magnitude of the Metropolis, compare it with other places or countries The population of the whole of Ireland by the last census was 6,515,794; Scotland had 2,870,784 inhabitants; and Wales, 1,188,821 The great manufacturing [illegible] of Lancashire in Yorkshire and [illegible] in the [illegible] 2,650,000 and 1,750,000 [illegible] people [illegible] is [illegible] the people [illegible] more than [illegible] of all Ireland four-fifths as great as all Scotland, twice as great as all Wales, one-seventh more than Lancashire, and one-fourth more than the entire county of Yorkshire By the Income-tax returns it appears that the assessed rental of the Metropolis amounts to the enormous sum of £19 186,768, but any [illegible] to estimate [illegible] the Metropolis would be [illegible] [illegible] one at that which to judge If [illegible] one will look at the shipping and [illegible] immense range of wharehouses, the [illegible] capital [illegible] trading to [illegible] £15 000,000 of [illegible] the Bank [illegible] to preclude a [illegible] of [illegible] derived by our several gas and water companies, the number and magnitude of our charitable and benevolent institutions, some faint idea of the wealth of the richest city in the world may be formed, but not realised.

All Communications to be addressed to the Editor, at the Office 139, Strand London.

PUBLISHED BY JOHN CASSELL,
335, STRAND, LONDON.

Just published, price Eightpence, the FIFTH MONTHLY PART of

THE ILLUSTRATED EXHIBITOR, a Tribute to the World's Industrial Jubilee.

May also be had in Weekly Numbers, price 2d.

The present Series of "The Illustrated Exhibitor" will close with the year 1851, when the whole will be published in one handsome Volume, including the Seven Monthly Parts, and containing Several Hundred Engravings of Works of Art, Machinery, &c., in the Great Exhibition, Price 7s., bound in cloth and lettered.

On January 3, 1852, will appear, the first number of a New Series of "The Illustrated Exhibitor," price 2d., under the title of

THE ILLUSTRATED EXHIBITOR
AND MAGAZINE OF ART

This Work, though published at so small a price, will greatly surpass everything that has yet appeared, even at double or treble that sum. The Engravings will form a Gallery of Fine Art. The first Artists in the World will be employed upon them, and the Printing, and all the details, will be executed with the greatest care, a new Printing Establishment being fitted up expressly for the purpose of bringing out this New Series of "The Illustrated Exhibitor." The First Number will be ready with the Magazines for January, 1852. Monthly Parts, 6d., or, when Five Numbers, 10d. each.

"The Illustrated Exhibitor and Magazine of Art" will not only form a Gallery of Pictorial Illustrations, but will also contain ably-written articles on a variety of subjects interesting and instructive to all classes. Among the separate departments of literature and art selected for descriptive and pictorial illustration will be found —Works of the Great Masters in Painting, Sculpture, &c.—The Portrait Gallery, with Biographical Notices—Historical Events — Scientific Discoveries, Inventions, and Improvements — Local and Domestic Scenes—and The Ladies' Department, which will consist of clearly-written explanations and accurate Engravings of the newest and most beautiful designs in Embroidery, Fancy Needlework, latest Fashions in Dress, &c

Also just published by John Cassell, 335, Strand, London.

THE ILLUSTRATED EXHIBITOR ALMANACK for 1852 —This superb Book of Reference contains, besides the Calendar, Astronomical, and other Information, upwards of Forty Illustrations, by eminent Artists. Price Sixpence.

THE PROTESTANT DISSENTERS' ALMANACK for 1852 contains, in addition to the Calendar, Statistics important to Protestant Dissenters, &c. &c., a Series of Engravings illustrative of Remarkable Events connected with Nonconformity. Price Sixpence.

A NEW AND POPULAR HISTORY OF SCOTLAND. By Dr. Robert Ferguson, of Ryde. Vol. I., price 7d. [Vol. II., completing the Work, on Dec. 1

STEPHENS' DYES FOR STAINING WOOD, &c. &c, And as a Substitute for Paint,

FOR DECORATING CHURCHES, LARGE PUBLIC ROOMS, and THEATRES, as well as Private Dwellings, giving the effect of Oak, Mahogany, or Satin Wood —When economy in expenditure of material and time is of importance, these Dyes will be found of great advantage, as they give a rich colour to plain woods, while they reflect all the beauty of the natural graining, which is so superior to imitations by art, and, at the same time, avoid the disagreeable smell and deleterious consequences of paint. These Stains are also extensively used as a colour in the fashionable mode of embellishing Picture Frames by Leather Embossments, to which they give a rich and beautiful finish

The Dyes, or Stains, are prepared and sold by HENRY STEPHENS, 51, Stamford-street, Blackfriars-road, London, in bottles of 6d. and 1s. each, and at 8s. per Gallon They may be obtained in powder at 8s per lb , which dissolves in water to form the liquid, and 1 lb. will make one gallon of Liquid Stain. THE TRADE SUPPLIED.

GUTTA PERCHA CLOTHES-LINE.

THE GUTTA PERCHA CLOTHES LINE is particularly recommended to Families, Laundresses, &c , for its economical qualities, being more durable, and does not require to be taken down when once put up , for if covered with a coat of WHITE Paint, neither sun, rain, nor frost will injure it, and, by simply wiping it with a damp cloth, it is always ready for immediate use.

GUTTA PERCHA SASH LINE and WINDOW BLIND CORD.—GUTTA PERCHA CURTAIN AND CORNICE RINGS (NOISELESS).

MANUFACTURED BY THE
GUTTA PERCHA COMPANY
(PATENTEES),
18, Wharf-road, City-road, London
And sold by their Dealers and Ironmongers in Town and Country.

NOTICE.

Persons can be Members of the Land and Building Society, or of the Benefit Society, or of both Societies, as they think proper.

Great and Important Benefits to the Working Classes

Office—13, Tottenham-court, New-road, St. Pancras, London.

UNITED PATRIOTS' NATIONAL BENEFIT SOCIETY, for Insurance against Illness, Accidents, with Medical Attendance; Old Age; Death of Member, Wife of Member, or Nominee; Loss by Fire, and other Casualties of Life.

According to the Payments of Members, the following important Benefits are Assured:

	£ s d.	£ s d
Illness or Accidents, per week..... from	0 7 0 to	0 18 0
Old Age or Superannuation..... from	0 4 0 to	0 6 0
Death of Member..... from	2 10 0 to	20 0 0
Death of Member's Wife or Nominee... from	3 0 0 to	10 0 0
Loss by Fire..... from	5 0 0 to	20 0 0

INSTITUTED 7TH FEBRUARY, 1843.

Enrolled in conformity to the Friendly Societies Act of Parliament.

Paid to Members and their Friends since its commencement, Benefits in Sickness, Superannuation, Loss by Fire, and Deaths, the sum of £12,101 18s. 6d.

Secretary—Daniel William Ruffy, residence at the Office.

Treasurer—John Smith, Brewery, Stamford-Hill, Stoke Newington.

Bankers—Commercial Bank of London. Branch: 6, Henrietta-street, Covent-garden.

For further information, Entrance Fees, Payments, &c., refer to the Secretary, enclosing three postage-stamps.

Agents required to form Branches in all parts of the Country. Commission Five per Cent.; reasonable compensation allowed for extra services.

PRESENT CAPITAL, above £3,500

PRESENT NUMBER OF MEMBERS, about 2,500.

Land and House your own; or Every Man his own Landlord.

BRITISH EMPIRE BUILDING AND LAND SOCIETY —Enrolled, and empowered to extend over the United Kingdom, Office, 13, Tottenham-court, New-road, St. Pancras, London

Manager and Secretary, Daniel William Ruffy, Residence at the Office

Treasurer, John Smith, Brewery, Stamford-hill, Stoke Newington

Bankers—Commercial Bank of London Branch 6, Henrietta-street, Covent-garden.

INVESTMENT DEPARTMENT

A Monthly Payment of 10s. 6d. will, at the end of 13 Years, secure to the Investor the Payment of £127
A Monthly Payment of 5s 3d. in 13 Years will secure 60
A Monthly Payment of 2s. 8d in 14 Years will secure 30
Deposits are received, and interest of Five per Cent allowed on all sums when they amount to 10s. and upwards.

LOAN DEPARTMENT,

For Members to purchase Freehold or Leasehold Property, or for Building, Subscriptions payable to the Society in the shape of Rent, instead of to a Landlord —

£100 advanced for 5 Years.	Monthly Repayments ..	£2	4 2
£100 " for 10 Years.	" "	1	4 8
£100 " for 13 Years.	" "	1	0 8

Surveyor, for examination of Property, and Expenses of Solicitor, for executing Deed of Mortgage, paid by the Society.

EXAMPLE.

If a man can purchase a house for £300, supposing before purchase he pays a yearly rent of £30, he borrows from the Society £300 for ten years, and pays yearly £44 8s., or £14 18s. more than he paid for rent, for which in ten years he purchases the house, and has no more rent to pay. Other examples of less payments over a longer period of years can be taken (see Table).

For further information, apply to the Secretary, enclosing three postage-stamps.

Agents required to form Branches in all parts of the Country. Commission, Five per Cent.; reasonable compensation allowed for extra services.

Printed and published by JOHN CASSELL, at his Office, 335, Strand, London.—Nov. 1, 1851.

CHINA AND THE CHINESE.

AMUSEMENTS OF THE CHINESE.

THE amusements of the people are both varied and numerous. The following are two of their in-door amusements. One consists in each one of the party guessing at the number of fingers suddenly held up between himself and his antagonist, and the penalty of the loser, each time, is to drink a cup of wine. In still calm evenings, during the continuance of the Chinese festivals, the shouts of the common people engaged at this sport are said to be sometimes so boisterous as to drown all other sounds. The other festive sport alluded to is to circulate a handsome bouquet of flowers rapidly from hand to hand among the guests, while a kettle-drum beats a roll *con sperato* in an adjoining room; whoever holds the flowers at the instant the drum ceases, pays a similar forfeit.

Other games are designed for out of doors. One of these, in times of public festivity, is supplied by an axle, consisting of a heavy piece of wood, and furnished at each end with a wheel formed from a block of granite. The aim is to effect the greatest uprising of this mass. The first feat is to raise it to the knees, the second to lift it in the arms, the third to bear it aloft in the air. Muscular strength and dexterity are alike required for, and promoted by, this kind of exercise.

CHINESE JUGGLERS.

Another, which is a favourite among the middle classes, consists in projecting a ball into the air by a sudden stroke given with the inside of the foot. The art, in this instance, is to drive the ball aloft in a direction nearly perpendicular to the horizon, and as little as possible to discompose

the limbs and garments of the competitor. The game ascribed, in the Chinese Encyclopædia, to an Emperor very remote times, who is said to have invented it for th diversion and exercise of his soldiers

In flying kites the Chinese take great pleasure, and discov in their manufacture no little ingenuity. Not only do th imitate the forms of butterflies, fishes, and birds, but th give them motions bearing some resemblance to those of th creatures the kites represent. Thus, when there is the appear ance of a fish, the tail vibrates and the body assumes an undu latory motion; while the butterfly-kite looks like that insec when agitated by the wind. But the *chef d'œuvre* in th way appears to be an imitation of the fishing-hawk. In th summer, the kites thus formed hover over the river near Canton just as fish-hawks do in creeks and harbours near the sea; an so complete is the resemblance to the pendant mode of thos birds when staying themselves in the air, as often to deceiv the stranger who looks on. By means of round holes, sup plied with *vibrating cords*, the kites are made to produce a lou humming noise, like that of a top. The ninth day of the ninth moon is a holiday specially devoted to this national pastime when numbers may be seen repairing to the hills, for the pur pose of kite-flying; and, after amusing themselves, they let the kites fly wherever the wind may carry them. The swing is also frequently used, resembling our own when suspended from the branches of a lofty tree, and oscillating like a pendulum in the arc of a very large circle.

The Chinese are, unhappily, addicted to gambling from their early years. A table, with a large circle divided into eight portions, is very commonly seen near the places of public resort. On one of the sections the player places his money, and then whirls round a shaft which turns on a pivot like the needle of a compass, hoping it will stop over the section he has chosen. In this lottery, as in others, the prizes are immensely exceeded by the blanks, but should there happen to be a pointing to the division containing the money, the sum staked is doubled.

One boy wishing for half a dozen oranges in this way, the fruit and half the price demanded for it are laid down together. The dice-box is then produced. Should the boy throw the highest number, he pockets his money again, and takes possession of the fruit; if the feat is performed by the seller, he; on the contrary, wins the stakes. In like manner, other eatables are sought, as rice-balls, filled with meat and vegetables, slices of pork, &c., which are stored up beneath the table of the vender, or so displayed in a vessel at hand as to attract the hopes of the hungry. Dice, cards, and dominoes, are all favourite amusements.

In the Chinese Encyclopædia there is a representation of the barbarous practice of cock-fighting. Quails, also, are trained for the same cruel sport; and besides these, a species of cricket. At certain seasons of the year, these insects are exposed for sale in great numbers, about the environs of Canton. They are kept in pans, covered with iron net-work. At the time of combat two of these crickets are placed in a bowl together, and irritated by a straw, when the attack takes place with great violence. The usual result is the retreat of one. Death appears rarely to take place. The passion that prevails for such sports is evident from the fact that hundreds of dollars are often staked on the issue of cricket-combats, and large sums are often paid for those insects who have proved victorious, as they are for successful racers in this country.

Jugglers are numerous in China, and often perform feats of a surprising character.

The Rev. George Smith describes the following performance when on a visit to a wealthy Chinese;—"Aquei conducted us into a room, where he was sitting with his two wives, handsomely attired, looking from a window on a crowd assembled in the street to witness the performance of a native juggler. The latter, after haranguing the crowd with much animation in the Nanking dialect (as is usual with actors), proceeded to one part of the crowd, and took thence a child, apparently five or six years old, who, with struggling reluctance, was led into the centre of the circle.

"The man then, with impassioned gestures, violently threw the child on a wooden stool, and, placing him on his back, flourished over him a large knife; the child all the time sobbing and crying, as if from fright. Two or three older men from the crowd approached with earnest remonstrances against the threatened deed of violence. For a time he desisted; but soon after returning to the child, who was still uttering most pitiable cries, he placed him with his back upwards, and notwithstanding the violent protests of the seniors, he suddenly dashed the knife into the back of the child's neck, which it appeared to enter till it had almost divided it from the head, the blood meanwhile copiously flowing from the wound, and streaming to the ground over the hands of the man. The struggles of the child grew more and more feeble, and at last altogether ceased.

"The man then arose, leaving the knife firmly fixed in the child's neck. Copper cash were now thrown liberally into the ring for the benefit of the principal actors. These were collected by assistants, all of them viewing the influx of the coin with great delight, and bowing continually to the spectators, and reiterating the words, 'Many thanks.' After a time, the man proceeded towards the corpse, pronounced a few words, took away the knife, and called aloud to the child Soon there appeared the signs of returning animation. The stiffness of death gradually relaxed, and at last he stood up among the eager crowd, who closed around him, and bountifully rewarded him with cash. The performance was evidently one which excited delight in the bystanders, who, by their continued shouts, showed their approbation of the acting."

The deception practised in this instance, consisted in the construction of the blade and handle of the knife, which is so contrived, that by making a sawing motion on the throat of the child, a stream of coloured liquid, resembling blood, is pumped out of the knife and handle. All the rest is but a specimen of clever acting.

Fireworks, as they are among ourselves, are especially active to the Chinese. The writer just quoted describes a giant specimen of pyrotechnic skill. A long pole was erected, fifty feet in height, hung round with cases of rockets and other combustibles. On its being lighted at the bottom, there was a rapid succession of squibs, roman-candles, guns, and rockets, which illuminated the sky to a great distance with their igneous masses. After this minor display, a house suddenly dropped with its inmates from one of the arms of the pole. The surrounding fireworks, far and near, were so arranged as to pour in their shot and completely riddle the house. A volley of lesser combustibles suddenly terminated a beautiful cluster of grapes, which lasted for some time, and shed a deep blue light on the houses and walks for some distance around. A shower of golden rain was shortly after followed by an umbrella of fire, which suddenly flew open, amid the loud cheers of the spectators. Soon after, a human figure was impetuously carried round in a circular motion, and received the discharge of the surrounding crackers. An oblique shower of gold and silver followed; after which some rockets pursued their flaming track along the air, in a horizontal direction. These were succeeded by rockets, shot perpendicularly to a great height. The display occupied a quarter of an hour, and was concluded amid the boisterous plaudits of old and young.

In Peking, during the winter, skating, and other amusements on the ice, in which the Emperor takes part, are among the national exercises. Van Braam, who was one of the Dutch mission which proceeded from Canton soon after Lord Macartney's embassy, says:—"The Emperor made his appearance on a sort of sledge, supported by the figures of four dragons. This machine was moved by several Mandarins, some dragging before, and others pushing behind. The four principal Ministers of State were also drawn on the ice in their sledges by inferior Mandarins.

"Whole troops of civil and military officers soon appeared, some on sledges, some on skates, and others playing at football on the ice, and he that picked up the ball was rewarded by the Emperor. The ball was then hung up in a kind of arch, and several Mandarins shot at it, in passing on skates, with their bows and arrows. Their skates were cut off short under the heel, and the fore-part was turned up at right-angles."

Such diversions are quite in the spirit of the Tartars, though their original habits were strongly opposed to the quietude of the Chinese. The labouring classes in the southern province of the empire are robust and athletic, but others who have not their exertion are proportionately feeble. The Chinese, unless

of the military profession, seldom mount a horse; and as no one who can afford a chair ever moves in any other way, the benefits of walking are totally lost. Alluding to personal comfort and ease they say:—"It is better to sit than to walk; it is better to lie down than to sit; and still better to sleep than to do either."

When Lord Macartney's embassy was in China, its members determined on giving a grand ball. Every arrangement was made which it was supposed could produce a favourable impression on the native mind, as the British "tripped it" with their utmost spirit and gaiety,

"On the light fantastic toe."

In the course of the entertainment Sir George Staunton tried to gather the views taken of it by one of the Mandarins, but they were not *very* favourable. "I think," he said, "you English people put yourselves to great unnecessary trouble: we get our servants in China to do all this for us!"

The great heat of the climate during a considerable portion of the year must be regarded as one cause of the general inactivity, which would be productive of great suffering were it not that the people live so much in the open air. In the south they do so, attired in warm clothing, during even the winter months. In the north the weather is too inclement to allow of this practice.

The theatre is another amusement of the Chinese to which we must refer.

The splendour of wardrobes thus used is remarked by a Russian ambassador, nearly two hundred years ago. He says:—"First entered a very beautiful lady, magnificently dressed in cloth of gold adorned with jewels, and a crown on her head, singing her speech in a charming voice and agreeable motion of the body, playing with her hands, in one of which she held a fan. The prologue thus performed, the play followed, the story of which turned on a Chinese Emperor, long since dead, who had behaved himself well towards his country, and in honour of whose memory the play was written. Sometimes he appeared in royal robes, with an ivory sceptre in his hand, and sometimes his officers showed themselves with ensigns, arms, drums, &c."

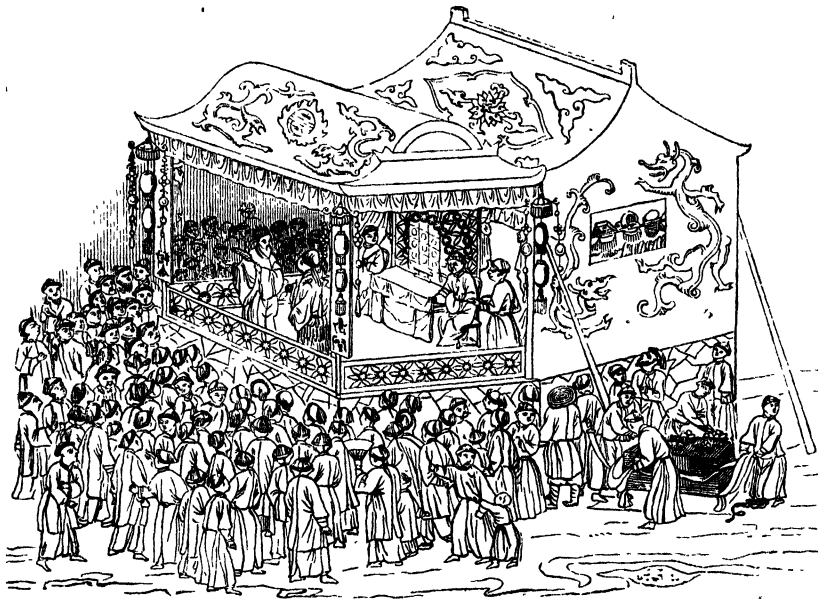
On most occasions, the costume of the Chinese stage is still magnificent: Gay silks and splendid embroidery are lavished on the dresses of the actors. Most of the serious plays are historical, but for obvious reasons, do not touch on events that have occurred since the Tartar conquest. The moral writers of China frequently warn their readers against theatrical performances, and prohibit their being witnessed by females.

Mr. Fortune describes an invitation accepted by himself and some other Europeans to the house of a Mandarin at Shunghae to see a theatrical performance, and to dine with him afterwards. Alluding to some preliminary hospitalities, he says:—"While this was going on in the house, the players were getting everything ready in the large room where the performance was to take place. In a little while one of them entered the room where we were, carrying in his hand several fine long ivory cards, on which were written a number of the most popular plays of the day, any one of which the players were ready to perform at the command of our host and his friends. We were most politely consulted on the subject, which, as we did not know a single character of the language, and had the greatest difficulty in understanding what was said to us, was not of much use. Having at last fixed on a piece for the evening's entertainment, we were all led into the theatre. The room was large and nearly square, having a platform at the upper end for the actors and band, and one of the sides being only separated from an open lane by a railing, so that the public might also have a view of the play. The centre of the room was filled with guests, and the roof hung a number of lanterns in the Chinese style. As it was early in the afternoon when the play commenced, the lanterns were not lighted, and the piece went on in daylight.

"The play began with some pantomime-like feats. These were succeeded by something which appeared to be very pathetic, judging from the language and gestures of the performers. All was gone through in a kind of opera style, the actors singing their parts with false voices. The feats of tumbling which were now and then performed, were extremely dexterous and clever, and attracted our notice more than anything else, probably because they were best understood.

"The dresses of the actors were superb, and must have cost a large sum of money. There were no females among them, as it is not customary for them to act, but their places were supplied by men or boys, chosen from among those who are most lady-looking; and so well were their appearance and dresses arranged, that it would have required a practised eye to have detected the difference.

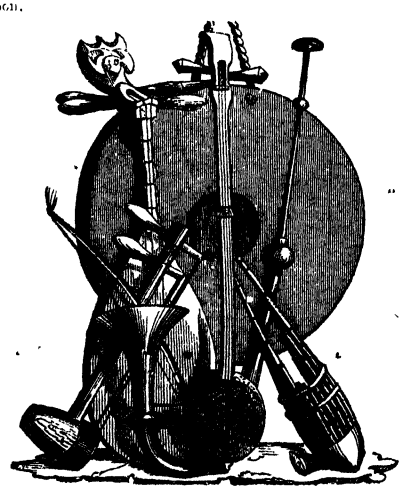
The voices of the actors were not musical, at least to English ears, but the whole was in unison with the noisy gong, and the wind instruments, like bagpipes, which are in common use among the Chinese. In fact, noise seemed to be the thing which produced the greatest effect, and we certainly had enough of it.



"I was struck by the various figures made by the actors on the stage, intended, no doubt, to represent something like those scenes or pictures which are so much studied in our theatres at home. A quadrant seems to be a great favourite, and was constantly made by them in the different acts. They have no scenery to assist the delusions, only a simple screen, which is sometimes used to represent a room out of which some actor is to make his appearance. Fencing is much practised, and is, perhaps, the most curious part of these exhibitions. Each individual has two swords, which he swings about his head in the wildest manner, at the same time throwing his feet and legs about in a most fantastic way, as if they had as much to do in the business as the hands and arms. The exhibition on day lasted for three hours, and then we left the theatre, and retired into another room."

There are in China a great number of public *fêtes* celebrated at various periods of the year, the majority in honour of some of the gods. That which took place at Canton, in honour of the Tai-Tseou, the god who presides over the safety of houses, has been well described by a French traveller, and may serve to furnish the reader with an idea of what occurs in similar cases all over the empire. For some days previous many of the streets were covered over with red, blue, white, and yellow awnings, which completely intercepted the rays of the sun. Planks had also been stretched across from one house to another, about ten feet above the ground, and upon them were placed images of gods, goddesses, and heroes, in pasteboard. The greater number of these groups of statuettes were representations of combats with sword or spear—a strange manner, one would think, of showing honour to a god so pacific as a protector of houses and families. At intervals splendid lamps or lustres were suspended along the whole way; at the entrance of the streets, and in the passages, altars of pasteboard were raised, adorned with flowers, paintings, and tinsel. Brilliant illuminations, and numerous *sing-song* representations in theatres, got up for the occasion, formed the principal amusement of the *fête*. Something of a religious gravity was lent to the whole solemnity by placing mice inside the statuettes, and thus imparting motion to them, and by the terribly discordant sound of the musical instruments. The music is varied at each festival. In the present case the instruments most in use were gongs, or kettle-drums, whilst at the fire festival stringed instruments only are allowed.

Of all Chinese *fêtes*, however, the most important is that which takes place upon the first day of the new year. The Chinese year commences with the first moon in January, and lasts during twelve moons; and in order that there may be no derangement in the number of moons assigned to each year, at the end of some years the last moon is doubled, so as to make these years consist of thirteen moons. A law of the empire ordains that all the affairs of one year be terminated before the commencement of the next; and any merchant or trader who has not balanced his books and paid his debts by the end of the last moon incurs a heavy penalty. This deliverance from the cares of the closing year is celebrated with great rejoicings, in which fireworks are exhibited on an extensive scale. When the Chinese tradesman has ruled his books, he adorns the space in front of his shop with festoons of flowers, "crackers," rockets, &c., and the noise caused by the explosion of the latter apprises his neighbours that he is now at liberty to make merry. He then invites his most intimate friends into his house, and during three or four hours



abandons himself along with them to every sort of excess. Whilst these orgies last, the doors are closed, and the windo hung with a sort of a semi-transparent curtain, which protects the inmates from the view of profane eyes. The rich often protract these saturnalia throughout the whole of the first moon.

During the first two days of the year all the shops are closed, and all business suspended; every one clothes himself in holiday garments, and nothing is thought of but amusement.

CHINESE THEATRE.

Some carry about the branches of trees deprived of their leaves, and covered with white flowers called *teou tchoung-fa*, others send presents of sweetmeats, roast sucking pigs, &c., to their friends. Some rush to the theatres, others to watch the sports upon the water. The mendicants daub their faces with black and white paint; and sometimes try to imitate the marks of deep wounds.

CHINESE MUSICIANS.

Just before the close of the year a great number of fantasti paintings, marble tablets, and valuable furniture or ornament of various kinds, are exposed for sale in the streets, at a pric

three or four times higher than that they would fetch in the shops. These are either the property of persons straitened for money to discharge their accounts, or of the rich, who fear being considered people of *mauvais ton* if they keep ornaments of this kind more than one year in their houses.

New year's day is almost the only interval of repose enjoyed by this industrious population. The entire remainder of the year is devoted to labour, except two or three holidays, which those who can, do not fail to make the most of—such as the "Feast of the Dragon," the "Carnival or Masquerade Day," in which the dragon plays the principal part, and the "Feast of the Lanterns." On the night of this last *fête*, the large towns offer an extraordinary spectacle. Every house is illuminated, and every boat upon the rivers and canals covered with lanterns; and the noise caused by the gongs, and other instruments, and the shouts of the people, is positively deafening.

THE PUPIL OF A GREAT MASTER.

"So, mamma, you have had a visit from our neighbour, Mrs Campbell?" said a bright Hebe-looking girl, as she entered the small but neat-looking parlour in which her mother was seated, and began to arrange some flowers in a china vase

"Yes, and she brought me some news, too."

"Of what sort?" asked the daughter.

"She tells me that the pretty cottage at the end of the lane, that has stood empty so long, is at last about to be occupied, and who do you think has taken it?"

"I can't tell, indeed. Is it any one that I know?"

"Yes, one with whom you are very well acquainted."

"Who can it be! Do tell me, mamma," continued the daughter, with increasing interest, "though I am almost afraid from the expression of your countenance that it is some one you are not very fond of having for a neighbour."

"You are quite right there. What do you think of its being James Davenport?" And as the mother pronounced the name she raised her eyes to the face of her daughter, whilst a deep flush passed over her own.

"James Davenport!" exclaimed her companion. "How can that be? He has not, I hope, proved unfaithful to Josephine."

"No, on the contrary, Josephine is to share it with him."

"Oh, I am delighted to hear that! Then Mr. Hardman has relented at last of his cruelty."

"No, not at all. So far from it, he continues to say, as he has always done, that if they want to marry they may, but they must not look for a farthing from him. So now, after having waited for a more cordial assent till their patience is worn out, they have determined to venture on the little they have, and trust to Davenport's talents and industry for bringing him gradually into fuller practice."

"And they are right," said the young girl with animation. "Better to live in a humble cottage, restricted by the closest economy, than in a palace where you are treated only as an incumbrance. And oh," she continued as a glow of pleasure lighted up her beautiful face, "how delightful it will be for me to have Josephine for so near a neighbour!"

On hearing these words, Mrs. Renwick (for that was her mother's name) fixed her eyes on the face of her daughter with an expression of surprise and displeasure, and then said—"Is it possible, Louisa, you can talk of making a neighbour of the daughter of Mr. Hardman?"

"Why not, mamma? you would not surely think of making her accountable for her father's transgressions. It belongs to the Almighty alone to visit the sins of the parents on the children; and no one that has ever looked at Josephine's sweet eyes, her pretty mouth, and her pure and open countenance, so full of artlessness and truth, can believe, for a moment, that she ever was capable of a mean or ungenerous thought."

"I don't pretend to say that Josephine is not a very good, amiable girl, but she is the daughter of the man who swindled your father out of an ample fortune, and drove us from the spacious mansion which we inhabited only a couple of years ago, and obliged us to take refuge in this humble dwelling, where your poor father breathed out the last sigh of a broken heart. When I think of this, Louisa, it is impossible I can ever bear the sight of her. So don't, I beg of you, attempt to bring her here."

"I won't, dear mother, do either that or anything else that will give you pain," returned the daughter, as the tears trembled in the full hazel eyes that had a minute before sparkled with vivacity; "but you will not, I hope, forbid my going to see Josephine, and showing her how much I still love her."

"If the wrongs that you father met with at the hands of hers," continued Mrs Renwick, without replying to her daughter, "were not sufficient to alienate your affections from her, I should have thought that the circumstance of Harry Rostoer's having likewise been so severe a sufferer would at least have had the effect. This was just about the time that you and Harry were to have been married, for your father and I had promised you should be his as soon as you had completed your nineteenth year; but Hardman, unfortunately, with his plausibility and cunning, persuaded your father not only to risk his own fortune, but that of his ward, in the tempting speculation that he held out to him merely as a trap, and now Harry has to make use of a profession that he had before studied merely as a means of gratifying the cravings of an inquiring mind, and has to submit to all the drudgery of a country physician, instead of waiting with his handsome fortune till practice sought him."

"Harry has never once complained of having been reduced to that necessity," replied Louisa. "On the contrary, in almost every letter he speaks with cheerfulness of the insight he is gaining into the science of medicine by the extensive practice in which he is engaged; and often declares his conviction that had he remained here under the enervating influence of wealth, he would never have been anything but a mere dribbler, but having, on the contrary, joined an old experienced physician, who was literally worn out with his extensive practice, he came at once into the experience of years, and constant opportunities of exercising his knowledge."

"All this is very fine and lover-like, but nothing could persuade me that he does not hate Hardman as heartily as I do, and would be mortified beyond expression were he to hear of your renewing your intimacy with his daughter. I hope, therefore, Louisa, that out of respect to his feelings, if not to mine, you will not think of doing so."

"And do you really say, dear mother," asked Louisa with a look of painful anxiety, "that I must not go to see Josephine when she comes so near to me?"

"Suppose you went, and met her father there?"

"And suppose I did, what of it? The encounter might be an unpleasant one to him, but to me it would be of little consequence. I have no need to be afraid of seeing Mr. Hardman, *I* never injured *him*."

"But is it not a most painful thing to see, and have to speak civilly to those we hate?"

"I don't know," answered Louisa with simplicity, "I never experienced the feeling of hate, and therefore cannot answer for its consequences."

"Louisa, you are a most provoking girl," exclaimed Mrs. Renwick, impatiently. "You really have no spirit. I believe if you even had an opportunity of being revenged upon him you wouldn't make use of it."

"There you are mistaken, mamma," said Louisa, looking at her mother with one of her sweet angelic smiles. "Give me an opportunity, and see if I would not have my revenge. But it is of no use talking of a thing that is not likely ever to happen. Mr. Hardman is independent of me, and altogether out of my reach. So only tell me, dear mother, if you will not agree to my going to see Josephine, provided Harry consents to my doing so."

"Well, well," replied the reluctant parent, as she turned away from the lovely face before her, lest she should be induced to give a too cordial consent, "I suppose, if Harry doesn't object, I must not, however disagreeable it is to me to yield."

"And you will write to him immediately?" urged Louisa.

"I have a letter half-written already, and will finish it directly."

"Oh, thank you, dear mother!" cried the sweet girl, as she again pressed her lips on the hand of her parent. "Now we will let the subject drop till the arrival of Harry's answer."

"But mind, you are not to write yourself and coax him," said Mrs. Renwick.

"Oh no, all shall be open and above board!" replied Louisa playfully, as she recommenced arranging her flowers, humming as she did so a lively air, for she knew the generous mind of her lover, and had no apprehension about the result of the application.

The answer to Mrs. Renwick's letter arrived even sooner than they had calculated, and nearly the first sentence was as follows.—"I am delighted to hear that Josephine and Davenport have at last determined to depend upon themselves for happiness. With his talents, diligence, and sobriety, and his amiable wife's industry and moderate desires, there is no doubt of their soon becoming independent. But I am half offended at my Louisa for thinking it necessary to consult me on the propriety of giving a welcome to her friend when she comes into her neighbourhood. Indeed, I cannot imagine what had come over her, for I could have been perfectly sure that her first impulse would have been to fly to her friend, and should have been equally certain of her giving me credit for partaking of the same feeling."

Louisa had scarcely finished reading this letter when their neighbour and chronicler, Mrs. Campbell, came in and announced the arrival of the bride and bridegroom at their little cottage the previous evening.

"Then I may go and see her, mamma," said the warm-hearted girl; and without waiting for a reply, she hastened out of the room to prepare for the visit; nor did she after she was ready venture to show herself in the parlour, lest her mother should start some new objection which would make it unpleasant for her to go.

She found the young bride alone, and was received by her with much affection, though with evident agitation, for this was their first meeting since the change in Mr. Renwick's fortunes had taken place under such circumstances as left no doubt of the fraud which had been practised upon him, with all of which Louisa knew her friend to be fully acquainted. She had not come, however, to recal painful recollections to the mind of the young bride, but to assure her of her sympathy and unaltered affection. With all the tenderness, therefore, of a generous heart, she repressed her own rising emotions, and led her on to talk of her husband, her house, and the beautiful garden by which it was surrounded, and help her to plan some simple alterations by which it might be improved. As they were thus engaged, and had almost forgotten the painful past in the sweet reciprocation of feeling that used to be so delightful to them, a harsh grating voice, which Louisa knew at once to be the well-remembered voice of Mr. Hardman, struck upon their ear, and they heard his step advancing towards the room in which they sat. Louisa was conscious of her friend's looking at her with an anxious eye, but she bore the examination with composure, for in truth she had no bad feelings respecting him to control. She thought of him with pity rather than resentment, for she felt it to be an awful thing for one so near his last account to entail upon himself sins which must inevitably bring a fearful charge against him. As he entered he discovered evident surprise at seeing her, and she fancied she saw a slight increase of colour in his face. She spoke to him politely, though coldly, and sat with composure whilst he conversed with his daughter, whom he met without taking any notice of her change of state or of the short journey she had taken after her marriage. After having answered all his questions, Josephine, by way of changing the subject, inquired how he liked her house.

"Oh, it looks very well!" replied the hard-hearted father; "but I think I see the auctioneer's mark on everything. The usual way things go when people set out beyond their means."

The young bride's colour went and came, but she made no reply to the cruel speech, whilst the father, as if satisfied with the wound he had given, drew his spectacles from his pocket and began to examine some books that lay on a centre table. Anxious to divert the mind of her friend from his cruelty, Louisa began to talk with great animation of some rare and beautiful flowers that had been sent to her by some of her relations, with seeds or roots of which she promised to supply Josephine. Then rising, she kissed Josephine affectionately, and promised to see her again soon; then bowing to the father she left the room. "Oh, how can such a man be the parent of such a daughter?" she exclaimed inwardly, as she bent her steps homeward. But Louisa forgot at the time that Josephine had had an amiable and excellent mother, and that the maternal relation, to a daughter especially, is most powerful.

On her return home she expatiated on the sweet and sensitive behaviour of her friend, the beauty of the house, and on everything she thought likely to please or amuse her parent, but was studiously silent when speaking of her encounter with Mr. Hardman, not to touch upon anything likely to irritate the feelings that had so long rankled under a sense of his base conduct.

Time passed on, and the two young friends enjoyed each other's society almost daily. Indeed, so fully was their former familiarity and confidence restored, that whenever anything occurred either to please or agitate her, Louisa's first impulse was to seek the ever-ready sympathy of her friend. They had, besides, without any explanation having actually taken place between them, become mutually acquainted with each other's feelings with regard to their parents, Josephine clearly understanding, from her friend's silence on the subject, that it was not in her power to ask her to return her visits, whilst the young bride, on her part, was always careful, in an indirect manner, to give Louisa notice if she had any reason to expect a visit from her father. Thus, by mutual delicacy and consideration, the intercourse between these amiable young women continued to be a smooth, unbroken interchange of sympathy and affection, under circumstances which would have involved less delicate natures in continual broils. And yet they were very different in their dispositions. Louisa was all sprightliness and animation, though possessing at the same time a deeply-reflecting mind, and a heart full of warm and generous feelings. She was beautiful; but though it was impossible she should not know she was so, her mind was too strong to put any undue value on her beauty, but wore it as we do a costly brooch, rejoicing in its possession, yet ceasing to think of it when we no longer see its reflection in our mirror. Indeed, though her person might be said to be faultless, her mind was the charm which most excited the admiration of all discriminating observers; and, like the flowers which, though lovely in themselves, are chiefly valued for the richness of their perfume, those who conversed with Louisa remembered only as a secondary excellence the beauty of her form, though all acknowledged it to be perfect.

Josephine was very different. As the daughter of a man of a and grovelling mind, she had enjoyed few opportunities of improvement; and had it not been for the circumstance of having had a mother whose mind was of a finer mould, it is difficult to say how closely she might have assimilated to her unworthy parent, for though her dispositions were amiable, she possessed little native energy of character. Her mother, before her death, had prevailed upon the unworthy father to grant her daughter the advantage of a year's instruction in the same school in which Louisa had been for many years a pupil. The favour was granted grudgingly, though the infatuated father was at the same time lavishing hundreds upon a dissipated son, on whom he had centred all his affections. Whilst at school the intimacy was ripened between the two girls, who had before been only slightly acquainted. Charmed with the modest simplicity and sensitiveness of Josephine's character, Louisa took delight in aiding her, and even after she had left school continued to her such valuable assistance as aided materially in forming the character which eventually gained the affection of Mr. Davenport, a highly-respectable and talented young lawyer.

That fatal scourge, the cholera, which visits young and old, rich and poor, without distinction, was committing its dreadful ravages with unprecedented violence in the town of ——— and its environs, where our two young friends resided, and Roscoe kept writing almost daily to Mrs. Renwick, to give her instructions for the management of herself or his precious Louisa, in case of their being attacked with any threatening symptoms, as well as to encourage them with the assurance that the danger was slight if means were taken to check its progress on its first appearance. These valuable credentials Louisa always hastened eagerly to impart to her friend, that she might derive all the advantage they did themselves from her lover's experience and tender care. She had one morning just put on her bonnet for this purpose, when their neighbour, Mrs. Campbell, entered with a look full of importance, and inquired if they had heard the bad news. On being questioned on the subject, she informed them that Mr. Davenport, being anxious that his wife should have a little fresh country air, had procured a gig and taken her a short ride before he went to the office. The horse, however, had proved an unsafe one, and having taken fright at something on the road, had started off and run with such violence as to throw them both out, and had dashed the gig to pieces; that one of Mr. Davenport's legs had been broken, and his wife had received some internal injury, for she could not bear to be raised to her feet without fainting. She also added that she had just seen them both brought home on a kind of litter. Louisa waited to hear no more, but flew on the wings of affection to the assistance of her suffering friend, still hoping that, as usual, report had greatly magnified the evil. But on arriving at the house she found that, for this time at least, there had been no exaggeration. A physician

had already been there, and had reduced Mr. Davenport's fracture, and she was told that he was lying composed and comfortable; but as the girl who answered her inquiries spoke, she opened the parlour door, when Louisa beheld the gentle, sensitive wife, lying on a couch, the picture of death.

"Why are you here, dear Josephine?" she exclaimed, as she sprang to the side of the sufferer. "Why were you not laid on a comfortable bed at once?"

"I was there," replied the mistress of the house, "but I have just had a message from my father to say that he is very ill with the cholera, and has not a creature with him, for all his people, except one little boy, had left the house the moment he was seized, and as I felt easy whilst lying, I was in hopes I was strong enough to go to him, but fainted when I reached here."

"But why should you think of going?" asked Louisa. "You could do nothing for him if you were there."

"I could at least endeavour to procure some one to wait upon him. It is dreadful to think of his being in the house by himself, and so ill as I am sure he is, before he would think of sending me such a message, for he is not one to complain for a trifle."

As she spoke, the boy that had before been mentioned came bursting into the room, breathless with running, and said, "Mr. Hardman sent me to say he is dying, and you must come to him."

Josephine, without speaking, made

placing her hand on her shoulder to hold her down, said—"Lie still dear Josephine, it is impossible for you to go, and if you even did so, it is most probable your life would be the sacrifice for such exertion."

"But can I lie here and think my father is dying, without creature to do anything for him?" asked Josephine. "Oh Louisa notwithstanding all his faults, he is my parent still," and her pallips quivered with emotion.

"I will go and see to him," said Louisa, "money will do everything, and he has plenty. I will go and find him a nurse;" and, without waiting to give her friend time to reply, she hastened out of the room. As she proceeded, accompanied by the little messenger, who was scarcely able to keep up with her rapid pace, she learnt from him that Mr. Hardman had been taken ill in the night, and had called up the servants, but did not send for a physician till about eight o'clock, that the doctor, as soon as he came, said he had got the cholera, and that then the housekeeper and the girl under her were so frightened that the moment the doctor was gone they left the house. They had now reached the house, the door of which they had scarcely entered when her ear was assailed by the most agonising cries she had ever before heard. In a moment pity got the better of every other consideration, and she flew upstairs to see if she could do anything to relieve a suffering fellow-creature. With a promptness and coolness of judgment that seemed almost supernatural, she turned over in her mind what was most likely to be of service, and without spending time in searching for other aid, she busied herself, with no other assistant than the little boy, in administering the necessary applications. Long and arduously, however, had she laboured before any appearance of benefit seemed to ensue from her exertions; but at length she was rewarded by seeing the sufferer more composed, though she was unable to judge whether his danger was diminished in proportion to the relief he had obtained. At this moment the physician came to make one of his hasty visits, for such was the virulence of the epidemic at the time, that the medical men had only a few minutes to bestow upon each patient as they went their rounds amongst them.

"Am I to die, doctor?" asked the sick man, in an interval of comparative ease. "Can you do nothing for me? Money will be no object in rewarding you if you can only save my life."

"When I left you last I hardly expected to find you alive on my return; but an angel," he added, fixing his admiring eyes on Louisa, whose person was unknown to him, "has come to your aid, and there is no knowing what miracle she may perform; still, however, if you have any worldly arrangements to make, it would be well to see after them while you are able."

The sufferer uttered a deep groan, but a moment after he raised his head and cried, "Who is it that has been helping me? Isn't it my daughter? I've been too ill to notice."

"It is Louisa Renwick," returned our heroine.

"Renwick!" repeated the sick man, "what brought a Renwick here?"

"Josephine is very sick, and I am here in her stead."

"And she has treated you like an experienced physician as well as a daughter," added the doctor.

"I should rather have expected her to put poison in my cup. Oh! I didn't need this," he continued, as Louisa began afresh to rub his cramp and contorted limbs with her beautiful little hands, that were already swollen and blistered by the severity with which she had applied them. "Get out of my sight, or it'll kill me to look on you."

"You had better send for some one to assist you in arranging your affairs—it may do you good by composing your mind," urged the physician.

"Well, well, send for Mr. M——. But oh, doctor, can you not save me?" cried the dying man, who had all his life made money his god, but who now found it wholly unable to give him relief in his last extremity. The little messenger was immediately dispatched for the lawyer, and the physician, after promising Louisa to endeavour to send some one to relieve her, hastened to another scene of misery and death.

Louisa's resolution and self-command seemed to rise in proportion to the demands made upon them, and as the violence of the disease seemed to have gained additional strength from its temporary relaxation, so her energy and activity increased in proportion, and only ceased when the arrival of the lawyer made her feel it necessary for her to absent herself. In going down stairs she met Harry Roscoe, and begged him to return and visit the unhappy man.

"I will come back to him, dearest," said the lover, "as soon as , but you have already exposed yourself

much, and I cannot think of allowing you to incur any further danger."

"Oh, I am not at all afraid!" replied the intrepid girl. "Besides," she continued, turning a look of sweet affection on her lover, "if there be danger, let us, dear Harry, share it together."

"That would do well enough if we had but ourselves to care for, but remember, Louisa, you owe a duty to your mother which forbids your running unnecessary risks. Go home, therefore, my own best beloved, and take care of her and yourself, and I will do all that humanity demands for one who, in truth, deserves little from either of us."

"Then let me go alone," urged the generous girl, "and do you hasten upstairs, for the lawyer has left the chamber; I hear his foot on the stairs."

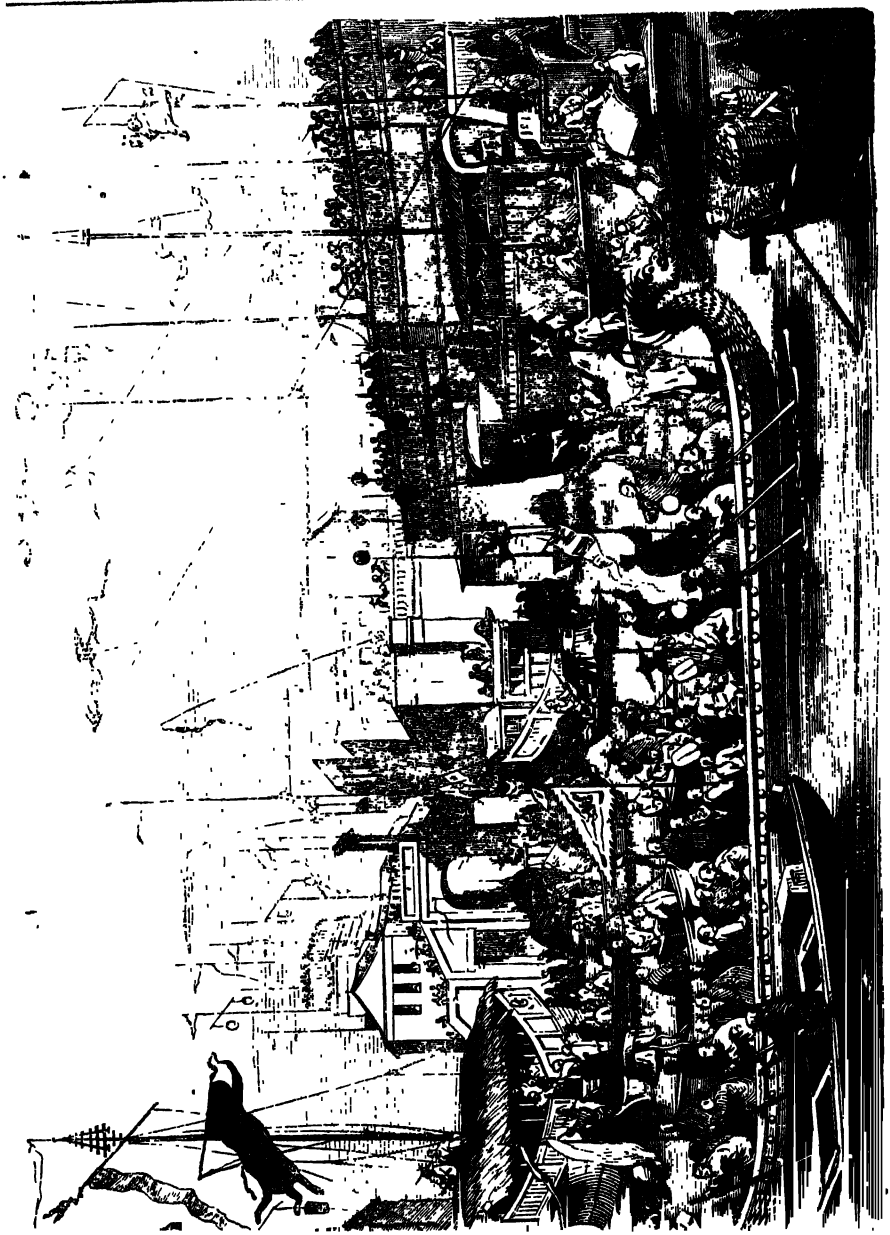
To this Roscoe made no objection, and our heroine proceeded in the first instance to the house of her friend, to give her all the satisfaction about the sufferer in her power, and then hastened home. But by the time that she had reached the room in which her mother was seated, nature was exhausted, and, completely overcome by the various strong emotions by which she had been agitated throughout the day, and the severe bodily fatigue she had undergone, she sunk senseless on the floor.

Though it was not long before Louisa was restored to consciousness, a high fever succeeded, and the lover returned from the bed of death to watch over the being in whom his very life was centered. But youth and an excellent constitution struggled victoriously over disease, and when sufficiently recovered to begin to think of others, she was told that Mr. Hardman had only lived about an hour after Roscoe went to him.

"And Josephine and her husband?" said she.

"They are both doing well," replied Mrs. Renwick; "and though old Hardman made no change in that part of his will which left his daughter penniless, unless her brother should die without lawful issue, Josephine has already come into undisputed possession of the whole of her father's property."

"Then she is now a rich woman," said the lovely girl, her fine eyes, notwithstanding her debility, beaming with delight. "How rejoiced I am!"



"Not so rich," returned her mother, "as she would have been, if you had not interfered and deprived her of a portion of it."

"What do you mean, mamma?" asked Louisa, in surprise.

"When the unhappy man sent for his lawyer, it was for the sake of adding a codicil to his will, by which he left the sum of one hundred thousand pounds to be divided between Harry and me, according to our respective claims. To this deposition he added that you, by your humane exertions to alleviate his sufferings, had heaped coals of fire on his head."

"Did I not tell you, mamma, that I would seek my revenge the first time I had a chance?"

"You did indeed, my child, and I am a greater gainer than I deserved by the course you have pursued. But I will endeavour, Louisa, in future to follow your example, and act according to the instruction the Saviour has given us, and 'return good for evil.'"

LONDON SCENES.

MR. JONES, THE "RESPECTABLE."

SCENE—*the Street.* TIME—*Two o'Clock, a.m.*

IN the conventional language of our age, a man is considered *respectable*, not so much on account of his intelligence or moral worth, as on account of his property, dress, and outward appearance. Hence, *he* is considered a *respectable gentleman* who lives in a good-looking house, with brass plate and knocker on his door, handsome blinds to his windows, and a smartly-dressed young woman to attend to the baker, butcher, milkman, postman, &c., &c. Hence, too *he* is considered a *respectable tradesman* who sports a plate-glass front with brass or mahogany frames, who keeps well-dressed shopmen or shopwomen, and who exhibits the choicest specimens of the articles in which he deals. And, with a large portion of the community, the person is accounted *respectable*, be he gentleman or tradesman, who meets with a few others of his own standing in society, evening after evening, in some of those *respectable* taverns which abound in every quarter of our metropolis.

With one or two of these *respectable* individuals our artist appears to have met, in the course of his professional rambles. It is evident that the two individuals whom he has represented as "*rather* the worse for drink," do not belong to the working classes. "Mr. Jones," is, perhaps, a principal clerk in a large mercantile establishment, and his friend in the "Chesterfield" one of his juniors. And it is sad to find, "in this nineteenth century," and at a period when institutions abound for the diffusion of light and knowledge, that there should be so many hundreds of this class, and wealthy citizens, and men of standing in society, who degrade themselves by sensual indulgences, instead of partaking of the true "feast of reason and flow of soul," which they might enjoy by means of such institutions.

We were the other day travelling in one of our western counties, when we witnessed several examples of this. The individual whom we shall call No. 1, was a farmer occupying, as he asserted, a considerable estate. In the morning we travelled with him to one of our large towns, and while waiting for the train, and afterwards, during the journey, entered into conversation with him, and, in fact, became rather intimate. As he was afraid of being too late at the station, we had accommodated him with a seat in the chaise in which we were riding; and we found him in every respect an intelligent and apparently virtuous companion. But on returning at night by railway, we had no sooner taken our ticket than we were grasped violently by the arm by a person whose appearance and rudeness left an

impression on our mind that he was a madman; for the transforming power of liquor had been such, that for a considerable time we had no idea that this wretched object was the respectable farmer with whom we had travelled in the morning, but so it was, and a more disagreeable companion we never yet found in a railway carriage. His oaths, and the follies and falsehoods he uttered, were not only humiliating but shocking. He insulted every one in the carriage. He rolled on you with all his weight; every now and then you were in danger of receiving a blow from his walking-stick, or of having your clothes fouled by his almost perpetual habit of expectoration. Though he only went with us about fifteen miles, yet at least a dozen times he wanted his ticket read that we might tell him where he had to stop. Never were we more pleased than when he arrived at his destination and took his exit.

In the same carriage were three gentlemen who felt dis-

gusted with our drunken farmer, and threatened to have him expelled, and yet immediately after he was gone, all their aspirations were for brandy and water; and from their conversation, it was evident that the tavern and the midnight revel were places to which they were no strangers.

The intoxicated yeoman, who stood in so much need of protection, had scarcely left us, before a wealthy individual, much the worse for liquor, and whom we shall call No. 2, entered our box. As he had received more education than the husbandman, and was not so far gone in liquor, we were not so much annoyed. Still it is was evident that both his body and mind were under the influence of strong drink. He did not travel with us very far, but when he was gone, we heard the following remarks concerning him from the brandy and water gentlemen, whom we might have called Nos. 3, 4, and 5. "That," said one of them, "is a thorough good-hearted fellow. He lives in this neighbourhood. I travelled with him the other day, and a real jovial companion he is. He has plenty of money, and he spends it freely, like a jolly good Briton." Our readers know what all this eulogy stands for; it intimates that the "jolly good Briton," No. 2, was fond of drink, of taverns, and of the revellers who congregate in such haunts. "*Goodness of heart*" was tested by fondness of drink, and the amount of property wasted thereon.

Here, then, we had five individuals who looked on themselves as belonging to the *respectable* ranks of society, all of them the worse for liquor, or else applauding the drinking extravagance of our age. We might add, that the only remaining companion in the carriage, whom we might call No 6, was a *respectable* tradesman, who was also more than half-intoxicated, and who very cordially united with the farmer in his oaths and blasphemies. A member of the Society of Friends and his wife were about to join us, but one of the gentlemen went out and barricaded the door, giving as a reason that he did not like their dress. Doubtless, if he had spoken candidly, he would have said that the sobriety and morality for which they were renowned, formed a greater objection than the cut of the gentleman's coat, or the shape of the lady's bonnet.

The facts stated above are very much in harmony with the engraving before us. It is evident that Mr. Jones, the individual sitting on the step of his own door, is not a pauper, nor a London beggar, but a person moving in respectable life. When he went from home in the morning he was able to walk erect, and had perfect control over himself and, probably, transacted business of importance during the day: now he has not strength enough to ring his own bell, and a policeman is performing that office for him. Were it not for his appearance, he would doubtless be taken off to the lock-up, and appear to-morrow morning before the magistrate; but his dress has saved him from that indignity. Mr. Jones is well known to be a *respectable* man.

The other individual, Mr. Snooks, with the cigar in his mouth, who is held by the arm of another policeman, and kept from falling, is evidently a person who does not belong to the masses. The deformity of his hat is rather the effect of a drunken fall, than of age or poverty. The countenance is that of an inebriate; and but for the grasp of the policeman, it is pretty clear, that his merely pointing at his drunken brother would so far disturb his centre of gravity as to lay him flat on the ground.

It is generally thought that policemen are required for the vulgar, the low-lived, the *mob*; and that if these were moral there would be no need of a constabulary force to walk our streets, and keep order. But in the engraving before us, only four persons are represented; two are officers of justice, and the other two are *gentlemen* in a state of intoxication! We have ventured a guess as to their position in society, we may be wrong, but it is evident that they are among the world's "respectable men;" looked up to, most likely, by their families, dependents, and neighbours: yet they are here both at the mercy of the policemen, and if they were dealt with as the laws direct, would spend their night in the station-house, and to-morrow would have to answer at the bar of the justice of the peace for their "drunken and disorderly" conduct.

Some of our readers may think that our artist has been too severe in giving this picture of *respectable* men; but constant observation has proved to us that we have thousands of persons in this Christian land who regard themselves as many degrees above the masses, who nevertheless often indulge to excess in what are erroneously called "the pleasures of the table;" and indeed the imperfect education, the mistaken prejudices, and the pernicious customs of our day are eminently calculated to produce such characters. Wealthy, respectable, and moral people indulge in the drinking customs of our country, and commend intoxicating liquor to their children, and, as a consequence, encourage them to drink. It may be a humiliating sight to see a gentleman drunk on the step of his own door, unable to ring his own bell, and placed entirely at the mercy of the police; but we would remind our readers that it is the use of strong drink which effects this degradation. The liquid fire creates thirst, and produces a most tyrannous appetite. And the desire for these poisons is evidently so strong in those who love them, that many spend every sixpence in purchasing them, and thus beggar their families, ruin their health, degrade their characters, and destroy their souls. A catalogue of the once wealthy and respectable men and women who are now, in consequence of drinking, either insolvents or bankrupts, or inmates of jails, unions, or madhouses, would present a frightful record; and thus, in the streets, the prison, the poor-house, and the lunatic asylum, Wisdom cries aloud, and calls upon the wealthy and respectable classes, upon the working classes, upon *all* classes—to ABSTAIN.

A VISIT TO THE BANK OF ENGLAND.

I HAVE the satisfaction of being a "*millionaire* of a moment"—a respectable personage, in the treasury of the Bank of England, having placed in my dexter hand one thousand notes of £1,000 each, of that establishment, duly signed, and payable on demand. Two more compact and portable little packages, of representative value, than the said sum of £1,000,000 sterling consisted of, it would not be possible to conceive, and even the transient possession of them made me feel immensely respectable, I can assure you. And wherefore not? Could I but have transported myself, and that same little handful, to any spot on earth, would not universal opinion pronounce me to be so? Is there a wiseacre who would not defer to my oracular judgments? Is there a wit who would not acknowledge the superior brilliancy of my jokes? Is there a patriot who would refuse me his vote at the next election? Would not that varied assortment of fine qualities, now latent within me, shine out through the transparent bank paper, like the light through a Chinese lanthorn? Of whose turbot should I not obtain the fin? What Amphytrion would not inquire anxiously, whether my palate relished better venison or turtle? Who would have the hardihood to warm his dining-room, if I said it was better cool? What "intimate friend" would "do" me in the purchase of a hunter? What artist would affirm before me that the precise height of the *Belvidere* Apollo was not five feet six inches and three-quarters?

"Felix et pulcher, et acer;
Felix et sapiens, et nobilis, et generosus——"

But for the very temporary character of the accommodation which I obtained at the Bank of England, I could have tested all these things, I am quite sure, with satisfactory results. As any of your friends who chooses may get a like sum, however, for a sufficiently long period, on the payment of two per

cent. per annum interest, and perhaps a quarter per cen below that even, on depositing Bank Stock Exchequer Bill or some such easily procured commodity, just by way of nominal security to the lender, the experiment may be ma at any time. The worthy gentleman who gave me the mon was affable in the extreme; still, I had an idea that, while was in my possession, he, perhaps, was inwardly repeatin, "Don't you wish you may get it?" and this reflection rathe disconcerted me, and made me feel less like a capitalist than I could have desired.

The Bank is remarkably well worth seeing—hardly any thing in London more so. The focus of the enormous wealth of this mighty nation, where the "*divitiarum majestas*" is a sacred, at least, as it could have been in the days of the Roman satirist, it may well be contemplated with surprise. One can not but wonder, when he finds himself in the midst of almos countless quantities of that fictitious wealth for which al mankind give their toil and thoughts so freely. In the trea sury, in which I stood yesterday, there are £30,000,00 sterling—of which one million is in gold, in bags of £1,000 each and the rest, with the exception of a comparatively small sum in silver, in notes of various amounts, from £1,000 downwards. One little safe, which was opened for us—about two feet by eighteen inches—contained, in a single compartment, £1,000,000 of the notes just specified. The bullion, now about £11,000,000, is kept in fireproof vaults, which are under ground. These are not shown, their position only being pointed out. In an apartment, joining the treasury are the weighing-machines, for the sovereigns and half sovereigns. The accuracy and mechanism of these are wonderful. A specimen of them was exhibited in the western nave of the Crystal Palace. There are ten in the Bank, worked by the steam-engine of the establishment, and about 50,000 a day are weighed by means of them. Each sovereign or half-sovereign is separately weighed, being passed through a tube on to the scale, whence, if full weight, it slides into a receiver on the right-hand, if light, it is jerked into the left. The slightest want of weight will cause it to be rejected, but all the light ones are tested twice, working the machinery at half speed, before they are condemned. After this trial, those which are deficient in weight are clipped by a machine, which cuts them half through, and are thus returned to the parties from whom they were received. They must then be melted down, as they cannot again get into circulation. The mechanism of these weighing-machines is beautiful; but it suggested to me a curious contrast. As I observed the vast number of sovereigns coming "down the spout" to the various scales, I could not help thinking, that all the mechanism known in Ireland seems to perform the converse operation, and to send everything "up the spout." Whether this contrast of ascent and descent results from the levity of the Irish character, and the gravity of the English, I am not prepared to say. I must, however, observe that the Lothbury system is, in my opinion, the preferable.

One of the most interesting portions of the Bank is the "cancel" department. In this, every note of the Company received during the day is cancelled. The operation consists in tearing off the lower right-hand corner, and stamping out the word indicative of the value, as "Five," "Ten," or as the case may be, through which two round holes, like those made by a wadding-cutter are punched. When the notes are thus mutilated, they are sorted, according to amount, into packets of one hundred, the number of each, and the name of the party through whom the Bank received it, entered in a book, and the packets then labelled and put by. In this state they are kept for ten years, and then burned. As the average amount cancelled is £1,000,000 daily, there are thus over £3,000,000,000 always in this department. The object of keeping them is solely to enable robberies and losses to be traced. At any moment the Bank can tell—at a glance, almost, at the books—whether any named note is cancelled, or remains in circulation, and, if cancelled, can produce it (within the ten years), and can tell how it came into the establishment. The Bank never reissues a note, and notes may be, and frequently are, cancelled, which have never passed outside its walls, having only been taken from the issue department to some other. Thus, if one receives £100, dividend on stock, and takes the notes to the Bank-post-bill office, and obtains one of the latter for them, they are sent into the Cancel-office direct, and destroyed without having ever been in circulation. This system, of course, imposes both great expense and great trouble on the establishment, but is a necessary security for the public. The printing-office is remarkable for its exquisite machinery. Ten men are employed in it, each of whom has a plate with two notes engraved on it. No one superintends the printers, and the machine supplies them with the blank paper, as they require it. To commit any fraud here is impossible. Every note of the ten presses registers itself as it is printed. One of the most curious things in this department is the mode in which the blank paper is supplied. When a workman has printed one packet, of a hundred leaves—that is, two hundred notes—he lays it on a piece of copper and thrusts it into a sort of pigeon-hole, of which there are ten at one end of the room. It disappears, and the same quantity of blank water-marked paper instantaneously replaces it, the mechanism being so delicate that the change is effected by the mere weight of the ink on the printed notes. The ink for the plates is very fine, and is made in the Bank, from the charcoal of the vine. All the stationery of the establishment is also manufactured on the premises, and there are large rooms for the making and repairing of the machinery, likewise within the walls. In one of the court-yards men are now boring for an Artesian well. They have got to a depth of about 220 feet, and have pierced through a variety of strata, amongst them one of a heavy metallic ore, a piece of which I brought away with me. Not being a mineralogist, I can't say what it is. The stratum they have now reached is a soft mud, or rather a muddy water, such as was met in boring for the shaft to commence the Thames Tunnel.

After visiting these portions of the Bank, to which only a director can procure admission, we passed through the public offices, which I need not describe. The Cash-office is very beautiful, and so is that in which the stock accounts are kept. The dividend week, during which £7,000,000 are paid over the counter of the adjoining office, must be one during which a visit would repay one. The whole establishment, as I said at the commencement, is certainly one of the greatest of the London sights.

HISTORY OF THE ENGLISH RAILWAY.

The growth of the railway system amongst us is well worthy the attention of the inquiring student. The history of locomotion is the history of progress. When people are shut up in their own little circle—when the means of transport are few and costly—we have intellectual stagnation. When, on the contrary, transport is easy—when the men of Manchester and London can meet and take counsel together—knowledge is advanced and society benefited. We can scarce wonder at the mental darkness and ignorance of the good old times, when we remember how completely our ancestors were unable to stir from their little villages and towns from the simple fact that there were no roads, nor coaches, nor travelling accommodation whatever. In the hamlet where dwelt the father there dwelt the child. No fresh light broke in to disturb the congenial monotony. All things continued as they were.

Let us just look back to travelling in those days. Long journeys were necessarily performed on horseback. In the twelfth century Peter of Blois said, the yearly proceeds of a fall in Salisbury Cathedral were less than the cost of a visit from Salisbury to London. The herald of the King of Scotland was allowed forty days to proceed from London to the border. Markets were inaccessible for months together, and the fruits of the earth rotted in one place, while a few miles off the supply fell short of the demand. Long after coals were procured in Newcastle, London, even then a capital of importance, was contented with wood or furze, owing to the impossibility of the transmission of coal. "It was easier," says Mr. Francis, in his interesting "History of the English Railway," to send merchandise from the capital to Portugal than to convey it from Norwich to London." In 1565 a new era commenced, owing to the introduction of coaches, the first one being built, according to Stowe, by the Earl of Rutland, about the same time also the roads were made the subject of

legislative enactment; hitherto they had been under no law. In the seventeenth century further, but not very successful, efforts were made to improve travelling; and in 1669, sanctioned by the doctors of the University of Oxford, the Flying Coach undertook to perform the journey from that place to London between sunrise and sunset. "This spirited undertaking," says Mr. Macaulay, "was solemnly considered and sanctioned by the heads of the university, and appears to have excited the same sort of interest which is excited in our day by the opening of a new railway. The success of the experiment was complete. At six in the morning the carriage began to move from before the ancient front of All Souls College, and at seven in the evening the adventurous gentlemen who had run the first risk were safely deposited at the inn in London." In 1706 a coach was started to run from London to York in four days. In 1712 the following advertisement appeared in the Newcastle Courant .—"Edinboro', Berwick, Newcastle, Durham, and London stage coach begins on Monday, the 13th of October, 1712. All that desire to pass from London, or any place on that road, let them repair to Mr. John Baillies, at the Coach and Horses, at the Head of Canongate, Edinboro', every other Saturday, or to the Black Swan in Holborn every other Monday; at both of which places they may be received in the stage coach, which performs the whole journey in thirteen days without any stoppages (if God permits), having eighty able horses to perform the journey, each passenger paying *four pounds ten shillings*, allowing each passenger 20 lbs. of luggage, all above, sixpence per lb. The coach sets off at six o'clock in the morning." Beside the waste of time, there were other expenses attending travelling. The roads were bad and infested with thieves. Gradually, however, these dangers became abated, and the invention of Macadam in 1825 made coach travelling for the first time really delightful. Such was locomotion till within a period within the memory of almost our youngest reader

The precise origin of railroads is unknown. There is no doubt, however, that the wooden tramroad was the first approximation to the modern railway. This great event took place somewhere between 1602 and 1649, and in 1676 had become quite common in our collieries. In 1767 the idea was practically entertained of applying iron to a similar purpose. By this period the discovery of steam had been made, and a Mr. Symington exhibited the model of a steam-carriage at Edinburgh. In 1802 Mr. Trevithick, who seems to have been the most unfortunate of inventors, took out a patent for invention, and in 1804 brought into use a machine of this nature on the railroad of Merthyr Tydvil, in South Wales. The principle was perfect, and yet for years after men still clung to the idea that it could not draw heavy loads. In 1811 the fancied difficulty was overcome by Mr. Blenkinsop, of Middleton colliery, who conveyed coals by the aid of engines with tooth-wheels worked into a rack. Shortly after Mr. Blackett, of Wylam, discovered that the difficulty Mr. Blenkinsop had overcome was altogether imaginary, and on the Killingworth Railway, on the 25th of June, 1814, with an engine constructed under the superintendence of George Stephenson, the success of the principle was proved by a carriage, moving on a slight ascent, drawing after it eight loaded carriages weighing twenty tons. Mr. Francis says, "Lord Ravensworth was called a fool for advancing the money, and Mr. Stephenson laughed at as a coxcomb for attempting that which others in their superior wisdom declared impossible."

The first iron road on which the locomotive was used as the moving power was the Stockton and Darlington Railway. Its engineer was Mr. Stephenson; its originator Mr. Edward Pease. Its act of incorporation was obtained in 1821; it was opened in 1825. We thus reach the beginning of the present system. We had iron roads and locomotive engines, but the benefit of the new system was merely local. In all parts of Wales, and England, and Scotland it had been tried, and with success; but the traveller had not reaped the benefit of the new system—he still travelled as usual—his turn is now to come. "It is now about twenty-eight years," says an anonymous writer, "since a thoughtful man" (this man was Thomas Gray), "travelling in the north of England on commercial business, stood looking at a small train of coal-waggons impelled by steam along a tramroad, which connected the mouth of one of the collieries of that district with the wharf at which the coals were shipped. "Why," asked Gray, "are not these tramroads laid down all over England, so as to

what you will get by it: you will be worried to death for your pains." The words were prophetic, but Gray disregarded the warning, and went to the principal inhabitants of Liverpool and Manchester urging them to adopt the new mode of locomotion. Gray was an enthusiast, and published books, and memorialised Ministers till the world began to deem him that greatest of all bores, a man with an idea in his head.

In 1822 an important step was taken. The survey for the railway between Liverpool and Manchester was made by Mr. W. James, who is a rival with Gray for the honour of originating the railway system. For a time, however, the scheme was abandoned. In a couple of years afterwards the first prospectus of the Liverpool and Manchester Railway was published. The estimated expense of the entire line was given at £400,000, and the passenger traffic—that traffic so marked a feature in railroads—was cautiously alluded to. Mr. G. Stephenson was engaged for a survey, and application was made to the House of Commons for a bill. The most determined opposition was made. Foremost in its opposition was, of course, the "Quarterly Review," eager at once bitterly to attack so revolutionary a scheme. In 1825 it said, "The gross exaggeration of the power of the locomotive steam-engine, or to speak more plainly, the steam-carriage, may delude for a time, but must end in the mortification of those concerned. . . It is certainly some consolation to those who are to be whirled at the rate of eighteen or twenty miles an hour by means of the high-pressure engine, to be told that they are in no danger of being sea sick while they are on shore—that they are not to be scalded to death nor drowned by the bursting of the boiler, and that they need not mind being shot by the scattered fragments, or dashed in pieces by the flying off or breaking of a wheel. But with all these assurances, we should as soon expect the people of Woolwich to suffer themselves to be fired off by one of Congreve's rockets, as trust themselves to the mercy of such a machine going at such a rate."

This reads ridiculously enough after the splendid results witnessed in our days, but even the friends of railways were not very sanguine themselves. Mr. Nicholas Wood said, "It is far from my wish to promulgate to the world that the ridiculous expectations, or rather professions, of the enthusiastic professor will be realised, and that we shall see engines travelling at the rate of twelve, sixteen, eighteen, or twenty miles an hour. Nothing could do more harm towards then general adoption and improvement than the promulgation of such nonsense." Such was public opinion at the time. Stephenson had to put up with opposition and abuse of every kind. Nothing but evil was predicted. When, before the Committee of the House of Commons, he only recommended a speed of eight miles an hour with twenty tons, and four miles with forty tons, the committee deemed him mad, and he was sneered at as a visionary and a lunatic. Still he kept on his way, and when his engine, the Rocket, driven by that Fox who twenty-five years after built the Crystal Palace, went at a speed of twenty-nine miles an hour, public enthusiasm knew no bounds. The work went on steadily, and on the 15th September, 1830, the Liverpool and Manchester line was opened to the public.

We have neither time nor space to dwell on individual railways. We have seen the system at length successful. The victory was won—science had vindicated herself. We may here mention that 1825 was a great year of railway excitement; that then a capital of £21,942,500 was demanded for railways, of which £219,425 was actually paid. From 1825 to 1830 the railway with the entire commercial interest was depressed. Then the great trunk lines were talked of, and steps taken which led to their ultimate adoption. On the 17th of Sept., 1838, the London and Birmingham Railway was opened the entire distance. In 1841 the Great Western was opened. As an idea of the immense sums of money squandered on these lines, we may state that the parliamentary expenses on the London and South Western were £650 per mile; London and Birmingham £650 per mile; Great Western £1,000 per mile; London and Brighton, £3,000 per mile. And to show how the landlords took advantage of their position, and compelled

the companies to pay them most enormous sums, we state that the prices per mile for land and compensation were—London and South Western, £4,000; London and Birmingham, £6,300; Great Western, £6,300; Brighton, £8,000.

1836 was another era of railway excitement. That year no fewer than 35 railway bills passed the legislature. In 1843 again speculation became busy. That year twenty-four railway acts were passed. The next year thirty-seven additional projects received the royal sanction. The delusion continued to spread. In the first quarter of 1845 52 additional companies were added to the number. We have yet hardly recovered from those times—when porters and paupers were responsible for thousands—when the lust of gold deluged the land—when honour, and morality, and religion seem to have died out in our midst. One thousand four hundred and twenty-eight companies, with a total capital of £701,243,208, demanding £49,592,816 for deposits, were actually registered by 31st October, 1845. The capital of completed railways amounted to £70,680,877. There were one hundred and eighteen lines and branches in course of execution, which required £67,359,325; and there were 1,263 companies projected, asking from the capitalists of England £563,203,000. The promoters of five hundred and fourteen schemes intimated their intention to apply to Parliament in 1846. Never before had such a mania existed. It passed away, blighting many a happy home—sundering many household ties—saddening many a joyous heart. Since then the railway system has been left to develop itself according to the growing want of the people; and we trust that it may be long ere the madness of 1845-6 again occur.

REVELATIONS OF TRUTH.

By Miss H M. Rathbone.

The breakfast things had been cleared away, and the young people of the family were rejoicing in the prospect of a happy country walk, afforded by the leisure of Christmas-day; but it was so intensely cold that Robert Markham, the father, seemed unwilling to stir out, and he stood at the window in an unusually gloomy mood True it was that he was a very poor man, though he often acknowledged that many alleviations were granted to him, and he gradually allowed himself to fall into a discontented reverie, as he gazed on his rich opposite door neighbours, who, wrapt in furs and velvet, were setting off in a handsome coach to church,

"The rich have everything they can wish for, I think," he muttered, half aloud; and that moment, to his surprise, a small man, clad in grey, stood beside him, who replied—

"Follow me," and gave him a pull, which, though gentle, he yet felt could not be resisted; and quitting the cellar they entered the very house at which Markham had been looking.

Here, in an inner chamber, paced to and fro an idiot girl, whose wasted loveliness, and the traces of superior intelligence still visible in her countenance, showed that though thus suffering for years, the time had been when she had been the life and joy of the domestic circle. Her mother sat in the chamber, quietly weeping bitter tears, and on following the handsome coach, Markham, by the aid of his guide, could see that the hearts of all within were every one more or less bowed down by the great trial to them of a sister and daughter so afflicted. Before he could ask any questions his guide had entered another wealthy abode, where around a late breakfast sat a family in great distress; for a letter had been just received conveying the unexpected intelligence of the sudden death of a very dear relative; and while the older members were absorbed in deep sorrow, the younger ones were lamenting amongst each other the sudden disruption of all their long-prepared schemes for a merry day and various joyous evening festivities. In the next house was a widowed mother, a young girl, and two old servants—the latter busily engaged in packing up for the departure by that night's mail of an only son, who, seated between his sole parent and his sister, vainly endeavoured to console them under the melancholy loss of his support and the comfort of his society during a ten years' sojourn in the Indian tropics.

"Alas! I dare not think we shall ever meet again in this life, my son—my only son!" was the sole response of those whose distress no human aid could soothe.

Markham, surprised and ashamed by all he had seen, would willingly, even now, have forborne any further inquisition behind scenes in rich houses. But the grey man gave him no time for parley, and a fourth mansion exhibited the hitherto unknown yet bitter suffering of a little girl, snubbed hourly by fretful self-important, tyrannical nurses, and daily tortured by the painful and undue partiality showed by her parents towards her brother, the heir of their noble house.

As they left this place, Markham heard the poor little girl murmuring to herself—

"Oh dear, I wish I was Nancy Dormer, the gate-keeper's child, for she loves her girls as well as her boys every bit!"

In the adjoining square resided a large family, who were this morning quarelling like so many cats and dogs, their unyielding tempers and perverse dispositions effectually barring out any enjoyment of the lovely holiday which they might have enjoyed, when the toiling merchant had shut up his counting-house for once, and had leisure, though he seemed to have no inclination, to be happy with his wife and children. Their next door neighbours were a baronet and his lady, who had only one child, a grown up son, subject to epileptic attacks; he had had one that morning, and the rest of the day was being spent apart from all friends and festive gatherings by the anxious parents, in sorrowful expectations of a second fit, and in that most painful of all states, suspense, which could neither be avoided nor hastened. Again the grey man traversed the snow-laden streets, and introduced Markham to an artist's home, who—an eminent teacher—had just saved enough to establish his eldest son in business, and to give his daughter a dowry on her marriage, but who had just received a letter by the postman to say that all his savings, which had been lent out, apparently, on good security, were entirely swept away by the failure of the gentleman to whom they had been entrusted.

"Stay," said Markham, "you are merely picking out the worst cases; it should be the average; let me choose for myself."

His guide coldly assented, and in a moment they entered an abode which Markham selected at random; here servants, wife, friends, and children, were anxiously awaiting the return of the head of the house in order to sit down to a luxurious dinner. He had gone out to make a call on an old acquaintance, and no one could conceive what delayed him. He came at length, looking pale and agitated, and with difficulty related that he had been detained by endeavouring to restore to life three young men who had been skating and fallen under the ice. The by-standers had, however, only succeeded, after hours of exertion, in bringing to life one out of the three, and the agony which the gentleman had gone through during this scene, and the distress he had witnessed of the relatives of the drowned boys, had entirely spoilt Christmas-day as a festival occasion, and, through sympathy with him, that of the rest of his family Impatiently Markham chose another dwelling, and there found a terrible scene going on in the anguish of heart with which two grey-headed parents were listening to the sad disclosure that one of their sons had committed a dishonourable, because dishonest, action, which would blast his reputation for life. The sweet sound of singing a hymn then attracted Markham to the opposite side of the street, and entering he saw a pale invalid with placid, resigned features, extended on a couch from which it was evident she would never rise again; and beside her another sister, as yet stronger, but also bearing the death-seal of consumption in her appearance, was singing the more suffering one to sleep, while their father, a widower, seemed praying for strength to bear these heavy impending trials.

The scene was peaceful but very sad, and the next mansion seemed to promise better, for it was now evening, and the sounds of gaiety showed that no pressing cause of grief prevented the seasonable festivities of Christmas; but at the side-table, lonely, neglected, sat a young fair governess, far away from all whom she loved; and whose magnificent salary, and the enjoyment of every external luxury, could not make up for the contempt with which she was treated; while the rest of the party were empty-headed people, caring only for good eating, save the son of the house, who had behaved ill and wasted his youth, and whose heart was now filled with corroding remorse. Five or six more examples only served still further to impress upon Markham the existence of the cross in every one's lot, which is the doom of rich and poor alike; and on entering a superbly-furnished drawing-room he beheld a spectacle from which he shrank, but which his inexorable guide compelled him to look upon. On the brocaded sofa lay a lovely

child some five years old—the darling of every one who knew him—his little features convulsed by terrible pain, and five doctors vainly striving to arrest the torturing suffering, or stay his fast fleeting life. The parents proffered gold, land, and houses to the medical men if they would only save their child, but in vain; and soon a piercing shriek told the spectators that all was over, and the wretched parents childless amidst their splendour.

Markham could bear no more. He fled bewildered, and seemed to outstrip his guide, and his hand was on the latch of his own door, when a kiss restored him to consciousness, and Jane Markham exclaimed—

"Why, father, what a long sleep you've had while we've been out! See, dinner's quite ready, and mother has dished up the plum-pudding."

Markham kissed his child in mute thankfulness, and with a full heart sat down to his clean simple meal, surrounded by healthy blooming children and his dear little crippled boy, to enjoy the luxury of pudding and beef provided by his employer, and feeling that he should never dare again to think his rich neighbours were free from trouble, because they happened to be wealthy.

A HOME PICTURE.

By Francis D. Gage

Ben Fisher had finished his hard day's work,
And he sat at his cottage door;
His good wife, Kate, sat by his side,
And the moonlight danced on the floor
The moonlight danced on the cottage floor—
Her beams were clear and bright
As when he and Kate, twelve years before,
Talked love in her mellow light.

Ben Fisher had never a pipe of clay,
And never a dram drank he;
So he loved at home with his wife to stay,
And they chatted right merrily
Right merrily chatted they on, the while
Her babe slept on her breast,
While a chubby rogue, with rosy smile,
On his father's knee found rest.

Ben told her how fast the potatoes grew,
And the corn in the lower field;
And the wheat on the hill was grown to seed,
And promised a glorious yield —
A glorious yield in the harvest time,
And his orchard was doing fair,
His sheep and his stock were in their prime,
His farm all in good repair.

Kate said that her garden looked beautiful,
Her fowls and her calves were fat,
That the butter that Tommy that morning churned
Would buy him a Sunday hat,
That Jenny for Pa' a new shirt had made,
And 'twas done too by the rule,
That Neddy the garden could nicely spade,
And Ann was ahead at school.

Ben slowly raised his toil-worn hand
Through his locks of greyish brown—
"I tell you, Kate, what I think," said he,
"We're the happiest folks in town"
"I know," said Kate, "that we all work hard—
Work and health go together, I've found,
For there's Mrs Bell does not work at all,
And she's sick the whole year round.

"They're worth their thousands, so people say,
But I ne'er saw them happy yet,
'Twould not be me that would take their gold,
And live in a constant fret;
My humble home has a light within,
Mrs Bell's gold could not buy,—
Six healthy children, a merry heart,
And a husband's love-lit eye."

I fancied a tear was in Ben's eye—
The moon shone brighter and clearer
I could not tell why the man should cry,
But he hitched up to Kate still nearer,
He leaned his head on her shoulder there,
And he took her hand in his—
I guess (though I looked at the moon just then)
There [illegible]

THE FRENCHMAN AND HIS ENGLISH MASTER.

Frenchman.—No, Sair, I never sall, can, vill learn your evil language. De verbs alone might, should, could, would put me to death

Master.—You must be patient. Our verb is very simple, compared with yours.

F.—Seemple! Vat you call seemple? When I say *que je fusse*, you say dat I might, could, would, should have been. *Ma foi!* 'er seemple dat! Now, Sair, tell me, if you please, vat you call de verb?

M.—A verb is a word which signifies to be, to do, or to suffer.

F—*Eh bien!* Ven I say I *can't*, vich I say, I be, I do, or I suffare?

M.—It may be hard to say, in that particular case.

F.—*Pas bleu!* How I might, could, vould, should, am to know dat? But tell me, if you please, vat you mean ven you say de verb is *a* word?

M *A* means *one*, and it is the same as to say the verb is *one* word

F—*Tres bien* Den ven I say I might, could, vould, should, have been loved, I use one verb? Ugh! (with a shrug)

M.—Yes, certainly.

F—And dat verb be one word! I tinks ver long word, vid more joints dan the scorpion have in its tail!

M.—But we do not use all the auxiliaries at once.

F—How many you use *at* once?

M—One at a time. We say I might-have-been loved, or I could-have-been loved.

F—And dat is only von word! Vat you mean by have?

M—*Hold possess* It is difficult to say what it means apart from the other words

F—Vy you use him den? But vat you mean by *been*?

M.—*Existed.* There is no exact synonym

F.—Ver well Den ven I say, I could-have been loved, dat vills to say, I vas-able-hold-existed-loved, and dat is von word! *Sacre!* I sall nevair learn de Engleesh verb, no, nevair—no time

M When you hear me use a verb, you must acquire the *habit* of conjugating it, just as—I love, thou lovest, he loves—and, believe me, you *can't* become familiar with the moods and tenses in any other way.

F—Vell, den
can'test, he can'ts; we can't ye'or you can't, dey can't

M—It is not so Can't is a contraction of the verb *cannot*

F—Vell, den, I cannot, thou cannotest, he cannoteth, or cannots, we—

M—No, no! *Cannot* is two words—*can* and *not*

F.—Den vat for vy you tie him together?

M—I see I ain't careful enough in my expressions.

F—Hold! stop dare, if you please. I sall, vill once more try. I in't, thou ain'test, we—

M—*Ain't* is not a verb, it is only a corruption. I won't use it again.

F.—*Ma foi!* it is all von corruption. May or can I say, I von't, thou vont'est, he von'ts?

M—No; you cannot say so.

F—Vat den? I might, could, vould, should, don't, ain't, von't, can't

M—No, you can't say any such thing, for these verbs are all irregular, and must not be so used.

F—*Mus!* vat you call *must*? I muss, thou mussest, he musses. You say so?

M—No, no, no.

F—Vell, den—I might, could, vould, should-have-been, muss How dat?

M.—*Must* is irregular It never changes its termination.

F—Den vat for vy you call him "irregulare," if he no change? *Ma foi!* he vill, sall—be ver regulaire indeed! Who make de grammaire Engleesh?

M.—Nobody in particular.

F.—So I tinks I might, could, vould, should guess so. I vill, all, muss, can understand nevair, von grammaire vich say de verb be one word, ven he be four, five, six,-half dozen; and den call irregulaire de only uniform verb dat nevair change *Excuses moi, Monsieur*, I nevair, may, can, might, should, could, would study such grammaire no more!

Facts Worth Knowing.—A Spanish journal contains the following singular summary:—"There are 3,064 languages spoken through the world—587 in Europe, 937 in Asia, 276 in Africa, and 1,264 in America. The number of males is nearly equal to females. The average life is 33 years; a fourth of the population die before the age of four years, the half before that of 17 years; such as survive these periods enjoy a measure of health which is denied to the [illegible]

MISCELLANEA.

THE ROSE.—Professor Agassiz, in lecture upon the trees of America, stated a remarkable fact in regard to the family of the rose—which includes among its varieties not only many of the most beautiful flowers which are known, but also the richest fruits, such as the apple, pear, peach, plum, apricot, cherry, strawberry, raspberry, blackberry, &c.—namely, that no fossils of plants belonging to this family have ever been discovered by geologists. This he regarded as conclusive evidence that the introduction of this family of plants upon the earth was coeval with, or subsequent to, the creation of man, to whose comfort and happiness they seem especially designed by Providence to contribute.

A CINCINNATI paper states that three years ago a poor orphan girl applied and was admitted to set type for that paper. She worked two years, during which time she earned, besides her board, about 200 dollars, and availing herself of the facilities which the printing-office offered, acquired a good education. She is now an associate editress of a popular paper, and is engaged to be married to one of the smartest lawyers in Ohio. "We should be disinclined to credit the above if we did not have so many evidences of the elevating influences of the printing office."

A TEA DRINKER.—Douglas Jerrold says:—"Hazlitt, the celebrated writer and critic, usually rose at from one to two o'clock in the day—scarcely ever before twelve—and if he had no work in hand he would sit over his breakfast (of excessively strong black tea, and a toasted French roll) till four or five in the afternoon, silent, motionless, and self absorbed, like a Turk over his opium pouch, for tea served him in this capacity. It was the only stimulant he ever took, and at the same time the only luxury, the delicate state of his digestive organs prevented him from tasting any fermented liquors, or touching any food but beef, mutton, poultry, or game, dressed with perfect plainness. He never touched any but black tea, and was very particular about the quality of that, always using the most expensive that could be got, and he used, when living alone, to consume nearly a pound in a week. A cup of Hazlitt's tea (if you happened to come in for the first brewage of it) was a peculiar thing. I have never tasted anything like it. He always made it for himself, half filling the teapot with tea, pouring the boiling water on it, and then almost immediately pouring it out, using with it a great quantity of sugar and cream. To judge from its occasional effect upon myself, I should say that the quantity Hazlitt drank of this tea produced ultimately a most injurious effect upon him, and in all probability hastened his death, which took place from disease of the digestive organs. But its immediate effect was agreeable, even to a degree of fascination; and, not feeling any subsequent reaction from it, he persevered in its use to the very last, notwithstanding two or three attacks similar to that which terminated his life."

"SECOND-HAND MEN."—A matron dwelling on the banks of the Tees, when under cross examination as a witness at the Durham assizes, turned up her nose at an insinuation that *her* daughter was inclined to wed a widower. "Very likely, indeed," said she, with a toss of her head, "that *her* daughter should marry a *second-handed man*." The poor widowers would likewise seem to be at a discount in America. Four young ladies advertise for husbands in the *Troy Times*, and close with the intimation that "no widowers need apply!"

A FATALIST.—A western American paper publishes the following:—"I knew an old man who believed that 'what was to be would be.' He lived in Missouri, and was one day going out several miles through a region infested, in early times, by very savage Indians. He always took his gun with him, but this time found that some of his family had taken it out. As he would not go without it, his friends tantalised him, by saying that there was danger of the Indians, that he would not die till his time came anyhow. 'Yes,' says the old fellow, 'but suppose I was to meet an Indian, and *his* time was come, it wouldn't do not to have *my gun*!'"

THE SHEPHERD'S DOG.—Without the shepherd's dog, the whole of the mountainous land in Scotland would not be worth sixpence. It would require more hands to manage a flock of sheep, gather them from the hills, force them into houses and folds, and drive them to markets, than the profits of the whole stock would be capable of maintaining. Well may the shepherd, then, feel an interest in his dog. It is, indeed, he that earns the family bread, of which he is content himself with the smallest morsel. Neither hunger nor fatigue will drive him from his master's side; he will follow him through fire and water. Another thing very remarkable is, the understanding these creatures have of the necessity of being particularly tender over lame and particular sheep. They will drive these a great deal more gently than others, and sometimes a single one is committed to their care to take home. On these occasions, they perform their duty like the most tender nurses. Can it be wondered at, then, that the colley should be so much prized by the shepherd—that his death should be regarded as a great calamity to a family, of which he forms, to all intents and purposes, an integral part or that his exploits of sagacity should be handed down from generation to generation?

LOVE.—We sometimes meet with men who seem to think that any indulgence in an affectionate feeling is a weakness. They will return from a journey, and greet their families with a distant dignity, and move among their children with the cold and lofty splendour of an iceberg, surrounded by its broken fragments. There is hardly a more unnatural sight on earth than one of those families without a heart—a father had better extinguish a boy's eyes than take away his heart. Who that has experienced the joys of friendship, and values sympathy and affection, would not rather lose all that is beautiful in nature's scenery, than be robbed of the hidden treasure of his heart? Cherish, then, your heart's best affections. Indulge in the warm and gushing emotions of filial, parental, and fraternal love. Think it not a weakness. God is love. Love God, everybody, and everything that is lovely. Teach you children to love, to love the rose, the robin, to love their parents; to love their God. Let it be the studied object of their domestic culture to give them warm hearts, ardent affections. Bind your whole family together by these strong cords. You cannot make them too strong. Religion is love; love to God, love to man.

ANSWERS TO CORRESPONDENTS.

JOHN CASSELL informs his subscribers that for the future the advertising page in THE WORKING MAN'S FRIEND will be discontinued. He will thus sacrifice £300 a-year, but at the same time he will be able to secure more room for the insertion of amusing or instructive matter. The sacrifice is great, and he trusts that the readers of THE WORKING MAN'S FRIEND will spare no exertion to extend its sale, as only a greatly-extended circulation will compensate him for the loss. John Cassell also announces that in the next number he will commence a series of articles on Hungary, illustrated by most superb Engravings. He does this in compliance with the wishes of a large body of [illegible] whose attention has been excited to Hungary by the arrival on our own shores of the illustrious [illegible]

But containing this announcement are inserted in that number, that of THE WORKING MAN'S FRIEND [illegible] distribute them among th[illegible] make the announcement as public[illegible]

JUVENIS.—George Stephenson [illegible] ful example [illegible] pupil, may come to be. He was born in [illegible] Newcastle, and spent his early years in a colliery. SILVER SUPERSEDED by RICHARD and JOHN SLACK'S CHEMICAL PURIFIED NICKLL SILVER.

A good Substitute for Silver has long been sought after, and numerous have been the attempts to produce a perfect metal that will retain its colour when in use. How fruitless the attempts have been, the Public know too well from the fact that all their purchases have, after a few days' wear, exhibited a colour little better than brass. The very severe tests that have been applied to our metal (which in all cases it has withstood) at once places it pre-eminent above all others; and, from its silver-like appearance—its intrinsic and valuable properties—gives us confidence in asserting that it is, and must remain, the only Pure and Perfect Substitute for Silver

STEPHENS' DYES FOR STAINING WOOD, &c. &c And as a Substitute for Paint.

FOR DECORATING CHURCHES, LARGE PUBLIC ROOMS, and THEATRES, as well as Private Dwellings, giving the effect of Oak, Mahogany, or Satin Wood

economy in expenditure of material and time is of importance, these Dyes will be found of great advantage, as they give a rich colo

which is so superior to imitations by art, and, at the same time, avoid the disagreeable smell and deleterious consequences of paint. These Stains are also extensively used as a colour in the fashionable mode of embellishing Picture Frames by Leather Embossments, to which they give a rich and beautiful finish.

The Dyes, or Stains, are prepared and sold by HENRY STEPHENS, 54, Stamford-street, Blackfriars-road, London, in bottles of 6d. and 1s. each, and at 8s. per Gallon They may be obtained in powder at 8s per lb , which dissolves in water to form the liquid, and 1 lb. will make one gallon of Liquid Stain.

THE TRADE SUPPLIED.

PRESIDENT OF THE FRENCH NATIONAL ASSEMBLY RECEIVING THE MESSAGE OF LOUIS NAPOLEON, THE PRESIDENT OF THE REPUBLIC.

THE BROKEN PITCHER.

La Napoule is, indeed, only a little place on the Gulf of Cannes, yet everybody in all Provence knows it. It lies in evergreen shades, high palms, and dark orange-trees. That alone would not make it famous. But they say that there grow the richest grape-clusters, the sweetest roses, and the loveliest maidens. I don't know—nevertheless, believe it. It is a pity that La Napoule is so little, and it is impossible to produce enough rich clusters, sweet roses, and beautiful girls; otherwise we should have some from thence into our own country. If since the building of La Napoule all its women have been beauties, without doubt the little Mariette must have been a wonder of wonders, because the Chronicle speaks of her. They called her, indeed, only the little Mariette; yet she was not smaller than a child of seventeen years and over would wish to be, whose forehead reached to the lip of a full-grown man.

The Chronicle of La Napoule had good reason to speak of Mariette. I, in the place of the Chronicle, would have done so too. For Mariette, who had hitherto lived with her mother, Manon, at Avignon, when she came back into her birthplace, turned it almost round—in reality, not the houses, but the people and their heads, and if not the heads of *all* the people, particularly of such whose heads and hearts are always in great danger in the vicinity of two soul-speaking eyes. In such a case it is no joke. Mother Manon would have done better had she remained in Avignon. But she had a little property in La Napoule, she had an estate with a vineyard, and a neat little house in the shadow of a rock between olive-trees and African acacias; so she was no poor widow. In her habitation she was as rich and happy as if she had been Countess of Provence, or the like. So much the worse for the good people of La Napoule. They had never seen such a mischief, nor read in Homer how a pretty woman brought all Greece and Asia Minor into armour and discord

Scarcely had Mariette dwelt fourteen days in the cottage between the olive-trees and African acacias before each La Napoulen knew that Mariette lived there, and that in all Provence there lived no fairer maiden than in that house.

When she went through the town, tripping lightly, like a disguised angel, in her fluttering petticoat, pale green bodice, an orange-flower or a rose-bud in her bosom, and flowers and ribbons waving in the grey hat that shaded her beautiful face, the grave old people became talkative, and the young men dumb, and, right and left, a little window—a door—opened in succession. "Good morning," or "Good evening, Mariette," they said. And she nodded, laughing, right and left.

When Mariette came into the church, all hearts (namely, those of the young men!) left heaven, all eyes the saints, and the devout finger got confused in the pearls of the rosary. That actually must have caused great vexation, especially to the pious. At this time, no doubt, all the young maidens of La Napoule became singularly devout, for it vexed them the most, and they could hardly be blamed for it.

Since Mariette's arrival more than one bridegroom had become cool, and more than one suitor had forsaken his beloved. There was a great deal of quarrelling and scolding, and many tears, good lectures, and refusals. They spoke no more of weddings—only of separations. They gave back love-pledges, rings, and ribbons. The old folks mixed in the quarrels of their children. Discord and strife ran from house to house. 'It was a pity! "It is all Mariette's fault," said the pious maidens; so said their mothers; so said their fathers; and at last all, even the young men.

But Mariette, veiled in her modesty and innocence, like the bursting crimson of a rose-bud in the dark green of its calyx, did not guess all this great misery, and remained friendly towards all. That quieted first the young men, and they said, "Why should you trouble the sweet, harmless child? She is without blame!" Then the mothers said so, then the fathers, and at last all, even the pious maidens. For whoever spoke with Mariette could not help but love her. And before six months had passed everybody had talked with her, and everybody loved her. But she did not know that she was beloved; and before she did not know that they hated her. 'Does the dim violet, often trodden in the grass, know how dear it is?

Now each one wished to atone for his injustice towards Mariette. Pity heightened the tenderness of their good-will. And Mariette found herself greeted more kindly, she laughed more cheerfully she joined more heartily in the country songs and dances.

. . . . . .

But all men have not the sweet gift of sympathy; some are stony-hearted, like Pharoah. This, doubtless, arises from the natural depravity of man since the fall; or, perhaps, because the baptism of these bad ones was not rightly administered.

A memorable example of such hardness was given by young Colin, the richest farmer and householder in La Napoule, through whose vine and olive gardens, citron and orange groves, the cool scarcely run in a day. One thing proved the natural corruption of his heart—that he was nearly twenty-seven years old, and had never asked why a maiden was made. But all the people, especially womankind of a certain age, in which they easily forgive sin, considered Colin the best youth under the sun. His face, his gay, easy manners, his glance, his laugh, had the luck, people said, to please; so that if it had only been necessary to cry to heaven for his sins, he would have obtained absolution. But this opinion of such judges is not well to trust. Thus, while old and young at Napoule had become reconciled to the innocent Mariette, and treated her kindly, Colin was the only one who remained without compassion for the dear child. If the conversation turned on Mariette he was dumb as a fish. If he met her in the street, he was red and white with anger, and shot a consuming glance after her.

When, in the evening, the young people gathered on the seacoast by the old ruined castle for cheerful games or the country dance, or to begin an alternating song, Colin was not wanting. But after Mariette came, the spiteful Colin was quiet, and would not sing any more for all the gold in the world. Pity for his charming voice! Everybody liked to hear him, and he was unsurpassable in songs. All the maidens liked to see the bad Colin, as he was friendly with all. He had, they said, a roguish look which the girls feared and loved, and when he laughed, one should have had him painted! But naturally the often-offended Mariette did not see this at all. And there she had a perfect right. Whether he laughed or not, it was the same to her. Of his roguish look she didn't like to hear, and there again she had a right. When he related stories, and he knew many, and all listened, she tears her neighbours, and threw, first at Peter and then at Paul, pluck leaves, and laughed and chattered, and would not hear Colin. That vexed his proud heart; he often broke off the story, and went away gloomy. Revenge is sweet. The daughter of Frau Manon might well have triumphed, but Mariette was too good a child, and her heart was too tender. When he was silent it made her so. If he was sad, she could not laugh. If he went away, she did not stay long; and when she got to the house, she wept brighter than of repentance than Magdalene, and yet had not sinned half so much.

. . . . . .

The pastor of La Napoule," Father Jerome, a grey-headed man of seventy, had all the virtues of a saint, and only one fault, that, on account of his age, he was very deaf. But, for all that, he preached so much the more instructively to the ears of his Christized children and his penitents, and they heard him gladly. He only preached on two subjects, as if all religion dwelt therein. These was, "Little children, love one another;" the other, "Little children, the dispensations of heaven are wonderful." The "little children" loved each other very dutifully, and hoped in the dispensations of Providence. Only Colin, with his hard heart, would know nothing about it. Even when he seemed to be friendly, he had bad intentions.

The Napoulens go to the yearly fair in the town of Vence. They have a merry life, and if they get little gold, yet they buy many goods. Mariette went also to the fair with Mother Manon. Colin was there also. He bought many nick-nacks and knick-shaws for his friends, but for Mariette not a sous' worth. But yet he was everywhere at her heels. But he spoke not to her nor she to him. One could see he meditated evil.

Mother Manon stood before a shop, and said, "Oh, Mariette, see this beautiful pitcher! A queen need not be ashamed to put it to her lips. Only see, the rim is of shining gold, and the flowers thereon bloom no brighter in the garden, and yet they are only painted. And in the middle is Paradise! Only look, Mariette, how the apples laugh from the trees! one really longs for them. And Adam cannot resist, as the sly Eve offers him one at his cost. And see how charmingly the lamb frolics with the

tiger, and the snow-white dove, with gold-green neck, stands before the vulture, as if he would caress him."

Mariette could not see it enough.

"Had I such a pitcher, mother," said she, "it would be much too beautiful to drink out of; I would put my flowers in it, and always look into Paradise. We are in the market of Vence; but when I see the picture, it is to me as though we were in Paradise."

So said Mariette, and immediately called all her friends to gaze at the pitcher, and soon by the friends female stood the friends male, and at last almost half the population of La Napoule, before the wonderful pitcher. Timidly they asked the shopman, "Sir, how much is it?" and he answered, "It is worth a hundred livres among brothers." Then they were all silent, and walked off.

When no more from La Napoule stood at the shop, Colin came secretly, put down a hundred livres on the counter for the shopman, put the pitcher in a box full of cotton, and carried it off. Nobody knew his wicked plan.

Near La Napoule, on his homeward way, as it grew dusk, he met the old Jacques, the Judge's servant, as he came from the fields. Jacques was a good old man, but rather simple.

"I will give thee some drink-money, Jacques," said Colin, "if thou wilt carry this box to Manon's house, and leave it there. And if any one should notice thee, and ask 'From whom comes this box?' say, 'A stranger gave it to me.' But do not mention my name, or I shall be for ever angry with thee."

Jacques promised, took the drink-money and the box, and went towards the cottage amid the olive-trees and African acacias.

. . . . . .

Before he got there, his master, the Judge Hautmartin, met him, and said, "Jacques, what art thou carrying?"

A box for Mother Manon. But, sir, I dare not say from whom."

"Why not?"

"Because Mr. Colin would be for ever angry with me."

"It is well that thou canst keep a secret. But it is very late. Give me the box. In the morning I shall go to Frau Manon. I will carry the box, and not tell that it comes from Colin. It will save thee a walk, and give me good employment."

Jacques gave the box to his master, for he was accustomed to obey him in all things without gainsaying. The Judge carried it into his chamber, and looked at it by the light with great curiosity. On the cover was written neatly, in red chalk, "To the lovely and beloved Mariette." Herr Hautmartin knew very well that this was only some jest of Colin's, and that a bad trick lurked behind it. So he opened the box carefully—a rat or a mouse might be concealed therein! But when he beheld the wonderful pitcher that he had himself seen at Vence, he was frightened. For Herr Hautmartin was a man well skilled in justice as well as in injustice, and knew that the thoughts and deeds of men's hearts are evil, from their youth up. He saw immediately that Colin wished to bring Mariette into trouble with this pitcher; that when it was in her hands he would give out that it was a present from some lover in the city, and that all good people must avoid Mariette. Thereupon Herr Hautmartin, the Judge, decided that he would put down this suspicion by confessing that he was the giver thereof himself. Besides, he loved Mariette, and would gladly have witnessed that she had more closely observed towards him the command of the grey Father Jerome, "Little children, love one another." Although Colin would fain have been the handsomest man in the town, the Herr Judge had the advantage over him in two things—namely, his great years, and a great, great nose! Yes; this nose, that went before the Judge like a yeoman of the guard, to announce his approach, was truly an elephant among human noses. With this elephant, his good intentions, and the pitcher, the Judge went the following morning to the house amid the olive-trees and African acacias.

"For the beautiful Mariette," said he, "nothing is too costly to me. Yesterday you admired the pitcher at Vence. Permit me, sweet Mariette, to lay that and my loving heart at your feet."

Manon and Mariette were enraptured and astonished when they saw the pitcher. Manon's eyes sparkled, but Mariette was beside herself, and said, "I wish to take neither your pitcher nor your heart."

Then Mother Manon got angry, and said, "But I take pitcher and heart too. Oh, thou fool, how long wilt thou scorn thy good Mok? For whom waitest thou? Will a count of Provence make thee his bride, that thou despisest the Judge of La Napoule? I know better how to care for thee. Herr Hautmartin, I count on having the honour to call you my son-in-law."

Then Mariette went out and wept bitterly, and hated the beautiful pitcher with all her heart. But the Judge struck himself with his flat hand across the nose, and spoke wisely. "Mother Manon, do not overhurry things. The little dove will be entirely submissive when she learns to know me better. I am not impatient. I understand womankind, and before a quarter of a year I will steal into Mariette's heart."

"His nose is too big for that!" whispered Mariette, who, behind the door, heard and secretly laughed. In truth, a quarter of a year had passed, and Herr Hautmartin had not with the tip of his nose pierced into her heart.

The next quarter of a year Mariette had other affairs. The pitcher made her much vexation and trouble, and, moreover, something besides. Fourteen days long they talked of nothing but the pitcher in La Napoule. And everybody said, "It is a present from the Judge," and the wedding is already agreed on. But when Mariette solemnly assured her companions that she would sooner her body should be in an abyss of the sea than marry the Judge, the maidens went away angry, and teased her, saying, "Ah, how happily she will rest in the shadow of his nose!" This was vexation first!

Then Mother Manon went on the cruel principle of forcing Mariette to carry the pitcher to the spring at the rock every morning, to fill it with fresh flowers. She hoped thereby to accustom Mariette to the pitcher and the heart of the giver. But it only led her to hate gift and giver. And the labour at the spring was a real punishment to her. Vexation, second!

Then when she came in the morning to the spring, twice in the week lay upon a ledge of the rock the most beautiful flowers, beautifully arranged, ready to make the pride of the pitcher. And round the flower-stalks a strip of paper was wrapped, and on it was written, "Dear Mariette!" Now some one, the little maiden knew, must do it for her, since in the world now there are no magicians or fairies. Consequently the flowers and the sweet speech came from Herr Hautmartin. Mariette would never smell them, merely because the living breath from the Judge's nose had breathed over them. She indeed took the flowers, because they were better than field-flowers; but she tore the paper into a thousand pieces, and strewed them on the place where the flowers were accustomed to lie. But this did not vex the Judge Hautmartin at all, whose love was as great in its place as his nose in its place. Vexation third!

But at last she discovered, in conversation with Herr Hautmartin, that he was not the giver of the flowers. Who could it be now? Mariette was astonished at the unexpected revelation. From that time she took the flowers carefully from the rock, smelt them, but—who put them there? Mariette, like all young girls—else they are not worth anything—was very curious. She guessed this and that young man in La Napoule. Yet she did not stop at guessing. She waked and watched late in the night—she rose earlier—but she spied out nothing. And yet twice in the week, in the morning, lay the magic flowers on the rock, and wound round them the strip of paper, ever with the quiet sigh on it, "Dear Mariette!" This would have made the most indifferent curious. But curiosity becomes at last a burning pain. Vexation fourth!

(To be concluded in our next.)

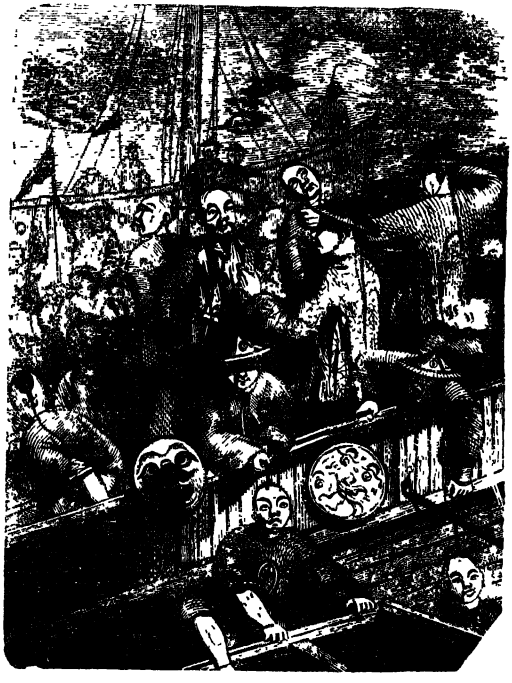
THE INFLUENCE OF NEWSPAPERS.—It is almost impossible, we think, to overrate the immense moral and political importance of a thoroughly good provincial journal. We hesitate not to say that in many instances the conductors of such publications have it in their power to serve the country more usefully even than some of our prominent politicians and statesmen. When, for instance, misunderstandings arise among large masses of workmen, in such parts of the country as Yorkshire and Lancashire, with regard to their employers, or to the rulers of the country, how important is it that the local press which they read should be under the conduct of good, loyal, liberal, and enlightened men. An injudicious article might keep alive a flame of discontent, when a few words of thorough good sense, dictated by a truly generous and liberal spirit, may keep a country in peace far more effectively than the *posse comitatus*, or a regiment of slaughter-breathing yeomanry.

CHINA AND THE CHINESE.

THE OPIUM-SMOKING OF THE CHINESE.

The drug called opium is formed of the concrete juice of the poppy. This plant is well known in England, as well as in the southern countries of Europe, but it appears to have come originally from Asia. It is reared most extensively in India, where opium forms the staple commodity of many provinces. The following is the general mode of treatment:—The plants are very carefully kept at a due distance from each other. Should the seed have been too thickly sown, some of the young plants are pulled up and used as pot-herbs, but when they have reached a foot and a half in height, they are considered, when their intoxicating nature, unfit for that use. The plant flowers in February, and the opium is extracted in March or April, according to the period of sowing.

When the flowers have fallen, and the capsules assume a bluish colour, they are wounded with a three-toothed instrument, which is drawn from the top to the bottom of the capsule so as to penetrate its skin. This is done in the evening, and the opium is gathered in the morning. The wounds in each capsule are repeated for three successive days, and generally fifteen days suffice in this way to wound all the capsules in a field, and to gather all the opium. A milky juice, exuding from the incisions, thickens on exposure to the air, and is carefully scraped off with a shell, or a small iron instrument, previously dipped in oil. It is afterwards worked in an iron pot, in the heat of the sun, until it is of a consistence to be formed into cakes of about four pounds weight. These are covered with the leaves of poppy, tobacco, or some other vegetable, to prevent their sticking together; and in this state they are dried and packed away for exportation in chests lined with hides, each containing forty cakes, and weighing about 150 lbs. The drug thus prepared brings in India about fifteen shillings a pound.



CHINESE SMOKING THE OPIUM.

The consumption of this narcotic drug in China is very great. Within the last sixty or seventy years that of Indian opium has risen from 1,000 to nearly 30,000 of the chests just described. It has actually formed an article of export from India to China, exceeding in value all the tea which that country has supplied for our own consumption, and for exportation to our colonies and to foreign countries. Towards the close of the last century the trade in opium was chiefly carried on in Macao; but in 1802 the English merchants removed it to the island of Lintin,

which then became the great opium depôt. "At Canton," says a Chinese writer, "there are brokers of the drugs, who are called melters. These pay the price of the drug into the hands of the resident foreigners, who give them orders for the delivery of the opium from the receiving ships. There are carrying boats plying up and down the river, and these are vulgarly called 'fast crabs,' and 'scrambling dragons.' They are well armed, and are manned with some scores of desperadoes, who ply their oars as if they were wings to fly with. All the custom-houses and military forts which they pass are largely bribed. If they happen to encounter one of the armed cruising boats, they are so audacious as to resist, and slaughter and carnage ensue."

A few years ago, one of the Chinese cruisers addressed a memorial to the Emperor, in which he stated that "magistrates of districts issue proclamations interdicting the clandestine sale of opium, at the same time that their kindred, and clerks, and servants smoke it as before. The police, influenced by the people in the public offices, became the secret purchasers of opium, instead of labouring to its suppression; and thus all interdicts and regulations became vain." The fact is, that a contraband trade of some millions sterling, in annual value, grew up despite of frequent edicts for its suppression.

CHINESE POLICE ARRESTING THE OPIUM SMUGGLERS.

The taste for opium prevailing in China, which began with the richer and descended to the poorer classes, appears to have been extended with astonishing rapidity. The following imperial edict was issued in 1800:—

"Let the buyers and smokers of opium be punished with one hundred blows, and be pilloried for two months. Then let them declare the seller's name, and in default of this declaration, let the smoker be punished as an accomplice of the seller, with a hundred blows and three years' imprisonment. Let mandarins and their dependants who buy and smoke opium be punished one degree more severely than others; and let governors and lieutenant-governors of provinces, as well as the magistrates of subordinate districts, be required to give security that there are no opium-smokers in their respective districts."

Six years after, more decisive steps were taken, under the direction of an Imperial Commissioner from Peking; the British residents were shut up in their factory, and only released on giving up the stock of opium on board the ships, amounting to 20,283 chests, worth nearly £3,000,000 sterling, the Superintendent of British Trade giving the owners indemnity scrips. The contents of every chest were subsequently emptied into sluices communicating with the river, in the presence of the Chinese authorities and many of the residents of the British and

INTERIOR OF OPIUM SMOKING SHOP.

WOMAN OF OPIUM-SMOKER.

other factories. And men were employed from day to day in hastening the process of maceration until the opium had become muddy and fetid, when the whole of it was washed into the river.

The merchants now withdrew to Macao, and, on being expelled by the Chinese their ships at Hong Kong But the opium trade is still extensively carried on. At Amoy, for example, the large native wholesale dealers are in the habit of strongly manning and arming a boat, in which they proceed outside the boundaries of the port to the six islands. There the foreign opium-vessels lying at anchor are similarly armed and prepared for resistance, in the event of the Chinese authorities attempting to capture them. The native boats return with the chests of opium to Amoy, and may be seen, with some European flag flying aloft, passing swiftly through the harbour, with sails set, and all the crew plying their oars. They always form too strong a force to encourage the hope of successful pursuit, either by the pirates or by the Mandarins. The wholesale native smugglers then dispose of the opium-balls separately to the retail dealers and proprietors of opium-shops No secrecy is observed respecting this article of universal traffic.

The Rev G. Smith, who recently witnessed the state of things, says —"I have seen three consecutive houses, kept by opium-venders. The people say that there are nearly a thousand such establishments in Amoy. Public notices on the corners of streets frequently invited the attention of passers-by to opium 'three winters old' sold in the opposite house. To the better class of these shops the servants of such men might be seen resorting, in order to purchase the prepared drug, and to carry it in little boxes, or, if the quantity were moderate, on little bamboo leaves, to their master, for smoking at his own house. They all asserted that they paid no bribes to the Mandarins, saying that these also smoked opium, and, therefore, were prevented by shame from interfering with the people. They assented to the probability of bribes being paid to the native authorities by the large wholesale purchasers, who go outside the harbour to buy opium from the foreign ships Among other proofs of the full cognizance of the local authorities, as well as of the general prevalence of opium-smoking, may be mentioned the fact of persons being met with in almost every street, who gain their entire livelihood by manufacturing the bowls of opium-pipes, which they publicly expose for sale in every direction.

The opposition now made by the Chinese Government to the opium-trade, at any time, appears to be extremely feeble. Mr. Fortune says, that he had many proofs of this during his residence in China, one of which was as follows.—An admiral, renowned for his valour, was sent with a number of war-junks to a particular station, where the opium-ships were anchored, for the purpose of compelling them to leave the Chinese shores. Gongs were beat, guns were fired—at a respectful distance, however,—and the junks came down with all that pomp and

which seem to form a principal part of their warlike operations

anchor, apparently paying but slight attention to all these threatening demonstrations Presently, a message was sent from the admiral, ordering them to get up their anchors and stand out to sea, and never more *to dare* to enter the waters of his Celestial Majesty, under the penalty of being *completely annihilated*.

A summons like this, in former days, might have had some weight, but now it had none, and the only answer the messengers carried back was, "That the foreign vessels were well armed, and that they would not leave their anchorage." This was quite sufficient to cool the courage of the admiral, who was now in a dilemma, he durst not fight the "barbarians," and if he did not manage to get them out of the way, his character for courage would suffer when the affair was represented at head quarters. He therefore altered his tone, and *requested* the captains, as a great *favour*, to leave the anchorage and ... outside for a day or two only, after which they might return to their old quarters. This was agreed to on the part of the captains of the opium-vessels, and, on the following morning, they got under weigh, and went out to sea. The Chinese, ... on the look out at the time, made a great noise by beating gongs and firing guns, and followed the opium-ships until they were fairly outside. The admiral now sent up a report to his government, to the effect that he had fought a great battle with the "barbarians," and had driven them away from the shores, or very probably, he said, that he had blown some of their vessels to pieces, and sunk the rest in the depths of the sea! In the meantime, even before the report was half-way to Peking, the opium-vessels had quietly taken up their old anchorage, and things were going on in the usual way. Such is a specimen of the way in which affairs are managed in China.

To prepare the opium, a portion is taken and dissolved in a copper ladle, over a charcoal fire. When it is melted, it is poured into a coarse paper filter, and, unless it be of the worst description, it readily passes through this into a small basin placed under it. When it will not pass through the filter, the Chinese account it bad, and it is sold only at a very reduced price. The filtered mixture is put again into a clean copper pan, and boiled slowly over the charcoal fire until the whole of the water is evaporated, and nothing remain but pure opium

The opium is kept for smoking in small cups made for the purpose. The smoker commonly lays his head upon a pillow, has a lamp or candle by his side, and with a kind of needle he raises a small portion of the opium to the candle, which being ignited, he puts it into the small aperture of the bowl of the pipe. The candle is applied to the bowl in the process of inhaling, and the smoke is drawn into the lungs in the same manner as an Indian or Chinese swallows tobacco A whiff or two only can be drawn from a single pipe, and, for continued use, the drug has to be frequently renewed How ... are prostrated to this evil practice. One is ... of Amoy having four or five rooms, in different parts of a square court These were occupied by men stretched out on a rude kind of couch, on which lay a head-pillow, with lamps, pipes, and other apparatus for smoking opium. In one part of the principal room the proprietor stood, with delicate steel-yards, weighing out the prepared drug, which was of a dark, thick, semi-fluid consistency. Here was a little company of opium smokers, who had come hither to indulge in the expensive fumes, or to feast their eyes with a sight of that which increasing poverty had placed beyond their reach

Many persons are said to use this drug "in moderation" In such instances the smoker lies down, but after he has taken a few whiffs, he quietly resigns the pipe, perhaps, to one of his friends, and walks away to his business But, as in other instances, it is difficult to maintain this hold on the indulgence, and frequently this "moderation" becomes excess In China, the spendthrift, the man of lewd habits, the drunkard, and other bad characters, in great variety, slide into the opium-smoker; so that the drug seems to be changeable with all the vices of the country. Opium, doubtless, has its victims in persons who, but for its fascinating lures, might have escaped their ruin, but, in the great majority of instances, it only adds one stain more to a character already polluted

The effects witnessed by Lord Jocelyn as produced on the Chinese at Singapore, he has thus described:—

"A few days of this fearful luxury, when taken to excess, will give a pallid and haggard look to the face, and a few months, or even weeks, will change the strong and healthy man into little better than an idiot skeleton. The pain they suffer when deprived of the drug, after long habit, no language can explain, and it is only when to a certain degree under its influence that their faculties are alive. In the houses devoted to their ruin, these infatuated people may be seen at nine o'clock in the evening in all different stages, some entering, half distracted, to feed the craving appetite they had been obliged to subdue during the day; others, laughing and talking wildly under the effects of a first pipe, whilst the couches around are filled with their different occupants, who lie languid, with an idiot smile upon their countenance, too much under the influence of the drug to care for passing events."

The sweet charities of life sympathy, affection, and benevolence, are the blessings blended with sorrow, sickness, and infirmity and from the restraints of temper and mutual forbearance to each other arise the kindness and good will ... and the charms of social life.

COLERIDGE AT HIGHGATE.

NOTHING is more interesting than to witness the fluctuation of public opinion, by which the hero of one day becomes the scorn and ridicule of the next. The same law applies to literary reputation. The fleeting Cynthias of the minute are numerous enough. We may say of them, as Byron said of heroes, that—

"Every month brings forth a new one"

In the case of Samuel Taylor Coleridge this was remarkably illustrated. The wits of the Anti-Jacobin could scarce find language too severe. He was all that honest men should shun and abhor. The bitter satire of Byron is almost equally malignant In our own day, by a numerous class, he is reverentially read. He is considered as the only man who has bridged over the chasm between reason and revelation, and laid the foundation of a faith which the acutest rationalism even must accept. Our opinion is different. Christian verities are dependent on no man, for in man's universal heart, as it beats with hope or sinks in despair, do they find a sure and safe response. If it were only by the painful mastery of Coleridge's writings that we became Christians, we should have but little hope for the spread of Christian truth. Coleridge's claim to admiration, aye, to immortality, was, that he wrote the "Ancient Mariner" "Genevieve." As a poet he will live in the memories of men, when the conversational power, for which he was so famed, will be altogether forgotten. Latterly the conversational powers of Coleridge have been brought up before the world by the publication of the lives of Chalmers and Sterling Chalmers says in one of his letters —

"We spent three hours with the great Coleridge. He lives with Dr. and Mrs. Gillman on the same footing that Cowper did with the Unwins. His conversation, which flowed in mighty unremitting stream, is most astonishing, but, I must confess, to me still unintelligible. I caught occasional glimpses of what he would be at, but mainly he was very far out of all sight and all sympathy. I hold it, however, a great acquisition to have become acquainted with him You know that Irving sits at his feet, and drinks in the inspirations of every syllable that falls from him There is a secret, and to me as yet unintelligible, communion of spirit betwixt them, on the ground of a certain mystical and transcendental lake-poetry which I am not yet up to Gordon says it is all unintelligible nonsense; and I am sure a plain Fife man as uncle "Tammas," had he been alive, would have pronounced it the greatest *buff* he had ever heard in his life."

Thomas Carlyle, more in the habit of writing cynically than Dr Chalmers, speaks out very strongly as to the utter intelligibility of what he calls "Coleridgean moonshine." He says —

"Coleridge sat on the brow of Highgate-hill, in those years, looking down on London and its smoke-tumult like a sage escaped from the inanity of life's battle, attracting towards him the thoughts of innumerable brave souls still engaged there. His express contributions to poetry, philosophy, or any specific province of human literature or enlightenment, had been small and sadly intermittent; but he had, especially among young inquiring men, a higher than literary, a kind of prophetic or magician character. He was thought to hold—he alone in England the key of German and other transcendentalisms, knew the sublime secret of believing by 'the reason' what 'the understanding' had been obliged to fling out as incredible; and could still, after Hume and Voltaire had done their best and worst with him, profess himself an orthodox Christian, and say and point to the Church of England, with its singular old rubrics and surplices at Allhallowtide, *Esto perpetua*. He distinguished himself to all that ever heard him as at least the most surprising talker extant in this world, and to some small minority, by no means to all, the most excellent. The good man—he was now getting old, towards sixty perhaps—gave you the idea of a life that had been full of sufferings, a life heavy-laden, half-vanquished, still swimming painfully in seas of manifold physical and other bewilderment. Brow and head were round, and of massive weight, but the face was flabby and irresolute. The deep eyes, of a light hazel, were as full of sorrow as of inspiration; confused pain looked mildly from them, as in a kind of mild astonishment The whole figure and air, good and amiable otherwise, might be called flabby and irresolute, expressive of weakness under possibility of strength. A heavy-laden, high-aspiring, and surely much-suffering man. His voice, naturally soft and good, had contracted itself into a plaintive snuffle and sing-song, he spoke as if preaching—you would have said, preaching earnestly and also hopelessly the weightiest thing. I still recollect his 'object' and 'subject,' terms of continual recurrence in the Kantean province; and how he snuffled them into 'om m-ject' 'sum-m-ject,' with a kind of solemn shake or quaver, as he rolled along No talk, in his century or in any other, could be more surprising.

"He had knowledge about many things and topics—much curious reading, but generally all topics led him, after a pass or two, into the high seas of theosophic philosophy, the hazy infinitude of Kantean transcendentalism, with its 'sum-m-jects' and 'om-m-jects.' Sad enough, for with such indolent impatience of the claims and ignorance of others, he had not the least talent for explaining this or anything unknown to them; and you swam and fluttered in the mistiest, wide, unintelligible deluge of things, for most part in a rather profitless, uncomfortable manner. Glorious islets, too, I have seen rise out of the haze; but they were few, and soon swallowed in the general element again Balmy, sunny islets, islets of the blest and the intelligible, on which occasions those secondary humming groups would all cease humming, and hang breathless on the eloquent words, till once your islet got wrapt in the mist again, and they could recommence humming. One night peal of concrete laughter at some convicted flesh-and-blood absurdity, one burst of noble indignation at some injustice or depravity, rubbing elbows with us on this old earth, how strange would it have been in that Kantean haze-world, and how infinitely cheering amid its vacant castles and dim-melting ghosts and shadows! None such ever came. His life had been an abstract thinking and dreaming, idealistic one, passed amid the ghosts of defunct bodies and of unborn ones. The mourning sing-song of that theosophico-metaphysical monotony left on you, at least, a very dreary feeling."

It is true Archdeacon Hare, in his life of Sterling, talks of "the occasional ebb and flow" of Coleridge's conversation—but we are inclined to suspect that Chalmers and Carlyle are nearer the mark, and that after all the fame of the old man eloquent must rest, not on the wisdom that fell from his lips, or from his efforts to build up a rational and lofty Christian faith—for which we fear with his dreamy life he was singularly unfit—but for that rare and exquisite poetry which strikes every chord of human feelings, and the response to which will never cease whilst man can live, and hope, and love.

FREEDOM.

BY W C BRYANT.

O Freedom! thou art not, as poets dream,
A fair young girl, with light and delicate limbs,
And wavy tresses gushing from the cap
With which the Roman master crown'd his slave
When he took off the gyves. A bearded man,
Armed to the teeth, art thou, one mailed hand
Grasps the broad shield, and one the sword, thy brow,
Glorious in beauty though it be, is scarred
With tokens of old wars, thy massive limbs
Are strong with struggling. Power at thee has launched
His bolts, and with his lightnings smitten thee,
They could not quench the life thou hadst from heaven.
Merciless power has dug thy dungeon deep.
And his smart armourers, by a thousand fires,
Have forged thy chain, yet, while he deems thee bound,
The links are shivered, and the prison walls
Fall outward, terribly thou springest forth,
As springs the flame above a burning pile,
And shoutest to the nations, who return
Thy shoutings, while the pale oppressor flies.

LOUIS NAPOLEON BONAPARTE.

...mage whose name stands at the head of this paper has ...o small amount of public attention during the last four ...nd Europe is already watching with interest to see ...ill become of him in 1852. But it must be confessed ...ot only has he no recommendation, save the name of ...parte, and a very small amount of talent of any kind, but h... character as a man is by no means above reproach. He is the son of Louis, ex-King of Holland, the brother of the Emperor, and of Hortense Beauharnais, daughter of the Empress Josephine; and therefore at present stands at the head of the Bonaparte family. He has, however, no claim to be considered heir of his uncle. The latter, in the same breath that he repudiated any claim to ancestral nobility, said also—"My son cannot replace me. I could not replace myself. I am the creature of circumstances."

Prince Louis commenced his historical career at Rome in 1831, at the age of 23, by taking part in a general insurrection of the people of Italy against the despotic power of the Pope. This revolt, however, legitimate in its origin and objects, was carried on with such imprudence and want of energy, that it brought ruin on nearly all its leaders. The Austrians at last interfered, and upon the advance of their forces the Prince immediately fled.

In 1832 he was residing in Switzerland as a political refugee, where his stupid intrigues, carried on in connection with a number of Frenchmen disaffected to Louis Philippe's government, drew upon him the indignation of France, and the distrust of the surrounding states. An event occurred in 1835, which plainly showed that it was the bauble of royalty on which he had set his heart, and that he cared no more for France than for any other country in which a prospect of obtaining this might be opened up to him.

PRINCE LOUIS NAPOLEON

In this year the young queen, Donna Maria of Portugal, became a widow by the death of the Duke of Leuchtenberg, a son of Eugene Beauharnais, and consequently a cousin of Louis Napoleon. The latter immediately became a candidate for the matrimonial throne of his relative. Rejected with scorn by the Portuguese Queen and Ministry, on the 14th of December, 1835, he issued a bombastic bulletin, in imitation of those of his uncle, denying the rumour which his friends had circulated, that he was the accepted suitor of the heiress of the House of Braganza, and declaring that even if the throne of Portugal were offered him, he would refuse to accept of it. "Sour grapes!" said the fox, when he found the branch on which they hung too lofty for him to reach.

In October, 1836, he "invaded" Strasbourg, at the head of a few miserable adventurers, expecting the whole of France to rise and join him. He was forthwith taken into custody as a dangerous lunatic, but afterwards liberated on his giving his parole of honour to remain in exile in the United States for ten years. In 1838 he broke his word, and came back to Europe, and again setting intrigues on foot, he was obliged to fly for safety to England. Experience did not appear, however, to have taught him wisdom, and in 1840 he embarked with some drunken companions on board a Thames steam-boat for Boulogne, carrying with him a tame eagle with clipped claws and moulted pinions—a fit emblem, it must be confessed, of an expedition intended to subdue France.

He was again arrested and sent a close prisoner to the fortress of Ham. He escaped in 1846, in the disguise of a workman, and again made his way to London. His after residence in this country was comparatively unmarked. His chief associates while here, it was well known, were ladies and gentlemen, bearing aristocratic names, but of very questionable character—speculators on the variations of stocks, gamblers, money-hunters, diners-out, haunters of the saloons of second-rate fashion, and of the nameless resorts of low vice and dissipation. He had no scruple whatever in getting into debt beyond his means of payment, and his most serious pursuit was the study of alchemy, by which he expected to arrive at the discovery of 'the philosopher's stone.' So vigorously did he prosecute this exploded science, in a house which he had fitted up as a laboratory, in Camberwell, and so firm was his faith in the charlatan empiric whom he employed to aid him in transmuting the baser metals into gold, that he actually appropriated his revenues in anticipation, and applied the first million of his gains to paying off the national debt in France, hoping that he might thus purchase the Imperial crown. Upon the first news of the revolution in 1848 he betook himself to France. In June, 1848, he was elected member of the National Assembly for the Department of the Seine, by 84,420 votes, as well as for many other departments in various parts of France. Such is the influence of a mere name over the great mass of the people. A vigorous effort was made in the National Assembly to have the edict still kept in force which excluded the Bonaparte family from the French territory, from the fear that Louis Napoleon might avail himself of the popularity caused by his relationship to the Emperor to aim at the supreme power. M. Ledru Rollin took a leading part in the discussion in opposition to

the claims of the Prince, and laid some force upon the circumstance that the latter had as yet made no public declaration of his sentiments as to the revolution of February, 1848. This objection was removed by the appearance a few days afterwards of an address to the electors of the Seine, declaring his attachment to the cause of democracy, order, and labour He took his seat towards the end of September, 1848, and upon his appearance, no small amount of curiosity was evinced by the other members to get a sight of him.

In December, 1848, he was elected President of the French Republic. 7,326,385 persons took part in the election, and of these 5,334,226 voted for Louis Napoleon One of the first public acts of his Government was his sending an expedition against Rome to subvert a republic, if possible, more legitimate in its origin than that over which he himself presided. The daily waste of life and money, the destruction and dilapidation of some of the finest buildings in the world, are subjects too painful to dwell upon at this present time We hope to enter into them more fully when giving a memoir of Garibaldi. Rome and Italy were again delivered over to the blighting influence of Neapolitan, Austrian, and Papal despotism, and the people of that fine country are now placed in a state of moral and physical degradation, of which an Englishman can scarcely form an idea. Louis Napoleon is fairly chargeable with being the author of this misery and ruin. He has spent the three years and a half during which he has now occupied the Presidential chair in every way to render himself personally popular, in making progresses through the provinces, and delivering fine speeches, which have as nothing and in contin[illegible] of [illegible] [illegible] the liberty of the press until [illegible] [illegible] He [illegible] the united and impenetrable Vatican, and has [illegible] condemning capital punishment in the columns of his journal.

When M Kossuth presented himself upon the frontiers, he was refused a passage through, as it was well known that he was the representative of principles diametrically opposed to those upon which the French Government are at present acting. In short, M. Louis Napoleon's career has been a continued lie —a perjury—and he is at this moment as great a reactionist as Francis Joseph or the Czar. The French people will have an opportunity of shaking him off in 1852, and we hope they will do it *con amore*. The fate of this pinchbeck republic may furnish a warning to visionaries in our own country, and convince them that liberty, equality, and fraternity are so many high-sounding words—meaning nothing, or positively mischievous, when political knowledge, public virtue, and education, are wanting among the masses

TELEGRAPHIC COMMUNICATION

One of the wonders of modern science is, decidedly, the electric telegraph. Our readers may not be aware that the system of telegraphic communication is old—almost as old as the hills. We find it resorted to by the men of all countries and all ages—by the rude barbarian and the polished Greek alike. For this purpose the Roman used the flag and the banner—the Greek lit fires on the mountain-tops—the untutored Indian ascends some neighbouring hill, where he stands as a signal or a guide, with arms uplifted to the sky. When the Spaniards discovered Mexico, they found an extensive system of communication by means of couriers trained from childhood, whose dress was indicative of the news they bore. The history of our own country supplies us with instances of similar attempts. When the Armada hovered on our shores, beacon-fires were lit, and a fiery warning passed through the land

The Italian historian Strada is generally supposed to have given the first idea of the modern telegraph In one of his essays he gives an account of a correspondence carried on by the help of a loadstone, which, if touched by two several needles, the other, at whatever distance it might be, moved at the same time, and in the same manner He says "that two friends possessed of these needles made a dial-plate, and fixed one in each of them, so that it could move without impediment to any of the twenty-four letters. Upon their separating they agreed to withdraw to their closets at a certain hour, and there to converse. To accomplish this, when some hundreds of miles asunder, each one shut himself up at the time appointed, directed the needle of his dial to every letter of the words he wished to use, making a pause at each to avoid confusion; and his friend saw his own sympathetic needle moving to every letter which that of his correspondent indicated." How far the Jesuit priest knew and foreshadowed the power of electricity remains doubtful. However, in 1684, a mode of communication was mentioned to the Royal Society, by which intelligence was sent from any high place to another as quickly as it could be written. In this "Century of Inventions" the Marquis of Worcester tells us "how at a window, as far as one can discover black from white, a man may hold discourse with his correspondent." In 1794 the French Directory established a system which is thus described —"At the first station, which was on the roof of the Louvre, M. Chappe received in writing from the Committee of Public Safety the words to be sent to Lisle, near which the French army at the time was. An upright post was erected on the Louvre At the top of this were two transverse arms, moveable in all directions with much rapidity. The different position of these arms stood as signs for the letters of the alphabet, and these he reduced as much as possible. Having received the sentence to be conveyed, he gave a signal to the second station to prepare At each station there was a watch-tower, on which telescopes were fixed, and the person on the watch gave the signal of preparation which he had received, and this communicated successively through all the line, which brought them into a state of readiness. The person at the second station received letter by letter the sentence from the Louvre, which he repeated with his own machine, and this was again repeated from the next, with almost an inconceivable rapidity, to the final station at Lisle." In 1795 Great Britain followed the example set by France, and the Admiralty adopted a plan of a six-shutter telegraph, proposed by Lord George Murray. About this time, also, the electric spark was used Arthur Young, speaking of a Monsieur Leonard, says—"You write two or three words on a paper—he takes it with him into a room, and turns a machine enclosed in a cylindrical case at the top of which is an electrometer—a small pith ball, a wire connects with a similar cylinder and electrometer in a distant apartment, and his wife, by remarking the corresponding motions of the ball writes down the words they indicate, from which, it appears, he has formed an alphabet of motions. As the length of the wire makes no difference in the effect, a correspondence might be carried on at any distance. There were other forerunners who from time to time came before the public, but their names were soon forgotten, and their plans died away.

The father of the system at length arose in the person of Mr Cooke, who, having become acquainted at Heidelberg with Professor Moenche, witnessed some experiments intended to illustrate the possibility of signalising by electricity. He came to London, obtained a patent with Professor Wheatstone, and devoted himself to the extension of that wonderful system by which time and space are annihilated, and thought made to travel with the speed of the lightning's flash.

The following is the description of Mr. Wheatstone of this wonderful application of science to practical purposes —

"Here is what may be called a dial with five vertical magnetic needles. On this dial twenty letters of the alphabet are marked, and the various letters are indicated by the mutual convergence of two needles, when they are caused to move. If the first needle turn to the right and the second to the left, 'h' is indicated; if the first needle deviates to the right, and the fourth to the left, then 'b' is indicated, if the same needles converge downwards, then 'v' is pointed to. These magnetic needles are acted upon by electrical currents passing through coils of wire placed immediately behind them. Each coil forms a portion of a communicating wire, which may extend to any distance whatever. These wires, at their termination, are connected with an apparatus consisting of five longitudinal and two transverse metal bars in a wooden frame, the latter being united to the two poles of a voltaic battery, which ordinarily have no metallic communication with the longitudinal bars, on each of which two stops, forming two parallel rows, are placed. When a stop of the upper row is pressed down, the bar on which it placed forms a metallic communication with the transverse bar below, which is connected with one of the poles of the battery; and when a stop of the lower row is touched, another longitudinal bar forms a metallic communication with the other pole of the voltaic battery, and the current flows through the two wires connected with the longitudinal bars, to whatever distance they may extend."

THE RUSSIAN'S DAUGHTER.

AN INCIDENT OF THE GRAND ARMY.

'HE rattling of drums, the sharp discharge of musketry, and he indescribable confusion incident to the movement of vast odies of men, announced the departure of Napoleon from

f the Russian town endless columns poured forth in dark an risthling lines. At intervals came troops of horsemen, thei teeds pawing the ground, and neighing in response to their omrades on the open plain, now more frequently rumbled the rtillery and baggage-waggons, startling the geese by their umber and equipments, and filling them with awe. The gaz us of the mighty conqueror, at whose bidding this vast host and array of warlike munitions had been suddenly evoked as rom some world, unknown or forbidden to all other men. As the Grand Army passed on, in the face of each sol ier might be read the spirit working beneath. The French onscript, fresh from his ploughshare, which he had ever onged to leave for the bivouac and the field, wore upon his ountenance only the expression of exultation and joy. The eteran, on whose breast you might perceive the medal of Austerlitz or Marengo, marched with the mien of a Roman egionary, confident and secure in the genius of his commander as when he heard his clear voice ringing amid the perils of Wagram, or saw him push out in his frail skiff to the raft of Tilsit to dictate terms of peace to two fallen emperors. The aged soldier renewed his youth, the boy's sinews were strengthened like steel, at the sound of the constant watchword, "To Moscow—to Moscow!" It was only in the muttered execrations of the conquered Austrian or Prussian, whom the vicissitudes of fortune had forced into an ungrateful service against their hereditary ally, that you might read the omen which cast its black and glowing shadow over the campaign.

The welcome command of "Halt!" had been given in a cold inclement night, busily engaged in preparing his noon-day officer detached himself from his companions and rode swiftly to the waggon in the rear of the column. Arriving at one distinguished from the rest by its superior size and finish, and by its equipments its peculiar [illegible] the curtain, and said in a low tone—"And how is Paul, now that we are once more on the road to home and Moscow?"

"Alas!" answered the sick man, wearily raising himself on his elbow, "I feel as yet none of that strength which my good doctor promised me when you begged me away from the hospital at Wilna. It is dreadful to lie here, and hear the moving life without, and to feel one's self cut off from it all, to catch the joyful shout of the soldiers, and to reflect that it must be long before one's own voice can be raised in the cry for *la belle France*. But courage, Paul—and don't make your comrades melancholy! How well you look, Pierre! and that cross, too—eh! don't try to hide it, Paul will earn it also if he ever escapes from this waggon. And do you know that the Emperor looked in on me to-day, and was delighted with my stubborn determination to go on with the Grand Army! And as he passed on I heard him humming

'Marlborough s'en
Ne sait quand il reviendra.

That last line—your Paul has had it running in his head ever since. I hope we may *not* return till we have finished our work."

heathenish old Kremlin, and our gay city dames will no longer be cruel, for will we not be heroes of the Grand Army! Adieu! expect me again at evening, and keep your courage up." And the warm-hearted Pierre galloped off.

Left to himself, Paul attempted to sleep, but his feelings had become somewhat excited, and this, with the motion of the waggon, which had once more begun its rude jolting,

opportunity to review these mementoes of my past life," and he carefully opened a small casket which reposed at the head of his couch. "Pierre talks of gay women, but how shall I forget that one who was only dear to me the moment she was snatched away, but whom I loved in a moment sufficiently for a life-time? Now these silent tokens shall bring up to me the dead past, and I will live those days over again. I have not written my thoughts since I entered the army. Sometimes I think I dare not. I am more ambitious than I was then, when I stained the white leaves of this little book with words like these."

He turned over a few leaves of the journal and read to himself in a low tone—"Pierre has just left us—our playground is deserted. The fields look mournful. The birds do not sing as sweetly as they did. I have lost a friend.

. . . . . .

"I am puzzled to account for the interest Middle F—— has recently taken in me. She is, I know, a little older than myself, and her disposition is not calculated to harmonise with mine, for she is bold and ambitious beyond most women, and I am so void of ambition that Pierre says I am good for nothing but a country *cure*, or at best a quiet scholar. Nor can I imagine why my conversation should please her, for I know nothing of the great world, and she has spent half her life in Paris. I shall see her again this evening.

. . . . . .

"So soon! Is it possible she loves me—that her love is returned—that we are henceforth all the world to each other! How little could a prophet ever have foreseen all this! And how little could we have read in those gay scenes and brilliant saloons the secrets of our destiny! I do not blame myself, for I am proud of the affections of a woman so beautiful and gifted, yet she has a haughty and imperious nature, and I know not how it will accommodate itself to the quiet of a philosopher.

. . . . . .

"Daily I feel that something is wanting to that perfect love which I ought to cherish toward dear Victorine. It may be useless in me to indulge the thought, but I doubt if more than my pride and feelings are interested. She loves me deeply, I am conscious, although I am unworthy of such affection. Our characters are so opposite that I must make sacrifices to ensure lasting harmony. I must soar to her views, she must not descend to mine. I will go into the army. I will win honours under the Emperor, I will return, and she shall meet me with a proud and delighted heart, for she shall find her early confidence not misplaced.

"All is settled. To-morrow I start for Brienne. I have written my determination to Pierre. I have resisted the entreaties of my parents. I have bid adieu to Victorine. She weeps, but I can see she is proud of the resolution I have taken. We are to correspond by every post. The rascal Baptiste pretends to be sorry that he cannot go to the wars with [illegible] merely says, 'My son, prove yourself worthy

urge it on me not to be alarmed, and not to distress Pierre with my sorrow, if there be no need for alarm and anxiety? I must hold myself in instant readiness to start at any moment. I must apply for permission to go when necessary.

. . . . . .

"She is dying! I have only seen her once, and then she did not know me, who would die for her! They were holding her in their rude grasp, and when I bid them cease they told me she would destroy herself if her hands were free! They commanded me from the room, but I would not go. I resolved to wait till she returned to her mind. I wished to be the first one whom her reviving consciousness would recognise.

. . . . . .

"After days of gloom and sorrow, and nights of dreary watching, I was at length addressed by my right name. Alas! how feeble were the lips that pronounced it! How mournful in their paleness, and yet how serene and lovely in their expression! I stood at her bedside, her hand in mine—the unseen hand of the grim angel over us both. 'Paul,' she whispered,—'Paul!' I knelt by her, and her last words flowed into my heart, as the last drops of a summer cloud melt into the heart, while the cloud vanishes for ever. 'I have loved you, Paul, deeply and truly—how truly you can never know. I am going to leave you. I will not ask you to remember me, for if you forget Victorine, *she* will not forget to watch over you. You will find some other Victorine, less proud and more loving than the first. Over her, too, I will watch, and will love her for your sake. Honour God—your country. Be your ambition ever noble as now. And when in a few days you go to the camp and the field, bear with you a resolve worthy yourself—to do nothing but what is virtuous and good. And here I have prepared you a little packet. Open it when—when I am gone—and cherish its contents for her sake who loved you so well. Kiss me, Paul—there—let me lean on you, for I am growing very weak ——'

'Quick!' exclaimed the *curé*: 'she is dying ——'

Merciful heaven!" I cried, 'she is falling from my arms! Her eyes—O God, is this death?'"

And as the sick man closed the book, he took from the casket a curiously-fashioned bracelet, on which was engraved the simple legend, "Love, the child of sympathy —V. F." He gazed at it long and earnestly, at times burying his face in his hands and giving way to passionate grief. At length the excitement passed away, and with the jewel firmly locked in his grasp he sank to sleep.

. . . . . .

A few months after the events narrated in these brief notes Paul Dubois and Pierre Chatelet entered the army — the former a prey to a seemingly incurable melancholy. In every engagement they attracted attention by their courage and their singular attachment—ever fighting side by side, each intent upon the safety of the other. By degrees Paul recovered his spirits, and began to mix among the ordinary pleasures of young men. Still it was observable that his actions were regulated by principles higher and more sublime in result than those of most of his fellows. He was wont sternly to reprove all deviations from the laws of honour and morality, all indications of a downward tendency in desire. As his brother officers saw that his character as a soldier became more eminent and admirable by reason of its stern virtue, they unconsciously imitated him. His influence was widely felt. All who knew him loved him. And thus it happened that when in the flush of awakening hopes, and at the very outset of the expedition wherein he had expected to reap a rich harvest of honour, he was prostrated by a fearful disease, his fellow-soldiers felt for him so deep a sympathy, and entreated with so much earnestness that he might still accompany them. And though he daily lost strength, his enthusiasm seemed but to kindle the more. His physician shook his head, but the sick man cared not for the uncomfortable paliet, the unwholesome food, nor the harsh motion of the waggon, so long as the rude soldier who marched by his side chanted the warlike chorus—"To Moscow—to Moscow!"

. . . . . .

I am afraid, *monsieur le général*," said the surgeon to the Chief of Division, "that we shall be obliged to leave our friend, Paul Dubois, as a prisoner of war in some wayside cottage, for he cannot hold out to Smolensk."

"Nay," interposed Pierre, who had just ridden up, "I have been with him constantly on the march, and he is as eager as ever to go on. To leave him here would be even worse than death."

"Ah, my good friend," answered the surgeon, "in that waggon he cannot live twenty-four hours longer. I repeat it, General, our only hope is in leaving him. It is a great loss to the division, and a melancholy fate to so brave and enthusiastic an officer. But we have no alternative."

The General consulted a moment with his staff. "Go then," he said to Pierre and the surgeon, "go to the Lieutenant Paul Dubois, and inform him that in the opinion of the medical staff and his brother officers, it is unsafe and impossible for him to proceed with us. Express my sincere regrets at the circumstances which separate us, and my ardent hope that ere the campaign is over we may meet again under better omens, and see that he is put in comfortable quarters. As for you, Captain Pierre Chatelet, you have full permission to use all time and camp equipage necessary for this purpose, and may you have a favourable report to give me when I next see you! And now, gentlemen, to your patient."

Paul received the intelligence of his destination with less grief than Pierre and the surgeon had anticipated. In truth his illness had in the last few days gone far toward weakening the energies of life and passion, and a languid sigh was all the resistance he offered. The horses were turned into a bye-road. The murmur of the Great Army gradually died away, and at last the eyes of the sick man, as he gazed through the parted curtains, rested only on his attendant and the devoted Pierre. On each side the fields lay basking in the bright sunlight, and in the distance a white cottage appeared, solitary and a grove of tall pines, and at the meeting of the roads which branched out in every direction over the cultivated plain. "And there," signed Pierre, coming to his side, "there is, without doubt, your prison-house, on your road to Fame. Now, Paul, you have, indeed, an opportunity to show the strength of your philosophy and your religion. You know that I cannot be spared from the army. God give us a joyful meeting at a not distant day!"

"We ask permission, may it please you," said Pierre, bowing very low to a comely Russian, who came forward from the house to view the unwonted spectacle of a military equipage at his very door, "to leave with you an invalid officer of the French army. Of necessity his life is in your hands, and I am not miscalculating on the generosity of a subject of Alexander, when I say that I feel he is safe with you. And if, sir, at a future time a ransom shall be required, your demands cannot exceed our willingness."

"A Russian's duty is ever to his fellow men," replied the farmer, lifting the curtain of the waggon, "and therefore the sick man shall be to me as a brother. For your Emperor, and his wars—I detest them. But this is needless now. Catherine," he continued, returning to the door, "bid the servants hither."

In a moment there appeared a fair, slight girl, followed by two or three of the household

"Take carefully now the couch from the waggon," said the Russian, "and lay the stranger in the shaded room. Go, girl," he added, to his daughter, "see that all is ready above."

"Ah, sir!" sighed Paul, as, supported by the arm of the faithful Pierre, he gazed from his couch at the simple but tasteful apartment in which he had been laid, and at the earnest face of the Russian bending over him, "how can I thank you for so unlooked-for a kindness from one whom men would call my enemy?"

"God is all-wise," answered the host, "and I have a son in the army of Alexander. It may be that he will yet have cause to bless a Frenchman."

The rays of the sun slanted through the narrow window, and fell higher and higher on the wall. The regular breathings of Paul told of more healthful sleep than had visited him for weeks "I will leave him now," said Pierre, "and avoid the sorrows of leave-taking. Put away that casket quietly, Baptiste. There let us go."

. . . . . .

Awaking from a long and refreshing sleep, Paul composed himself for a survey of the chamber in which for the pre-

sent he was domesticated. The room where he lay was small, and tastefully furnished, exhibiting in a thousand particulars the tokens of graceful and feminine care. His couch, albeit somewhat coarse, was of the whitest linen; upon the low mantel, the humble chairs, and the frames of the simple pictures, not a stain or speck of dust was visible. One window was open, looking out on green and dewy fields; the song of birds floated cheerfully in; the din of the marching army was no longer heard; the jolting of the sick-waggon was forgotten. The invalid had already begun to retrace his steps to the portals of life.

A light step in the passage, and the Russian maiden came softly in, lingering modestly for an instant on the threshold. "And how has Monsieur slept?" she inquired in the purest French. "We much feared to disturb you last night. Monsieur is very sick, but we can give you rest and quiet, and we can prepare you food, such as is good for the sick; and we have a physician—oh! he is a wonderful man, and he lives but a few versts off."

"Ah!" replied Paul, "perhaps my nurse of last night is the better physician. At least," continued he, in the natural language of compliment, "one kind look from you does me more good than a whole packet of the doctor's drugs. Your air is wonderfully refreshing, too; and really I fancy I begin to have an appetite."

"Monsieur shall not complain of hunger," said Catherine; and, gliding from the room, she soon returned with a small salver, on which were displayed the materials of a meal which, to the eyes of the invalid, accustomed for months to the rude food of the camp, appeared tempting beyond all description. There might have been nothing alluring to the epicure in that snowy bread and plain broth, but the very simplicity, together with the grace of the fair girl by whom they were offered, made them more delicious to Paul than the most costly feast. And Paul's situation caused him to depend upon his nurse for those little attentions which invalids ever exact. Those blue eyes looked only sympathy, those fresh lips opened only in pleasant smiles and pleasant words.

So day by day the hours passed away in that still chamber. As Paul gathered strength, he loved to tell the simple maiden of France, of the broad lands through which he had passed in his marchings, of the many scenes in which his soldier-life had been spent. He grew more fond of watching Catherine's light form as she moved about the apartment, arranging its exquisite order, or when, in the still twilight, her golden hair streaming over her shoulders, she sat by his bed-side singing him to sleep with her ancestral ballads. By degrees her image formed itself on his heart, and lent form and colouring to his deepest reveries. Ah! Paul, Paul, there is a meaning in that simple motto in yonder casket, which you both will have applied to yourselves before you are aware!

The Russian, too, was a frequent visitor in the chamber of the sick man. But his talk was of realities, of truths, which could not fail to urge themselves with great weight upon men interested in the mighty struggle then going on almost within hearing. "Let us," Lossmin would say, "view these things as friends, and from a common ground.

"It is now August, and the frosts of autumn are already beginning to be felt. Your Emperor has not yet arrived within sight of Moscow—the last courier announced to me that he had just left Smolensk. Your army is already suffering famine. You will reach Moscow in September, and you will have left one quarter of your army on the road.

"... your Emperor make peace if he can now that the sword is in sight of the scabbard. As for conquering Russia, it were impossible, though there were no such thing as winter. The moment you retreat, you will find yourselves beset on every side by our light troops and Cossacks. Your Emperor is playing a fearful game—let him look well to his pieces."

"Stay," replied Paul, "you know not our strength—nor our Emperor. He will make peace in your capital. He will pledge Alexander under the shadow of the great cross of St. Ivan. He will receive your ambassadors at Paris before the Cossacks shall have found their way back to their native deserts."

. . . . . .

Days rolled on. August passed away, and September came, bringing golden twilight and sharpening air, reddening the broad fields, and lending a richer shade to the dark pine and hemlock. Paul had escaped from the confinement of his chamber. Although a prisoner, no one could have been more at liberty. And Catherine—whom he used laughingly to call his gaoler—never was minister of justice more lenient. Those long walks—how inexpressibly delicious, in the fresh, sunny air! And the eloquence of the young man—how captivating to a susceptible mind, which had hitherto never opened itself to the rude influences around! Her feelings to the young man, while he lay on his couch of pain, she had easily excused to herself as the ... of ...

when he was absent. Paul, too, was attracted to the gentle girl by stronger inclinations than could lay to the charge of gratitude or alleviated loneliness. Her character, so pure, so confiding, so sympathetic, seemed the full realisation of all he had imagined in his Eutopia of love. So, while he cherished the memory of Victorine, he allowed his thoughts to dwell at liberty upon the Russian maiden. As for Lossmin—his sagacity was somewhat blunted by time—he had outlived romance. If Catherine had had a mother, she might have been warned of her indiscretion—for so a prudent mother would infallibly have termed it—and the good Lossmin might have awaked to the manifest danger of sheltering a handsome French officer under his roof, but the worthy woman had been dead some years, and so Catherine went on nursing the young and growing love.

The visits of the courier began to be more frequent, as the needs of the empire demanded that its inhabitants, and especially those near its great roads, should be acquainted with the progress of the war. The carnage of Borodino, the desertion of Moscow, had been communicated in fearfully rapid ... to the startled inmates of the house of Lossmin, and ..., as Lossmin himself was sitting moodily at his door, a breathless courier placed in his hands a letter from his son, an officer in the Russian army.

"My honoured father," for so the letter ran, "our trust in that God who watches over the destinies of righteous men, and also in our father-sovereign, Alexander, and our own good swords, Moscow is in ruins; our rear-guard have finished their mournful work of desolation, and the French conqueror lords it only over a heap of ashes. He has sought peace, but our brave Alexander has vowed not to sheathe the sword while the enemy remains on Russian ground. ...

"I cannot write more now. We have fallen on fearful times. Our capital is deserted—our hereafter is uncertain. I hope to revisit you soon, when we have chased the Frenchmen over the Niemen; but God is all-knowing. It is said the enemy will endeavour to remain at Moscow. If he attempt it he will perish of famine. We are already closing in on the return roads.—Your devoted son, "IVAN."

"Thus far," exclaimed Lossmin, hastening to read the letter to Paul, "I have spoken truly. Let your Emperor look to his gods, if he acknowledge any, for the God whom we worship will not serve him. And behold," he continued, as a few scattered snow-flakes, brought by the chill north wind, slanted through the air, "behold the winding-sheet of the Grand Army!"

. . . . . .

The winter had set in with unheard-of rigour. The roads were well nigh impassable, and intelligence from the army, although intently looked for, came less often. It chanced upon a wild and stormy night, that Lossmin, Catherine, and Paul were sitting by the huge fire in the dining apartment. The tables had long been cleared, and the remainder of the family had dispersed for the night. The moaning of the wind, and the noise of the drifting snow, naturally turned their thoughts to the two armies engaged in their deadly struggle amid such adverse circumstances.

While thus conversing, Paul exclaimed, "Hark!—a knocking at the great door. And some one shouting—'Help! Quick—a light!'"

The party instantly rushed to the door at which the noise was made. They unfastened and opened it amid the entreaties of the voice to lose no time.

"It is—it is Pierre's voice!" cried Paul, as he eagerly

darted forth into the gloom and grasped his friend by the hand.

"And," exclaimed the latter, "I bring you one Ivan Lossmin, whom I made prisoner near here, who is dangerously wounded, and wished only to die under his father's roof. Quick, for the love of God, or he will perish with cold!"

There was no need of his passionate exclamation. Ere he had finished speaking, Lossmin had gained the rude sleigh, and, lifting thence the helpless form of a wounded soldier, bore him across the threshold, crying, "My son! my son! now has the curse of war come home to my own hearth!"

The wounds of Ivan proved of a less severe character than Pierre had at first feared. Added to the combined influence of cold and hunger, they would soon have proved fatal; but warmth and food are powerful aids to the system, and after a night of sound sleep, in which the eyes of the devoted Catherine were never once closed, he declared himself out of danger, and almost entirely free from pain. And with the two officers at his side, Catherine holding his hand in her own, and Lossmin leaning over the head of the couch, he proceeded, at the earnest request of the latter, to relate the circumstances which had led to this unlooked-for and strange reunion

"We had," said Ivan, "steadily followed the French army on their retreat from the capital. Never was there greater bravery displayed than by the Grand Army in their perilous march across a wasted and hostile country. Daily we drew in more and more closely on their flying columns, and daily our combats became more fierce and bloody.

'At length, after weeks of the closest fighting, those whom we pursued found themselves on the banks of the Beresina, spanned in this place only by a single bridge. It was then for the first time that our corps (for hitherto we had kept much in the rear) saw to what a miserable remnant that army was reduced which had so lately entered our capital. We had yet to learn how much stronger they were in all the energies of despair—those men who looked so haggard and famished.

'It was our design to cut the enemy off from crossing the bridge, and had we kept somewhat nearer them in the pursuit we might have succeeded. But in our attempts we met with a most determined resistance, and a bloody struggle ensued, in which you had well-nigh lost a son.

"I found myself surrounded by three French horsemen, and separated from my ranks. I saw that escape was hopeless, and by a strange fatality aimed a blow at the very one who was to preserve me. He is by my side. It was Pierre. My stroke glanced, and a quick, sharp pain in my breast is all that I remember after. When I awoke to consciousness after the lapse of a few hours, I was in the tent of my captor, and my wounds I found dressed with as much care as could have been expected. But I heard the surgeon declare, as he left the tent, that I was in great danger

"Then I wished to see you once more before I died. I implored Pierre to send me to you. He replied that it was impossible. I then gave into his hands my farewell message to you. He gazed at the name. 'Lossmin!' at length he exclaimed; and asked me if you were my father? I replied, yes. In a moment he had left the tent.

"He returned almost immediately, and enveloped me in the best robes he could procure, and removed me to his sleigh. We had scarcely set out before we were overtaken by that fearful storm in which I had well-nigh perished before we found you last night. And now, my father, do we not owe eternal gratitude to the brave man that has restored me to you and to life?"

"Ah!" said Pierre, "who would not have done as I did?"

"Say no more," exclaimed Lossmin, "we shall part from you with sadness, when you return to your army, taking away your brother Paul, whom you have made free were he ten times a prisoner. So long as you will bless the house of the Russian, remain; and when you would depart, it shall not be without a fitting equipage for the brave soldier."

At the mention of departure, the face of Catherine was instantly shaded; a half-checked exclamation burst from her lips; and before she could recover herself, the watchful eyes of Paul were gazing into her own with more than ordinary meaning. She hastily rose, and without uttering a word retired from the room. She was passing through the great hall to her own apartment, when she felt herself detained by a gentle but firm grasp, to which, for the instant, she could not but yield.

"Catherine—my dear Catherine!" said Paul in a low tone, "forgive me for thus addressing you—my love is my only plea—it is a strong one if you will acknowledge it. Am I presumptuous in imagining that I am not without place in your thoughts? I would have the preserver of my life its constant guardian. Oh, Catherine, do not frown on one who loves you, and fancies you sympathy looks kindly on him!"

"Nay, sir," exclaimed the frightened girl, "so noble, so ambitious, you would not wed the simple Russian maiden! Be content to forgive me—or think of me only as one who aided to restore you to your country and the world. Gladly would I hear of your success hereafter. I will promise more, that I will never forget you, though our destinies are so widely different—"

"No more!" no more!" interrupted Paul. "I will yet earn your love. For you sake I will renounce all ambition for that glory which most men prize, but which you in your pure wisdom look on as empty. Then you will love me—"

"Catherine!" exclaimed the deep voice of Lossmin—for the precipitate flight of the lovers had aroused him to a sudden perception of the truth, and had brought him in quest of them—"Catherine, do you love the young French soldier?"

There was no reply, but the soft eyes were directed upward for a moment, and Paul fancied the small hand in his own ceased to struggle

"It is enough," said Lossmin fervently. "God, I thank thee, that in one day thou hast given me two noble sons! Learn more firmly on him, my daughter, and may Paul Dubois never do aught than bless this hour! My children, I leave your young hearts to their own expressions!"

* * * * *

In a stately park near Paris there stand two mansions, which, by their resemblance and noble appearance, elicit frequent remarks from those who extend their search after pleasure beyond the gay city. They are tenanted by citizens Paul Dubois and Pierre Chatelet.

A BOLD STROKE FOR A HUSBAND.—General Gunning had a most beautiful and accomplished daughter. Her charms attracted many admirers, among others, the Marquis of Blandford, eldest son of the Duke of Marlborough, and the Marquis of Lorn, eldest son of the Duke of Argyll. At first the young lady seemed to favour the pretensions of the Marquis of Lorn, but in a short time she evinced a decided preference for the Marquis of Blandford. The Duke of Argyll, who had married the widow of the Duke of Hamilton, a sister of General Gunning, inquired of the General whether the Duke of Marlborough was apprised of his son's attentions to his daughter, and approved of the projected matrimonial alliance. The General frankly admitted he did not know, but would immediately address a letter to the Duke of Marlborough on the subject, and if he disapproved of the match, he would at once put an end to the affair. Accordingly he wrote a letter to the Duke, and sent it to Blenheim by his groom. He received an answer expressive of the Duke's entire approval of his son's choice, and of his own deep sense of the good qualities of the young lady. General Gunning immediately repaired to the Duke of Argyll, who, having read the letter attentively, expressed strong suspicions of its authenticity. General Gunning then went to Lord Charles Spencer, the Duke's brother, who unhesitatingly pronounced the letter to be "an awkward imitation of the Duke of Marlborough's handwriting." The seal was either an impression from a small seal, which the Duke had ceased to use for many years, or from one copied from it. General Gunning returned home and questioned his wife and daughter on the subject, they assured him the letter was genuine, or they had been imposed on. The General next interrogated the groom, who, impelled partly by threats and partly by solicitations, confessed he had been bribed by Miss Gunning, who had furnished him with the letter. The General then turned his daughter out of his house, and shortly after separated from his wife. Mrs. Gunning published a large pamphlet, entitled, "A Letter to the Duke of Argyll," in which she attributed the forgery to Captain and Mrs. Bowen, whom she had offended by endeavouring to prevent their marriage, at the earnest solicitation of Mrs. Bowen's father. But Mrs. Gunning does not attempt to explain how the Bowens became acquainted with the General's intention to write to the Duke of Marlborough, or transmit his letter by his groom. The Duke of Argyll declined all further intercourse with his sister-in-law, Mrs. Gunning, and his niece, Miss Gunning.

MISCELLANEA.

LUMP 'EM.—A young Wesleyan student recently occupied, on Sunday morning, the pulpit of one of their chapels in Manchester, and in his prayer, he prayed for the Queen, Prince Albert, each of the royal babies by name, then proceeded to the Duchess of Kent, and got as far as the King of Hanover, when a blunt, honest countryman, who happened to be a worshipper, tired of this long catalogue, cried out aloud, "Lump 'em! lump em!" A hearty "Amen!" from the congregation testified how feelingly they entered into the countryman's request, to the surprise and confusion of the "mannin black,"

EDUCATION IN AMERICA.—It is by the attention it pays to public education that the original character of American society is formed and preserved. Their Schools were established by law, and are kept up by obliging the inhabitants, under pain of heavy fines, to support them. Schools of superior kind were founded in the same manner as in the more populous. The municipal authorities were bound to enforce the sending of children to school by their parents: they were empowered to inflict fines upon all who refused compliance, and, in case of continued resistance, society assumed the place of the parent, and deprived the father of those natural rights which he used to so bad a purpose. At this very time (in the year 1630) those principles which were scorned or unknown by the nations of Europe were proclaimed in the deserts of the New World, and were accepted as the future creed of a great people. The boldest theories of the human reason were put into practice by a community so humble that not a statesman condescended to attend to it, and a legislation without a precedent was produced off-hand by the imagination of its citizens.

'JIM, does you mother ever whip you?' —"No, but she does a precious sight worse, though."—"What is that?"—"Why, she washes my face every morning."

SLOW AND RAPID COMPOSITION.—Speed in composition is a questionable advantage. Poetic history records two names which may represent the rapid and the thoughtful pen—Lope de Vega and Milton. We see one pouring out verses more rapidly than a secretary could write them; the other building up, in the watches of the dark, a few majestic lines. One leaving his treasures to be easily compressed into a single volume, the other to be spread abundantly over forty-six quartoes. One gaining fifteen pounds, the other a hundred thousand ducats. One sitting at the door of his house, when the sun shone, in a coarse coat of grey cloth, and visited only by a few learned men from foreign countries, the other followed by crowds wherever he appeared, while even the children shouted after him with delight. It is only since the earth has fallen on both that the fame and the honours of the Spaniard and the Englishman have been changed. He who nearly finished a comedy before breakfast now has motionless in his small niche of monumental biography; and he who, long choosing, began late, is walking up and down in his shining robes, and with laurel round his head, in the cities of many lands, having his home and his welcome in every devout heart and upon every learned tongue of the Christian world.

WHAT IS A COQUETTE?—A young lady of more beauty than sense, more accomplishments than learning, more charms of person than graces of mind, more admirers than friends, more fools than wise men for attendants.

AN EDITOR'S REVENGE.—A Donegal paper publishes a short paragraph descriptive of the Earl of Enns' visit to his estates in that quarter. His lordship, it seems, addresses his tenants at great length; but, says the *Ballyshannon Herald*, "As his lordship never had sufficient patriotism to subscribe to his county paper, we shall not occupy our columns in publishing his speech."

ONE MISSING.—The Rev F Coyle, in a lecture on memory, delivered at Adelaide (reported in the *South Australian Register*), instanced stage drivers, whose memory of the orders, and directions given them is remarkable. He once rode outside with the owner and driver of a stage from Troy to the land of knickerbocker: the driver could not have had less than fifty parcels and messages to deliver by the way: but he was at a loss, he knew he had not often *one* parcel, but 'dang him if' he could remember what it was. At when the children came rushing out with 'Welcome home, Pa, but, oh, where did you leave Ma?' "May I be totally scorched, said he, "if I hant forgot Sal!" That was the missing parcel.

ETHAN SPIKE ON THE UNION.—The following (says an American paper) is Ethan Spike's best effort, and it will be read with interest by all who can appreciate true eloquence and patriotism. Ethan Spike is from Down East.—Fellow-citizens we have come up here, every man prepared to take his life in his own six pocket—to preserve the union—that blessed union—let for, bled for, and died for, by our reverend posterity on the fields of Buena Vista, Yorktown, Mahawsky and Waterloo. Thus here glorious union, feller-citizens, is threatened with as much of its life. By whom? Why, by a set of unsarcumsized, mean, nasty critters, who cannot depreciate this blessed perladynum that provides every man a vine and figtree—under which we've sot, and our fathers has sot, and no one has dared to molest or skeer us. Feller citizens—I'm for the union. Yes, *sir!* and though the hull world was again me, though the devil joined the aberlushunists, yet, as Mr. Webber said in his Newburyport letter—"*Hue stallium, sanda Purissima Husto. taglonis, echo, signum ee Bonaraja*"—though pelican towered on ossa, I'd fire fall all was blow! (Hear, hear, and stomping.)

Feller-citizens, I'm in earnest! A crisis is riz! Ar it wakin' up the free, enterrified suvrins of these 'ere stills more suvriner states to the reskew.

"That's a mustelin' of nations,
A wakin up of snakes—
The devil's broken out again,
And all creation shakes."

Yes, every thing is wakin' up, and takin' off its coat. Even the sleepy lion, Daniel Webster, is arousin' and shakin' his tail and mane, and prepares to pay for human rites an democratic usages. The great confounder of the constitution,' as he is justly termed, in his last letter to me, very truly and graphically says—'Ethan,' says he, 'I don't speak as a Massachusetts man not nothin' else—no pen up your turkeys counteract my powers—the hull continent, however bounded, is mine!"

THE DEATH OF A WIFE.—"The death of a man's wife," says Lamartine, "is like cutting down an ancient oak that has long shaded the family mansion. Henceforth the glare of the world, with its cares and vicissitudes, falls upon the old widower's heart, and there is nothing to break their force, or shield him from the full weight of misfortune. It is as if his right hand were withered—as if one wing of his angel were broken, and every movement that he made brought him to the ground. His eyes are dimmed and glassy, and when the film of death falls over him he misses those accustomed tones which might have smoothed his passage to the grave.

PUTTING THE QUESTION.—'Sally, don't I like you!'—"La, Jim, I reckon so!" "But don't you know it, Sally? Don't you know I'd tear the eyes out of any ton cat that dares to look at you for a second?" "I 'spect you would." 'Well, the fact of it is, Sally, I—"—Now, don't Jim, you're too sudden.' 'And, Sally I want you to—.' "Don't say anything more now, I will—." "But it must be done immediately, I want you to—." 'Oh, hush, do [illegible] to-night, to get ——.' "What, so soon? Oh, no—impossible! Father and mother would be angry at me."—"How'd be mad for doing me such a favour as to m——.' "Ye, dear; oh, what a feeling!"—"But there is some mistake, for all I want to have you do, is to *mend my trowsers!*" Sally could hear no more. She threw up her arms, and, screaming hysterically, fainted away—says an American paper.

PRECOCITY OF INTELLECT.—Having watched the growth of the young mind a good deal, we are less and less in love with precocity, which, indeed, is often a mere manifestation of disease, the disease of a very fine, but weak nervous organisation. Your young Roscioses and all wonders of that kind generally end in the feeblest of common place. There is no law, however, precise and absolute in the matter. The difference of age at which men attain maturity of intellect, and even of imagination, is very striking. The tumultuous heat of youth has certainly given birth to many of the noblest things in music painting, and poetry, but no less fine productions have sprung from the ripeness of years. Chatterton wrote all his beautiful things, exhausted all hope of life, and saw nothing better than death, at the age of eighteen. Burns and Byron died in their 37th year, and, doubtless, the strength of their genius was over. Raffaelle, after filling the world with divine beauty, perished also at 37. Mozart earlier. These might have produced still greater works. On the other hand, Handel was 48 before he gave the world "assurance of a man." Dryden came up to London from the provinces, dressed in Norwich drugget, somewhat above the age of 30, and did not even then know that he could write a single line of poetry, yet what towering vigour and swinging ease appeared all at once in "Glorious John." Milton had, indeed, written his "Comus" at 28, but he was upwards of 50 when he began his great work. Cowper knew not his own might till he was far beyond 30, and his "Task" was not written till about his 50th year. Sir Walter Scott was also upwards of 30 before he published his "Minstrelsy," and all his greatness was yet to come.

A negro once gave the following toast. "De Gobernor ob de State—he come in berry little opposition, he go out wid none at all"

Women's teeth generally decay sooner than men's, the reason of which, says some writer, is because of the friction of the tongue and the *sweetness of the lips*

DO IT WELL.—A noble saying is recorded of a member of our British House of Commons, who by his own perseverance and industry had won his way to that high position. A proud scion of the aristocracy one day taunted him with his humble origin, saying, "I remember when you blacked my father's boots." "Well, sir," was the noble response, "*did I not do it well?*"

AMERICAN ADDRESSES.—We deem it useful to remind all who are in the habit of writing letters to the United States, of the necessity of adding, on the addresses of their letters, the names of the county and the state to the name of the locality The utility of this is evident from the fact, that there are in the United States 25 localities called Washington, 24 called Franklin, 23, Salem, 22, Springfield, 25, Canterville, 19, Jackson, 15, Jefferson, 18, La Fayette; 10, Filmore (the name of the present President); 14, Troy, 9, Kossuth, 10, Lowell; 20, Richmond, 18, Waterloo; 22, Columbia; 18, Concord, &c, all scattered over the union, and at immense distances from each other.

ADVANTAGE OF DRINKING WATER.—It is a great mistake to think that beer is necessary for a hard-working man. At the time I write, there are a set of men, employed in draining by task-work in Richmond-park, who are patterns of English labourers. Hard as they work from morning to night, and in all weathers, they seldom drink any beer. They boil a large kettle of coffee in their little bivouac in the park, and drink it hot at their meals, this costs them but little, but they do as hard a day's work upon it as any labourers in England, and have continued to do so for three years past, under all the disadvantages arising from wet and cold to which a drainer is subject. A proof of this may be found in Capt. Ross's recent voyage to the Arctic regions. He says, that on a journey, attended with great difficulty and hardship, he was the only one of the party whose eyes were not inflamed: he was the only one who did not drink grog. He was also the oldest person amongst them, and for the same reason he bore fatigue better than any of them. He adds, that he who will make the experiment on two equal boats' crews, rowing in a heavy sea, will soon be convinced that the water drinkers will far outdo the others. No better testimony to this is required than the experience of the men who work at the iron founderies. This is the hardest work that falls to man to do, and so well do the labourers in this department know that they cannot perform it if they drink even beer, that their sole beverage during all the hours of this hot and heavy labour is water.

THE HONOUR OF THE BAR.—Some of the scandal in which the profession has been involved has originated in the shabby tricks of a few, and more in the *badinage* of the many. Serjeant Davy was once accused of having disgraced the bar by taking silver from a client "I took silver," he replied, "because I could not get gold; but I took every farthing the fellow had in the world, and I hope you don't call that disgracing the profession."

NOT VERY COMPLIMENTARY.—One of the delegates of the General Assembly of the Free Church of Scotland, from France, who had not acquired the English language very perfectly, observing that a bare country was called a barren one in English, remarked on rising, as he looked round upon the great number of bald heads and venerable men before him, that "he felt very much embarrassed in speaking before so many barren heads."

BEAUTIFUL THINGS.—Beautiful things are suggestive of a purer and higher life, and fill us with mingled love and fear. They have a graciousness that wins us, and an excellence to which we involuntarily do reverence If you are poor, yet pure and modestly aspiring, keep a vase of flowers on your table, and they will help to maintain your dignity, and secure for you consideration and delicacy of behaviour

ECONOMY IS DUE TO OUR EMPLOYERS —"Waste not, want not," is a good old proverb "He that is faithful in little is faithful also in much" A person who takes no care of the materials committed to his hands by his master will never duly husband his own property. Economy and wastefulness are habits that will influence us in all things, both when we are engaged about our own substance or that of another. To waste another's goods is the same as to rob him The loss in both cases is equal, and the principles whence they spring very much alike The man who takes care of his employer's goods is sure to look after his own, and thus is on the road to prosperity. It would be difficult to calculate the immense loss of property that every year occurs from carelessness and want of economy. Some persons are worth nearly half their wages more than others, because they never injure or waste anything The employer being wealthy, or the stock abundant, is no excuse for carelessness. A loss is a loss, and a robbery is a robbery, whether taken from the heap of the miser or the smaller store of the indigent. "Gather up the fragments, that nothing be lost," is a divine command. Heaven allows nothing to be destroyed. There has not been a single drop of water wasted from the creation until now. The decomposed elements of last autumn were the aliment of our last spring. Economy, rigid economy, is one of the laws of nature; and we shall not realise "the good time coming," until we have a careful and economical world. Let this spirit prevail, and not only will the master be saved from loss, but in many instances the servant will rescue himself from the Union.

ANSWERS TO CORRESPONDENTS.

MR. ANDREW LEIGHTON, of Clevedon-terrace, South-street, Toxteth-park, Liverpool, writes to complain of our insertion of a poem by his sister, without acknowledgment, in the number of THE WORKING MAN'S FRIEND for the 1st of November We must plead not guilty to the charge of having intended any disrespect or injustice The poem was sent us, and we inserted it, deeming it very suitable to our columns, and one which our readers would peruse with pleasure. We refer to the poem entitled "The Lyre of Labour." Mr. Leighton states that it was by his sister Marie, and that it originally appeared in the *Preston Guardian*.

MR. HENDERSON has kindly pointed out a mistake which occurred in our number for November 1. We call a Chinese reel, a loom. If our readers turn to page 69, they will be able to make the correction for themselves.

HUMANITAS.—In ancient London, in various parts of the town, public conduits were erected where animals might quench their thirst, there were two on Snow-hill, closely contiguous to Smithfield, one erected in 1489, and the other in the reign of Henry VIII, and called Lamb's Conduit. In the year 1728, however, all the ancient conduits were destroyed, and the reason assigned by the writers of the last century is, that it was the object of the City authorities to compel all persons to pay for a supply of water from the New River, then recently brought to London by Sir Hugh Middleton; since which time no provision whatever has been made for supplying water to the beasts and sheep in the market

SAMPSON.—The length of railways now in operation in the United States amounts to 6,674 miles. We give a statement furnished by an American friend showing the length of line owned by several of the companies owning the largest roads, including branches —

South Carolina	212 miles.
Michigan Central	221 ,,
Baltimore and Ohio	213 ,,
Georgia	210 ,,
New York and Erie	200 ,,
Central Railroad of Georgia	191 ,,

The longest continuous line of railway in the United States is from Savannah to Dalton, 932 miles.

Central Railroad (Savannah to Macon)	191 miles
Macon and Western (Macon to Atalanta)	101 ,,
Western and Atalanta (Atalanta to Dalton)	100 ,,
	392 ,,
From Dalton to Chatanooga is	38 ,,
which will be opened the present year, making a continuous line of	430 ,,

From Chatanooga and Nashville the whole line is under contract, 150 miles to be completed in two years, giving to Savannah a connection through the interior, in one continuous line of 580 miles, to navigable waters flowing into the Mississippi The actual expenditure upon these lines amounts to one hundred and seventy-five and a half millions of dollars. There are now some 8,600 miles more of railroad in progress, and which will, in the proportion of the roads completed, absorb some sixty millions more of capital, to which add the cost of roads finished and in use, but of which the cost is not given—such as the Georgia Railroad, the Michigan Central, the New Jersey, Central New Jersey, New York and New Haven, New York and Erie, and others—and it would probably not be an excessive estimate to assume two hundred millions of dollars as the amount invested, or in progress of being invested, in railroads in the United States. Of this large sum a very small proportion only is held abroad.

All Communications to be addressed to the Editor, at the Office, 335, Strand, London.

POSTPONEMENT OF THE HISTORY OF HUNGARY FOR ONE WEEK.

We regret to announce that, notwithstanding the most careful preparation on our part for the commencement of this History, we are compelled to defer the publication of the first chapter till our next number. The large number of Engravings to be introduced (upwards of One Hundred) has prevented the artists from furnishing those requisite for the commencement. The first chapter, with seven beautiful engravings, will positively appear in our next number, when the History will be continued without interruption till its completion. We trust our readers will excuse this unavoidable delay, remembering that, in consequence of our large circulation, we are compelled to go to press nearly a fortnight prior to the date of publication, which will also account for our having so exten-

sive a list of Answers to Correspondents in the present number

AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. I., NO. 8.] SATURDAY, NOVEMBER 22, 1851. [PRICE ONE PENNY.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER I.

THE truth of the assertion, that every nation has a mission assigned to it by Providence, is every day becoming more fully recognised. One by one kingdoms and empires have appeared, run their course, and passed away, having fulfilled their destiny with more or less of faithfulness and truth. With them, as with individuals, death is less terrible when its approach has been heralded by slow decay, and its victims sink to rest from a well-spent life of toil, of triumph, of duty. But when "the voice of the weeper wails manhood in glory"—when a people has entered on its career with all the vigour of hardy youth—with the proud consciousness of the power to do and the heart to dare—or is struck down in the fullness of its early pride and beauty—the shock is more severely felt, and men throng to mourn and admire the features of the departed—

> "To mark the mild angelic air,
> The rapture of repose that's there"

So has it been with Hungary. Thousands of the people of this country knew nothing more of her than that she was in existence; but when they heard of her heroic struggle, and of her unhappy fate, the gaze of all Europe was turned towards her. The interest has been still further increased by the advent of her great chief to our shores. People ask with anxiety for information as to the fatherland of this celebrated man, and the cause in which he fought. There is still another circumstance in connection with Hungary which arrests our attention with no small force, and will perhaps contribute more to the instruction and interest which we hope to supply in the following pages than any other. While all other countries of Europe have been verging more and more every year towards an amalgamation of interests, of manners, of institutions, and even of language, Hungary has remained as separate and as distinct as ever. Standing upon the confines of Europe, she has again and again stood the full brunt of the assaults of the Moslem; and whilst her people and institutions have all the calm heroism and solidity of Christian civilisation, their manners,

BATTLE OF MAURIAC BETWEEN THE HUNS AND THE ROMANS.—(*See page* 114.)

their eloquence, and their costume, have all the picturesque beauty and romantic colouring of the "children of the sun." Our readers may therefore expect to find themselves in another hemisphere as they linger over the records of the heroic but unfortunate Magyars. All history is full of matter for deep thought; but that of Hungary has the charm of a romance, with the sober details of sad, but profitable, experience.

The Magyar historians are unanimous in affirming that they derive their origin from the people known as *Huns*, and celebrated for the fury of their assaults upon the Roman empire. They were amongst the number of those fierce tribes who issued from the north and north-east about the fourth or fifth century after Christ, and bore down the degenerate legions by their desperate and ferocious valour. They were the terror of the Greeks and Romans; and as men generally like to disfigure whatever they hate, the Latin and Byzantine writers paint the Huns as hideous savages, ugly and deformed, having small eyes, flat noses, no beards, and a tawny complexion. Independently of the circumstance already mentioned, some doubt attaches to the correctness of this description, from the fact, acknowledged by all, that the Magyars of the present day are types of manly beauty. The frightful ravages committed by the Huns struck terror into the inhabitants of the old and worn-out Roman empire; and Attila, one of their leaders, was celebrated amongst them as "the scourge of God." Wherever he directed his march, blood, havoc, and desolation marked his path, and many a Roman infant ceased its cries and tried to sleep when that dreaded name was uttered by the nurse's lips.

Modern historical and philological researches show that the Finns, the Turks, the Magyars, and also the Mongols, and least civilised Tartar tribes of central Asia, all belong to the same stock. It is true that there exist many striking differences of physiognomy and manners between the Turks and Magyars at the present day, but none that may not be accounted for by the difference of climate, and the mixture of other races.

The original seat of the Huns was the centre of Asia to the north of China, between the rivers Irtisch and Aum. The Chinese annalists ascribe to them an antiquity equal to that of their own nation. Previous to the year 200 of the Christian era many dynasties had in succession reigned over them. They had in those vast *steppes* or open plains an empire of wider limits than that of Rome—kings, "strong in war and wise in council," and legislators, who, if they did not possess the subtlety and *finesse* of modern statesmen, had at least sufficient ability for their age and generation, and the circumstances by which they were surrounded. It must not, however, be for a moment imagined that the Huns were by any means under the influence of what may be termed a *fixed* civilisation—that they applied themselves to the cultivation of the soil, or to manufacturing industry. They were essentially a nomadic, or wandering race, tending their flocks and herds, and spending their whole lives on horseback. War and the chase were the two great national pastimes; and the more effeminate Chinese were forced to purchase peace from their troublesome neighbours by many a heavy sacrifice. In the reign of Pou-nou-Tanjou, about the 87th year of our era, the empire of the Huns was considerably enfeebled. A desolating famine was a prelude to the misfortunes which followed. The Chinese managed to sow dissension between them, and thus achieved by cunning what their arms had proved unable to effect. The Huns separated into the northern and southern tribe. The former was subjugated and remained for a long time enslaved; but it is with the latter that we have to occupy ourselves—for they were the ancestors of the Magyars. The others, harassed by the intrigues of the Chinese, left their country at last, to take possession of Turkey and the Holy Land. It was only by a great series of changes, and after the lapse of many years, that contact with other races, and their conversion to Islamism, deprived them of many of the leading characteristics of their tribe, and moulded the Tartar of the eastern plains into the modern Turk. The northern Huns were attacked afresh by the Chinese; and having been defeated by the Imperial general in several battles, they too abandoned their original seats; and after wandering for many years through various parts of Asia, they at last poured themselves upon Europe like an avalanche. They overthrew all who opposed them. The two empires of the Goths fell beneath their arms, and in 427 they settled, temporarily at least, in Pannonia, and entered the Roman empire both from the east and west. They had many chieftains of more or less celebrity in this exodus; but the most renowned of all was Attila, to whom we have already made reference. By the Hungarians he is called *Etele*. The opinions entertained concerning this extraordinary man are various. His partisans and followers considered him a hero of the highest order, and compared him to Hannibal or Alexander; whilst the Greeks and Romans agree in pronouncing him to be a bloodthirsty monster, "incapable of any dram of mercy," whom no misery could pierce and no prayer could soften. It is clear that he was fierce and relentless as a tiger; and that wherever he passed, neither property, nor life, nor honour remained unspared. From time to time the Greek Emperors at Constantinople purchased a shameful peace by large tribute, but nothing could satisfy the greedy barbarian but the possession of the whole of the two empires. Town after town fell before the fiery valour of the Huns, until all central Europe, save Spain and Italy, was in their hands. On they swept in their dreadful course, like some horrible monster, "tainting and poisoning with pestiferous breath what the voracious appetite could not devour." A short time previous to his setting out upon this expedition, an incident occurred which might well be scouted as a piece of incredible romance, if it were not verified by the unanimous testimony of contemporary historians. The fame of the redoubtable warrior had penetrated the boudoirs of the Roman ladies, and despite the depreciatory reports of their affrighted countrymen, the ardent imagination of the Italian women had pictured the barbarian conqueror as the idol of chivalry, and the very soul of poetry and of love. Honoria, the sister of Valentinian III., had besought her brother to bestow her hand upon Attila, but the Emperor, degenerate as he was, had still some sparks of the ancient national pride remaining, which, centuries before, had dictated the haughty and famous answer, that the daughter of a Roman citizen was too good to be the bride of a king. Enraged at his refusal, Honoria, though only sixteen or seventeen years of age, had the courage secretly to forward a ring to Attila, as a pledge of her love, and a gage of the union which she hoped would afterwards take place, at the same time requesting him to march upon Italy. The rude barbarian at first answered by an expression of cold surprise at so strange a proposal, but six years later it suited his policy to demand her as his bride, and half the empire as her dowry. Valentinian replied that Honoria was already married, and that he had consequently no claim upon the empire. Attila only needed an excuse to commence the war, and, joined by Clodion, a prince of the Franks, who had been deposed by the Romans, and whose brother was a hostage in their hands, he now marched upon Italy. No sooner had he reared his banner, than barbarian hordes rushed from every side to serve beneath it, from the shores of the Baltic, and the banks of the Rhine, the Volga, and the Danube—all gloating with eagerness to seize upon the rich spoils of the falling empire. A small body of Franks, commanded by the eldest son of Clodion, acted as their guides. His army amounted in all to seven hundred thousand hardy warriors, burning with the desire of plunder and conquest, and having unbounded confidence in their leader.

The Romans, on their side, were roused from their "sloth and apathy by *terror* and *despair*; to shame they had long before been lost." The army, under the command of Actius, "the thrice-appointed consul," to whom "the wretched Britains" vainly sent their "groans and tears," took their last stand beneath the Alps—those eternal hills, which had looked down upon so many brilliant victories won by their forefathers. The formidable *pilum*, with which they had conquered the world, still hung at the belts of their degenerate descendants, but the hands that were to grasp it were unnerved by luxury and vice, and the brave and unconquerable will, without which weapons are useless, was wanting too. Theodoric, the King of the Goths, fearing a descent upon his kingdom in Spain, had joined his forces to them, and the united armies awaited the approach of Attila upon the vast plains of Mauriac (now Mury). On the morning of the 1st of July, the opposing forces were drawn up in hostile array, the war-

soldiers of the past, and the fresh youth of modern Europe, standing face to face, panting for the signal to commence the strife for the empire of the world.

The battle was long and bloody. Again and again the fiery Huns rushed to the charge upon their mettled steeds, and were dashed back by the Roman legions, who fought with unshaken constancy. Aetius, in person, performed prodigies of valour, and rallied his faltering troops by deeds worthy of Marius or Cæsar. Theodoric, too, was everywhere, and everywhere was valiant as a lion. Attila proved himself not unworthy his ancient fame. No troops could flinch from the onset under such leaders. During the forenoon fortune appeared to incline to neither side; but towards evening Theodoric was knocked off his horse in the *melée*, and trampled to death under the feet of the furious combatants. Night fell before the victory had declared for either side, but the Romans remained in possession of the field of battle.

In June, 452, Attila set another army on foot, and at last made an irruption into Italy, and carried everything before him. The affrighted inhabitants lost time in fruitless deliberations, without taking measures to make an effectual resistance. Some fled from the mainland to take refuge in the islands of the Adriatic, and there laid the foundation of Venice. Concordia, Pavia, Padua, Vicenza, Verona, and even Milan, fell into the power of the Huns. He was in the midst of his triumphs, when the Pope and the Consul Arienus were sent to treat with him by the Emperor, and he consented, upon being promised an annual tribute, to withdraw from Italy. Upon his return he occupied himself with internal organisation of the vast empire which now owned his sway, and it certainly required a commanding genius to rule under one sceptre so many peoples, differing so much in their manners and their

At last, when crowned with glory, and when he might reasonably look forward to spending the rest of his days ... peace and retirement, he took a step which proved fatal to his [illegible] He became violently enamoured of the [illegible], King of Bourgogne, and married her; but she, on the wedding night, from what motive is not known, stabbed him with a poignard as he slept.

His followers celebrated his funeral rites with great pomp. At the festivities which followed, the bards sang of [illegible] and the warriors made the air resound as they clashed their swords in accompaniment around the body of the fallen hero. In compliance with ancient custom, they enclosed his remains in a magnificent coffin, and declaring that the memory of such a man deserved "not ordinary tears, but tears of blood," they sacrificed upon his tomb the workmen who had erected it, lest they should ever insult the *manes* of the deceased by engaging in any less honourable employment. With Attila, the Hunnic empire fell. It had been erected by conquest, and when the master-spirit which presided over it disappeared from the scene, it at once went to pieces.

The Huns dispersed, and, annihilated as a people, fell backwards Asia, and from that period their primitive name is no longer seen in history. Other tribes of the same family succeeded them upon the political arena, and the history for a long period presents only the spectacle of incessant struggles. Before the entrance of the Huns into Europe, the country, which is denominated Hungary at the present day, and which was the centre of the Hunnic empire, had been peopled from remote ages by the Pannonians and Illyrians, races of Greek origin, with some mixture of Celtic blood. In the northern part, on the borders of the Danube, dwelt the Quadi and Marcomanni, two tribes often mentioned by Cæsar in his Commentaries, who were Germanic in their origin. To the east, in modern Transylvania, Moldavia, and Wallachia, the great nation of the Dacians, belonging to the Thraco-Greek family, had established itself. Last of all, in a corner at the foot of the Carpathian Mountains, between the Quadi and the Dacians, were the Jazyges, a people belonging to the Selavonic stock. The Huns found all these people in subjection to the Romans, or Goths. The Hunnic invasion had set in motion many other tribes of the same race, who were then encamped near the shores of the Black Sea, in the way of the Asiatic races in their march towards Europe. The Avars, a branch of the Huns of the south, arrived upon the confines of Europe about the year 558. They resembled the Magyars of the present day, in their physiognomy and general appearance. The lightness of their complexion, and the regularity of their features, attracted the attention of the Greeks and Romans. They wore their hair in flowing tresses, tied with gaily-coloured ribbons, a custom which still prevails among the Magyar peasantry, but in other respects they were dressed as the Huns.

The Avars precipitated themselves upon the Roman empire with the same violence as their predecessors, and established themselves in Pannonia. Their sway extended in 582, under their Khan Bayan, from Thuringia to Italy. In 646, having lost Dalmatia, and some other provinces in succession, they retained possession of Pannonia alone, and the countries bordering on the east. Charlemagne, who had extended his empire as far as the Ebro in Spain, resolved to drive the Avars beyond the eastern frontiers of Europe. It took four campaigns, however, when he was in the zenith of his power, to accomplish this. Having obtained possession of Upper Pannonia, he formed it into a margravate. One division of the Avars then returned to Asia, and the remainder became blended with the rest of the population, so that their famous name entirely disappeared from history. Their ruin was achieved by the same people who had overthrown the Hunnic empire. It was the Franks and Germans who put an end to the Avar domination after it had lasted for three centuries.

Then came the Croats, from the foot of the Carpathian Mountains, to occupy the countries now known as Croatia and Dalmatia. Swatopluk founded in the north-west the kingdom of Great Moravia, and the Bulgarians, who were another branch of the Hunnic race, established themselves in the countries lying to the east. It was about this time, also, that some other tribes of the Slavonic family commenced to settle in some parts of those districts, now known as Hungary and Transylvania.

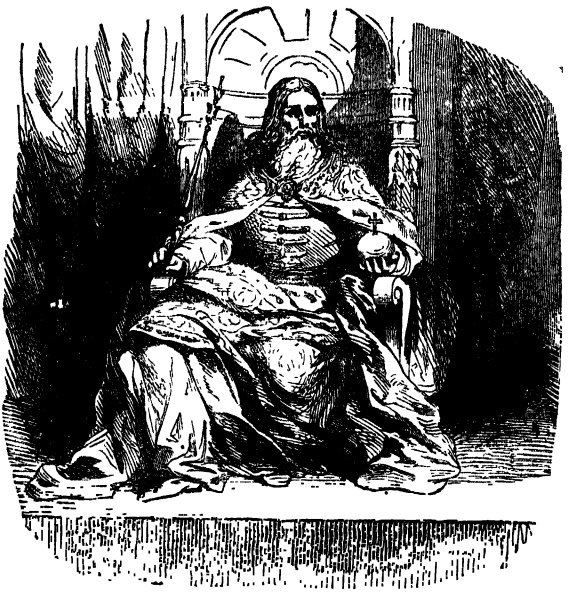
We must entreat the attention of the reader to the distinctions between these various races, in order that he may clearly understand what follows.

We have now arrived at the invasion of the great Magyar race, which predominates in Hungary at the present day. About the time of the downfal of the Carlovingian dynasty, or dynasty of Charlemagne, in France, a people bearing the name of Magyars, who had previously dwelt in the original seat of the Huns, appeared suddenly upon the frontiers of Transylvania and Moldavia (the ancient Dacia). These also belonged to the Hunnic race, and received as an inheritance whatever rights had been acquired by conquest in the preceding migrations of their countrymen. The Magyars had in succession abandoned their seats on the banks of the Volga, and the shores of the Caspian Sea, at first for want of sufficient extent of territory, and afterwards because Arnhult, Duke of Bavaria, besought them aid against Swatopluk, King or Duke of Great Moravia. When they had entered Pannonia, they sent forward Kusid, the son of one of their chieftains, to make observations, and bring them intelligence as to the fertility of the soil which their forefathers had inhabited, and in which they were now about to settle. Kusid filled a pitcher with water from the Danube, and a basket with some soil and herbage, and carried them back. Upon seeing them his countrymen clashed their arms in token of satisfaction, and moved forward with confidence. Though they thus gave evidence of their desire of bettering their condition in material concerns, they by no means laid aside their arms and warlike habits. Their appearance spread terror upon every side. They cast themselves like a flood over Pannonia, and under the conduct of their chief Almos, they made themselves masters of the vast tract between the Tibissa and the Danube, upon which Attila had formerly pitched his tents. They in like manner defeated the Slavonian monarch Swatopluk, and having put to flight the neighbouring chieftains, they finally took possession of the country which at the present day constitutes the kingdom of Hungary and the principality of Transylvania, a part of Wallachia, and Austria, except Croatia, and the coasts of the Adriatic Sea. This conquered territory now took the name of *Hungary*, according to some from a town called *Hungvar* or *Ungvar*, in which the new-comers had fixed their head-quarters; and according to others, from the name of the Huns themselves. The Magyars called their own country *Magyarorszag* or Magyary.

If any proof were needed of the spirit of liberty which animated the Magyars from the earliest times, it would be afforded by the treaty into which they entered with Almos their chief, upon their settling in their new territory. Almos proclaimed himself the successor of Attila, and wished to obtain from the people an assurance that they would place his son Arpad upon the ducal throne at his own death. In the compact which was made upon this occasion, the king guaranteed the preservation of all the ancient rights and usages of the nation; and that, upon the achievement of any fresh conquest, the land thus acquired should be equally divided amongst all those who had contributed to the success of the enterprise. The people, on their part, swore allegiance to himself and his son, not as irresponsible monarchs, but as freely elected leaders, "first among their equals;" and in accordance with an ancient national usage, the contracting parties, or their deputies, opened with their swords the veins of their arms, and letting the blood flow into goblets half filled with wine, drank it off as the pledge of their faith. He who violated an engagement thus ratified, covered himself with eternal infamy.

Arpad reigned in 891 over little less than a million of Magyars, of whom 215,000 were men capable of bearing arms. He was the monarch whom the national historians delight to honour He occupies the place in the memories of the Hungarian people that Harold, the last of the Saxon Kings, or Richard Cœur de Lion, does in our own, nay, perhaps a higher one, in consequence of the greater tincture of romance and

ATTILA.



enthusiasm which pervades their character. Louis Kossuth, in one of those spirit-stirring and eloquent bulletins, issued by him during the late war, which have made his name immortal, proved himself a true orator in the highest and best sense of the word, when he addressed the Magyar army as "Warriors of Arpad!" He knew that every heart would awake to the sound, recalling as it did one of the proudest periods of their history, when the swords of their forefathers were never drawn but to conquer.

Arpad greatly added to the strength of the nation by his wise measures for the internal organisation of the new state. For this purpose he convoked an assembly upon a great plain, under the open sky, to deliberate upon affairs of common interest. In this meeting we find the origin of the Hungarian Diet. It is at this time, also, that the political privileges, which the Magyars reserved to themselves alone, to the prejudice of the conquered people, begin to show themselves more distinctly; privileges at that time, however, indispensable to the preservation of their nationality and their conquests. It is a remarkable circumstance, that those countries in which this distinction between the victors and the vanquished has been rigidly preserved, have for the most part proved unfortunate, and fallen under the yoke of foreign nations. Poland, where a few hundred thousand nobles reigned over two or three millions of serfs, is a melancholy instance of the truth of this. Hungary is another, although in it the evil did not prevail to so

great a degree. In Ireland the two races have never become amalgamated, and the result has been unceasing misery. Happily for England, the Normans and Saxons were at an early period completely mingled. In whatever country serfs are found who till the soil, and eat the bread of hardship and slavery, they are the descendants of the vanquished people, and the nobles the descendants of the victorious invaders; and woe to the land in which the two races stand apart, the one slavish, lifeless, degraded; the other proud, brave, and idle, but weak and divided!

This preponderance of the nationality of the conquerors was the cradle of the Magyar nobles, of whom we hear so much. Every Magyar was noble; that is to say, he was one of the masters of the country, or the descendant of one, and so were his children and his children's children. Among themselves there was the most perfect equality. Those of the Hungarians who are not nobles at the present day, are the descendants of the aboriginal inhabitants, who were subdued by the Magyars, and who have not been absorbed into the dominant race, or else of those Magyars who, by their refusal to embrace Christianity, lost their title to be considered freemen or nobles. It has been at various times in the power of the House of Hapsburgh to remedy this evil of divided races; but, notwithstanding the various assertions to the contrary, it has always neglected to do so; and we may guess with what motive. Consequently, down to the close of the late war, the Hungarian constitution rested upon a basis exclusively Magyar, or aristocratic. M. Kossuth acknowledges this, and laments it;

STEPHEN.

ANCIENT MAGYARS.

but in the short period during which the Hungarian Diet was independent, in 1848, they took many steps to raise the serfs to a position of freedom and equality; and it must be remembered, that national independence is, above all things, necessary to the progress of internal, social reform.

Let us return to our narrative. The accounts that have come down to us of the ancient Magyars have all been transmitted by their enemies, the Greek or Roman historians, and are, consequently, anything but favourable. They represent them as having been small in size, with a hideous, frightful-looking face, and a voice which resembled the howling of wild beasts. We must, however, ascribe to those who drew this portrait a large amount of blind hatred or stupid credulity, as we can scarcely be brought to believe that such frightful ogres as these could ever, by the influence of climate or situation, be moulded into those forms of manly vigour and beauty by which the Hungarians of the present day are distinguished.

Like the Huns, the Magyars passed their time on horseback. Hence their proverb, *Lóra termett a Magyar*—"the Magyar is born to ride." Like the Parthians, their charges in battle were swift and sudden, and upon meeting with a reverse they retreated with equal rapidity; and they were so expert in the use of the bow and arrow, that they were able to inflict heavy loss upon regular troops, whilst remaining themselves beyond the reach of danger.

The Greek Emperor, Leo, the historian Constantine Porphyrogenetus, Theophylact, and others, bear testimony to their

valour and their stern integrity. Like all the other wandering tribes, they pillaged towns without scruple, but no Magyar ever violated female honour, even in the flush of victory or the horrors of actual combat. They strictly observed any treaty into which they had once entered, and it required more than ordinary provocation to induce them to break the ties of good faith, even in matters of trifling importance.

In their private, as in their political life, the Magyars were simple and unrestrained. They never contracted marriage, but lived with one or more women, constantly and faithfully, as suited their inclination or their means. Hence, even at the present day, *hazasnag, hazasodas*, "to make a house or household," are the words answering to our "wedding" or "marriage." The man calls his wife *feleseg*, "his half." Some of their most common proverbs may serve to give an idea of their general character.

Bujdosas emberneh elete—"man's life is but the passage from one country to another." *Három dolog egeszseges; leget nem enni munkától nem futni, es nem, bujalkodni*—"the three things necessary to secure happiness are, sobriety, labour, and moderation in pleasure."

They measured time by the phases of the moon. Sunday they called *vas*, or *vasarnap*, "the day of iron," because on that day iron was sold, when they dwelt near Mount Altai, in Asia.

They were serious and solemn by habit, but were nevertheless at all times distinguished by their gaiety and good humour. They were fond of consulting sorcerers or necromancers, and of witnessing the performances of showmen and mountebanks, and would often exclaim, when any misfortune befel them, *Pokolban is esik egyszer egy mnep*—"there are *fêtes* even in hell."

Of their religious belief, previous to their conversion to Christianity, we know but very little. One thing is certain, that they adored but one God, for the word *Isten*, meaning God, is the only one they have ever had in their language to express the idea of a supreme being, but what the sentiments were regarding his character and attributes we can offer no information, and can form no opinion. They sacrificed white horses, however, to some idols, but with what particular object is not known. They set a high value on white horses, and upon their first arrival in Pannonia sent one as a present to King Swatopluk.

These are the only traits of the domestic life and manners of this singular and interesting people which have been handed down to us.

After the occupation of Hungary, properly so called, of Transylvania, of Wallachia, as far as the river Aluta, and of part of Austria, the country was divided into a number of districts, each governed by an elective chief. In these there was some resemblance to the municipalities of ancient Rome, but with less unity, less regularity, and greater conformance to Oriental customs. The first National Assembly was held, as we have already said, in the plains of Tibissa, and other meetings of similar character afterwards took place there regularly. Arpad preserved the divisions into counties which had been originally made by Charlemagne, under the name of *Meegye*, or *Varmeegye*. Any people who offered no resistance to Magyar domination remained free—at least we find no mention of harsh treatment used towards those who submitted quietly. Peaceable strangers were freely allowed to enter the country, but the singular idea which first emanated from King Stephen, that unity of language and manners enfeebles and enervates a state (*unius linguæ, uniusque moris regnum imbecille, et fragile est*) afterwards cost the Magyars dearly, as Austria was not slow in paradox to her own benefit.

The Duke Zoltan, who succeeded Arpad, spread the terror of his arms through the whole of Germany, and even Italy and France. In the year 900 the Magyars, attracted by the renown and the riches of Venice, forced a passage across the Alps, and soon arrived on the shores of the Adriatic. They then embarked, and numerous sanguinary battles were fought at Citta Nuova, Equilo, Capo d'Argero, and Chiozza; so that it only remained for them to cross the arm of the sea which es Venice from Malamocco, to become masters of the e of the sea" herself. Consternation spread through the ity, until the Doge, Petra Tribuno, armed the fleet, and, reminding the Venetians of the victory they had achieved over Pepin under similar circumstances, and in similar peril, he led them against the enemy. The Magyars embarked in the first ships they met with, and although possessing a competent knowledge of the principles of navigation, and possessing enough of courage and hardihood, their fleet altogether wanted organisation and proper equipment. The Venetians, therefore, being familiar with the coast and soundings, and possessing consummate maritime skill, attacked them vigorously, and throwing them into disorder, achieved a complete victory. The sea was covered with the wrecks of the Hungarian vessels and the bodies of the dead; and the Magyars returned to Italy to revenge their defeat on the inhabitants. Toxis, the successor of Zoltan, was also the terror of the Christian countries; but Geyze I., who came after him, embraced Christianity, and from that time the manners of the Magyars became softer and more refined.

Duke Stephen, who succeeded Geyze, was the first to introduce Christianity generally amongst the people, and he wrought changes of such importance in the internal organisation of the kingdom, that he demands as much of our attention as our space will allow us to bestow. The ease and rapidity with which the conversion of the Magyar nation was achieved, must, however, be ascribed not less to the national inclination of the people towards whatever was lofty, pure, and elevated, than to his zeal and activity. If one element more than another was largely developed in the genius of the Hungarian people, it was the desire for social and intellectual progress; and it must for ever form a subject of regret that their aspirations have so often been cramped by the blighting influence of foreign domination.

In return for his exertions on behalf of the Christian faith, Stephen received from Pope Sylvester II. a royal crown, and the title of Apostolic King, as his Holiness at that period looked upon the bestowal of these honours as forming a part of his special prerogative. He was canonised after his death, and is [illegible] the saints of the Romish calendar.

The [illegible] clergy, and of feudalism in the surrounding nations, compelled Stephen to organise his kingdom upon the basis of a constitutional monarchy. He established three distinct orders among the Magyars—prelates, magnates (*seniores domus*), and petty *noblesse* (*nobiles servientes regales*). Each of these orders took part in the administration of the country, but at the Diet they simply signified their agreement or acquiescence in the measures proposed. The Palatine was the first personage in the kingdom after the King, he was the [illegible] communication between the latter and the people, and filled the Sovereign's place during his absence. Stephen created also a supreme judge, and treasurer, and other high officers, who composed the order of barons of the empire, or magnates. The chiefs of the ancient Magyar bands were ranged under this head. The primitive republican government disappeared almost insensibly, and the prelates, by working upon the religious feelings of the King and people, managed to secure to themselves a considerable amount of political influence, and a place in the first rank or order.

Stephen [illegible] the a[illegible] which M. Kossuth considers the safeguard of Hungarian liberty. Each of these counties had an independent jurisdiction. The members of the *noblesse* were chosen as public functionaries, and the king himself often appeared at the sittings of the tribunals. The counties were in every respect organised as little republics, and had the right of periodically convoking assemblies, which exercised a direct influence upon the general politics of the kingdom. In short, we do not know that we can point the reader to a better analogy than the federal institutions of the United States of America. This municipal system is held in such reverence by the Magyars, that many of the national writers declare their belief that the spirit of divine truth must have directly inspired Stephen with the idea of its formation. The military organisation of sixty-two or seventy-two county citadels, distinct from the civil counties, was very useful for the defence of the country. The superior commandants had their residence in these fortresses, and hence received the title of *Comites Castri*, or "Counts of the Bailliage." But what is most deserving of attention is the system of national defence. The magnates composed the army of the king (*Kiraly Sereg*), and the ordi-

nary *noblesse* the national army, known at the present day as the *Insurrection*, which was bound to be ready to take the field whenever danger threatened the country. The possession of land in Hungary had an intimate connection with the rights of the *noblesse*. Two leading principles presided in the appropriation of their privileges. The first was something similar to one of our own legal fictions, that the king was proprietor of all the lands of the country. In the full strictness of the Magyar law, that which we call the right of property was among them only the right of possession *(jus possessionarum)*. The second was, that no one, who was not noble, was able to acquire landed property, and consequently was not obliged to defend the country. The entire kingdom was thus divided amongst the warriors—the descendants of the first conquerors. The ordinary condition attached to the bestowal of lands or tenements, was that of military service; and it was understood on both sides that whenever there was a failure of the male line, the property would revert to the crown, a female heir being incapable of discharging the duties annexed to her position. Those who possess an acquaintance with the history of land-tenure in England, will perceive the striking analogy which exists between the Hungarian law and the earlier stages of our own. In these ordinances of King Stephen, we cannot fail to recognise a mind considerably in advance of the age in which he lived, and a wideness of view and comprehensive grasp of intellect which, working in harmony with the genius and disposition of the various races united under his authority, went far to assure a brilliant future for the Magyar race.

His successor, Bela I., governed with great energy, and was the first to give a fixed and definite organisation to the legislative assemblies.

We must now turn our attention for a few moments to other races and other conquests. The reader will doubtless remember that after the retreat of the Avars into Asia, great numbers of Slavonic tribes invaded Europe. Between the years 602 and 641 huge hordes of Croats and Serbes, abandoning their habitations at the foot of the Carpathian Mountains, came and settled in the southern part of modern Hungary. Those who established themselves in the centre of the new country called it Dalminium, from a town of that name, and themselves Dalmatians. The Croats, fixing themselves in the country lying to the south-west of Hungary, preserved their original name, as also the Serbes, who retired still farther towards the west. The name of Slaves, or Slavonians, was given by the Venetians to a tribe placed between the Serbes and Croats. Creemir, the first Croat prince, reached a position of great power and influence, and his son Dirzislaw assumed the title of King of Croatia in 970. In the time of Solomon, King of Hungary, Peter Creemir, a man of great talents and address, occupied the throne of Croatia, and being attacked by the Duke of Carinthia, he sought the aid of the Magyars. It was cheerfully and successfully rendered, without any stipulation or reward whatsoever. Sometime afterwards, Zwonimir, successor of this monarch, married Helena, daughter of Bela, King of Hungary. Her husband dying, Helena was driven from the country by a faction roused up against her under the joint influence of religious bigotry and national hatred. She applied to Hungary to interpose in her behalf, and Ladislas, the Magyar King, immediately attacked the Croatians, subdued the whole country in the space of a few weeks, and replaced Helena upon the throne. Upon her death the King of Hungary took possession of the country by the right of conquest and succession, and established a national constitution as the fundamental law of the kingdom. He then bestowed the crown upon Almos, his own nephew, and Minister of the late Queen, as a dependency upon Hungary. Before his death he gave his eldest daughter in marriage to Kalo, son of Alexis Comneus, Emperor of the East.

To Ladislas succeeded Coloman, who was surnamed *Bibliophilus*, or the Book-lover. His reign forms one of the most pleasing pages in Hungarian history, from the success of his efforts to promote the glory and amelioration of his kingdom, and his devotion to literary pursuits in an age when learning was at its lowest ebb. A noble, named Peter, having laid claim to the Croatian crown, was defeated by Coloman, in a series of battles, and after a number of successes gained in conjunction with the Venetians over the Normans, into the details of which our space will not permit us to enter, the latter was crowned King of Croatia and Dalmatia. It was under his reign that the crusades commenced, and the restless longing for change and movement which distinguished the age, sought refuge in the out-pouring of Christian vengeance upon the Saracens. Godfrey of Bouillon, celebrated as the King of Jerusalem, arrived upon the frontiers of Hungary at the head of the Soldiers of the Cross. His character, full of ardent and romantic enthusiasm—his fiery valour, calm, devout, and child-like submission to the Church and the fair sex, and spotless honour—all these were so much in unison with what the Magyars loved, honoured and revered, that Coloman received him with open arms. After a conference, full of cordiality, a free passage through his territory was immediately granted to the Crusaders.

The two succeeding reigns present little worthy of notice, save the continued struggle carried on by the Magyars, in repelling the incursions of the Turks, Russians, and other barbarous tribes of the east and north-west. Europe owes Hungary an eternal debt of gratitude for having repeatedly saved her from the imposition of a religious creed, which would for centuries at least have stayed the progress of Christian civilisation, or from the horrors of a second barbarian invasion.

Under the reign of Geyze II., emigrants from Germany and Flanders settled in Sepuce in the north of Hungary, where they formed a distinct people, and were governed by their own counts. This was another addition to the evils of divided races, so detrimental to Hungarian nationality. When Stephen III. ascended the throne, his younger brother, Bela, was named by the Emperor of the East heir presumptive to the Byzantine Empire, and received in possession the duchies of Sirmia, Slavonia, and Croatia. But afterwards, in consequence of the Empress giving birth to a son, his claim was destroyed, and he became simply King of Hungary. Sometime afterwards, troubles began to break out in Gallicia, now known as Poland; and the country was put under the protection of the King of Hungary. In 1188 Bela III. asserted this claim against Casmir, the old Duke of Gallicia, and for some time the Hungarian King bore also the title of King of Poland. It was in virtue of this right (if right it may be called) that Austria took part in the dismemberment of that unfortunate country. Bela III married, as his second wife, Margaret, daughter of Louis VII., King of France. This lady was the means of introducing into Hungary a great deal of the refinement and elegance which, even at that early period, distinguished the French court. The Magyar youth began to repair to Paris to complete their education, and study foreign manners; and a university, upon the model of that of Paris, was established in Vesprim, a central town of Hungary. After the death of Bela, Henry VI., Emperor of Germany, determined upon sending an army to aid the crusaders in Palestine. At the head of the quota furnished by Hungary, Margaret, the youthful widow, set out in person. What was her motive for this strange undertaking we know not, unless it were that weary longing for rest and consolation in another world, which finely-wrought natures then thought purchaseable only by privation and toil in this. But this picture of female youth and beauty setting out upon a distant and perilous expedition, surrounded by the fierce warriors of the Cross, is one of those pleasing gleams of light which now and then shoot across the heavy darkness of the middle ages. Margaret died in Palestine.

Emete, who succeeded Bela III., followed up the conquests of his predecessor, and subdued Bulgaria and Servia. Andre, a brother of the King, governed Croatia, as a vassal of the Hungarian crown.

We have now arrived at one of the most memorable periods in the history of Hungary, that which witnessed the reform of the constitution. The close resemblance existing between this important event and the grant of our own Magna Charta by King John, must possess the deepest interest for every English reader. Notwithstanding the foreign wars and intestine broils to which Hungary had for centuries been a prey, the real power of the government rested entirely in the hands of the king. The great dignitaries of the state did not hold their offices in hereditary succession, or even for life. They could be at any moment deprived of them for no better reason

MARGARET, QUEEN OF HUNGARY, AT THE HEAD OF THE HUNGARIAN CRUSADERS.—(See page 119.)

than the sovereign's pleasure; but the very fact of their meeting together in the Diet, or great council of the nation, secured to them an influence, which was becoming every day more and more powerful, and promised at no distant day the right, and perhaps the power of taking exception to the arbitrary acts of the monarch. On the other hand the organisation of the counties was going to decay, forming as it did the best bulwark against domestic tyranny or foreign invasion. Things were in this position, when Andre II., a feeble and vain prince, ascended the throne. He carried on war for a considerable length of time against the Russians and the Saracens in the Holy Land, without reflecting upon the evils caused by his absence from his dominions, and the lavish expenditure of blood and treasure which has long contests entailed upon the kingdom. Upon his return he found the affections of the people entirely alienated, and was astonished by the loud and general outcry raised on every side against his extravagance. His quarrels with his son Bela still further increased the number of his enemies. His Queen, Gertrude, a woman of very masculine disposition, but who had acquired this manly vigour at the expense of her woman's tenderness and truth, sought to allay the storm by seizing upon the reins of government in her own name. Her unfaithfulness to the instincts of her sex, and to the commonest dictates of honour and religion, wrought her own and her husband's ruin. She encouraged and aided her brother in an attempt to seduce the wife of a proud and haughty noble, Benedict Bor (the famous Bank Ban) the Palatine of the Kingdom. Enraged at the insult and dishonour, Benedict rushed into the palace, followed by some friends, and struck the Queen dead on the spot. The assassins were executed, but this only irritated the malcontents still more. Andre lost all authority, and with characteristic imbecility, applied to the Pope to re-establish tranquillity. After a long struggle, the Prince Bela undertook to act as mediator between the contending parties; and through his instrumentality, important concessions were obtained from the King, and ratified by him at a Diet held in 1231. He acknowledged the legislative assemblies to have the same rights as himself, and he confessed that those privileges of the *noblesse*, which Saint Stephen had established upon a firm basis, but which his successors had failed to recognise fully, had been violated by himself also. He solemnly confirmed in their fullest extent all the political privileges claimed by the noblesse and the free inhabitants of the country, with the addition of the following clause:—"That every time that the King or his descendants should violate the privileges of the Magyar nation, the nobles should be at liberty to rise up, sword in hand, to

oppose this breach of the law, without being liable to the charge of high treason." This was a concession, at the same time just and dangerous. The right of resistance should be ever present to the eyes of the government; but the people should never look upon it save as the closing scene in a long vista of unavailing remonstrance and entreaty. But when placed in the hands of a powerful and warlike *noblesse*,

'Who sleep with head upon the sword
Their fever'd hands must grasp in waking;"

whose sympathies and occupations are distinct from those of the masses of the population, it sows the seeds of strife, turmoil, and division. In addition to the confirmation of their old privileges, the Magyar aristocracy obtained some new ones. They were declared free of taxes, and none of its members could be placed under arrest except for clearly proved violations of law. They were obliged to arm at their own expense, and attend the King in warlike array as far as the frontiers of their own country, but, if farther, the Sovereign should bear the cost. The latter was forbidden to make any office or employment hereditary, or to commit the administration of the finances to Jews

MAGYARS OF JASZBERENY

or Mahometans; and it was strictly stipulated that a diet should every year be convoked upon St. Stephen's Day.

All these articles, thirty-one in number, were united in a code, and became the basis of the aristo-democratic constitution, which prevailed in Hungary up to the close of the late war, commonly called *Bulla Aurea*, or the "Golden Bull." Andre was the first Magyar King who was obliged to take an oath, at his coronation, to be faithful to the constitution.

Hungary was thus one of the first countries in Europe to obtain effectual guarantees for her liberty; and although her Bulla Aurea, like our own Magna Charta, bears unmistakable marks of its feudal origin, it has, nevertheless, every claim to be considered a reform of true and lasting value. It must not be forgotten that the terms "Magyar nobles," or "free men," at that time included the whole of the conquering nation.

Bela IV. succeeded to his father, Andre II. After he had ascended the throne, he showed great force of character, but, at the same time, a great leaning to arbitrary measures. A calamity fell upon Hungary during his reign, from the effects of which she did not recover for many generations. A tribe of the Hunnic race arose about this time, and rendered itself powerful by its conquests under the leadership of its chief Mogol, or Mogul, whose name it assumed. Under one of his successors, Iengis Khan, it spread terror through the whole of Asia; but that quarter of the world not proving enough to satisfy its ambition, it precipitated itself upon Europe. Poland and Russia bore the first shock of the invasion, but it soon spread to the plains of Hungary, and left them waste and silent as a pathless desert. After having massacred great numbers of the population, the Moguls retreated, carrying with them thousands of captives.

THE BROKEN PITCHER.

(*Concluded from Page* 99)

Now on a Sunday Father Jerome had preached again on this subject "The dispensations of heaven are wonderful." And the little Mariette thought, would that it might ordain that I should discover the invisible flower-bringer! Father Jerome was not wrong. On a summer's night, when it had become very warm, the little Mariette was awake early, and could not go to sleep again. She dressed herself, and went out to wash face, breast, and arms in the cool spring; she took her hat, with a desire to wander an hour by the sea. She knew there a retired place for a bath. But, in order to get to the retired place, she must go over the rocks behind the house, and then downward among the pomegranate-trees and the palms. This time Mariette did not get by; for under the slimmest and youngest of the palm-trees there lay in sweet sleep a slender young man—near him a nosegay of most beautiful flowers. Also there was a white paper there, on which, probably, a sigh was left. How could Mariette go by? She stood fixed, and trembled for fear in all her limbs. She would go back again to the cottage. Scarcely had she gone two steps, when she looked again at the sleeper, and remained stationary; yet so far off she could not see his face. Now or never she must discover the secret. She tripped lightly nearer the palm-tree. But he appeared to move. Then she ran back toward the cottage. Yet his motion was only Mariette's timid fancy. Again she took the path to the palm. But perhaps he feigned sleep. Quickly she hastened towards the house. But who would fly for a mere perhaps? She trod with a bold heart the way to the palm. By these fluctuations of her timid and irresolute soul between fear and curiosity, by these hither-and-thither trippings between the cottage and the palm-trees, by degrees her little steps had come nearer to the sleeper, while at once curiosity conquered fear.

"Why should he affect me? The path carries me by him. Whether he sleeps or wakes I will certainly go past" Manon's daughter. But she did not go by, she remained standing, for now the face of the flower-bestower is sufficiently in sight to be certain of the whole affair. Still he sleeps on, he cannot have had a sound sleep for four weeks. And who was it. Now who else should it be but that arrant villain, Colin!

There! it was he who, out of his old enmity to the good maiden, had brought on her so much vexation with the pitcher, and had got her into this vexatious affair with Herr Hautmartin; it was he who came here and teased her with flowers to provoke her curiosity. Why? He hated Mariette. In all companies he behaved towards the poor child in an unaccountable manner. He avoided her when he could, when he could not, he distressed the innocent little one. Towards all the maidens of La Napoule he was friendly, talkative, pleasant—all but Mariette. Only think! he had never asked her for a dance, and she danced enchantingly! Now, there he lay, caught, entrapped! Revenge awoke in Mariette's breast. What disgrace could she do him? She took the bunch of flowers, untied them, and revengefully scattered his present, in just anger, all over the sleeper. Only the paper on which was the sigh, "Dear Mariette!" she took, held, and then thrust hastily into her bosom. She would keep this proof of his handwriting for a future occasion. Mariette was sly. Now she must go. But her revenge seems not yet satisfied. She could not go from the place without punishing Colin's wickedness with something similar. She tore from her hat the violet-coloured silk ribbon, and threw it lightly round the sleeper's arm and round the tree, and tied Colin, with three knots, fast to the palm. When he awoke, how astonished he would be! how his curiosity would be aroused to know who had played him the trick! It would be impossible for him to guess. So much the better. It served him right. Mariette was only too merciful towards him. She seemed to repent her work as soon as she had finished it. Her breast heaved. I really believe that tears came into her eyes as she looked with too much compassion on the transgressor. Slowly she went back from the pomegranate trees over the rocks, often looking round, slowly up the rocks, often looking down at the palm-tree. Then she hastened to the calling Mother Manon.

But that same day Colin played a new trick. What did he do? He would openly mortify the poor Mariette. Ah! she had not thought that everybody in La Napoule knew her violet-coloured ribbon! Colin knew that too well. He twisted it proudly round his hat, and wore it before all the world for a show, like a trophy. And everybody said, "He had it from Mariette." And all the maidens said, angrily, "The wretch!" And all the young men who liked to see Mariette said also, "The wretch!"

"How, Mother Manon!" shrieked the Judge, as he came to Manon, and shrieked so loud that it echoed wonderfully through his nose—"How! did you suffer her? Did my bride present the young farmer, Colin, with her hat-ribbon? It is high time that we should celebrate our wedding. When it is past, then I shall have a right to speak."

"You have the right," answered Mother Manon. "If affairs stand so, the wedding must be soon."

"But, Mother Manon, your daughter refuses her consent."

"Only prepare the wedding-feast."

"But she will not look favourably on me, and when I seat myself by her, the little wild thing jumps up and runs away."

'Herr Judge, only prepare the wedding-feast."

'But if Mariette resists?"

'We will take her by surprise. We will go to Father Jerome. On Monday morning, when it is early and quiet, the ceremony shall be performed. We will persuade him to that. I am the mother. You, the first magistrate of La Napoule. He will submit. But Mariette must not know anything about it. On Monday early I will send her to Father Jerome, all alone, on an errand, so that she will suspect nothing. Then the pastor shall appeal to her heart. Half an hour afterwards we will come along. Then immediately to the altar. And even if Mariette says, No, what difference will that make? The old man cannot hear. But, till then, do not let Mariette or La Napoule know of it."

Very early Mariette went to the spring with the pitcher. No flowers as yet lay on the rock. It was too early; the sun had scarcely come out of the sea. Footsteps rustled. Colin made his appearance with flowers in his hand. Mariette blushed. Colin stammered, "Good morning, Mariette."

"Why dost thou so openly wear my ribbon, Colin?" said Mariette, and set her pitcher on the rock. "I did not give it to the

'Thou gavest it not to me, dear Mariette!" asked he, and was white from inward rage.

Mariette was ashamed of her falsehood, cast down her eyelids, and said, after a while, "Well, I gave it to thee; but thou shouldst not have worn it as a show. Give it back to me."

He slowly unbound it; his vexation was so great that he could not conceal the tears in his eyes, or the sighs in his breast. "Dear Mariette, let me have the ribbon," said he, gently.

"No!" answered she.

Then his anger changed to despair. He glanced to heaven with a sigh, then sadly at Mariette, who quietly and modestly stood by the spring, with downcast eyes and drooping arms. He wound the violet-blue ribbon round the flower-stalks, saying, "Take all then!" and threw the bouquet so spitefully against the beautiful pitcher on the rock, that it fell upon the ground and broke. Glad of the mischief, he went away.

All this Mother Manon, leaning from the window, had heard and seen. But when the pitcher broke she lost hearing and seeing. She had no command of her tongue from astonishment. And as she pressed with violence against the closed window, to call after the wretch, she forced the window out from the crumbling stone, so that it fell with a great noise on the ground, and was shattered to atoms. So many misfortunes would have made any other woman lose her mind; but Manon soon recovered herself.

"Lucky! that I was the witness of his deed!" said she. "He must go before the Judge. He shall outweigh window and pitcher with his gold."

But when Mariette brought in the remnants of the broken pitcher—when Manon saw Paradise Lost, the good Adam without a head, and only Eve's leg remaining, the serpent triumphing unhurt, and the tiger uninjured, while the lamb had all vanished except his tail, as if the tiger had swallowed him, then broke forth Mother Manon, crying, into curses against Colin, and said, "One may see that throw came from the hand of the devil!"

And so she took the pitcher in one hand, Mariette in the other, and went at nine o'clock to Herr Hautmartin, where he was accustomed to sit in court. Then she broke out into loud complaints, and showed the broken pitcher. Mariette wept bitterly. The Judge, when he saw the broken pitcher, and the beautiful bride-elect in tears, scolded in such righteous anger

against Colin, that his nose grew violet-blue, like Mariette's famous ribbon. He sent his constable to fetch the rascal. Colin came, deeply troubled. Mother Manon repeated her complaint with much eloquence before Judge, constable, and clerk. But Colin heard not. He approached Mariette, and whispered to her, "Forgive me, dear Mariette, as I forgive thee I broke, madvertently, thy pitcher, but thou hast broken my heart."

"What does the whisperer there?" with judge-like dignity, said Herr Hautmartin. "Hear your accusation, and justify yourself!"

"I will not excuse myself. I broke the pitcher, though not wilfully," said Colin.

"I believe so, indeed," sobbed Mariette "I am as much to blame as he, for I vexed him and made him angry. He threw the flowers and the ribbon heedlessly. He could not help it."

"What do I hear?" shrieked Mother Manon "Will the maiden be his justifier? Herr Judge, speak! He has broken the pitcher, that he does not deny, and I, on his account, the window—if he denies that, he can go and see it."

"That you cannot deny, Herr Colin," said the Judge; "so do you pay for the pitcher three hundred livres, for so much it is worth, and for—"

"No," said Colin, "it is not worth so much. I bought it at the fair at Vence, for Mariette, for one hundred livres."

"You bought it, Herr Shameless!" cried the Judge, and all his face became like Mariette's hat-band. Yet he would not, and could not say any more; he naturally feared investigation into the affair

But Colin was angry at the speech, and said—

"I sent this pitcher to Mariette on the evening of the fair, by your own servant, Jacques. Jacques is there at the door He is a witness Jacques, speak, did I not give thee a box to carry to Mother Manon?"

Herr Hautmartin would have interposed. But the simple Jacques said —

"Only think, Herr Judge, you took Colin's box from me, and carried what was in it to Mother Manon. The box lies there under your papers"

Then the constable forced out the half-witted Jacques, and though Herr Colin would have had him in, no one would call him back.

"Very well, Herr Judge," pursued Colin; "but this trick shall be your last one in La Napoule. I know more than by this thing that you would ingratiate yourself with Frau Manon and Mariette with my property When you aim at me you would do well to ride over to Grasse for the bailiff."

With that Colin went away.

Herr Hautmartin was very much puzzled in the business, and did not know what to do in his perplexity. Frau Manon shook her head. The thing looked dark and suspicious. "Who will pay for the broken pitcher?" asked she.

"To me," said Mariette, with glowing face, "to me it is already fully paid for!"

. . . . . .

The same day Colin rode to Grasse for the bailiff, and came back the next morning early. But Herr Hautmartin only laughed and talked Mother Manon out of all her suspicions, and swore he would have his nose cut off if Colin were not made to pay the three hundred livres for the broken pitcher. And he went also with Frau Manon to Father Jerome about the wedding, and urged him well to place before Mariette her duty not to refuse the marriage against the will of her mother, as a dutiful daughter. That the good old man promised, although he only understood half that they bawled into his ear.

But Mariette took the broken pitcher to her sleeping-room, and now first truly loved it, and it was to her as if Paradise had been brought into her heart ever since it had been shattered out of the pitcher.

So, when Monday morning came, Mother Manon spake to her daughter —

"Dress thyself up, and carry this myrtle crown to Father Jerome; he wants it for a bride."

Mariette dressed herself in her Sunday clothes, took without suspicion the myrtle crown, and carried it to Father Jerome On the way she met Colin, who greeted her gently and tremblingly, and when she told him where she was carrying the wreath, Colin said —

"I am going that way, too, for I must carry to the pastor the money from the church-tithes." And as they both went along he, trembling, took her hand, and they both trembled as if they had committed some great crime against each other.

"Hast thou forgiven me?" anxiously whispered Colin. "Ah, Mariette, what have I done to thee that thou art so cruel to me?"

But she could say nothing, only "Be quiet, Colin! Thou shalt have the ribbon back again, and I will preserve thy pitcher. I hope it is indeed from thee?"

"Mariette, canst thou doubt? All that I have I would fain give thee. Wilt thou in future be as friendly to me as to others?"

She answered not, but as they went into the pastor's house, she looked at him sideways, and when she saw his beautiful eyes wet, she whispered, "Dear Colin!"

Then he bent and kissed her hand At that moment the door of room opened, and Father Jerome, with his venerable form, stood before them. The young people felt dizzy, and certainly have fallen had they not leaned on each other. I do not know whether it was the effect of the hand-kiss or fear of the old man. Mariette handed to him the myrtle crown. He laid it on her head and said, "Children, love one another!" and touchingly and affectingly entreated the maiden to love Colin. For the old pastor had either, owing to his deafness, wrongly heard the bridegroom's name, or, owing to his failing memory, forgotten it, and thought that Colin must be the bridegroom Under this exhortation of the old man, Mariette's heart melted, and amid tears and weeping she said "Ah, I have loved him for a long time, but he hates me!"

"I hate thee, Mariette!" said Colin "My soul has lived only thee since thou earnest to La Napoule Oh, Mariette, how could I hope or think that thou didst love me? Did not all La Napoule seek thee?"

"Why didst thou flee from me, Colin, and associate with all my companions before me?"

"Oh, Mariette, I went in fear and trembling, with sorrow and [illegible] me, I had not courage to be near thee, and yet it I were not with thee I was unhappy"

While they spoke together thus, the pastor thought they were quarrelling, so he laid his arm around them both, drew them together, and said, "Little children, love one another!" Then Mariette sank on Colin's breast, and Colin put both arms around and both faces shone with quiet rapture. They forgot the or, the whole world. Colin's lips touched Mariette's sweet mouth. Both were lost in each other Both had so lost their presence of mind, that, without knowing it, they followed the delighted Father Jerome into the church, and before the altar.

"Mariette!" sighed he

"Colin!" sighed she.

In the church prayed many worshippers; but with astonishment they became witnesses of Colin and Mariette's marriage. Many ran out before the end of the ceremony, to publish right and left through La Napoule, "Colin and Mariette are married" When the ceremony was over, Father Jerome rejoiced heartily that it had turned out so well, and that the parties had offered so little resistance. He led them into the parsonage.

Soon came Mother Manon, breathless. She had waited long at her house for the arrival of the bridegroom. He did not come At the last stroke of the clock, her anxiety troubled her, and made her set out on the way to Herr Hautmartin's. But a new surprise awaited her. She learned that the bailiff, with all the deputies had taken into custody all the deeds, bonds, and registers of the Judge, and had committed Herr Hautmartin at the same time. "That godless Colin has done this!" was her thought. Now she hastened to the parsonage to inform Father Jerome of the postponement of the wedding She came in smiling, proud of her work, towards the good old man, with his hands on the newly-married pair. Now, in good earnest, Frau Manon lost thought and speech, as she saw what had taken place. But Colin had never in his whole life had thought and speech more than at present. He told of his love and the broken pitcher, and the falsehood of the Judge, and how he had unmasked his injustice at Grasse to the deputies. Then he asked Mother Manon's blessing.

Father Jerome for a long time did not understand it, but when he got a full conception of the marriage by mistake, he raised his hands devoutly, and said, with upward gaze, "Wonderful are the dispensations of Providence!" Colin and Mariette kissed his hands. Mother Manon, out of mere veneration for heaven, gave the newly-married her blessing, but they noticed between them that her head seemed as if it were turn

WHAT A WORKING MAN CAN BECOME.

We hear much of the wretched lot of the poor—that it is too often bitter and bleak we should be the last to deny, yet every day teaches us that with many men it is their own fault that they are poor. It is clear that with energy, and industry, and self-denial, most poor men might be in a better position than that in which they are. Illustrations of this truth come before us every day. Most of our great men have begun life in the humblest circumstances; but while their fellows were frittering away their time and opportunities, they were resolutely fighting the battle of life. Sir Joseph Fox was an engine-driver; Sir William Cubitt was an operative in the employ of Ransome and May, of Ipswich. After all, it is clear that the men who die paupers, and are buried in the pauper's grave are not the energetic—the industrious, but the lazy, the profligate, or the weak. They failed from want of proper knowledge, or self-control, or power; but society did not blast them, and they may not lazily sit and arraign the evils of the competitive system. If they will work honestly and heroically their names may be yet famous in our land.

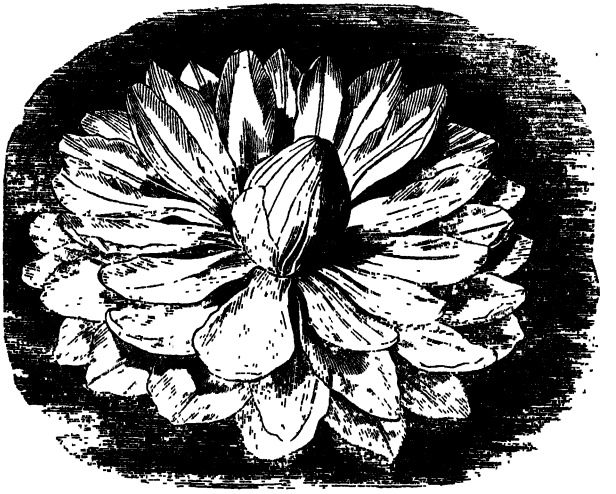
Just now all England resounds with the name of Richard Andrews, the thrice-elected mayor of Southampton, who greeted Kossuth with such a warm reception when he first landed on our shores. Now, who was Richard Andrews? The son of a poor working wheelwright, at Bishop Sutton, in Hampshire. The earnings of the father in those times, when schools were few and provisions dear, barely enabled him to send his first son, Richard, from about five until he was eight or nine years of age, to a dame-school, at twopence a week. Thus slenderly provided for with education, his mother's father, an agricultural labourer, took him to work at ploughing, turnip-hoeing, thatching, and all the other usual odds and ends of a farm-boy's hard work, at the magnificent wages of 3d a-day, for which he laboured away for nearly three years. He was always, however, on the look out for something better, and when a little more than twelve years old, a chance turned up for him of employment as an under sawyer, at the village of Hitchen Stoke, where, for two years, he worked in the saw-pit at a shilling a day. For this he laboured twelve hours; and, having to walk to and from Hitchen Stoke ten miles, was on foot on in the saw-pit from four o'clock in the morning until nine at night.

The saw-pit led to a better trade, he used to go to the forge to get the tools put in order, and there—it might be from the flying sparks, or the free swing or ring of the hammer, or the warm look of comfort of the forge-fire on a winter's day, or the pleasure of seeing the iron beaten out to any shape, that the wish took hold of him to become a smith; and whilst waiting for the tools, he used to amuse himself trying his hand at heel and toe-tips and hobnails, at which he soon became an adept, and showed such skill at iron, and spoke with such desire to learn the trade, that Mr. Beaumont, then a great stage-coach maker, gave him employment as hammerman under one of his smiths. Here he soon gained the approbation of his master and fellow-workmen; had his wages raised from 5s. to 6s., 7s., 8s., and 9s. a week; and in three years, being four years before the end of his apprenticeship (and a most unusual thing), had a fire to himself, and a hammerman under him.

During the last four years of his apprenticeship, Andrews was considered the first hand in the shop. He made all the heavy coach-axles, which in those days were wrought from well-used wheel-tyres, and he made, too, the whole of the tyres for that immense stage-coach factory, which employed at the time upwards of 100 men.

At a dance at Tichbourne Down, Andrews, then nearly out of his time, met his future wife, who was living at Alresford. She soon, however, went home to Hounslow. Those were not days of railways or excursion trains; Hounslow was forty-seven miles from where Andrews lived; but he walked the distance in a day, and in about a week walked back on one of the hottest days in summer. Three or four months afterwards, his seven years being ended, he rewalked the distance to be married; to this day Hampshire Dick's wedding is remembered in Hounslow; for he put down the immemorial usage on such occasions of setting up a hideous din of pokers and tongs, tin kettles, and cows' horns.

The apprenticeship over, the mystery of smithcraft thoroughly mastered, and Andrews 21 years of age and married, his employer offered him a guinea a week. He knew he was worth more, so he left the shop to seek better fortune. It was the depth of winter, when, on a Thursday, Andrews and a companion-workman set off for Chichester at two in the morning. The distance was 30 miles, but they arrived in time to breakfast in the city, at half-past nine. The companion fainted at the breakfast-table. There was no work to be had at Chichester; so next day Andrews walked back the 30 miles. His former master then offered 25s. a week to engage with him for a year; but he had too recently got over his apprenticeship to wish to bind himself again; so the very next day, Saturday, he started at four in the morning, and by nine had walked the 20 miles to Southampton. This was in 1821; and he had in all the world just 2s. 6d. in his pocket. He, however, got work at Jones's coach factory, at 24s. a week; and having in three weeks saved £2, he returned to Hitchen Stoke to bring his wife and child home to Southampton.



For seven years he worked at the same factory, and got on from the 24s. to earning two guineas a week. He resolved, and kept to it (though his family increased rapidly), to put something, little or much, into the savings bank every week; and at length, having gathered £75, he started, in a little back-street, on the 1st October, 1832, as a master coachmaker, with two workmen. In three weeks the £75 were gone, in first expenses; but repair jobs came in fast, were well and punctually done—a name was earned, and trade grew. In the same year came on the general election, at which the Tories fought their great battles against Reform. The most influential canvassers came to Andrews. They promised him that he should make his fortune by the support of the surrounding gentry if the Tory had his vote. They urged that his was a business depending solely on the gentry, and that if he went against them he must look for ruin. Southampton was then but a fashionable and invalid watering-place, a whole day's fast stage-coach journey from London, it had neither dock nor warehouses, the Peninsular and Oriental Company was not formed, there was no railway, no West India steamboats, no one thought, then, of such a town of trade and manufacture as is now increasing every day in Southampton-water. The odds seemed dead against the man who should go against the gentry. "Give me," said Andrews, "an hour to make up my mind. Come back then, and you shall have your answer." They came, expecting to tick the vote against Reform. Andrews looked up from the forge—"I believe," he said, "Reform to be right, and I will vote for it. I have so far worked my own way without any other help than my skill as a workman, and I have no doubt of getting on in the same way without selling my conscience."

There were abundant grumblings and threats against him, but his first year in business for himself brought him in over £2,000, and within ten years of that election he had laid out £10,000 on the ground and buildings of his factory; and in a single year (1845) he earned more than £22,000, selling upwards of 300 new and second-hand carriages. Travellers by overland route to India cross the desert in Andrews' omnibuses. He built the state carriages for the late Mehemet Ali and the Sultan; has a large trade with the colonies, Mexico, Valparaiso, and Porto Rico, carries on every part of the manufacture of carriages, with the exception of patent axles, on his own premises.

But it was not only on the Reform occasion that Andrews stood by his opinions against his apparent interest. He was one of the members of the Anti-Corn-law League, belonged to its Council, gave a handsome pony-carriage to the League Bazaar in 1844; and in 1842, when the Mayor refused the Town-hall, and a public meeting was violently broken up, Andrews cleared out his carriage-bazaar, which held from 2,000 to 3,000 persons, his workmen mounted guard at the entrance, wheel-spokes in hand, and so Free-trade had a place for its advocacy in the home of a business said to depend solely on the favour of those who were strong monopolists. Threats again there were in abundance of supporting others, and setting up fresh opposition in coach-making, to all of which Andrews used to reply, "Set up as many as you please; coach-building has already grown to be the staple business of the town; the more makers, the more name the place will have for carriage building, and I am certain of getting as good a share of it as I deserve."

THE VICTORIA REGIA.

THE Crystal Palace, after all, had a beginning. Previously other Crystal Palaces had been erected, though not of such gorgeous character, or lofty aim. Amongst these must be mentioned the one built at Kew—a place with which every Londoner or London visitor should be familiar—a place at one time dear to royalty, for it was the favourite residence of George III. For a long time Kew was utterly neglected; visitors were admitted by stealth to the Botanic Gardens, no encouragement was given to them to repeat their visit. But now the case is altered. The place is thrown open to the public, and on a summer day, whether you go by rail, or buss, or steamer, we know no place out of London that will better repay a visit than the Botanic Gardens of Kew and the accompanying pleasure-grounds, lying on the banks of the majestic Thames, far away from London smoke and dirt and noise. No other spot in England can boast such gardens. From all parts of the world seeds and specimens and flowers reach Kew.

VICTORIA REGIA IN PUD

The palm-house, the pride of the Gardens, is built of stained yellow glass, and rejoices in all the majesty and luxuriance of the East. Around you palms and plantains raise their graceful forms; but the wonder of wonders is the gigantic water-lily, the flowers of which we have engraved here. It was discovered accidentally by the traveller Schomburgh, in British Guiana. It is one of the largest, and at the same time the finest of the vegetable kingdom. It opens upon the surface of the calm water something like our water-lily, but in proportions of which we, accustomed to stunted vegetation, can scarcely form an idea. The flowers are not less than a foot in breadth, and the leaves float upon the surface of the water, in the form of large dishes, five or six feet in diameter. The structure of these leaves is very singular. Their shape is that which botanists call *petiolate*—that is to say, the petiole stalk, is attached to the centre from beneath: they are smooth and green at the upper part, and have a raised border of about two inches in breadth all around, like that of a sieve or large plate. Below they are of a reddish colour, and divided into a large number of compartments by very prominent veins, which leave between them triangular or quadrangular spaces, containing the air which helps to support the leaves upon the water, so that birds and other small animals have been often seen running about and pursuing their prey upon them, as if on solid planks.

VICTORIA REGIA IN BLOSSOM.

This marvellous flower, as Tennyson says, "anchored to the bottom," annually exhibits its wonders. In a way that would have charmed the Lady of Shalot, the admiring spectator may see

"The water-lily bloom."

Thanks to science and Sir W. Hooker, and those much-abused people, the Commissioners of the Woods and Forests, the Victoria Regia has become one of us; and buds and flourishes here, in this land of fog, and cloud, and rain, as vigorously as it ever did in that warmer climate where first it sprang into beauty and life.

ODYLE.

Most of our readers, we presume, by this time have heard of odyle. It is the name of a certain property perceptible in highly sensitive persons, of both sexes, by which a peculiar influence is produced on such persons whenever they approach a powerful magnet, or by the sun, the fixed stars, the moon, and planets, chemical action, and, indeed, the whole material universe. The discoverer of this extraordinary property was the Baron Von [illegible]ch, an Austrian nobleman, of great scientific attainments, who had long devoted himself to making experiments with magnets, and whose discoveries have been verified by numerous witnesses in Germany, and by the English translator of his work —Dr. Gregory, Professor of Chemistry, in the University of Edinburgh.

The sensitives, it appears, are very numerous. At first, Reichenbach thought the sensitive state was essentially a morbid one, and that healthy persons were not subject to it. Wide experience, however, has shown this to be a fallacy. Reichenbach finds fully one third of people, in general, to be more or less sensitive. The highest degree of sensitiveness is comparatively rare, but is still common enough even among the healthy.

The peculiar property, called odyle, was first discovered while the author was making magnetic experiments. He found that a certain effect was produced upon the sensitives by making downward passes with strong magnets, having a supporting power of 10 lbs. The Baron says —"The nature of this impression such excitable persons, who may, however, often be justified in regarding themselves as perfectly healthy, is not easily described. It is rather unpleasant than agreeable, and is associated with a gentle feeling, sometimes of cold, at other times of warmth, which resembles a cold or tepid *aura*, or current of air, which they believe gently blows upon them. Occasionally, they experience a dragging or pricking sensation, some complain of headache. Not only females, but also men in the prime of life, are to be met with, who distinctly perceive this influence. It is sometimes very vividly felt by children." To avoid error or deception, a great number of persons were tested, and he has selected a list of nearly a hundred of both sexes, whom he placed under the head of healthy and diseased sensitives. Their avocations and addresses are given. Amongst them we find noblemen and gentlemen, physicians, divines, military and naval officers, [illegible]nt functionaries in the Imperial and public service, tradespeople, servants, and peasants. Aware of the strenuous opposition he would be called to encounter, he has proceeded carefully on the inductive system, and has varied his experiments in every possible way, so as to render his discoveries worthy of the reception of the world.

This property having thus been discovered in the magnet, Baron Reichenbach thought it might also be possessed by other bodies. The same effects he found were produced, though in a less degree, by crystals of quartz, gypsum, alum, borax, and other salts. Similar sensations were also experienced from the end of a wire, whose other end was exposed to a surface connected with the sun's rays. By similar means the solar rays were tested, and it was found that not only the moon, but all the planetary bodies, produced a similar effect. Here we have a clue to the influence produced on lunatics by the moon. Aided in this way, Reichenbach elicited some exceedingly curious results from the varied phenomena of the earth's surface. He also found that chemical action was a source from which this new power could be obtained. During the decomposition of salts, and even in their solution, this agency was liberated, and produced similar effects with those occasioned by magnets, crystals, sun, moon, and stars. The Baron's next step was to attempt to obtain odyle, so as to render it cognisable to vision. For this purpose he selected an inner apartment at Schloss Reisenberg, his residence, near Vienna, which he rendered perfectly dark, and in which, by means of a wire running through a long suite of rooms, he could command a metallic communication with the outer air. Here - not being a sensitive himself—the Baron shut up his sensitives. The lowest class, he found, after being shut up from fifteen to sixty minutes, were enabled to see, what they described as a faint cloud-like smoke, of a greyish-blue colour, that issued constantly from both poles of his large horse-shoe magnet immediately after the armature or keeper was removed. A higher class of sensitives beside this discovered odylic sparks; whilst the highest class of all saw flames issue from both poles of the magnet, from two to six inches in length which then united and ascended to the ceiling, as a luminous cloud or nebula. They described the flames as being very ethereal, and of a lightning-colour; that issuing from the positive pole having a reddish tinge, while the flame from the negative was greyish, tinted with blue. This odyle is described as imponderable. It is influenced by the currents of air or the breath. If the hand is placed over the flame it becomes flattened, and streams around it, rising upward again. Odyle is not magnetism, for it has not the property of imparting polarity to needles, or attracting iron, and can be copiously obtained by chemical action.

By means of this wonderful discovery, many facts now come clearly to be explained. The human body is a vast store-house of chemical action. Odyle is liberated from the entire body, but chiefly from the eye, the inside of the hands, the tops of the fingers, and the lips. Here we have clearly the philosophy of kissing, if not of love-making in general.

We can now also account for other phenomena, which have been a sad stumbling-block to our philosophers in days gone by. In the decaying graves of our brethren, chemical action takes place, and odyle is liberated. A sensitive perceives it; ignorant and terrified, the spectator swears to having seen a ghost, and the village churchyard is said to be haunted ground. The Baron took Mlle. Reichel, a highly-sensitive female, residing with his family, one night to a cemetery, near Vienna, where she saw a dense vaporous mass of odylic flame rising to the height of four fe[illegible] Had the lady been an ignorant rustic, a fearful ghost story would have sprung into existence, and long been greedily believed.

We will give another instance of the odylic exhalation. Some [illegible]s ago the blind German poet, Pfeffel, engaged a young Protestant clergyman, named Billing, as an amanuensis. One day [illegible] they were walking in the garden, Pfeffel observed that as often as they passed over a certain spot Billing's arm trembled, and the young man became uneasy. He made inquiry as to the cause of this, and Billing at last unwillingly confessed that as often as he passed over that spot he was attacked by certain sensations, over which he had no control, and which he always experienced where human bodies lay buried. He added, that when he came to such places at night he saw strange things. Pfeffel, with the view of curing the young man of his folly, as he supposed it to be, went with him that night to the garden. When they approached that place in the dark, Billing perceived a feeble light, and when he drew nearer he [illegible] ghost-like form hovering in the air. Many experiments were tried during several months. Company was brought to the place, but no change occurred. Still the ghost-seer stuck to his story, and at last Pfeffel had the place dug up. At a considerable depth they came to a firm layer of white lime, about as long and as broad as a grave, tolerably thick, and on breaking through that the bones of a human being were discovered. The bones were taken out, the grave filled up, and when Billing was again brought to the place the nocturnal ghost was no longer visible. Reichenbach easily explains the phenomenon. A human corpse is a rich field for chemical changes. A layer of dry quick-lime compressed into a deep pit adds its own powerful action to these affinities. Rain-water from above is added. The lime first falls to a mealy powder, and afterwards is converted by the water which trickles down to it into a tallow-like external mass, through which the external air penetrates but slowly. Such masses of lime have been found buried in old ruined castles, where they had lain for centuries, and yet the lime has been so fresh that it has been used for the mortar of new buildings. The occurrence in Pfeffel's garden is therefore quite according to natural principles, and since we know that a continual emanation of the flames of the crystalline fo[illegible] panics such processes, the ghost-like appearance is thus explained. It must have continued until the affinities of the lime for carbonic acid, and for the remains of organic matter in the bones were satisfied. So, whenever a sensitive passed over the spot, he would perceive the exhalation of which Billing spoke. Ignorance, and fear, and superstition, would give to the luminous appearance the form of a human spectre, and supply it with head, arms, and feet, just as we can fancy when we wish any cloud in the sky to represent a man or demon. Thus the existence and appearance of ghosts may be easily explained. Thus, every day the mysteries of human life are cleared up, and the wonderful is brought down to the level of the commonest understanding. Thousands of ghost stories will now receive a natural explanation, and will cease to be marvellous. We shall even see that it was not so erroneous a-

absurd as has been supposed, when our old women asserted everyone knows they did, that not everyone was privileged to see the spirits of the departed wandering over their graves. In fact it was at all times only the sensitive who could see the emanation from the chemical change going on in corpses, luminous in the dark. Thus do we see for ever destroyed one of the densest veil of human ignorance and error. What our forefathers called witch was often merely a sensitive. It is to be trusted, that we are more merciful in these times, because more knowing, and that we shall cease to persecute men who but truthfully narrate what they see and hear and feel. Our fathers did this, and the result was the perpetuation of ignorance of every kind. It is time now that we learn to listen to new truths with respect, however they may clash with parties and principles with which we have become identified. The world reaps the benefit, and in that we should rejoice.

COMPUTATION OF TIME BY THE ANIMAL CREATION.

This faculty is perfectly unconnected with the external senses, and exhibits so completely the combination of method and judgment, that perhaps nothing in the whole animal system goes so far to prove the existence of mind, and although almost every proof has a reference in some manner to the human race, yet it is not the result of education, but of observation. The peculiarities of the season, and of the periods of migration and of hybernation, do not fall under this head, as the knowledge of them is entirely attributable to instinct, and to that impulse over which the animal has no control, affecting the young as strongly as the old. Recognition of circumstances has no influence on the judgment, for, where any variation takes place, the animal is bewildered and cannot reconcile it to its accustomed practice. Thus, we read of the dog, the constant companion of its master, which remained quietly at home on the Sundays, but followed him to the church on Good Friday, although to outward appearance the two days were the same. The same with the deer in Greenwich-park, which, accustomed to the crowds frequenting the spot, are so little alarmed at their appearance that they feed from the hand, but confine themselves on Sunday to an enclosure set apart for them, and never wander from its precincts, but on Good Friday, when the park is equally thronged, they remain at large. Poultry know the exact moment of feeding time, and domestic animals return of their own accord at the stated period from their pasture. Robins and other little birds, will come regularly at the hour of breakfast to receive their crumbs from the window. An ostrich, at Paris, rang a bell at the door of its enclosure when its food was not brought at the usual hour. We are so accustomed to the presence of our dogs that we almost cease to notice their actions, but the least intelligent of them seem to be perfectly conscious of the arrival of certain periods of time. There is the well-recorded story of the Newfoundland dog which took daily a basket with sundry pence in it to the baker's, and brought back the rolls for the family's breakfast, but on Sundays made no effort to move. The race of turnspits is almost extinct, as their services have been superseded by machinery, but in some places this has not been of long date. These dogs know the roasting-day most distinctly. At the Jesuits' College at Eteche, the cook took one of these dogs out of its turn to put it into the wheel of the spit; but the animal, giving him a severe bite, ran away, and drove in from the yard the dog whose turn it really was. Arago describes something similar; he saw several dogs at an inn, whose duty it was to turn the spit in regular rotation, one of which skulked away, and obstinately refused to work, because its turn had not come round, but went willingly enough into the wheel after its comrade had turned for a few minutes. A dog, which was in the habit of accompanying its master from Paris to Charenton, where he spent the Sunday with a friend, having been locked up on two successive occasions, ran off alone to Charenton on the Saturday evening, and waited there for its master. A gentleman writing from Edinburgh, and speaking of the Scotch shepherd's dog, describes it as one of the most intelligent of the canine family, as a constant attendant on his master, and never leaving him except in the performance of its duty. In some districts of Scotland these animals always accompany them to church; some of them are even more regular attendants than their master, for by an extraordinary computation of time, they never fail resorting thither, unless employed in attending their charge. To a stranger, their appearance is somewhat remarkable in such a spot, and the propriety with which they conduct themselves during the service is remarkable and [illegible]. In one parish great complaints were made against [illegible], as occasioned during divine service by the quarrelling or otherwise unmannerly conduct of the dogs, when it was agreed that all those who had dogs should confine them, and not allow them to come to church. This did very well for the first Sunday or so, but the dogs not at all relishing to be locked up on a day when they were wont to enjoy themselves, were never to be found, they by some instinct knew the Sunday as well as their masters, and set off before them, whither they had been in the habit of going on that day.

LOVE ON.

Love on, love on, the soul *must* have a shrine—
The rudest breast must find *some* hallowed spot;
The God who formed us left no spark divine
In him who dwells on earth, yet loveth not.
Devotion's links compose a sacred chain
Of holy brightness and unmeasured length,
The world with selfish rust and reckless stain
May mar its beauty and not touch its strength.

Love on, love on—ay, even though the heart
We fondly build on proveth like the sand;
Though one by one Faith's corner-stones depart,
And even Hope's last pillar fails to stand
Though we may dread the lips we once believed,
And know their falsehood shadows all our days—
Who would not rather trust and be deceived,
Than own the mean, cold spirit that betrays?

Love on, love on, though we may live to see
The dear face whiter than its circling shroud
Though dark and dense the gloom of Death may be,
Affection's glory yet shall pierce the cloud
The truest spell that Heaven can give to lure,
The sweetest prospect Mercy can bestow,
Is the blest thought that bids the soul be sure
'Twill meet above the things it loved below.

Love on, love on—Creation breathes the words—
Their mystic music ever dwells around,
The strain is echoed by unnumbered chords,
And gentlest bosoms yield the fullest sound
As flowers keep springing, though the [illegible]
Is oft put forth for worm to feed upon,
So hearts, though wrung by traitors and the tomb,
Shall still be precious, and shall still love on.

PROOF POSITIVE.—Not long since, it seems, a steam-boat, called the Old Kentuck, blew up near the Trinity, at the mouth of the Ohio, where it is a well-established fact that a great many of the mosquitos will weigh a pound, by which accident a lady residing in the name of Mrs Jones lost her husband and her trunk, or both of which an action was brought. There was, strange to say, great difficulty in proving that Mr Jones had been on board at the time of the collapse, that worthy having notoriously been very drunk on the wharf-boat just as the steamer left. Many witnesses were called to prove the fact, until finally a Mr Dietzmar, a German, was placed on the stand. Our friend, J. S, Esq., was attorney for the boat, and elicited from Mr Dietzmar, in examination "Mr Dietzmar, did you know the Old Kentuck?"—"Yah, I wash blowed up mit her."—"Were you on board when she collapsed her flue?"—"When she bust the [illegible]? Yah, I wash dare."—"Did you know Mr Jones?"—"To be sure Mr Jones and I took passenger togeder."—"You did? When did you last see Mr. Jones on board the boat?"—"Well, I didn't see Mr Jones aboard de boat last time." J S fancied his case was safe, and with a most triumphant glance at the jury said. "You did not? Well, Mr. Dietzmar, when last did you see Mr. Jones?"—"Well, when de schmoke pipe and me was going up, we met Mr. Jones coming down."

MISCELLANEA.

CANDID STATEMENT.—An honest lady in the country, when told of her husband's death, exclaimed, "Well, I do declare, our troubles never come alone! It am t a week since I lost my best hen, and now Mr. Hooper has gone, too, poor man!"

DR FRANKLIN'S LETTERS TO A LADY.—The *Boston Post* publishes five copies of unpublished letters from Dr. Franklin, which have recently been found in that city. The following one seems to have been addressed to a lady with whom he was on intimate terms previous to his marriage, and who was single at that time:—"Philadelphia, Oct 16, 1756—Dear Katy,—Your favour of the 28th June came to hand but on the 22nd September, just three months after it was written I had two weeks before written you a long chat, and sent it to the care of your brother ward. I hear you are now in Boston, gay and lovely as usual Let me give you some fatherly advice kill no more pigeons than you can eat, be a good girl, and don't forget your catechism, go constantly to meeting or to church till you get a good husband, and then stay at home and nurse the children, and live like a Christian. Spend spare hours in sober whist, prayers, or learning to cipher You must practise addition to your husband's estate by industry and frugality, substraction of all unnecessary expenses. Multiplication—he will make you mistress of As to Division, I say with brother Paul, 'Let there be no division among ye,' but as your good sister Hubbard (my love to her) is well acquainted with the Rule of Two, I hope you will become as expert in the Rule of Three, and when I have again the pleasure of seeing you I may find you, like my grape-vine, surrounded with clusters, plump, juicy, blushing, pretty little rogues just like their mamma Adieu. The bells ring, and I must go among the grave ones and talk politics—B F."

HOW TO DRAW A CONGREGATION.—The *Tribune* says Several years ago we were a resident of North-Western Louisiana, near the confines of Texas. The people were as a general thing not much given to religion. An itinerant preacher happened to go along in the neighbourhood during the dearth of religion, and set about repairing the walls of Zion in good earnest. But his success was poor. Not over half-a-dozen could be got together at his Sunday meetings Determined, however, to create an interest before leaving the neighbourhood, he procured printed handbills, and had them posted up in every conspicuous place in the district, which read to the following effect:—"Religious Notice—Rev. Mr. Blaney will preach next Sunday, in Dempsey's Grove, at ten o'clock, a m, and at four p m., Providence permitting. Between the services, the preacher will run his sorrel mare, Julia, against any nag that can be trotted out in this region, for a purse of 500 dols." This had the desired effect. People flocked from all quarters, and the anxiety to see the singular preacher was even greater than the excitement following the challenge. He preached an eloquent sermon in the morning, and after dinner he brought out his mare for the race. The purse was made up by five or six of the planters, and an opposing nag produced. The preacher rode his little sorrel, and won the day, amid the deafening shouts, screams, and yells of the delighted people. The congregation all remained to the afternoon service, and at its close more than 200 joined the church; some from motives of sincerity, some for the novelty of the thing, some from excitement, and some because the preacher was a good fellow. The *finale* of the affair was as flourishing a society as could be found in the whole region thereabouts.

A CRIMINAL CASE IN TEXAS.—At a late trial, somewhere in Texas, the defendant, who was not familiar with the multitude of words which the law employs to make a very trifling charge, after listening a while to the reading of the indictment, jumped up and said, "Them 'ere allegations is false, and that ere allegator knows it."

A USEFUL MAN.—Benjamin's new paper contains the following:—"To advertisers—We have the pleasure of announcing that we have secured a stout, healthy young man, who will take all patent medicine advertised in this paper, and furnish certificates of any desired stringency, according to price, to the proprietors."

When it was remarked in company how very liberally those persons talked of what their neighbours should give away, who are least apt to give any themselves, Sydney Smith replied, 'Yes, no sooner does A fall into difficulties than B begins to consider what C should do for him.'

PROOF THAT A MAN IS DEAD.—A subscriber to one of the eastern papers a few years ago, being sadly in arrear for the same, promised the editor that if his life were spared to a certain day, he would without fail discharge his bill. The day passed and the bill was not paid. The conclusion, therefore, was that the man was dead—absolutely defunct Proceeding on this conclusion, the editor in his next paper placed the name of the delinquent under his obituary head, with the attending circumstances of time and place Pretty soon after this announcement, the subject of it appeared to the editor, not with the pale ghostly appearance usually ascribed to apparitions, but with a face as red as scarlet Neither did it, like other apparitions, wait to be first spoken to, but broke silence—"What the ——, sir, do you mean by publishing my death?" "Why, sir, the same that I mean by publishing the name of any other person—viz, to let the world know that you were dead." "Well, but I am not dead!" "Not dead? then it is your own fault, for you told me you would positively pay your bill by such a day if you lived till that time. The day is past, the bill is not paid, and you positively must be dead, for I will not believe that you would forfeit your word—oh, no!" "I see you have got round me, Mr Editor—but say no more about it, here is the money And harkee, you wag, just contradict my death next week, will you?" "Oh, certainly, sir—just to please you—though, upon my word, I can't help thinking you died at the time specified, and that you merely came back to pay this bill on account of your friendship for me."

IRISH WIT.—"Molly," said a lady to her servant, "I think you'll never set the river on fire." "Indade, ma'm," innocently replied Molly, "I'd never be afther doing anything so wicked—I'd be burning up all the little fishes."

ANSWERS TO CORRESPONDENTS.

HENRY.—The earthenware manufacture of this country is very large. It is estimated that at the Potteries alone the value of the earthenware produced annually is about £1,700,000, and that the value of the manufactures of Worcester, Derby, and other parts of the country, may amount to about £750,000, making a total annual value of £2,450,000 The value of the gold annually consumed at the Potteries in ornamenting porcelain is £34,400. The quantity of coal consumed annually at the Potteries is 498,000 tons. It is calculated that the present total amount of the export trade in earthenware is about £1,300,000.

THOMAS.—You are quite right. Science is a great help to the unprincipled knave. As a proof, at this time there are in circulation a large number of counterfeit half-crowns, which have been produced from dies in brass and then electro-plated with silver, by which means the base coin has much more the appearance of silver than that produced in the common way by a mould. For instance, the milling round the edge [illegible] ed from the Mint, and it is well known that the greatest difficulty the coiner had to contend against was mill the edge of the spurious equal to the genuine crown. To these brass coin the contractors now in use are of little avail, as they must bend them These half-crowns are the best imitations of the genuine ones yet produced, and they are only to be distinguished from them by the peculiarity of their ring and their lighter weight.

JUVENIS.—It was Luther who said that to rise early and marry young was what no one would ever repent of doing You will find the passage in that delightful book, "Luther's Table Book," where also you will read how he threw the inkstand at the old soul was as much afraid of the Turks then as now-a-days some of our good people are afraid of the Pope.

W J.—Eighty-five thousand six hundred and three emigrants left the ports of the United Kingdom, at which there are Government officers, in the quarter ending September 30, 1851. This is at the rate of 330 a-day, 6,510 a week. 15,963 sailed from Irish ports; 4,378 from Glasgow and Greenock; and 67,962 from three English ports—namely, 10,062 from London, 2,799 from Plymouth, and 54,401 from Liverpool. Many of the Irish emigrants are returned at Liverpool. Of the total number, 66,860 emigrants sailed to the United States; 9,268 to British North America; 6,097 to the Australian colonies; and 1,278 to other places. The emigration has hitherto been greater in 1851 than it was in the corresponding quarters of 1850.

G. G.—The lunar day, or, in other words, the time which the moon continues above the horizon, is of various lengths. While she remains near any of those points of the heavens which the sun occupies during the summer, she, like that luminary, necessarily rises early and sets late, with reference to the time of her coming to the meridian For instance, we will suppose the moon to be in one of the sun's summer constellations, say Taurus or Gemini, with her day about sixteen hours in length. We will suppose her also to be about the full, when she would be on the meridian about midnight. She would, in that case, rise about eight hours before midnight or about four p.m., and she would set about eight hours after midnight, or about eight a.m. But while the moon is near any of those points which the sun occupies during the winter, she rises late and sets early, also with reference to the time of her coming to the meridian. This is a beautiful provision of the Divine bounty, as by these means the full moons are when we most want them—that is, in the winter—by far the most beneficial, for not only is the day, or time of being above the horizon, of the winter full moon much longer than that of the summer full moon but also the moon's meridian altitude is ever much greater in the former than in the latter case, and her light, in consequence, much more intense.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER II.

UNDER this terrible calamity, Bela sought in vain for assistance from the Duke of Austria. Hungary was covered with dead bodies and ruined houses, but the King was not discouraged. He introduced a number of German colonists for the cultivation of the soil, and appealed to the people to support him in the carrying out of the measures designed to insure their own safety.

ASSEMBLY OF THE MEMBERS OF THE HUNGARIAN DIET ON THE PLAIN OF RAKOS, FOR THE FIRST TIME IN THE OPEN AIR, IN 1295

He ordained, amongst a number of other useful regulations the regular holding of the county assemblies. These assemblies were one of the most important of the privileges of the Hungarian people. Their rights, their duties, and their connection with the supreme power of the state, bore, as we have already said, a close resemblance to those of the states of the American Union. The sovereign authority was vested in the King and the Diet with regard to questions of general interest only. If the student reading of the thousand perils and disasters through which the Magyar nation has passed, unparalleled for their number and magnitude in the history of the world, should ask what was the safeguard of Hungarian liberty, while passing through an ordeal so trying, we can give him no other answer than refer him to the county assemblies. The life-blood of manly independence must have coursed quickly through the veins of the Magyar noble, as, with measured tread, arrayed in the splendid national costume, he strode proudly to the hall of council, where kingly power wrought no fear, and kingly smiles inspired no hope, where "the liberty to know, to utter, and to argue freely" for the common weal was accorded to [illegible] poorest country gentleman. The sittings were all in public, and the eyes of [illegible] There was the h[illegible] fearlessly. The [illegible] the Diet, but his labour was in vain whilst the freely elected representatives of the people were meeting in every county to watch over the public liberty, and whose interests and sympathies, coinciding with those of their constituencies in the midst of whom they lived and deliberated, [illegible] the most effectual guarantee against any betrayal of the confidence reposed

in them. Individuals may be traitors, but no treacherous representative body, save the Irish parliament, has ever been heard of in history. It was in these assemblies that the Hungarians received that political education which has rendered them so much superior to all the nations of eastern Europe. The happy distinction between the legislative and executive powers, the best safeguard of freedom, was recognised in Hungary before any other country in the world.

Bela, when he had in some measure repaired the disasters inflicted by the famine and the invasion, proceeded to chastise Austria for her refusal to assist him in his time of need. Frederic the Archduke was killed in the campaign, and by a treaty entered into at its close, Hungary obtained the whole of [illegible] extension of the frontiers of Dalmatia. Bulgaria was also incorporated with the Magyar kingdom as a dependent province. A short time afterwards the Moguls appeared, but were this time defeated with tremendous slaughter, thirty thousand men being killed in one battle.

It is at this epoch that the House of Hapsburgh, which was destined to exercise so baneful an influence upon the future of the Hungarian nation, first appears upon the scene. There was an implacable rivalry going on between Rodolph of Hapsburgh and Ottochar, the rightful King of Bohemia, and Duke of Austria. The former sought the aid of the Magyar King, and by means of it expelled his antagonist from his dominions, and laid the foundation of his own dynasty. It was the eagle lending his plume to wing the arrow that was to drink his own life-blood. The history of the relations of the Hapsburgh family with the Magyars, Kossuth has well designated, "a continued perjury." But who could foresee in 1278 that results so disastrous would spring in 1848 from this ill-advised connection?

All the national writers agree in their opinion of the great merits of Bela IV. During his long reign he surrounded himself and his kingdom with glory. No other prince has ever encountered greater difficulties, and none ever surmounted them with so much courage and ability. Before his death he gave his granddaughter, Mary, in marriage to Charles Martel, Prince of Salerno, a scion of the House of Anjou—an alliance which paved the way for the accession of a branch of this French family to the Hungarian throne.

There is nothing worthy of remark in the reigns of his successors, until we come to Andrew III., the last of the dynastry of Arpad. The pope, who considered Hungary a fief of the Holy See, opposed his election, and claimed the crown for Charles Martel, to whom we have just been referring. Rodolph of Hapsburgh, on the other hand, wished to place his son Albert upon the throne. Andrew III. espoused Agnes of Austria, and it is upon this marriage that Austria afterwards based her pretensions to the Magyar crown.

With the view of bringing about a reconciliation between the contending parties in these disputes, the King convened a grand Diet of the nation upon the plains of Rakos. This was the first time the great assembly of the Magyars was held in the open air. It is curious to find this singular custom equally prevalent amongst the Poles and Hungarians. The nobles of both countries met on horseback, to deliberate on elect a king, upon a vast meadow, clothed in their most splendid garments, a single gentleman often carrying his whole fortune in his own accoutrements, and the rich housings of his steed. There are a number of interesting circumstances, however, in connection with the Polish Diet, into which at present it is not our province to enter.

Andrew III. died in 1301 without any heir, and with him ended the dynasty of Arpad.

At this period the Hungarian people had made no inconsiderable amount of progress, not in political knowledge only, but in science and the industrial arts. St. Stephen had declared the inviolability of private property, and decreed its transmission from one generation to another by hereditary descent. The Magyars did not reserve to themselves alone the enjoyment of these political rights and liberties. Amongst the free inhabitants of their country were comprised all those stranger populations who had voluntarily submitted to their rule, and even the immigrants who had more recently entered their territory, and claimed to be considered as their guests. [illegible] those of the Hungarians who were convicted of theft or adultery, who sought to escape from military service, or who remained obstinately attached to Paganism, after the rest of the nation had embraced Christianity, were condemned to a state of slavery or serfdom. The laws against stealing, and against the illicit intercourse of the sexes, were more than ordinarily severe; and any freeman who was detected in an amorous intrigue with the domestic of another was sentenced to have his head shaved. Although the sale of women was strictly forbidden after the introduction of Christianity, these rigorous measures were indispensably necessary to root out the old custom of polygamy. The military superintendents (*ewreok*) formed a police service, and travellers were obliged to be provided with a passport or safe conduct. Royal messengers kept up postal communication between all parts of the kingdom, and each county was obliged to furnish them with relays of horses. This was the origin of those post-houses (*vorspann*) which are seen in every part of the country and of which the tourist is obliged to avail himself at the present day. The expenses of the government were defrayed by the revenues of the royal domains, that is, by the cultivation of the crown lands, and the produce of the salt and gold mines, and by the imposition of a small duty upon certain articles sold in the markets. The administration of the finances was conducted with great prudence and ability. As in central Europe, the towns arose, in nearly every case, in the neighbourhood of the great fortresses or castles, and became enlarged and enriched by the extension of industrial employment, and the influx of foreign colonists; as the Hungarians, in general, preferred living in the open country. Many of these towns became in process of time independent of the Chatelain, or lord of the castle, and were then called *free* or *royal*. All strangers paid a tax by way of compensation, for the protection afforded them, and their share in the political privileges, and thus greatly augmented the revenue. The consequence of this fixed internal organisation, and the security afforded to labour and property, was a rapid increase in the commerce and manufactures of the kingdom. The agricultural produce was every year more than sufficient for home consumption, and the utmost attention was given by the government to the promotion of industrial employment. St. Stephen sent shoemakers, carpenters, wheelwrights, &c., at his own expense through most of the towns in his dominions, for the purpose of imparting a knowledge of the manual arts to those desirous of acquiring them. The Magyars were celebrated at an early period for their skill in tanning, and Hungarian leather was in great demand all over Europe; they excelled also in dressing the furs, which formed part of their rich national costume. Their foreign commerce was also extensive. Their merchants had large counting and warehouses at Constantinople for carrying on their trade with the East. They supplied the northern countries with linen, woollen cloth, and arms, and the Germans with corn, cattle, and ale. They received their spices and other foreign products from Venice and Dalmatia, and supported a powerful and well-manned navy for the protection of their commerce.

The foregoing sketch has shewn us a barbarous, nomadic people, from the central plains of Asia, possessing all the coarseness and unbridled passion of the savage state, but full of courage, energy, and self-confidence, precipitating itself upon the worn-out civilisation of the Roman empire, and conquering new seats in the heart of another hemisphere. From the chaos which succeeded the breaking up of the old order of things, it arose a young and hardy nation, girding its loins to run the race of civilisation and progress with the other peoples of modern Europe. We have seen its conversion to the mild doctrines of Christianity; and have watched with interest its growth and improvement in the arts of peace, and its close adherence to the older and sterner virtues of the warrior. We have seen it every day coming out stronger and more self-reliant from the rude shocks and rough turmoil of the middle ages, and gradually building up a constitutional monarchy like our own, a canopy thrown over the head of a great nation to shield it from the biting chill of despotism, or the rough storms of an unbridled democracy—an undertaking the more difficult, because there was then no model to guide in the formation of free institutions. The progress has been [illegible] slow and it may be at times painful, but always

successful. We have now arrived at the era of power, influence, and glory, in which Hungary was the bulwark of Europe against the terrible assaults of the Turks, and its leader in arts, and law, and commerce.

It would be useless, as well as uninteresting to our readers, to attempt in the following pages to furnish a full detail of the various kings who have occupied the throne of Hungary, with their exploits or the incidents of their lives. Our space will only permit us, if we wish to avoid furnishing merely a dry catalogue of names, to seize upon the salient points of the history, and by them to illustrate the growth and life of the nation, the development of her commerce and civilisation, her decline under the influence of foreign domination, and above all the genius and disposition of the people, as displayed in their institutions and manners.

When the Magyars placed Almos, the son of Arpad, upon the throne, it was not so much a recognition of his hereditary right to the succession, as an acknowledgment of the great services of his father, and an expression of their veneration for his talents and virtue. From the same motives they gave up entirely their undoubted right to elect their monarchs, as long as there remained a scion of the house of Arpad to wear the crown; but when at the death of Andrew III. the dynasty became extinct, they resumed the exercise of their prerogative, and four candidates immediately appeared to claim their suffrages. Two of them, Venceslas and Otho, obtained it one after the other, not so much from their intrinsic merits, as because the remaining candidate, Charles Robert of Anjou was the favourite of the Pope, who endeavoured to procure his election by lavish threats of excommunication and anathema. The two former, however, having been successively driven from the kingdom, the Magyars succeeded in overcoming their repugnance towards Charles as the nominee of the Holy See, and chose him as their King. Their dislike to him arose from the obnoxious interference with their constitutional privileges made on his behalf by the Pope, whose sympathies and interests have in all ages run counter to those of the people. The Hungarians, like ourselves, would not be terrified into a surrender of their rights by the thunders of the profligate imbeciles who have so long swayed the destinies of Italy, and who walked slipshod over the necks of kings, when Europe was in its childhood.

Charles was the son of Charles Martel, and nephew of Charles II. of Naples, who was nephew of the celebrated Saint Louis, King of France; and, notwithstanding the unauspicious circumstances under which he ascended the throne, the Hungarians had afterwards reason to remember him with pleasure as one of the wisest and ablest of their monarchs. Notwithstanding his legitimate election, some of the great nobles refused to acknowledge him, and one of their number, Mathew Csak, perhaps better known as Count Trencin, who possessed immense estates at the foot of the Carpathian Mountains, refused to do him homage, and shutting himself up in his castle, bid him defiance. The King immediately put himself at the head of an armed force, and proceeded to enforce submission to the national will; but so powerful was the rebel lord, that it was only after a tedious war, and great loss, that he was compelled to surrender. At the siege of the fortress of Saros, which was commanded by Demetrius on behalf of Count Trencin, and was carried by storm after a gallant defence, the sons of Elias Goergey, the Count of the German Colony of Segusc, fought with unshaken courage at the side of the King in defence of the law and the constitution. Little did they think that a man of their stainless race would afterwards make their very name a synonyme through all Europe for whatever is traitorous and base. Arthur Goergey, the regicant of 1848, is the lineal descendant of one of them. As soon as peace was restored, Charles, who was now for the second time a widower, married the Polish Princess Elisabeth, and fixed his residence at the fortress of Visegrad upon the Danube, of which we [illegible]. Crowning the summit of a lofty hill, [illegible] by its picturesque situation, and astonished [illegible] or upon a nearer approach by its grandeur and extent. In the hands of Charles, it became one of the most magnificent royal residences in Europe. He carried to its embellishment all the French taste for what is showy and [illegible] and refined by a diligent study and high a[illegible] classic models of antiquity. Nor was his attention diverted from the work by the premature and lamented death of his two sons, or the constant anxiety caused by the ambitious designs of Paul Subics, who claimed the title of Ban of Croatia and Bosnia.

An outrage, disgusting for its coarseness, and rendered terrible by its sanguinary results, at length disturbed the course of this prosperous and happy reign. Casimir of Poland, afterwards surnamed the Great, the brother of the queen, a man of dissolute habits and violent temper, paid a visit to the Hungarian court, for the purpose of regulating the affairs of the Order of Teutonic Knights under the immediate superintendence of Charles Robert. Falling violently in love with one of the Queen's maids of honour, Casimir brought to bear all the tactics acquired in a long course of dissipation, declarations of the warmest love, prayers, entreaties, and splendid offers, without making any impression upon the cold virtue of the Magyar lady. This unsuccessful wooing inflamed his passion still more, and seizing a favourable opportunity, he obtained by brutal force what purity and innocence had steadily refused him.

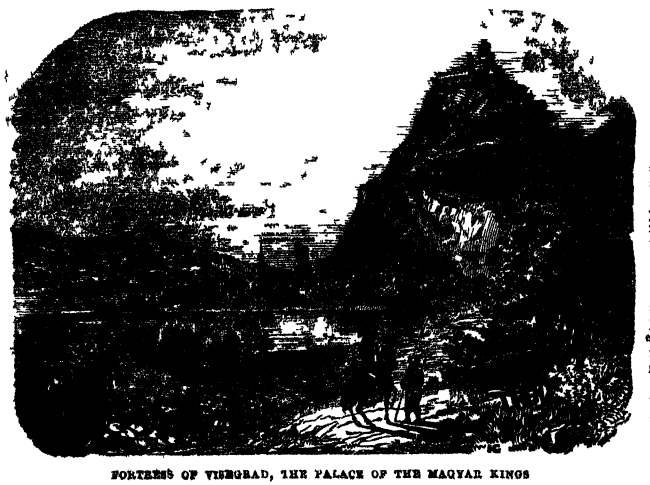
The unfortunate girl, overwhelmed with grief, shame, and remorse, fled from the palace and sought relief in pouring out her sorrows to her father, Felix Zacs, a Hungarian noble. Roused to fury by the injury and insult, Zacs rushed to the apartments of Casimir, swearing to wash out the disgrace in the heart's blood of the offender. But the ravisher had fled immediately upon the perpetration of his crime, and the disappointment of not finding him, still further increased the rage of the unhappy father. Losing all command over himself, he entered the room at which the royal family were seated at dinner, and struck the queen with his sabre, cutting off the four fingers from her right hand. In vain the king attempted to defend his wife. Zacs wounded him also, and was about to attack his two sons, when three noblemen with their attendants, entering the apartment, they all fell upon him at once, and cut him to pieces.

The royal vengeance did not rest satisfied with the summary punishment thus inflicted upon Zacs. The gentlemen of the court went armed to his house, and seizing his son, dragged him through the town tied to the tail of a horse, until he died from sheer exhaustion. We may excuse this outrage, committed in the first moments of rage; but nothing can palliate the after horrors, ordered by the king in his calmer moments. Clara Zacs, the unhappy lady whose injuries had been the cause of all, was compelled to walk through the town, having her nose, lips, and fingers cut off; while the crier proclaimed, "Thus is the punishment of traitors!" The king's vengeance extended itself to the second generation, and even further. The grandson of Felix Zacs was banished, and the collateral members of his family were obliged to save themselves by flight from torture or mutilation.

This terrible event occurred in 1336.

Charles Robert's attention was soon turned from this dreadful tragedy to other and more honourable employments. In the year 1285, the Tartar Noguis, the inhabitants of Moldavia, united with the Wallachians, the remains of the Daco-Roman colonies, and commenced to devastate Hungary. Having been defeated in some sanguinary engagements, they at length settled peacenbly between the Danube and the right bank of the Aluta. The two tribes into which they were divided, uniting under one chieftain, they began to cross the river, and whether it was that Charles Robert was alarmed at their progress, or wished to reduce them to a state of complete subjection, he declared war against them, although Bessarab, the waywode, or leader, paid him homage as his suzerain. Despairing of being able to contend against the king in the open field, Bessarab resorted to stratagem. Decoying the Magyar army into a mountain pass by feigning a retreat, he suddenly surrounded them on every side, so that to avoid the destruction of his forces, Charles was compelled to sue for peace. The wily waywode feigned the most friendly disposition, and protracting the negotiations to as great a length as possible, he in the meantime fortified the entrances to the defile, and crowned the heights with men-at-arms and archers, ready to pour down showers of arrows, and roll heavy rocks upon the Hungarian army at the word of their leader. When the Magyars become aware of the full danger of their position, their consternation was great. They saw every odds that can

encourage a soldier, on the side of their enemies—numbers position, and the certainty of a safe retreat Their only hope lay in forcing the entrance of the gorge without delay, but long are they reached it, three fourths of their number were buried beneath the missiles of their assailants, and the king only, and a few nobles, succeeded after a desperate combat, sword in hand, in fighting their way out



Charles Robert had naturally but little taste for war, and this catastrophe completely convinced him that he would meet with greater success in the smoother field of diplomacy

Upon the death of his grandfather as the heir of Charles Martel he preferred his claim to the Neapolitan crown before the Papal Court at Avignon Clement V, the Pope, pronounced however, in favour of Robert the uncle of the Hungarian king a brave and experienced warrior who was very popular amongst the Italians At the death of the latter, so disgusted was he at the corrupting influence exercised over his own heirs by the French ladies of his court, that he determined to leave the crown to one of his nephew s children He therefore sent an embassy to Hungary, inviting Charles Robert to Naples and requesting him to bring with him his second son Andrew No sooner had the message arrived, than the King set out, accompanied by a numerous and brilliant suite Upon their arrival at Naples, Robert betrothed his daughter Jane, aged only six years to Andrew the son of Charles Robert and declared them his heirs Andrew henceforth remained in Italy with his tutors, and a suite of Magyar gentlemen

COLOMAN

When Charles Robert regained his kingdom he found a splendid field for the exercise of his diplomatic talents suddenly opened up to him Vladislas Lokietel the King of Poland had died during his absence and his son Casimir who committed the outrage already mentioned at Visegrad had succeeded to the throne The latter was undoubtedly a man of great personal bravery and possessed some celebrity as a warrior and patron of the fine arts but he was given to indulgence in sensual pleasures indolent and averse to the transaction of serious business Charles rightly judged that such a monarch would be continually placed in difficulties from which the resources of his own uncultivated intellect would be entirely insufficient to extricate him and that he would naturally look to him as a man of ability, and a near relative, for advice and assistance

FORTRESS OF VISEGRAD, THE PALACE OF THE MAGYAR KINGS

The event answered his expectations He was constantly referred to as an arbitrator in the troubles which at that time distracted Poland, and his great taste, the gentle and winning courtesy of his manners, and his great superiority when thus placed in comparison with their own monarch, gradually won for him the esteem of the Polish nobles, and caused them to listen with a readier ear to representations which the Magyar king caused to be made to them, of the importance of a change in the order of the succession

At a meeting held at Visegrad, in 1335, Charles, in the character

of a mediator, finally succeeded in smoothing away the differences which existed between Casimir and the Order of Teutonic knights. In many similar cases he rendered like services, always acting the part of a disinterested arbitrator, but at the same time, gaining over the *noblesse* by his smooth flattery and the splendour of his presents. He had, however, a dangerous rival in John, King of Bohemia. Having rendered him important services, however, so dexterously did Charles Robert manage, that the Margrave of Moravia, who was the rightful heir of the Bohemian crown, promised his daughter Margaret in marriage to Louis, eldest son of the Magyar King, at the same time engaging to guarantee to him the succession in case Casimir died without issue. The wife of the latter died childless in May, 1339, and the Diet of Cracow proclaimed Louis of Hungary heir presumptive. Casimir himself came to Visegrad, with a magnificent retinue, to announce the good tidings. He was received with the splendour in which Charles delighted, and never was the exquisite taste and lofty dignity of the Magyar King displayed to better advantage than in this celebration of the consummation of his hopes and labours.

His days were now in the 'sere and yellow leaf,' and in 1342 he died after a long and brilliant reign of thirty-two years, in which he had done more for the promotion of the arts, commerce and manufactures of his kingdom, and the extension of its influence, than any monarch who had come before him. The Hungarians before his death had learned to love him with an ardour which [illegible] former dislike. In the greatness of his talents and the splendour of his services, they forgot that he owed his elevation in some measure, at least, to the support of a bigotted foreign priest, and remembered only his devotion to the Magyar nation, and the proud position to which his exertions had raised it. This forms a splendid trait in their character. The willingness to abandon prejudices, this homage to talent, to [illegible] moral worth, without reference to its accidents in the surest evidences of the lofty moral courage, and the high souled devotion to great principles which distinguish the Hungarian people.

Vast crowds amongst whom were Casimir of Poland and the Margrave of Moravia, followed the remains of Charles Robert to the tomb, and by their sorrowing aspect, and lowly-muttered lamentations, furnished the last testimony of their unavailing regret.

But the public grief was hushed or forgotten when Louis I. ascended the throne, amidst universal acclamations, in possession of a genius and aptness for affairs which gave early promise that his career would by its greater brightness obscure the lingering rays of his father's glory. In the commencement of his reign he showed more than usual activity, and in an expedition which he directed against the Saxons, his arms achieved the most splendid triumphs. This people inhabited many towns of Transylvania, to which some of them had come at an early period to submit themselves to the dominion of Charlemagne, others had been settled in different parts of the country at various times as colonists, after the devastations which had been committed by the Asiatic barbarians. Presuming upon the youth and gentleness of Louis, immediately after the death of his father, they refused to pay the public taxes, and the customary tribute exacted from all foreigners. The King, however entered their terri-

VAYVODS, ANCIENT INHABITANTS OF THE COUNTRY BETWEEN THE DANUBE AND THE JASSIOSA, SINCE MINGLED WITH THE MAGYARS.—HORSES AND MEN IN MAIL ARMOUR.

tory at the head of a large army, and quickly reduced them to submission. The Wallachians also, who had so successfully resisted his father, acknowledged his sway, and ever after remained firmly attached to him.

An event occurred in Naples about this time which occupied the attention not of Hungary only, but of all Europe, and which, from its interest and importance, demands as much of our space as we can well bestow. Our readers may remember the precocious engagement which was concluded by Charles Robert between his son Andrew and Jane, the heiress of Robert, King of Naples. The young prince, as we have already mentioned, was left at the Neapolitan court at the age of six years, to be brought up under the eye of his intended father-in-law, who, in order to remove all cause of dispute or division, promised that his daughter should succeed him in the kingdom in case she married Andrew. The latter, as he grew in years, prepossessed every one in his favour save his future bride. It is rarely that the human heart will bend its likings or dislikings to accord with the dictates of policy or ambition, and the hatred of Jane towards the youth whom she was expected to love and honour, but had not been permitted to choose, grew every day more violent. She and her young sister Mary were endowed with all the charms of figure and face which poets love to paint as the birthright of the women of the south; but they had also the hot temperament, and longing after forbidden pleasure, which, destroys domestic peace in the lands of sunny skies and starry nights, but is comparatively unknown amongst the denizens of less favoured climes. Jane's beauty won the attachment of the bishop of Cavaillon, a jolly priest and gallant gentleman; called forth the melodious praises of Petrarch, the ardent but dreaming and sentimental scholar, and secured for her the flattering notice of Pope Clement VI., who plumed himself upon being an excellent connoisseur in female beauty, almost as much as upon wearing the triple crown. All this might flatter the vanity of the young princesses, but the bad example of their mother, Margaret of Valois, corrupted their morals; and Phullippine, a depraved woman, who by her influence over Yoland, a half-brother of Jane, obtained the situation of governess in the royal family, finished the work of evil, which she had begun. Jane's dislike to Andrew manifested itself clearly upon the death of the King her father. Acting upon the evil counsel of her advisers, she declared that though her marriage gave him a right to share her bed, she certainly would not permit him to share her throne, and therefore would not concede to him the title of King or allow his coronation. The Pope was the universal referee at that time in all disputes relating to crowns and sceptres, and Clement VI., who was residing at Avignon, was called upon to decide between the husband and wife. In this instance, at least, the successor of St. Peter would ten thousand times rather have waived the exercise of his prerogative. On the one side he feared the great power of Louis, the King of Hungary; on the other, the loss of Jane's favour, to whose beauty his vows and her marriage did not by any means prevent his paying court.

In this dilemma he resolved upon sending Petrarch to Naples to make diligent inquiry into the cause of the quarrel. A worse emissary he could not have selected. Petrarch's disposition was amorous in the extreme, and he was consequently prepared to pardon all faults committed under the influence of that absorbing passion. Louis, hoping to save his brother's rights and Jane's reputation before matters came to an extremity, sent on his side his mother, Elizabeth, a high-minded and amiable woman, possessing great purity and integrity. She therefore set out for Naples, attended by a brilliant escort, but had no sooner arrived than she found it would be impossible that she could exercise any influence at such a court, where all the worst vices of our nature were covered over with a show of refinement which increased their allurements at the same time that it deepened their depravity, and where the frank and open manners of the Magyars were stigmatised as gross and barbarous. Nevertheless she endeavoured to bring about a reconciliation which would in all probability have been lasting, if her efforts had not been frustrated by the harsh sternness of the monk Robert, of the order of St. Francis, Andrew's tutor, being placed in opposition to the puling sentimentalism of Petrarch. Robert governed the kingdom in Andrew's name with great vigour and inflexibility, but having no taste for poetry, looked upon all poets with profound contempt. He therefore received Petrarch with studied indifference, and paid no attention to the Pope's instructions. The former, though he generally employed his pen in pouring out mournful complaints of the coldness of his mistresses, flew to arms, and revenged himself by writing a satirical poem, in which he heaped bitter reproaches upon Robert. Elizabeth was still at Naples, when the titular Empress of Constantinople, Catharine of Valois, provided a lover for Jane in the person of her son, Louis of Tarentum, who, in snatching the first fruits of unlawful love, rendered Andrew still more odious in the eyes of his wife.

The maternal affection of the Hungarian Queen now made her alive to the dangers which threatened her son, and she wished to take him back with her from an atmosphere so tainted with treachery and corruption.

The Greek Empress, however, entreated her to change her determination; the Chancellor of the kingdom, Count of Montescaglioso, an honest and powerful man, and devoted to the Hungarian cause, expressed to her his conviction, that if Andrew remained, matters might still be arranged; and Jane herself, with the ferocious cunning of a tigress, besought her with tears in her eyes, not to deprive her of her husband She therefore yielded to their solicitations, and took her departure.

At last the Magyar ambassadors purchased from Clement VI., with a sum of 41,000 marks of silver, some concessions in favour of Andrew. The amount was not sufficient to obtain all The Pope consented to confer upon him the title of King and crown him as such, but without any stipulation as to the succession at his death.

The Hungarians rested satisfied with this, but did not perceive till too late, that all their efforts would be rendered unavailing by the intrigues of the ladies of the Neapolitan court Agnes de Perigord, Duchess of Durazzo, another member of the royal family, jealous of the success of the Empress Catharine on behalf of her son, determined to counterbalance the influence thus obtained. Supported by the Cardinal de Talleyrand, she obtained from the Pope permission for her son Charles of Durazzo to marry Mary, the younger sister of the queen. Prompted by Catharine, however, Jane refused her consent, and they therefore determined upon carrying off the princess in the night In this there was a fresh insult offered to Andrew, as Mary had been previously affianced to his brother Stephen; and in case Jane died without issue, the succession remained to her sister In this instance he again gave proof of his gentleness and humanity, or as some may think, his feebleness and incapacity, by pardoning the ravisher. About this time a new scandal precipitated the closing scene of this hideous drama The queen's figure began to afford evidence, every day more unmistakeable, of her infidelity to her husband, and the insult and dishonour were rendered deeper by her indifference to her disgrace. Some mentioned Bertrand Artus, the son of the Grand Chamberlain, and the sworn enemy of Andrew, others Louis, Duke of Tarentum, as the cause of it; but Andrew was too proud to exhibit any outward signs of the mortification he felt, Soon after, some courtiers made a banner, with the figures of a block and an axe displayed upon it, and paraded it at a tournament in Andrew's presence, to signify the determination of the court to get rid of him, since they could no longer delay his coronation. On the 18th of September, 1344, he accompanied the queen to a party of pleasure at a country house, near Aversa, and riding out in the country, they stopped to dine at the convent of St. Peter of Morono, some distance from the town. In the evening a messenger came to the royal apartment to summon Andrew, as if for the purpose of delivering to him some important despatches. He had no sooner left the room than the door was closed behind him, and a hand placed on his mouth to stifle his cries. Andrew shook himself loose by a tremendous effort, and ran towards the hall his arms; but he found all the doors shut, and Jane quietly in her bed, paralysed by fear or the noise aroused his attendant, who cried for help; but Artrand d'Artus, the favourite of the queen, victim, and urged the assassins to attack hi struggle, they hung him from the balcony of a rope which the queen herself had

and bleeding body was then thrown into the garden, and the monks, when aroused, had to search for it during the greater part of the bright summer night before they found it.

When the news reached the town of Aversa, the tumult was great. The women rushed into the streets bewailing the murdered king, and the men went in arms to the convent, and forcing the gates, in blind fury slaughtered every one whom they met, without inquiry as to his innocence or guilt. All, in the bitterness of their grief, thought only of avenging the murder, and forgot to bury the body, which lay for many days before it obtained the rites of sepulture.

The queen, after the first flood of hypocritical tears, set out for Naples, and immediately abandoned herself to indulgence in every sort of licentious pleasure. The birth of an infant son awakened the memory of her past delinquencies, and filled the minds of the people with horror and disgust. Louis of Hungary instantly demanded an inquiry of the Pope, with a view to the discovery and punishment of the authors of this lamentable outrage. It accorded neither with the interest nor the inclination, however, of the Papal court to throw any light upon the matter, as the chief offender was the near relative of his Holiness. Cutting short the negotiations, Louis required the Cardinal de Talleyrand, and his nephew, the Queen herself, Catharine of Valois and her two sons, to be delivered up to him, that they might suffer capital punishment. Being anxious, however, to save his brother's honour, he consented that Charles Martel, Jane's illegitimate son, should be educated by Elizabeth at the Hungarian court, and that during his minority, his brother Stephen, Duke of Slavonia, should govern the Kingdom of Naples. But he was resolved in any case to punish the Queen, and deprive her of the crown, and for that purpose levied an army and marched upon Italy.

This dispute has been rendered one of the most famous in modern history, by the means which were now taken to decide between the contending parties. A man at this time sat at Rome in the chair of the ancient tribunes, who united the austerity and the severe and inflexible justice of the ancient Brutus, with the fire of the Gracchi, and the brilliant eloquence of Cicero. Raised from the body of the people, he was their idol; and when he banished from the gates of his native city the lawless nobles, the descendants of their barbarian conquerors, and re-established the reign of pure justice, equal rights, his fellows hailed him as their prophet and their guide. He had humbled the power of the great—and they looked upon him with a jealous eye; but the multitude clung to him as a father. He had become renowned for the largeness of his intellect, and the far-sighted justice of his decisions; and happier than the modern Ciceronacchio, he had gained the confidence of most of the princes of Europe. This plebeian saw crowned heads submit their disputes to his arbitration, and upon him Louis and Jane called, to decide between them. The task was a difficult one. By giving judgment in favour of either, he made the other his enemy. Rienzi temporised, postponed his decision from day to day, either from prudential motives, or with the view of making his finding upon the case more highly valued and more anxiously expected. Jane tried him with gold, but found him incorruptible, and then addressed herself to work upon his affections, flattering the vanity of his wife by rich presents, whilst she assured the Tribune that she sought only an impartial sentence.

At last the day came on which this great trial, wonderful for the demonstration which it affords of the might of moral power, and the force of great traditions, was to take place. Taking his seat upon a throne beneath the mighty dome of the Capitol, with the tribunitial crown upon his head, and the silver ball, the ensign of power, in his hand, he summoned before him the advocates of the rival monarchs, and bid them plead their clients' cause. And when the vast multitude which assembled to witness this strange and thrilling scene, their great law-giver giving judgment between the kings of the earth, it seemed as if some lingering rays of the glory of the old empire cast their mellow light through the hoary ruins that mouldered around, recalling the days when Rome sat the seven hills clothed in majesty, and Jugurtha and rival claimants of a great kingdom, awaited the mand to decide their fate.

ne heard but did not decide. With a hesitation ly not inherent in his character, he declared that he could not pronounce upon so weighty a matter without first consulting the Pope.

Louis could not brook the delay, and he consequently refused any longer to leave the matter in Rienzi's hands, but determined forthwith to right himself by force. Sending forward the main body under the command of Nicolas Herrici, a pious bishop (according to the notions of the times) and a brave soldier, he followed himself at the head of one thousand men, as an avenging corps, in the midst of which floated a black banner, carrying a portrait of his murdered brother. Town after town fell before him; the petty princes of the peninsula sent embassies to seek his alliance, and the Pope alone attempted to arrest his triumphant progress. A legate met him, and threatened him with the anathemas of Mother Church, unless he consented to desist from hostilities, and make peace with the Queen. Louis' reply was characteristic of the man and of the nation to which he belonged. "The Pope," said he, "has no right to place bounds to my vengeance. He promised to punish the murderers of my brother, and his blood still cries against them from the ground. The criminals still survive, and are sheltered and protected by the Holy See, while I, who have taken arms only for their chastisement, am threatened with excommunication. The Holy Father reserves his curses for innocence and his favours for crime. Let him excommunicate me. I make no objection. I don't fear his empty thunders. There is a higher judge than he, who knows the justice of my cause, and will one day review the decisions of the Pope's."

He continued his course, and the Neapolitans began speedily to flock to him. The Queen was deserted on every side, even by her husband, Andrew's murderer, whom she married in less than a month after his death. She escaped in the night, and landed safely upon the coast of Provence.

Upon taking possession of Naples, Louis guaranteed to all the free enjoyment of their liberty and property, except those who had taken part in the assassination of his brother.

This promise seems to have reassured Charles de Du who rested under the gravest suspicions. The Magyar headquarters were then at Aversa, and thither the Neapolitan flocked to pay homage to their new sovereign. Durazzo followed their example. This man was a strange compound of bravery and ambition, carelessness of his own interests, and great perseverance. He was constantly mixed up in low and vile intrigues, and was consequently looked upon with great suspicion by the nobles, although his conduct appeared less equivocal in the eyes of the people. He had drawn upon himself the hatred of the Archbishop of Naples, who appeared before the Hungarian King as his principal accuser.

A grand council of the Magyar barons was summoned by Louis to deliberate upon the guilt of the culprit and the punishment of his crime. The sentence of death was unanimously pronounced. According to the custom of the time, the King was seated at a solemn banquet in the midst of his lords, when the unfortunate Charles was called before him.

"Duke," said the King, regarding him with a stern aspect, "your lot is cast—you shall die within an hour. But you must first listen to the recital of your crimes. You hindered the coronation of my brother by your machinations; you ravished Mary, the sister of the queen, who was promised in marriage by her father, first to me and then to my brother Stephen. You have, it is true, pursued the assassins of Andrew, but only that you might further your own ambitious projects. You were the first to invite me to this country, and the first to desert my standard when I had arrived. You shall now expiate your guilt by an ignominious death."

It was in vain that Charles begged and prayed for life on any terms; the King spurned him from his feet in disgust. He was beheaded on the same balcony from which the unfortunate Andrew had been hanged.

It would seem as if a curse has for centuries hung over the kingdom of Naples. When Louis conquered it, it was as corrupt, as degraded, as void of honour, humanity, and good faith, as now, when the finest intellects in the kingdom are buried in dungeons thirty feet below the level of the Adriatic.

He set to work immediately to introduce some sort of order into the hideous chaos, and afford some sort of security to the unfortunate people who had been so long plundered by the nobles and the court. The task was difficult—but it was one

worthy the ambition of a great man He protected personal liberty, private property, and the fruits of honest labour against open violence of the robber, and the more silent, but no less dangerous attacks of fraud and chicane "Activity, honour justice replaced sloth, jobbing, and corruption, assassination, and dissoluteness of manners, and the people began to revive *

Louis entertained a feeling of deep disgust at the low state of morality which he found prevailing amongst the mass of the people, and the total want of principle of the *noblesse* When, upon making his triumphant entry into the capital the great lords presented him with a magnificent throne he refused it with evident marks of contempt and when the orators appeared with their panegyrics, and the poets came to recite their complimentary odes he refused to hear them

He had to steer clear of two evils He had on one hand to avoid offending the pride of the nobles by too great severity, and on the other hand, to see that the authors of a great crime should not escape with impunity Under the stern severity of the Magyar rule however the Neapolitan barons soon began to regret the gay licentiousness of the old *regime* and long for its return

A deplorable calamity soon occurred which hastened the outbreak of their discontents and enabled them to give form and consistency to their hatred of Hungarian domination A terrible earthquake shook the whole of Italy, burying towns and villages by the shock and close upon it followed a pestilence which spread with greater or less degree of virulence, over the whole of Europe Hungary escaped with little injury but Naples was the very centre of the wide spread desolation Louis travelled through the whole kingdom exposing himself to imminent personal danger, in the attempt to alleviate the sufferings of the wretched inhabitants His labour was however, in vain and after fortifying the garrisons and distributing troops through the country at the earnest solicitation of his ministers he returned to Hungary No sooner had he disappeared than the nobles threw off the mask, and sent deputies to Avignon where Jane had taken refuge, beseeching her to return with her husband, and take possession of her throne But she had no money and in order to raise supplies, she sold the town of Avignon, and the territory attached to it, to the Pope for a sum of 80 000 florins, and even pledged her jewels to fit out an expedition She arrived at Naples, and was received into the town, although the Hungarian garrison occupied the castle, and Louis of Tarentum her husband, put himself at the head of the army Charles Martel Jane's son, being at this time dead Louis wished to marry his brother Stephen to Mary, the widow of Charles de Durazzo, and place them on the throne but the Pope steadfastly refused his consent, and succeeded in inducing the German levies to desert the Hungarian standard This defection

* Matthæus Villani, l I c, 16.

obliged Louis to suspend his operations for some time but in the spring of 1350 he again appeared with large reinforcements, and carried everything before him He was twice wounded at the sieges of two towns, but still persisted in [illegible] At the siege of

cult to keep as it was easy to acquire, and being disgusted with the shameless immorality of the Papal court, at once acquiesced in it The Queen sent him 300,000 florins to meet the expenses of the war but it was returned with the cold reply, that he fought to avenge his brother not to accumulate wealth He immediately vacuated Naples, after having occupied it for six years

that if they met face to face in a general engagement he should not decline the conflict

Marching upon Naples, it surrendered to him without striking a blow Upon taking possession of the town he informed the inhabitants that he would levy a contribution on their goods as a punishment for their treason Thus was the signal of a general outbreak and after a murderous conflict in the streets the Magyars harassed and worn out by the overwhelming numbers of their assailants were compelled to retreat to the citadel The Pope seized this opportunity of renewing his offers of peace on behalf of the Queen At the same time declaring his intention of delivering judgment upon the differences existing between the two parties It was impossible to exculpate Jane from the charges alleged against her but at the same time Clement was by no means willing to have a powerful king as his neighbour instead of a beautiful woman who was anything but niggard of her favours towards those whom she wished to conciliate To end the matter, he forthwith formed a tribunal of his own creatures before whom Jane was arraigned with a mockery of legal procedure, and, in accordance with the advice of her ecclesiastical counsellors, he declared that instigated by *diabolical witchcraft* by an excess of folly, of which she could not divine the cause, she had, *against her will*, ordered the murder of her husband whereupon the Pope declared her innocent of the *witchcraft and its consequences!*" The moment the judgment was pronounced, a letter signed 'Lucifer Prince of Darkness, and addressed to "His Holiness the Pope his representative upon Earth,' fell in the midst of the astonished consistory In the epistle, his Satanic Majesty informed them of the satisfaction with which the accounts of the manifold vices misdeeds, and injustice of the Pope and his cardinals were received by the damned spirits in the infernal regions

SER I, CRUELTY OF JANE I IS OCCUPYING HUNGARY IN CONNECTION WITH THE CZAR

The absurdity of this judgment was apparent to every one but Louis, perceiving that the kingdom of Naples was as diffi-

Such was the negative result of a conquest achieved by the expenditure of blood and treasure It affords one of those useful lessons that men learn from history of the folly of an endeavouring to sway a foreign nation and an alien race by force alone without the aid of moral power and influence Would that the present ruler of Hungary would follow the example of his wiser and abler predecessor, and quietly relinquish what can only be retained by arms and coercion

ISABEL LESLIE.

One calm summer evening, a travelling carriage, drawn by a pair of spirited bays, was slowly ascending a hill in one of the most beautiful and romantic portions of South Wales. Its occupants were a lady and gentleman, who were so absorbed in earnest conversation, that the many beauties of the surrounding scenery were unheeded. As they reached the summit of the hill, however, the driver reined in his steeds in obedience to a signal from his master, and Mr Leslie exclaimed—

"There, Marion, we are almost at home now, have I been too poetical, or too prosaic, in my descriptions of Glenwood?"

The young bride looked hastily from the window, and an exclamation of mingled surprise and admiration escaped her.

"Your descriptions certainly fell very far short of the reality," she replied, with a smile. "I had no idea of anything half so lovely."

For some moments they sat in silence. There was a blending of new and strange emotions in Marion's breast, and she could not give vent to them in words. At length, as her eye wandered round in search of new beauties, it fell upon a simple but tasteful monument of white marble, gleaming out in strange contrast with the deep green turf, and from among the overshadowing trees.

An indefinable thrill passed through the frame of the young wife, and her cheek perhaps grew a shade paler for her husband, marking the direction of her glance, bade the driver go on, and drawing her closer to his side, kissed her fondly as he said—

"The mother of my child sleeps there. You do not tremble, dearest. I know that if her gentle spirit looks down upon us now, she rejoices that my heart is no longer desolate—that her little one is no longer motherless. And look, Marion, for I continued, loving, inside the solemnity of his tone and manner, there is Isabel in the piazza ready to welcome us."

A moment more, and the carriage drew up at the door. The household had all assembled in the hall to greet their new mistress; but the little Isabel had escaped from her nurse, and stood upon the piazza, clinging to a vine wreathed column that supported the roof. Her face was flushed, her eyes sparkled with excitement, as, shaking back her dark curls, she leaned forward to obtain a better view of the new comers; and when Mr Leslie lifted his wife from the carriage, she sprang forward, and, without noticing her father, extended her little arms beseechingly, exclaiming, "Mamma, mamma!"

Tears started to Marion's eyes, and she would have clasped the little creature to her heart with whispered words of tenderness, but the child, after gazing in her face long and earnestly, while surprise, doubt, and finally bitter disappointment were depicted on her own expressive features, broke from her embrace and bursting into tears, ran to her nurse, crying "Take me away, Nanny—take me away."

One pleasant evening in August—it was in May that our young bride first saw her new home—Mr and Mrs Leslie were seated in the piazza, of which we have before spoken, and Isabel was playing on the grass at a little distance. Her father's eyes rested fondly on her, as he watched her graceful movements, and noted her rare beauty, with pardonable pride.

"She is very lovely," he said at last. "Is she not, Marion?"

"She is, indeed," was the reply, and a shade of sadness rested on the sweet face of the young stepmother. "Oh, if she would only love me!"

"Do not say so, my Marion, how can she help loving one so kind and gentle as yourself," said Mr Leslie, earnestly, as he tenderly clasped the little hand that his wife had placed upon his arm while speaking.

"No, Ernest, Isabel does not love me. I have no disrespect or rudeness to complain of—her temper is too sweet for that, but, with all my endeavours, I have not advanced one step in winning her love and confidence. She has no personal dislike to me, it is but her fidelity to the memory of her mother that keeps us apart. Of her she no longer speaks unless it be to Minnie, but it is not because she has ceased to think of her. Every morning she takes her little basket, fills it with the flowers which she has been told her best loved, and goes to her grave, and scatters them

all this, my Marion. Have you ever spoken to her of it?"

"I have felt almost afraid to do so."

experiment, then—and, take any word for it, she will

At the usual hour, immediately after breakfast the next morning, Marion saw Isabel take her little basket, and go to the garden in search of flowers. Throwing on her bonnet, she slowly followed the child, and reached her just as she had filled her basket.

"You have some beautiful flowers here, my little Isabel," she said, adding at the same time a superb moss rose-bud to her fragrant treasures. "Shall we go and sit under the large oak-tree in your mother's grave? Then I will show you how to make so pretty wreaths, and we can hang them in the shade over the grave so they will keep fresh nearly all day. Will you come?" she continued, extending her hand, with a smile. Isabel lifted her large, dark eyes wonderingly to the kind face that was bending over her, and finally, placing her hand quietly in that of Marion, she walked silently by her side to the oak-tree, which was one of her favourite resting-places.

"Now, Isabel, we will hang the wreath on that willow-tree that bends just over your dear mamma's head. There, does that please you?" and shall we make one every morning?"

Isabel made no reply, but her red lips quivered, and her head trembled so violently that her little basket fell from her grasp. At last she flung herself upon the grave, and sobbed convulsively. Marion knelt by her side, and, putting her arm around her, asked—

"What troubles you, dear Isabel? Are you weeping for your mamma, my poor child?"

The little creature struggled with her tears for a moment, then lifting her tiny arms she clasped them around Marion's neck and kissed her over and over again.

"Oh, no, no!" she exclaimed. "I was not weeping for mamma, but I have been so very, very naughty! They told you were my new mamma, and that papa would be angry with me if I did not love you, and then I thought that if I loved you, called you my mamma, I could not love my own poor mamma, and oh, she always loved me so much, and I was at home, would not like me to come here, and bring flowers, and we not wish me to talk of my mamma any more, and so I would love you at all."

An hour afterwards Mr Leslie found them in the same spot, Isabel sitting with a glad cry into his stretched arms, and having her head on his shoulder, murmuring, "God has been very good to me, dear papa. I have two mamma to love me now—one in heaven, and one on earth."

From that hour there was confidence—perfect, entire confidence—between Marion Leslie and the child of her adoption. As years passed on, and the young wife knew that ere long she would indeed a mother, she could not help feeling a slight degree of anxiety as to the effect the arrival of the little stranger might produce upon Isabel, but her uneasiness was wholly uncalled for. All heart rejoiced, when, after a day and night of torturing pain, Mrs Leslie was pronounced out of danger, and the glad tidings of the birth of a son passed from mouth to mouth, but were more overjoyed than she who had been before regarded heiress of Glenwood.

* * * * *

Fifteen years! how long in anticipation—how short in retrospect! Years had passed away, and to our friends at Glenwood they had brought many changes. Marion Leslie had three long years, worn the garb of widowhood, and the same disease that tore her noble husband from her side, laid its heavily upon her first-born. When at length, after many months of suffering, they bore him from the chamber where he had lain so long out into the piazza, that the pure fresh air might play his golden locks, it was with saddened hearts and tears that could not be kept back, for they knew that their pride, their darling, their precious little Willie, might not look upon the roses that were just opening their white and crimson buds upon the soft, green turf—nor on the large old trees, beneath whose swaying branches he had so loved to play. The boy was blind!

His sisters, Marion and Isabel—for another daughter had been added to the household band—a laughing, hazel-eyed little creature who was then four years old, escaped. The latter was now from a lovely child into a still lovelier maiden. She was, indeed, beautiful; but hers was not the dazzling beauty that at once challenges admiration. She would very possibly have passed unnoticed amid a crowd. Her dark, lustrous eyes, were generally so veiled by the heavy lashes that shaded them, that few knew they could flash and sparkle, and she was, perhaps, too pensive and thoughtful for a girl entering upon her

beat quickly, and sent the rich blood to her cheek. Yet beautiful as she was, all loved her for her thoughtfulness, her purity, and for the warm, confiding heart, that found some good in all God's creatures.

Trouble," it is said, "never comes singly," and at the time when we take up again the broken thread of our narrative a shadow was resting upon the spirits of the inmates of Glenwood. Death was again hovering over the dwelling, and this time his destined victim was she who, years previous, had crossed its threshold a trusting, happy bride. Marion Leslie knew that her days, nay, her very hours were numbered, and can we wonder if, when the thought of her orphan children, one of whom was so helpless, so dependent, her heart sunk chill within her, and she wildly prayed that the cup might pass from her!

She was reclining one evening on a low couch near an open window, around which hung, in rich luxuriance, flowering vines that her own hand had trained there, and Isabel sat near her reading. As she paused, her mother's eyes kindled, and a faint flush rose to her cheek.

"Beautiful!" she murmured, "but Isabel, lay aside your book, love, and sit here close by my side. I want to talk with you awhile. I would speak of the evening when we first met. Do you remember it, my Isabel?

"Do I remember it? Indeed, indeed I do, my mother!" was the fair girl's answer, as she bowed her head and her tears fell fast upon the wasted hand that clasped her own. "I can never forget the day that I long ago learned to regard as the brightest in my life—the day that brought you here to be not at once a guide, companion, and a friend. Oh, my mother!—how more than mother how can I ever repay you for all your kindness and affection—for your persevering efforts to win my love and confidence when I was but a wayward child—for the unvarying tenderness that has never allowed you to evince by look, or word, or deed that I was less dear to you than your own children—for the watchful care that has kept my yearning heart from realising that I was motherless!

"Blessings on you, my sweet Isabel! I feel that I shall not be with you long; and were it not for my children, I should welcome the hour of my release. But, oh! Isabel, when I think of them—my poor blind Willie and of my clinging sensitive affectionate little Marion, it is hard—hard to be reconciled to the approach of death!"

Mrs. Leslie had half raised herself from her couch, in the excitement of the moment, but, as she ceased speaking, she sank back exhausted and large tears forced their way through her closed eyelids. Isabel had fallen upon her knees, and buried her face in the pillow, and for some moments the silence was unbroken. At length she raised her head, and looking steadily in her mother's face, she said, in a voice that, though low and solemn was yet calm and firm—

"Mother, I am young, very young, and the words I am about to speak might be deemed presumptuous by a stranger, but you will not so understand them. What you have been to me that—and helping me—will I be to Willie and Marion. Their happiness shall be dearer to me than my own, and I will watch over and care for them even as you would have done. Do you trust me, mother? Will you accept this vow?"

"Will I accept it? will I trust you? Oh! my Isabel, you little dream what a burden you have removed from my heart. You are so young, it is true, but I have such confidence in you, that I can leave my darlings in your charge without a fear or a doubt. God and heaven bless you, my child—your words have removed the last cloud that came between my heart and heaven, and now the pathway to the grave has no terrors!"

She ceased, and Isabel's watchful eye marked the increasing pallor of her cheek.

"You have exerted yourself too much, dear mother," she said; "lay your head upon my breast, and try if you cannot sleep."

Mrs. Leslie complied, and for several hours Isabel supported her in one position, refusing to listen to the entreaties of the nurse, that she might be allowed to take her place.

"She will surely waken if we attempt to move her, Nannie, and she was so very tired. Oh, do let her sleep!"

Just then the physician came in, and, in reply to Isabel's remark, that her mother had slept sweetly for three hours he [illegible] and drew the curtains further back. It [illegible]—they looked upon the face of the dead! [illegible] Sacred [illegible] e that Isabel Leslie made to her dying mother would have been regarded by her under any circumstances, the fact that the words in which it was couched were almost the last that had fallen upon that mother's ear—that, in a few moments after they were breathed, she had exchanged the discordant sounds of earth for the deep harmonies of heaven—rendered it still more so.

Riverside, the estate of Walter Hamilton, lay about five miles to the north of Glenwood. Mr Hamilton and Mr Leslie had been friends in boyhood. Their families had ever been upon terms of the closest intimacy, and it was a rare thing if a week passed without finding Clarence, the only son of Mr Hamilton, quietly seated in the pleasant parlours of Glenwood, reading to, or chatting with, Mrs Leslie and Isabel; or, as was more frequently the case, pleading with the former for a walk or a ride with the latter.

For the last year, there had been more reserve in their manner towards each other, and meanwhile, Clarence Hamilton had been looking into his own heart, and had learned—but we will not anticipate.

At the close of a dark, gloomy day, about six months after her mother's death Isabel sat alone in the library. The large parlours had looked so lonely and dreary after the children had retired, that she had ordered lights in her father's favourite apartment, thinking that change of place might, perhaps, drive away the sadness that weighed upon her spirits. There had been an unusual display of wilfulness on the part of Marion, that day, and she had been obliged to exert her authority more decidedly than ever before, as she had been fancying, too, that Willie was growing paler and more feeble,—and these causes, together with some trifling household difficulties made her feel more oppressively than was her wont the burden of care that rested upon her. She had tried to read in vain, and was sitting by the table, with her head resting upon her folded arms, when the door opened, and Clarence Hamilton entered.

She looked up, and welcomed him with a faint smile, as he seated himself by her side, but, after a few fruitless attempts to maintain a conversation on ordinary topics, he said, "You look sad to night, Isabel, I wish I dared to ask why you are so, as I used to do when we were children together."

"I know no reason why you may not, Clarence," replied Isabel, while the tears filled her eyes, for there was something in his tone and manner that reminded her—she knew not why. Then, trying to speak more gaily, she continued: "There is nothing the matter, except that I sometimes find being the 'Lady of the Manor' rather troublesome dignity. Have you been to L— lately?"

"I have not, was the answer—and the long pause that ensued was broken at last, by Clarence, who exclaimed, "I cannot talk to night upon indifferent subjects. I came here to speak to you of ourselves—of our own intercourse. Isabel—Isabel, why do you turn me as you have done of late? For the last few months I have found it difficult to obtain even a glimpse of you, and never, until this evening have I met you alone. May I not ask, why is this?"

"I have not the leisure I once had, to devote to my friends," was the evasive reply, "and my spirits have not been such as to allow me to mingle in society with any pleasure, either to myself or others."

"And this to me, Isabel?" asked the young man, sadly. "I had hoped that you regarded me with more than an ordinary acquaintance, that friends, as we have been, from our very childhood, I might have claimed the privilege of friendship, and striven to sooth and comfort you in your affliction. But that you have not permitted, and now, I hardly dare ask that you will give me the right to do so for the future. Yet you must know that I love you, Isabel—that I have loved you for years—that the hope of one day calling you mine, is the dearest that my heart has ever cherished. May I not believe that hope is not a vain one?"

Isabel had turned her face away, it was pale as marble, and almost as rigid such was the effort she made to retain her composure, and, so successful was she, that her voice scarcely trembled as she replied, "It may not be, Clarence, we can never be more to each other than we now are, friends."

Young Hamilton rose hastily, and, gazing upon her face for a moment, said "Then I may linger here no longer. I thought I had reason to believe that my love was not unreturned; but it seems I was mistaken—farewell," and, without another word, he left the room.

Isabel's forced composure gave way the moment he passed from her sight. "Oh, my mother, this is terrible!" she murmured, and her slender frame swayed to and fro, in the violence of her emotion. The door had not quite closed behind Clarence Hamilton, and turning, involuntarily, for a last look, he was startled by beholding the sudden change in the countenance and attitude of her he loved. Noiselessly entering the room, he stood again by her side.

"Isabel, I was not deceived; you do love me; and this strange agitation convinces me that some cause, of which I am yet ignorant, occasioned the cruel words you have just spoken. I leave you not again until all is explained."

"Oh, Clarence! I have hoped and prayed that I might be spared the agony of this moment." was the young girl's answer; "I will no longer try to conceal from you that you are dear to me; but there is a bar to our union that can never be removed."

"There can be none that is insuperable. Oh, Isabel! now that I know you love me, I cannot give you up."

"A promise to a dying mother can never be broken, Clarence," and Isabel related to him her last conversation with Mrs. Leslie. Earnestly he strove to alter her determination—to persuade her that duty required no such self-sacrifice; and, finally, he said, "You need not be separated from Willie and Marion, dear Isabel—my home shall be theirs, and you can watch over and care for them as well in one place as another."

"I know, I feel, that Willie's life would be shortened by taking him from Glenwood. Here, he is familiar with everything around him—he can go from room to room, and even, to some extent, about the grounds, alone. It could not be so elsewhere, and he is so attached to his home, that, if taken from it, he would droop and wither like a transplanted flower. No, Clarence, urge me no longer; our paths lie in opposite directions, and God will give us strength to walk therein. Leave me now, I beg, you are but torturing yourself and me by prolonging this interview. Go—and may heaven bless you!" She extended her hand; Clarence raised it, for a moment, to his lips, and Isabel Leslie was alone.

. . . . . .

We pass over the period of ten years in the lives of those to whom our story relates. It was a morning in early spring-time: Glenwood bore much the same appearance that it did when we first looked upon it. By one of the open windows sat a lady, apparently about twenty-seven or eight, engaged in some light embroidery. She did not look in the least sad or unhappy, yet there was something about her face and mien that spoke of past sorrow. You could scarcely tell what, however; for her smile was sweet and even joyous, as she turned to greet a young girl, who, at that moment, approached the window from without—one tiny hand grasping the folds of her riding-dress, while, with the other, she unfastened the little velvet cap that so well became her.

"Oh, sister Isabel! I have had such a charming ride!" she exclaimed, as she laid her cap on the window-seat, and commenced smoothing the long brown ringlets that shaded her bright, animated face. "Ebony was in fine spirits, and we flew over the hills like two madcaps, as we were. Cæsar found it hard work to keep up with us, and I imagine he hopes Miss Marion won't take another ride very soon. And, oh! I have some news for you, Isabel. we passed Riverside, and—what do you think?"

"Pray, don't make me guess, dear Marion. I was never good at riddles."

"Why, then, I learned that Clarence is coming home. Old Lina had every window in the house wide open, I verily believe; and such tearing down and putting to rights again, I never saw in my life."

A slight flush had mounted to the brow of the other sister, but the other one marked it not; and, in a moment, added,

"I wonder if he looks at all as he used to? Lina said he had been gone ten years."

"Do you remember him?"

"Oh, yes! and how handsome I thought he was. Are you not glad he is coming home? I am; for now there will probably be something going on to keep us awake;" and the merry girl bounded away to her room, singing as she went.

Clarence Hamilton was coming back; and how would he come, alone or otherwise? Isabel knew not—they had never met since the interview of which we have before spoken. He left for the Continent the next week. Until the death of his parents, she had heard from him occasionally through them; but, for the last five [illegible] her

A few weeks afterwards, he stood again in her presence no one would have dreamed that the two who there met coldly, but so calmly and quietly—could ever have loved other as they had loved. The interview was not long, and it tinged with sadness on both sides; for Mr. Hamilton had re to look on the graves rather than the faces of his nearest rela Willie's wonted seat, too, was now vacant; and, as his eye f a shorter mound near Mrs. Leslie's resting-place, he need explanation.

"Marion, my own dear sister, why will you no longer co in me? For weeks you have been sad and restless—your grows pale—your step is slow and languid, and, at times, startle me by an unnatural gaiety that is more painful to b than sadness itself. I am convinced that your suffering is mental than physical, yet you evade all my questions. What I done, Marion, thus to forfeit your confidence?

"Oh, nothing, nothing, dearest Isabel! Do not be an about me. I have not felt very well for the last few weeks, will soon pass over."

"You cannot deceive me, Marion. I have read your hea long not to be well aware that something distresses you. I c now demand your confidence; you are too old for that; I only beg, by the love I have so long borne you—by the me of your mother - that you will no longer withhold it from May I ask you a question or two, my own sister, and will answer me truly?" she continued, as she drew the now wo girl to her breast and twined her arms around her.

"I will, I will, Isabel, ask me whatever you wish."

"Then tell me, Marion, do you not love Clarence Hamilt

Marion started quickly from her sister's embrace at this u pected question, and an almost angry flush rose to her very head, then with a sudden revulsion of feeling, she buried he in her sister's lap, and wept more bitterly than before.

"I am answered, darling," said the latter, after she had all her to weep awhile in silence. "Now, tell me all about it."

"Oh, do not blame me, Isabel! Indeed, indeed, I did mean it. I could not, knowingly, have given my affections to unsought. I did not dream that I cared for him, until I wa that—that—"

"That what, dear Marion?"

"That Mr. Hamilton had been a lover of yours before he aproad, and that you refused him. Then my eyes were op and at the same time I felt that he who had once loved c good and noble as you are, even vainly, could never care fo like me."

"You do yourself injustice, my sweet sister. I should that I was bestowing a treasure upon any man, in giving hi hand of my Marion; but tell me, have you ever had rea think Mr. Hamilton loves you?"

"Never, never. His manner is always kind and cour but nothing more. But, oh, Isabel! do not, do not betra I could never look upon his face again if I thought he susp my folly."

"Nay, fear not, dear one. Your secret is as safe with m it were hidden in your own breast. Now, go, let Flora s these dishevelled curls, and try, if for my sake at least, you call your smiles and roses back again," she added, as she te kissed Marion's now glowing cheek.

"Blind fool that I have been!" murmured Isabel, as she the secrecy of her own apartment. "How could I expec one as young, as confiding, as prone to love as Marion, could ciate as freely as she has done with one like Clarence Ham without loving him? Now, once again my radiant dream i —'their happiness shall be dearer to me than my own!' w words of my vow. I have kept it thus far—shall I break it

Not many months afterwards, there was a small bridal assembled at Glenwood. Lovely was the childlike bride robe of pure white, and her luxuriant ringlets unconfined e a simple wreath of the lily of the valley; but scarcely less the pale, spiritual Isabel, with her deep, dark eyes, and tresses, bound with severe simplicity around her beau shaped head. Once only during the evening did Clarence H ton, on looking suddenly up, meet those eyes bent upon hi such a strange expression that his heart thrilled, and the qu thought arose, "Has she quite forgotten that she ever love But the next moment she was receiving her guests with a g dignity that completely deceived him. Two hours late Isabel Leslie was alone in the home of her father.

GARIBALDI.

THERE are times when out of evil Providence can educe good The world s history is rich in illustrations of this truth For instance, the appeal to the sword has often advanced a nation, and yet nothing can be more hostile to the very spirit of that Christianity, which is but another name for true progress than that appeal to the sword It is clear brute force cannot spread opinion—cannot strengthen or weaken truth—has nothing whatever to do with the right of the question by which it is evoked, and yet some of the brightest scenes in the annals of our race are those in which the Hampdens and Washingtons of the past have nobly battled for their hearths and home War

is so fearful a curse—so completely opposed to the inductions of reason, or the teaching of religion—that we must always mourn the necessity which calls it into being—that while we ask, with the poet

'What can alone ennoble fight?

we feel constrained to pause ere we complete the quotation, and reply—

"A noble cause

Yet the men who dare all for liberty claim our admiration It is a fine sight, that of a people struggling against the oppressor—to the best of its power endeavouring to burst its chain and become free In 1849 such a sight was presented to the admiration of Europe For a brief period Rome woke up from her sleep of centuries and recalled the glories of the past Under the guidance of Mazzini it seemed on its way to life and liberty once more The Pope was an exile at Gaeta The Bible, that charter of human rights, was no longer a sealed book once more man stood erect and free But soon came clouds and storm and the bright illusion was destroyed To the eternal disgrace of Louis Napoleon Italian liberty was blotted out by the bayonets of France With her fine words—with her men of chivalrous honour—France could yet stoop to sully a name from which freedom had fondly hoped so much and a yoke abhorrent to the people of Rome was once more placed upon their necks

The short but glorious defence made by the Roman people during that time is familiar to our readers While Mazzini legislated Garibaldi fought with a heroism that deserved success Like Mazzini he was not a Roman, but like him he cast in his

left with that young republic, feeling that there centred the only chance Italy had of regeneration. From his youth Garibaldi seems to have devoted himself to the profession of arms. In 1844 we find him heading an attack upon the squadron blockading Monte Video, under Admiral Brown, and putting them to flight. In 1848, when Italy, under Charles Albert—that traitor in the cause of Italian independence—rose against Austria, we find Garibaldi fighting for his father-land. And when it came out that that cause was betrayed—that Charles Albert was seeking his own weal and not that of his country—that the man who swore with his sons to shed the last drop of his blood in defence of Milan, could yet hand it over to Radetzky without striking a single blow, Garibaldi headed the Lombard Volunteers, who to the last remained faithful to the cause to which they were pledged. This little army established themselves at Lugano. Amongst them, fighting as a common soldier was Mazzini. Then aim was to kindle once more a national insurrection, and a rising did actually take place in the Val d'Intelur. It was, however, in vain, the people had been wearied out. In common with most hereditary bondsmen they had forgotten the truth—

"Who would be free themselves must strike the blow."

But Garibaldi's mission was not yet over, and when Rome rose to do battle for her rights, we again meet him. Of the Roman republic we need not speak here at much length. It suffices here to say, that it was thoroughly Roman in its origin. Of the parties to its first proclamation only one was not a Roman. It welcomed by all the towns in the Roman States. During the time of its continuance, from February, 1849 to June of the same year, there was not a single condemnation to death or exile for any political offence, nor a single newspaper suppressed or suspended. Well, then, might Garibaldi—like Mazzini we believe, a native of Genoa—(probably a friend from youth of the latter)—join the Romans in the conflict they waged with the French, remembered, by 14 000 Roman soldiers against 0 000 French. Much of the glory of that wonderful stand made by the Romans against Oudinot was attributable to him alone. Surprising tales are told of his personal bravery. He was welcomed by the people there as a deliverer on his public entry into that city, May 10, 1849, but against superior force bravery or patriotism avails but little. So Garibaldi found it. After the public buildings had been bombarded—after immense loss had been sustained—on the third of June the French entered Rome. At the same time Garibaldi quitted it with four or five thousand men in the direction of Terracina. His wife in a state of pregnancy, mounted a horse, and shared with him the perils of his flight. Gradually, beneath successive encounters with enemies, and hardships his troops wasted away, and at last he escaped to Genoa, where for some time he seems to have found shelter. But few particulars are known of him, such as they are, however, we have gathered them together here. By a recent American mail we learn that Garibaldi arrived at Panama, by steamer from New York, *en route* for Lima there possibly to wait the time when again the Italian nation will rise up in its majesty and might to break the oppressor's yoke and become free.

THE SCHOOL AND THE SCHOLAR. The school is like the earth in spring time, it requires merely to be sown. But on that sowing depends, perhaps the harvest of centuries. If one single word that falls upon the mind of the child may determine its course for life time, may determine something far higher, whose consequences are felt through ages, for the progress of thought is endless—it reckons its posterity to the thousandth generation,—to the end of days. Therefore the child as a holy thing, for it bears God's unbroken seal on its forehead. Treat it with all truthfulness and care, for care has its reward—if not to-day, hereafter, if not for you, for a coming race. Ye are labourers in God's kingdom. But God's kingdom has no fairer symbol upon earth than a child with its innocence—than a youth with his open countenance. Of such [illegible]

FEMALE COSTUME.

IF manners make the man, it would seem that at this time a large number of the other sex fancy that dress makes the woman, for never in these British Isles, has there been so much attention paid to female costume as at present. We have had the Bloomer committee at Miss Kelly's Theatre, in Dean street. The provinces have been invaded by Mrs. Dexter, Mrs. J. C. Foster and other ladies, more or less talented or public spirited, have also appeared upon the platform in support of Mrs. Bloomer's novel dress. In quarters where we least expected to hear it, the cry of "Pantalettes, and woman's rights" has been vigorously raised —

"To don, or not to don,
The sweet unmentionables, is now the ladies' question.
Whether 'tis nobler in a woman to sweep
The dirty streets with draggling tail,
Or with a pair of scissors cut it off,
And make a pair of pantalettes?
'Tis a consummation
Devoutly to be wished."

At least, so Shakspere says. We prefer to remain neutral in the matter. However, a brief survey of female costume may not be unacceptable at this time. One thing, at any rate, we shall learn from it—that is, the antiquity of the much-abused and neglected skirt. Following the example set us by many wiser and better men we begin at the beginning —

The British female dress first mentioned in history, is that of Boadicea Queen of the Iceni. Dion Cassius gives us an account of her appearance from which we learn that she wore a torque of gold, a tunic of several colours all in folds and over it, fastened by a brooch a robe of course stuff. Females in the lower walks of life were not so elegantly clad but simply arrayed themselves in skins holding with the poet—"when unadorned adorned the most." The dress was not very picturesque or graceful but it had one advantage—it did not entail the necessity of wearing stays. Under the Anglo Saxons, considerable improvements were adopted. The ladies threw aside their bear skins—but not having the fear of Mrs. Bloomer before their eyes we are compelled to state that they adopted that abominable skirt which the strong minded American females who have lately been lecturing at Miss Kelly's Theatre, denounce as the badge of slavery and as the result of the wickedness of that hard hearted monster man. Mr. Planché tells us. The Anglo Saxon females of all ranks wore long loose garments reaching to the ground distinguished in various documents by the name of the tunic the gunna or gown, the cyrtle or kirtle and the mantle. The first and last articles describe themselves but the terms, gown and kirtle, have caused much disputation from the capricious application of them to different parts of dress. We must presume the gunna, or gown, generally means the long full robe, with loose sleeves, worn over the tunic, and the kirtle an inner garment, at this period, as we find it mentioned in the will of Wynfloda, 'among other linen webb and in one place described as white. The sleeves of the tunic, reaching in close rolls to the wrist, like those of the men are generally confined there by a bracelet, or terminate with a rich border, and the mantle hangs down before and behind covering the whole figure, except when looped up by the lifted arms, when it forms a point or festoon in front. The head dress of all classes is a veil or long piece of linen or silk, wrapped round the head and neck." Under the Danes, little alteration was made in the costume. Then woman was not

"Variable as the shade,
By the light quivering aspen made,"

and fashion did not alter every three months, as in these more enlightened times. The only alteration adopted by the Anglo-Norman ladies was that of lacing the gown, so as to make it set close to the figure—a custom, we may suppose, they would have been slow to adopt, could they have foreseen the long series of disasters that would ensue. In the reigns of Rufus and Henry I, the ladies sported outrageous skirts and sleeves. In King John's time, richly-furred pelisses were worn, in winter, under the mantle. The wimple also then came into use. It was a handkerchief worn round the head and chin. Under Edward I, we find the satirists attacking the ladies' skirts. The

authors of the "Roman de la Rose" advise the ladies, "if their legs be not handsome, nor their feet small and delicate, to wear long robes, trailing on the pavement, to hide them; those, on the contrary, who have pretty feet, are counselled to elevate their robes, as if for air and convenience, that all who are passing by may see and admire them." Another poet, of the 13th century, compares the ladies of his day to peacocks and magpies; "For the pies," says he, "naturally bear feathers of various colours; so the ladies delight in strange habits and diversity of ornaments. The pies have long tails that trail in the dust; so that the ladies make their tails a thousand times longer than those of peacocks and pies." At the same time, the tight-lacing, to which we have already referred, continued. In a MS. copy of the "Lay of Syr Launful," written about the year 1300, we have a description of two damsels the knight meets. He says—

"Their kirtles were of Inde sendel,
Ylaced small polif and well"

In the same romance the Lady Triamore is described as—

"Clad in purple pall
With gentyle body and middle small

Female fashions progressed amazingly under Edward III. The gown was cut lower in the waist, and was worn so long, not only in the train, but in front, as to be necessarily held up in walking. Another fashion introduced at this time was the wearing of a spencer, or jacket, or waistcoat, for it resembled all three, faced or bordered with furs, according to the rank of the wearer, and some of the first young ladies of this period are represented in a kind of coat, buttoned down like that of the men, with side pockets, pretty much the same as we have seen in our time. With the exception of stomachers and enormous head-dresses, like frightful towers or steeples, in length about three-quarters of an ell, we find little novelty in female costume, till we come to the reign of Henry VI., when we meet with bishop-sleeves. The troubled reigns of Henry VIII, King Edward VI., and Mary, produced few novelties in dress. Other things occupied the public mind. The country was passing through a transition state. Men were learning to appeal to the real Word of God instead of the counterfeit article that spoke from Rome: the vain and imperious Queen Bess gave an impulse to the subject of dress, to the great scandal of the Puritan censors of the time. Our readers all know the dress of "glorious Queen Bess." We can easily call up the features of that royal lady, with her great ruff and jewelled stomacher, and pointed petticoats. Cynical old Stubbes, writing, says:—"The women have doublets and jerkins as the men have, buttoned up to the breast, and made with wings, welts, and pinions on the shoulder points, as man's apparel in all respects; and although this be a kind of attire proper only to a man, yet they blush not to wear it." "About the middle of this reign," says Mr. Planche, "The great change took place that gave the female costume of the sixteenth century its remarkable character. The lady was imprisoned in whalebone to the hips; the partelet which covered the neck to the chin was removed, and an enormous ruff, rising gradually from the front of the shoulders to nearly the height of the head behind, encircled the wearer like the nimbus or glory of a saint. From the bosom, now partially discovered, descended an interminable stomacher, on each side of which jutted out horizontally the enormous fardingale, the prototype of that modern antique, the hoop, which was banished the court by King George IV." The ruff was the consequence of the introduction of starch, which Stubbes gravely tells us was the invention of the devil. The ruff continued in fashion till Mrs. Turner, who had a principal hand in the poisoning of Sir Thomas Overbury, was fortunately hung in one. Under Charles I. and the Commonwealth female costume once more gave way for the introduction of Restoration, which but too well characterized the gay and graceless dames who wore them. With William and Mary came Dutch fashions—the stomacher was restored—the full sleeve was tightened. Under Anne and the first Georges fashions of the most extravagant character appeared—hoops and head-dress completely altered the appearance of our ladies. Addison, in the *Spectator*, speaking of one of the temporary variations of fashion, says: "The whole sex is now dwarfed and shrunk into a race of beauties that seem almost another species. I remember several ladies who were once very near seven feet high, that at present want some inches of five." Gradually the more ridiculous features of dress were assuming a more rational form, till the French revolution came and swept away altogether the old style of dress. Fashion ran into the other extreme. Hooped petticoats, high-peaked stays, figured satins, yard-long waists, were abandoned, and, instead, the lightest products of the loom clung round the form, girdled under the arm-pits—altogether forming a dress as ungraceful and inappropriate as ever disguised female charms. At length the fashions of the day are graceful. Whether the ladies of our day will rush into Bloomerism, of course we cannot tell. The advantages are, that it makes the ladies look much younger, and that it does away with the necessity of wearing stays—a matter of importance as it concerns that future which must be wrought out by healthy hearts beating in healthy frames.

ON KOSSUTH'S VOYAGE TO AMERICA.

By Walter Savage Landor.

Rave over other lands and other seas,
Ill-omen'd, black-wing'd breeze!
But spare the friendly sails that waft away
Him, who was deemed the prey
Of despot dark as thou—one, sending forth
The torturers of the north
To fix upon his Caucasus once more
The demi-god who bore
Sad humanity Heaven's fire and light,
Whereby should re-unite
In happier bonds the nations of the earth,
Whose Jove-like brow gave birth
To that high wisdom, whence all blessings flow
On mortals here below.

Rack not, O Boreal Breeze! that labouring breast
On which, half dead, yet rest
The hopes of millions, and rest there alone.
Impiously every throne
Crushes the credulous, none else than he
Can raise and set them free.
Oh, bear him on in safety and in health
Bear on a freight of wealth
Such as no vessel yet hath ever borne:
Altho' with banner torn
He urges thro' tempestuous waves his way,
Yet shall a brighter day
Shine on him in his own reconquered field;
Relenting fate shall yield
To constant Virtue. Hungary! no more
Thy saddest loss deplore;
Look to the star-crown'd Genius of the West,
Side guardian of the oppress'd
Oh! that one only nation dared to save
Kossuth, the true and the brave!

LITERARY NOTICES.

In answer to numerous inquiries, JOHN CASSELL informs the readers of "The Working Man's Friend" that the ILLUSTRATED EXHIBITOR *will be ready by the 15th of December, price 7s. 6d.; or, handsomely bound in extra cloth, with gilt edges, price 10s. 6d. It is adapted for an easy reference to the Great Exhibition, and contains a complete Catalogue of the Articles exhibited, with the Prices attached to each, and the Names and Addresses of the Exhibitors.*

The appearance of the FRENCH MANUAL *has been delayed, that it may be printed with the greater care. It will, however, be ready by the 20th of December, when it will be published in stiff covers, price 2s., or, neatly bound in cloth, 2s. 6d.*

The HISTORY OF SCOTLAND, *by Dr. R. Ferguson, author of "The History of England," of which work nearly 30,000 copies have been sold, will be ready December 1, price 1s. 6d. in cloth.*

MISCELLANEA.

THE PLEASURES AND ADVANTAGES OF *LABOUR*.—There is a false notion in the world respecting employment. Thousands imagine that, if they could live in idleness, they would be perfect! This is a great mistake. Every ... ous man and woman knows that not ... so tiresome as being unemployed. During some seasons of the year we have holidays, and it is pleasing on these occasions to see the operative enjoy himself; but we have generally found that, after two or three days' recreation, the diligent mechanic or labourer becomes quite unhappy. Often he sighs over the wretchedness of being idle. The fact is, we were made to labour, and our health, comfort, and happiness depend upon exertion. Whether we look at our bodies or examine our minds, everything tells us that our Creator intended that we should be active. Hands, feet, eyes, and mental powers, show that we were born to be busy. If we had been made to be idle, a very large portion of our bodily and mental faculties would be redundant.

THE ART OF CRUSHING BORES.—Wits have a happy faculty of getting rid of bores. The old men of the sea that sit so heavy upon the shoulders of the Sinbads are cast adroitly into the mire by a dexterous movement of these nimble gentry. Most men of talent are now and then condemned "for want of company to put up with trumpery." George Selwyn had tolerated a prosy old gentleman in the country, that in Dogberry's phrase "would have been most tolerable and not to be endured" in London. In London, therefore, George hurried past him in the street. "Surely," said the gentleman, stopping him, "you remember me?" "Yes," replied Selwyn, breaking away, "and when next we meet in the country, I shall be happy to renew the acquaintance." She Adam's persecutor was an elderly twaddler of the fair sex. He escaped her by manœuvring that the weather was too bad to go out, and when she caught him returning from a walk and accused him of inconsis... "it cleared up" he said, "enough *one*, but not for *two*." The suspected ... of Smith, the author of the "Rejected ... dresses," is more amusing than either. ... was laid up with gout at the house of a country squire. A friend proposed a stroll in the garden. "A stroll!" exclaimed Smith, "look at my gouty shoe." "Ah," replied his friend, "I wish I had brought one myself; but our host is out of the way now." "What difference does that make?" inquired Smith. "You don't mean to say," rejoined the friend, "that you have really got the gout? I thought you had merely worn that shoe to escape being shown the improvements." But nothing ever passed the ingenuity of Lord Norbury. He once, in Dublin, out of formal civility, told an elderly couple that they must pass some time with him at his country seat, which was many miles distant. He copied them one day coming down the avenue in a chaise and pair, the roof loaded with a mountain of luggage. He flew at the door to greet them—seized their hands, shook them with Irish warmth and welcomed with rapture, "This *is* kind —this *is* kind, indeed! Now, I'll take no denial—none whatever—you *shall* stay and dine with me!" When the Abbé Coyar intruded upon Voltaire, with the intention of remaining weeks at the least, the great man endured him till the following day. But the torture of a story interminably long, and intolerably dull, induced him to cut short the narrative and the visit by this interlocutory speech—"Do you know the difference, Monsieur l'Abbé, between Don Quixote and yourself? Don Quixote mistook inns for castles, you mistake private houses for inns."

NEW SATELLITES OF URANUS.—Mr. William Lassell, of Starfield, Liverpool, says—"I have discovered two new satellites of the planet Uranus. They are interior to the innermost of the two bright satellites first discovered by Sir William Herschell, and generally known as the second and fourth. It would appear that they are also interior to Sir William's first satellite, to which he assigned a period of revolution of about 5 days and 21 hours, but which satellite I have as yet been unable to recognise. I first saw these two of which I now communicate the discovery on the 24th of last month, and had then little doubt that they would prove satellites. I obtained further observations of them on the 28th and 30th of October, and also last night (Nov. 2), and find that for so short an interval the observations are well satisfied by a period of revolution of almost exactly four days for the outermost and two and a half days for the closest. They are very faint objects—certainly not half the brightness of the two conspicuous ones, but all the four were last night steadily visible in the quieter moments of the air with a magnifying power of 778 on the 20 foot equatorial.

CLERICAL CELIBACY. A correspondent of *John Bull* communicates the following:—"I happen to know one of our bishops, second in worth to none on the bench, was thus reproved by a noble Romanist lady—'I wonder, my lord, you are not ashamed of having a wife and half-a-dozen children.' 'I should be much more ashamed,' he answered very gravely, 'to have the children without the wife.'"

PATENT MILK.—A very valuable discovery has recently been patented by a French gentleman of some eminence in scientific circles. The discovery relates to the preservation of milk for an indefinite period of time, and it seems eminently calculated to confer a lasting benefit on the maritime interest of the world.

V. B Fadenilke is the inventor of *solidified milk in tablets*. The air cannot exercise any prejudicial effect whatever on this milk, as is too often the case with other milk when it is preserved in bottles. By a process, known of course only to the inventor, the impurities of the milk as it passes from the udder are extracted, and then the milk itself is manufactured into a sort of tablet substance. This solidified milk of Mr. Fadenilke is extremely economical as regards the ordinary wants of life, and it is well adapted for hospital purposes; but its great advantage rests in the milk being useful in long sea voyages. This discovery found a place in the Crystal Palace during the Exhibition; but, unfortunately, it appears to have escaped the observation of the jury. The milk tablets can be grated into a fine powder, and, when put into tea, they will immediately dissolve, without leaving any sediment whatever behind, while the milk itself not only retains its full flavour, but also all its nutritious qualities.

ANSWERS TO CORRESPONDENTS.

H. B., and several other correspondents, have suggested the propriety of our publishing a cheap reprint of Kossuth's speeches while he was with us. The suggestion is an excellent one, but received too late. The thing has already been done by the proprietor of the *Weekly News and Chronicle*.

JOSEPH WILSON.—We should certainly dissuade you from publishing. Your aim is good and your views are correct; but you had better leave the advocacy of your cause, so far as writing is concerned, to men of education. Unless a work is well written, it had better not be written at all.

E. G.—The duty paid out of every 20s. spent on tea is 15s., on sugar, 10s; and on coffee, 8s.

DUNS SCOTUS.—The Scotch plaid can boast high antiquity in its favour. Of the several kinds of cloth manufactured in Gaul, one, according to Pliny and Diodorus Siculus, was composed of fine wool dyed of several different colours, which, being spun into yarn, was woven either in stripes or cheques. This is the origin of the Scotch plaid, which to this day is called "the garb of old Gaul."

PETER.—The fashion of cropping the hair came from France in the time of Canute. Till then the Danes took great pride in their long hair. Harold Harfagre—*i.e.*, "Fair-locks"—derived his name from the length and beauty of his hair, which is said to have flowed in thick ringlets to his girdle. He made a vow to his mistress neglect his precious curls till he had completed the conquest of Norway for her love. In England the custom of cropping was never universally adopted; and the courtiers of the French Regent, on William the Conqueror's return to Normandy, three months after his coronation, attended by some of his new subjects, were astonished at the beauty of the long-haired Englesh.

STEPHEN.—The largest diamond in the world is the Portuguese, which weighs 1,680 grains, and is estimated at £5,644,000. The next is the Koh-i-noor, which weighs within a small fraction of 280 carats (a carat weighs between three and four grains), and the estimated value of which is £2,000,000. The next is the Russian diamond, which weighs 195 carats. These are the three largest diamonds in the world.

VEGETARIAN. We believe the cause of the potato disease is yet to be discovered. Many causes have been assigned, but we question whether the right one has yet been found.

R. M. sends us the following questions:—1. How did Sin enter heaven? 2. Is it not possible for it to enter the same way again? Really, R. M. must excuse our declining to attempt to answer such questions, and we advise R. M. not to trouble his head with such. It is the present that concerns us—what is, not what was. In the discharge of daily duty, each one of us has as much as he can accomplish. This world is too busy a one for such laborious trifling and useless inquiry as that suggested by R. M.

T. A.—It is a remarkable fact, that of all the constitutional states of Europe or America, Great Britain is the country in which the people hold the smallest stake in the soil. France, with a population of 32,560,934, had 10,895,582 landed proprietors, or one in three. The United States, with a population of 20,000,000, had 5,000,000 proprietors, or one in four. Belgium, with a population of 5,029,677, had 950,723 proprietors or one in five. Holland, a commercial and shipping country, with a population of 3,500,000, had 400,000 proprietors, or one in nine. Sweden, with a population of 3,574,202, had 300,000 proprietors, or one in twelve. While Great Britain and Ireland, with a population of 27,041,050, have only 633,421, or one in forty of the population, including freeholders and copyholders, with a direct interest in the soil.

—The new law of evidence ... ration on the 1st of November was the act of that veteran reformer, Lord Brougham. It is a very important one. Under the former state of the law the evidence of the parties who may be supposed to know most about the matter was inadmissible.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER III.

New successes compensated Louis for the loss of Naples. He was shortly afterwards called by Casimir, the King of Poland, to his assistance against the Bohemians and the Russians. He thus became acquainted beforehand with the genius of the people over whom he was one day to be called to reign. Although the two peoples had attained almost to the same stage of culture and civilisation, the straightforwardness, frankness, and magnanimity of the Magyars, were more in accordance with the King's tastes and disposition, than the permission of the Diet, who would not, at the same time, bear any part of the expenses of his journey. These conditions well exemplify the jealous *hauteur* of the Polish nobility; but, in imposing them, they committed a fatal error. By prohibiting Louis' residence in his newly-acquired dominions, they taught him to look on them as a distant and dependent province, in whose welfare and prosperity he could feel only a secondary interest. He therefore yielded with indifference to their demand that, in case he or his son Stephen died without having made

BATTLE OF VARNA BETWEEN THE TURKS AND HUNGARIANS.—(*See page 161.*)

the uneasy, restless spirit of the Poles. His partiality for the former was still further increased by the efforts made by the Polish nobles to impose new restrictions upon him in case he came to rule over them. They stipulated that he should be content with the revenues which accrued to the Crown in the time of Vladislaus Loketek, and engage never to attempt to found a right upon the voluntary offerings with which any of his subjects might present him; and, lastly, that he should never visit his new kingdom without issue, they should possess, without interference, the right of choosing their own kings. From that moment, Poland occupied a foremost place in Louis' attention.

Passing over the great war against the Venetians, concerning the possession of Dalmatia, and a partially successful attempt to ask a mediator in the contentions of the petty princes of Italy, we arrive at the death of Casimir, the last of the race of the Piasts, which had given so many great men and great kings to Poland. He was, in many respects, a feeble

and inefficient monarch; but he had the desire to act well, which so often forms a redeeming trait in listless, inconsistent characters. He possessed great personal bravery, and amidst all his indulgence in the grosser vices, a tender and feeling heart, and a devotion to the duties of his station, which made men regret the defects which seemed to be inherent in his constitution, and, in some measure, marred his best efforts. He made open confession of all his faults and weaknesses, but earnestly declared that his constant endeavour was to prevent them interfering with the discharge of his official duties. He died [illegible], without leaving behind some memorials of his zeal for the welfare of the country. Before his time, there were scarcely any fortified towns in Poland, but during his reign, towns, villages, and castles, built with elegance and solidity, arose upon every side. He had great tact in the discovery of merit, and when found, he never failed to appreciate and reward it. He erected a third estate, composed of the *bon geoisie*, or middle class, and if his successors had taken care to foster the new element thus introduced into the constitution, Poland would have made far more rapid progress, and, in all probability, would not, at this moment, be writhing in the paws of the Russian bear. But even Casimir himself did only half the work, or rather neutralised the good effects of what he did do, by signing the fatal measure, at the Diet of Viszlicza, in 1347, which constituted a powerful and idle oligarchy to crush the middle and lower classes.

He committed many other grave political errors, one of which was his making no provision in the family compact, entered into with Louis, that the latter should reside in Poland during some part of every year. Urged by his favourite mistress, a Jewess, named Esther, he granted free admission to the country to the German and Hungarian Jews. As to the justice or policy of this act, different views may be entertained; but it is, at all events, certain that this covetous race has ever since preyed upon or impoverished the Polish country people, so that there only remained [illegible] and tyrannical aristocracy, always engaged in conflicts with the Crown.

Upon the death of Casimir, a deputation of Polish nobles repaired to Visegrad, to request Louis to take possession of the throne, according to the treaties already entered into. He received them in state, surrounded by the barons of his empire; but heard their offer with seeming doubt and hesitation.

"You know not what you ask," said he to them, "and you," turning to his barons—"you know not what you advise. It is difficult to watch over two distinct flocks; and, for this reason, no bishop is allowed to preside over two dioceses. When the Roman empire only counted a few huts as its possessions, two kings were too many to govern it, so, I fear, one king would be insufficient to reign over two great empires."

At last, however, he yielded to the solicitations, and consented to go to Poland to be crowned. The ceremony took place at Cracow, and after it was over, the Chancellor presented him the conditions laid down in the treaty, by which the succession was secured to him. He pledged himself to restore at his own expense all the countries wrested from Poland; to bestow no dignity or public office upon any foreigner, to make good to knights and men-at-arms all losses sustained by them in carrying on war out of the kingdom; and lastly, to impose no new tax upon the property of the Church, or of the *noblesse*. This sort of constitutional charter was accepted by the King of Hungary in 1355, and is considered the first of the "*Pacta Conventa*"* of Poland.

Louis felt, however, that he and the Polish aristocracy could never work together in harmony. They were too restless, proud, and discontented ever to submit quietly to the rule of any one; and they were too powerful to be coerced into sub[illegible].

He committed the government to his mother, Elizabeth; but she, though herself a Pole, found herself unable to carry it on. After the occurrence of numerous scenes of violence, turbulence, and anarchy, into the particulars of which we cannot here enter, he convened a Polish Diet at Buda in March 1381, and invested Zawiza, Bishop of Cracow, and two other noblemen, with the government of the kingdom. Poles were filled with rage and consternation upon hearing his measure. They now found themselves placed under the domination of a haughty and irascible priest, instead of the gentle rule of Elizabeth, and Vladislaus, the viceroy, who succeeded her. The bishop, however, did not long continue to give them cause for complaint. The hotty *debauchee* fell from a ladder, and broke his neck, as he was pursuing a young girl, who, to escape from his brutal violence, had taken refuge in a hay-loft.

Constantly disappointed in his expectations with regard to Poland, the King of Hungary at length determined to abandon her finally, and leave her to her fate. He assembled another Diet at O-Zolyom (A[illegible]) in 1382, and presented to it his daughter Mary, the [illegible], and her betrothed lover, Sigismond, son of the Emperor of Germany, Charles IV. He had given up the hope of any lasting union between the two countries, and he therefore wished to evidence his desire for the welfare of the Polish people, by offering them as their king the man whom, of all the princes of Europe, he deemed worthy of his daughter's hand. But in doing this he severed the bond that seemed so likely to unite Poland and Hungary for ever. Each nation [illegible] pursued its own course, to meet at last as [illegible] misfortune, cousin-german bleeding under the same.

Upon the plains of [illegible], the storm was now brewing which was to put the energy of Europe upon its mettle, and involve her frontier nations in the most terrible and momentous conflict in which men have ever drawn the sword. One of those tremendous crises was now at hand which [illegible] in the history of the world, in which the fate and fortune [illegible] generations depend upon the courage and fortitude [illegible] men, who stand forward with great hearts to stem the torrent, or meet the shock. The stubborn patriotism of Hampden, and a few others like him, secured to us the blessings of a free government, of the happiest combination of liberty and order that the world has ever seen. Thirty thousand British upon the plains of Waterloo saved Europe [illegible] it has not been so happy as many were led [illegible] the battle of liberty may ere long have to [illegible] again, their efforts were none the less pra[illegible].

So, in the fourteenth and fifteen centuries, Hungary and Poland saved our forefathers from the imposition of a false creed, and ourselves, in all probabilities, from the miseries of a retrogressive or stationary civilisation.

The Hunnic nation belonged to that [illegible] times, under the name of Huns-Mogols, or that of White Huns, filled history with their renown, and spread its swarm of warriors all over Europe.

Among the various branches who detached themselves from the parent stock, are included the Turks, who for a long time inhabited Turkistan, and the countries bordering on Southern China, and were confounded with the people known as Tartars. In the tenth century they entered Persia, and Asia Minor, drawing along with them tribes with whom they had allied themselves, or whom they had conquered on their way. The Turks founded many dynasties in these countries, of which the most celebrated were the Gaznevides, the Seldjoucides, and the Ottomans. These branches were subdivided into smaller ones, known as Khazars, Uzes, Ounigours, all of them more or less closely connected with the Magyars by ties of consanguinity. After the dismemberment of the Seldjoucide empire, the Emir, or chief, Othman, or Ottoman, settled about the year 1300 at Karahissar, in Phrygia, and assumed the title of Sultan, at the same time giving his name (Ottoman) to his people and dynasty. His two immediate successors greatly extended the empire of which he had laid the foundation. Orkan conquered the whole of Asia Minor, and in 1355 carried his arms into Europe.

The approach of these terrible fatalists roused the King of Hungary to take immediate steps for the defence of the countries lying between his own dominions and those of the Greek empire, which was already tottering to its fall. His labours were crowned with success by the taking of Buda, and a great victory gained over the Wallachian rebels. In the meantime, whilst the Greek Emperors, Andronicus and Palaeologus, were making vain attempts, in the midst of the intrigues and corruptions of the Byzantine court, to postpone the fall of the ancient empire over which he ruled, the Otto-

* Sealed contracts, or agreements."

mans were marching from triumph to triumph. It seemed as if Providence had hardened the hearts of the Greeks, and blinded their eyes to their impending fate. They were as lewd, as corrupt, as vain, and frivolous, with the Moslem within two or three days' march of their gates, as when Julian, the last hope of the ancient philosophy, was riding at the head of the victorious legions. In a war with the Emperor of the Serbes, they were so foolish as to call in the aid of the Turks, which the wily Orkan immediately granted, taking possession of their names of most of the strongholds of the country, which, however, he retained in his own.

Orkan died, and Amurath, his younger brother, a fierce and haughty warrior, ascended the Moslem throne. Young, talented, and ambitious, he disdained to adopt the subterfuges or pretences of his predecessor. He assumed the tone of a master, and Constantinople trembled. Palaeologus flew to Louis of Hungary for aid, and the latter promised to march to his assistance, in case the other European sovereigns did.

But the ancient fervour of chivalry had already died away. The Pope would not preach a crusade in favour of obstinate schismatics, who scouted his pretensions to the universal bishopric, and the Eastern empire was left to its fate. In the meantime Amurath occupied Servia and Bulgaria, thus sowing the seeds of the tremendous conflicts which afterwards took place between Turkey and Hungary. Louis appears at this period not to have a correct idea of the tremendous importance of the Ottoman invasion, and consequently did not take those precautions which the crisis demanded. His attention also was drawn away by disputes with Venice and Naples, but as these belong more to the history of Italy than of Hungary, and concerned the monarchs more than the people, we shall pass them over, and hasten on. We shall merely remark that Louis was compelled to assist, and that the war with Naples was excited by the execution of Joan, the murderess of her husband, Andrew. Four Magyar gentlemen strangled her with the very rope which she herself had supplied for the assassination of her husband. During these conflicts the Hungarian fleet increased rapidly, and practice gave the Magyar sailors an amount of self-confidence and dexterity which could then be rarely found except amongst the Venetians. Their navy was at this period one of the finest in Europe.

Louis did not survive to receive intelligence of the last of the triumphs of his glorious reign. When the messengers arrived with the news, he was already breathing his last in the Palace of Visegrad. His death diffused mourning and lamentation throughout the whole nation. Through many a year of trial and danger his had been the cool head to plan, and the strong arm to strike for the general weal. Whilst he lived Hungary was the proudest and greatest kingdom in Europe. His dominions extended from the shores of the Baltic to the ports of Byzance, and from the Black Sea to the Gulf of Naples, and his influence was felt, and his anger feared, where his flag had never floated. The strong courted his friendship, and the weak looked to him to shield them from the scathing fury of the followers of the False Prophet. And now, when the sword of the unbeliever was raised to strike, the brave hearts that should bear the first shock of the onset, were heaving with sorrow, as they stood around the gloomy vault in the Royal Alba, while the body of the departed hero was lowered into the last resting place of all the kings of his race.

The Magyar historians love to dwell upon the glories of the reign of Louis the Great, and above all upon the splendour of his palace of Visegrad, in which he fixed his residence during the greater part of his life. They tell, with pardonable pride, of its vast extent, which could afford ample accommodation within it for two kings and many minor princes, with all their suite, of its three hundred and fifty chambers, furnished in a style of dazzling splendour, of its gardens stocked with the rarest exotics, and cooled by the rush of flowing water, of the soft and voluptuous music which every evening, from one of the highest towers, soothed or delighted the courtly guests, and, floating on the breeze, cheered the peasant as he "plodded his weary way" homeward; of the neighbouring mountains, crowned with wood, and studded with pleasant villas or rustic churches, of the pleasant and shady valleys that sloped away to the Danube's edge, and afforded calm and retirement to him who chose to escape for a season from the gaieties of the palace.

It is a subject of more importance to us to consider the changes or improvements Louis wrought in the Hungarian constitution. He had more respect for the rights of the people and nobles than his father, Charles Robert, because he was less wily, more straightforward in his dealings, and had a great dislike to the tricks of diplomacy. In a Diet, held at Buda in 1351, he confirmed the Bulla Aurea, and added twenty-five new articles. After the happy issue of his first campaign in Naples, he established perfect equality amongst the nobles, as an acknowledgment of their services. The distinction between the great seigneurs and the simple nobles was thus effaced, and the name *barones, proceres*, and *nobiles*, were applied equally to all. At the Diet of Rakos, under one of the last kings of the race of Arpad, the peasants and the *jobbagy* (domestic servants) obtained the right of leaving their lords, and taking up their residence upon the estates of another. This was one step towards their emancipation, and it possessed greater weight from the circumstance that in all other countries of Europe at this date the serfs were inseparable from the soil on which they were born. Louis gave full force to this law, and those who fought bravely under his banners not only became free, but in every respect equal to the ancient nobles. The authority and duty of the Palatine, of the judge of the kingdom, of the treasurer, underwent no alteration of importance. The Palatine, Count de Trencin, already claimed the right of governing the kingdom, whenever the throne became vacant—just as the Lord Mayor of London does under similar circumstances in England. Charles Robert struck an injurious blow at the independence of the counties by placing a number of them in groups under one count, instead of each under its own. These supreme counts took rank among the first barons of the empire, and gave place only to the *vaigrodes* or *bans*. These great nobles received their emoluments, as did all other *employés*, in kind, and had besides the right of purchasing a certain quantity of salt. Each county, divided into four districts, had a certain number of puisne or deputy judges, presided over by a superior judge (*jeobiro*). Their assessors, a sort of jury composed of nobles, took part in the deliberations, and returned their verdict upon the case. These were elected by the nobles of the district, and none were qualified who had not real property within the jurisdiction of the court. The king himself named the superior courts, and sometimes even the viscounts, who opened the assemblies, under Charles Robert with the royal permission, and under Louis, when the public safety required it. In these were discussed the legislative and legal affairs of the district, matters of police, and other subjects of general interest, not within the province of the general Diet.

The military force of Hungary at first consisted, as we have already seen, entirely of the barons and their immediate followers, who ranged themselves under the banner of the king and afterwards of the sixty-two bands furnished by the same number of counties or military districts, who were compelled by law to defend the country at their own expense. The Magyars, however bravely they might fight at home, were never disposed to carry the war beyond their own frontiers, even when the king bore the cost, and this was doubtless the cause of the many invasions to which Hungary has been exposed. The old military organisation began, however, in course of time, to fall into abeyance, and Charles Robert endeavoured to introduce a number of useful reforms. He ordained that the inhabitants living in the neighbourhood of the citadels, and every landed proprietor who was not a noble, should furnish his contingent to the general armament. This plan did not, however, answer his expectations, and a sort of militia was therefore created, called *banderies* (from the monkish Latin, *banderium*), upon the plan of the Italian bands of mercenary troops. This was maintained at the expense of the prelates and magnates, who, in their fondness for display, often appeared in the field at the head of a greater number of levies than they were called upon to furnish. Charles Robert permitted them to keep their respective troops distinct, and bring them into battle under their own orders and their own banner.

Besides these, there were the Szeules, who fought as irregular troops, under no orders, when and in what manner pleased

them. These were divided into two corps, archers and slingers. The revenues of the crown lands, it may readily be imagined, were by no means equal to the outlay of princes so enterprising as those of the house of Anjou. They were accustomed to a more lavish and less scrupulous system of finance than they found prevailing in Hungary, and in order to meet the expenses of their long wars they placed heavy imposts upon all persons not ennobled. Thus, for every load of hay or of straw that entered a farmer's gate, he was obliged to pay a tax of eighteen deniers, and hence the name *porta* was given to it. The ninth part of the produce of their labour and industry was a tax which pressed with tremendous weight upon the poorer classes, and acted with a very injurious influence upon the commerce and agriculture of the country. This was not abolished till 1848. The landed property of the nobles could never be sold or alienated in any way, but was strictly entailed upon the male line, upon failure of which, it reverted to the crown. It was therefore almost impossible for any one, who had not a claim to nobility, to become possessor of any land, except as a tenant farmer.

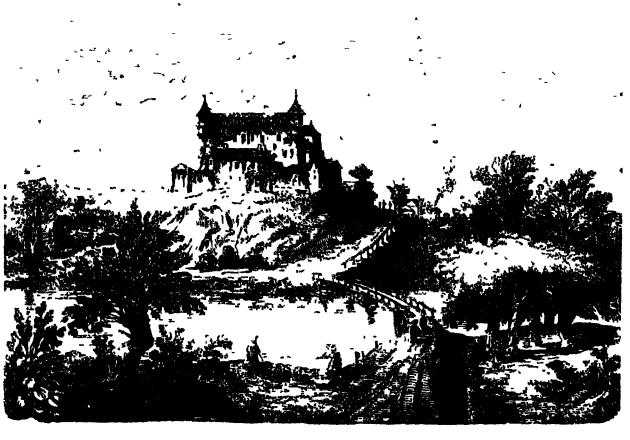
The administration of justice was generally pure, and the forms of procedure simple and direct. The ordeal by fire or boiling water fell into disuse under Bela III. and Andrew IV., and was finally abolished by Lucas Bánfi. These princes also introduced advocates into the courts, appointed mayors for the villages, and magistrates for the government of the towns. The nobles had tribunals sitting in every country for the trial of those of their own order.

The Court of the Palatine, the tribunal of final resort in all cases, changed the place in which its sittings were held four times in every year, for the convenience of those residing in the more remote parts of the kingdom. All legal proceedings took place publicly in open court.

The labour of the strangers who were introduced to fill the place of those massacred by the Moguls, gave a prodigious impulse to the commerce and industry of the nation. The vines of Turkey, the juice of which the Hungarians assert to have been the nectar of the gods (Homer's wine), which not only ministered to the luxury of the table of the day, but with honour crowned the splendid feasts of the Magyar monarchs, owed their origin to an Italian colony placed at Olaszi. The immense wealth of the great lords, the splendour of their feasts and entertainments, and the gorgeous magnificence of their dress and equipages, were not without their effect upon trade, whatever might be their ultimate influence upon the immorality of the people. In the midst of this manufacturing and commercial prosperity, the arts and sciences, and polite literature, were not forgotten. Many of the Hungarians repaired, to complete their education, to the universities of Paris and Bologna, then famed for the learning and ability of their professors. An academy, known as the *Studium Generale*, was founded at Vesprim during the thirteenth century. Ladislaus IV. bestowed upon it an extensive library, and distinguished professors gave instruction in theology, jurisprudence, and *belles lettres*. But as literature was at that time peculiarly the province of the clergy, the national language was, for a considerable period, unhonoured by the notice of the learned. Though Louis the Great spoke the Magyar with ease and fluency, as his mother tongue, still Latin continued to be the language of the refined and the noble. Amongst the learned men of the earlier part of Hungarian history, the names of Rogerius, Archbishop of Spalatro, of Calanus, the historian, Bishop of the Five Churches, Simon Koza, the chronicler, and the German astronomer

SCYTHS. (See *page* 151.)

WALLACHIANS. (See *page* 150.)



Klingsohr, are mentioned with honour. In 1367, an academy was established in the town of Pecs, and, in a short time attained to such a height of celebrity, that four thousand students are said to have yearly filled its halls. Michas Madius, the Dalmatian chronicler, John Kukeolleo, the Secretary of the King, and many others, of equal note, owed the eminence to which they afterwards attained to the instruction they received here.

Following up the course upon which St Stephen entered, the dynasty of Arpad, at all times, displayed the utmost zeal for the honour of religion, and as Romanism was the only form under which it was then known in Europe, the Popes soon obtained immense influence in Hungary. They established a crowd of religious orders, and as the clergy entirely monopolised the teaching of the young, they secured an ascendancy and an amount of wealth, which remain almost unimpaired to the present day. After the conversion to Christianity, there was but one archbishop, and six bishops, in the whole kingdom. When Louis the Great died there were thirty archbishops, and eight hundred bishops.

CHARLES I. CROWNED IN THE FOURTEENTH CENTURY.

As might naturally be expected, from the tincture of romance which pervades their character, the Magyars, above all, were imbued with the poetry of religion. That enthusiastic veneration which the men of all European nations, in their wildest and coarsest moods, entertain for the graceful purity of a fine female character, holier and more beautiful when robed in sorrow, or bowed down by misfortune, in the Magyars found vent in the devout worship of the Virgin Mary. In the palace of the king, and the cottage of the peasant, her image was, at the same time, an ornament and an object of adoration, more, perhaps, as a poetic ideal, than as a household goddess. In the reign of Bela IV., the coin was struck with a portrait of the Madonna, and bore the inscription, *Sancta Maria*. So strongly was this feeling of reverence carried in the people's minds, that the National Diet, in 1458, feared to make any change in the die with which the coinage was stamped, lest it should create a popular ferment.

CASTLE OF OZORVOM.

The Magyars, essentially a warlike people, had never submitted themselves to the government of women; in favour of whom no stipulation was inserted in the original compact made between them and Arpad, but, full of veneration for Louis, they placed his daughter Mary upon the throne, and curiously enough, not only proclaimed her queen, but insisted that she should assume the title of *King*, and sign her charters *Maria Rex*, in all public documents. This seemed to make her accession a special favour dictated by gratitude to her father.

She was married to Sigismond, King of Poland, who assumed the government of Hungary. He was a feeble and worthless monarch, disliked by his wife, and mistrusted by the people. Previous to his marriage, an insurrection of the Croats deprived Hungary of all her ports upon the Adriatic, and the intended bride fell into their hands, and was detained a prisoner, although he made several ineffectual attempts to rescue her at the head of an armed force. She was at length restored to him by a party of Magyar *noblesse*, and he ever after hated her deliverers for having proved themselves his superiors in the field. In continual fear of assassination, he endeavoured to protect

himself by executions and proscriptions, and whenever danger from without obliged him to turn his attention to the defence of his kingdom, his measures were planned without prudence or decision, and executed without energy. The dependant provinces upon the frontiers were consequently in continual hesitation between obedience and separation, and the Magyars were thus frequently involved in harassing and disastrous wars. In the meantime the terrible son of Amurath, Bajazet, surnamed *The Lightning* by the Ottomans, was casting his greedy eye upon the rich plains of the Danube. After having reduced to tribute the feeble court of Byzantium, which he needed only to strike to subdue, he determined to give strength and security to his conquests, by extirpating the hardy and vigorous races who served as a bulwark to the falling empire of the East. He therefore invaded Wallachia. The Magyars made some fruitless attempts to beat him back, and in the meantime the Queen died childless. Sigismond, having secured to himself the succession to the crown, levied a large army in order to revenge upon the Turks the losses which the Hungarians had sustained. But so great was the terror caused by the ferocious valour of the Ottomans, that he found his forces insufficient, and he appealed to all Europe to aid him. Philip the Rash of France, the Count of Nevers, La Tremouille, the Admiral of Vienna, Marshal Boucicaut, and a host of other able warriors, answered to the call, and placed themselves under his banners. The old chronicles dwell with delight upon the valorous exploits performed by these worthy successors of the first crusaders, but their efforts were vain, owing to the want of ability upon the part of Sigismond, so that at the disastrous battle of Necopolis the Hungarians were totally defeated, and twenty thousand men and a crowd of foreign knights were left dead upon that fatal field. Instead of returning to his kingdom to restore the drooping courage of his subjects, Sigismond fled to Constantinople, under the pretence of seeking for soldiers and money. He came back empty-handed and crest-fallen through Dalmatia. He forthwith commenced to make treaties relative to the succession to the crown, in which he violated the rights of the nation, and was consequently seized upon and committed to prison, but was soon afterwards liberated upon his promising to observe the laws of the kingdom. His return to power was marked by sentences of death and proscription. Having become in succession King of Bohemia, and Emperor of Germany, his new dignities gave the opportunity of gratifying his taste for moving from place to place, and weaving intricate webs of diplomacy. He frequently interposed as mediator in disputes in which Hungary had no interest, and then involved her in conflicts, often bloody, in order to enforce his decisions. The disgraceful part taken by him in the Council of Constance is well known. John Huss and Jerome of Prague, the celebrated reformers, were summoned before it, to answer for their heresies, but refused to do so without some guarantee that would ensure their personal safety. Sigismond granted them a safe conduct, signed by his own hand, and upon their arrival joined in sentencing them to be burnt alive. This odious act of perfidy entailed many a year of suffering and disaster upon Germany.

In the meantime Naples and Venice seized upon various strongholds upon the Adriatic, without any hindrance from Sigismond, and it was only at the pressing instance of a valiant warrior, named Nicolas Szentpoli, that he at length made preparations to avenge the defeat sustained by his army at Nicopolis. The war was commenced by the taking of Bosnia by the Hungarian General Peterfi, who pushed on as far as Nissa, where the Grand Vizier occupied a strong position, with an army of twenty-four thousand men. The battle was fought on the 4th of October, 1410, which ended in the total defeat of the Turks, who lost nearly the whole of their

It was on this occasion that John Hollos, the adopted son of Butho, a Wallachian *boyard*, or nobleman, first made himself conspicuous by his valour. He had served in succession under the banners of Francis Csanadi, and of the Cardinal Demetrius, Archbishop of Strigonia; and in this battle, where he [illegible] commanded a troop, his daring attracted the attention of the King, who bestowed upon him the house and [illegible] of Hunyad, in which he had been brought up. The place in which John Hunyadi was born is unknown, and his origin even is uncertain, but as a nation never suffers the early life of its heroes to rest in darkness, but supplies with tradition the deficiencies of history, we shall here present our readers with the story of this great warrior's career as it is popularly received in Hungary at the present day.

Sigismond, after the death of his first wife, had married Barbara de Cilly, a perverse and cunning woman, who poisoned her husband's existence, and disgraced her own sex by her gross licentiousness. He, therefore, very soon began to abandon her society for that of other women. In 1392, he led his army into Wallachia, and when encamped on the banks of the Sztrigy, he met in one of his evening walks a girl named Elizabeth Morsiani, the daughter of a neighbouring boyard, and was captivated by her beauty. The admiration and attention of the king dazzled the simple maiden, and she yielded her honour almost without even a coy refusal. Sigismond then passed on to the scene of the war, where, also, he was equally successful, and upon his return, the beautiful Morsiani again presented herself at his tent, and asked what reward he would bestow upon her for presenting him with a child. "I will load the child with honours," he replied, delighted with the result of his amour, and handing her a gold ring, told her to come to the palace, and the king should mind him of his promise. Some months after this [illegible] Elizabeth married a boyard named Volk Butho, who took her with him into Wallachia, where she soon after gave birth to a son, whom she named John. Sigismond soon again arrived in the neighbourhood, and she repaired to the camp, and presented him with the child and the ring. He received her graciously, and renewed his promises of favour and protection, and told her to come to Buda. Shortly afterwards her husband died, and she was making preparations for the journey, when a crow snatched the ring from her son's hand, and flew with it to a neighbouring tree, whereupon her brother, running to her assistance, shot the bird, and restored the bijou. She appeared before the King in his palace at Buda, and he loaded her with favours. When John had grown up, he bestowed upon him the domain of Hunyad, and sixty villages, and gave him as his coat-of-arms, a crow carrying a ring in its bill, and the young man ever after bore the name of his estate, Hunyadi Janos, or John of Hunyad.

Whether this recital be true or not, it is at least romantic, but can neither add to, nor diminish the glory of his after career.

At the battle of Semendria Sigismond was again successful, and again Hunyadi made the Turks feel the weight of his prowess.

The King died in 1437, and was buried in the Cathedral of Great Varadin. His sole merit amongst the Hungarians was his adherence to the traditional customs of the country, and his having, according to the popular belief, left a son behind him whose great services made him the pride of the nation.

The widow of Sigismond, was as we have already remarked, a woman devoid of honour, or of talent. So vile and degraded did she become, that it is credibly related, that, forgetful of the dignity of her station, and her womanhood, she made the first advances, when the fading of her charms had diminished the number of her admirers. She was the Messalina of Germany. Sigismond left to his daughter Elizabeth and her husband, Albert, Archduke of Austria, the three crowns of which he was in possession at his death. The Diet sanctioned Albert's succession to the throne, but with a great number of restrictions. He did not long survive his coronation, being poisoned, as was commonly believed, by his mother-in-law. He left his wife *enceinte;* but the Diet, and foremost among them John Hunyadi, did not think that in such perilous times they should entrust the government of the kingdom to a young and inexperienced female, but determined upon offering the crown to Ladislaus, King of Poland. He accepted it, and made his entry into Hungary amidst great rejoicings, but without a word of his marriage with the widowed queen, which it was confidently expected would take place. She, deprived of her resources, pledged the crown, which she had in her possession, to the ambitious Frederic III. of Germany, a weak-minded prince, who, by his avarice, was, however, laying the foundation of the future greatness of the House of Hapsburgh.

Now commenced in right earnest the war between the Hun

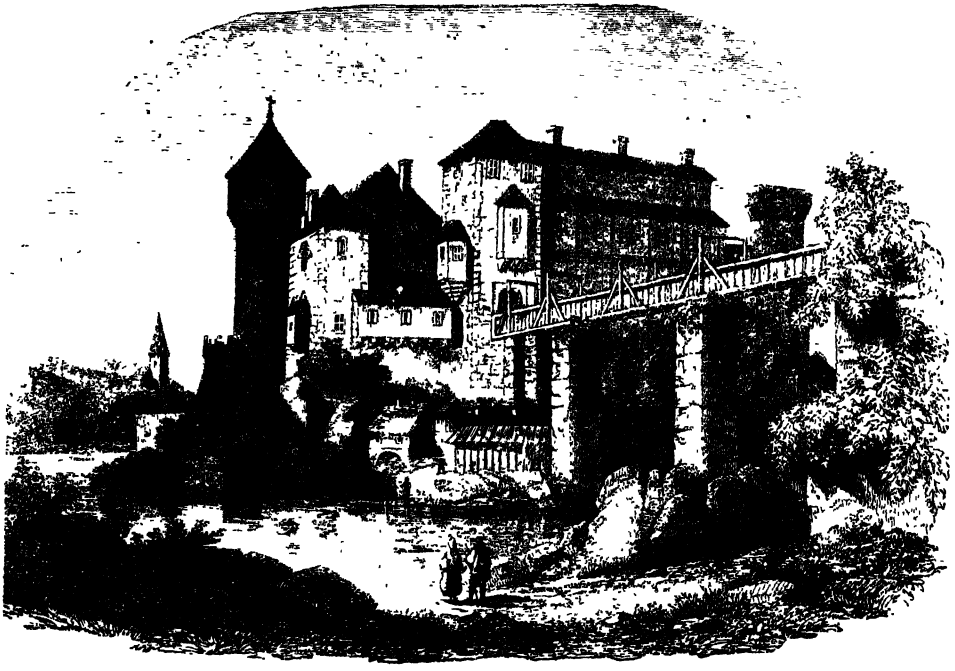
garians and the Turks. Her traditions, her music, nay, in some degree the character of the people, have received mournful colouring from that tremendous struggle. The ruined churches, dismantled fortresses, and great towns strongly walled, to which the affrighted peasantry from the surrounding country flocked for shelter, are all remains of that age of heroes. The Turks and Magyars were, as we have already stated, sprung of the same stock. Issuing from their native plains, the one settled in Pannonia, and embraced Christianity and its attendant civilisation; the other established itself upon the shores of the Bosphorus, swore by the creed of the Arab prophet, and offered all Europe its choice of the Koran or the sword. Thus the two nations, of same blood, found themselves placed face to face as deadly enemies, after the lapse of many changeful [illegible].

True to the customs of the Asiatic plains, both fought on horseback in a frightful *melee*, thousands of men matched in duels, with the same description of weapons, struggling for life, for quarter was neither asked nor given. To the love of homes and altars was added the additional stimulus of the deadliest religious bigotry, that [illegible] minds natures so hard-favoured as [illegible] Magyars wore the full armour, but when marching against the Ottomans, they resumed their costume and the curved [illegible]. They put on simply a light cuirass, or coat of mail, to protect the breast, and upon the rest of the body the national habit, which in magnificence was in no way inferior to the rich garments of the Turks. They alone were ever ready for the struggle when the rest of Europe seemed paralysed with fear.

In the midst of the rejoicings attendant upon the coronation of Ladislaus, Hunyadi twice defeated the Ottomans. He beat Mezet Bey in a murderous battle in Transylvania, and reduced Drakul, the waywode of Wallachia to submission. In this conflict the Szeules, the descendants of the soldiers of Attila, who remained a separate and distinct people upon the soil [illegible] Hungarian [illegible] Germans [illegible] Romans [illegible] Turkish army, they bore the shock of the Mussulman cavalry in solid squares, firm as a wall, and again and again dashed them back like foam from rock. The Turks sustained a still greater disaster near the Iron Gate, and Amurath II. at last sued for peace. Every voice ascribed the honour of these brilliant victories to the talents and valour of Hunyadi, and Ladislaus named him Count of Temes and Captain of Belgrade. His fame in some degree intimidated the partisans of the Queen, who were agitating for her restoration to the government, but in the midst of the dispute Elizabeth died, and thus set the question at rest. The Ottomans, however, always ready to take advantage of the intestine quarrels of the Magyars, again appeared on the frontiers, burning with eagerness to revenge their recent losses. Having united their forces with those of George Brankowitsch, Prince of Servia, and Drakul, waywode of Wallachia, they again marched to meet them. Hunyadi [illegible] pushed on rapidly, the Turks everywhere retreating before him. At last they made a stand at the foot of the Mountain of Konoviez. At the dawn of day the Magyar army was drawn up in the order of battle, in a long line, the best-born of the country [illegible] shoulder to shoulder, panting for the fray. Hunyadi, [illegible], of lofty stature, and eagle face, as great an orator as he was a soldier, rode out in front, and inflamed them courage by his burning words, till he had wrought them up to the highest pitch of religious enthusiasm and martial ardour. "To die once," said he, drawing his sword, "is a debt we owe to nature, but to die like brave men, on the field of battle, for one's country and religion, is a privilege which the Almighty God bestows on his chosen people only!" Wheeling [illegible] exclaimed, "God is with us! follow me!" and dashed like lightning on the foe. The Magyars instantly charged with wild hurrahs. The struggle was short, bloody, but decisive. There was a rush of steeds, a fierce clashing of weapons, and in a few minutes the Turks were broken "like thin clouds before a Biscay gale," and were flying across the plain in mad confusion. Rendered blind by fanaticism, the Ottomans did not perceive that, however great the valour of their soldiers might be, they had no leader who was nearly a match for the Hungarian general, and continued their attacks from time to time. Being obliged, on the other hand, to suppress an insurrection in Asia Minor, Amurath was obliged, at last, to sue for peace. To increase his chance of success, he endeavoured to gain over George Brankowitsch, the Prince of Servia, to his interest by large bribes. Brankowitsch was fully aware of the great weight which Hunyadi possessed in the royal councils, and therefore addressed himself to him in the first instance, offering him, as a reward for his zeal and the service he had rendered in driving the Turks from Servia, the magnificent estate of Vilagosvar, which, five centuries later, became the scene of the basest treachery. The Magyar, looking upon the gift as an act of pure munificence, accepted it without hesitation. Soon after, the Sultan sent ambassadors to the King to treat of peace, and Hunyadi, yielding to the flatteries of the wily Servian, brought them before Ladislaus [illegible] Diet, sitting at Szegedin. During the discussion which followed, Hunyadi, beginning to perceive that he had been duped, remained silent, and when peace was agreed and sworn to for six years, he gave no sign either of assent or disagreement. The clauses of the treaty were favourable, in appearance at least, to Hungary, which regained possession of all the Dimidium provinces, except Bulgaria.

No sooner [illegible] been signed than Cardinal Caesarini, the Papal legate [illegible] Morea court, received new instructions from the Holy See, ordering him to foment another war against the Turks. He therefore represented to the King that a new league was being formed against the Ottomans, who were now held in check by the disturbances in Asia Minor, and that the Pope would send him succours, and informed him that he had no right to conclude a peace with the infidels without the consent of the Holy Father. Ladislaus pleaded the solemn treaty, and his oath sworn on the holy evangelists; but the Prince of the holy Catholic Church assured him that everything was lawful, when done in defence of the Christian faith.

It is [illegible] to this event that the character of Hunyadi appears in its best light, that he first shows himself vastly superior to his age, and to his creed. To him the dust of the most desperate battle was as the breath of life. From war he had everything to gain, and nothing but his life, and of that he reckoned but little, to lose. How grateful then must it be to every ingenuous mind to see this high warrior, brought up in a loose and often inflexible morality of the camp, contending the shameless ministers of Christ's religion at the foot of the throne, and solemnly calling on the King not to violate his pledged faith. "Sire," said he with all the energy with which the love of truth inspires great souls, "all the priests in the world cannot free you from subjection to the laws of honour. You have sworn to the treaty, and an oath is more sacred than all the bulls that ever were issued."



The Poles manifested equal repugnance to the war, but the Diet gave way before the expressed wish of the King. Hunyadi followed him in the expedition which was immediately fitted out, his scruples being quieted, it is said, by a promise that after the successful issue of the campaign he should receive Bulgaria as an hereditary province. We are loth to believe this of a man who had already displayed so much nobility of character, and would rather think with many that, finding himself placed in a [illegible] he [illegible] to [illegible] [illegible] [illegible]

furiously upon the wing commanded by Karasi Bey, which instantly turned and fled. Karasi was slain, while vainly endeavouring to rally his troops, whose flight spread terror and confusion through the whole of the Turkish army. Amurath himself prepared to escape, and, tearing open his robe, drew forth the treaty concluded between himself and Ladislaus, and raising his eyes to heaven, exclaimed: "God of the Christians! if thou art the true God, avenge the perfidy of thy disciples!" The greatness of his loss made him doubt the truth of his own faith. The rash bravery of Ladislaus, however, and the jealousy of some of the Hungarian barons, soon changed the face of affairs. The latter persuaded him that Hunyadi would appropriate to himself the sole honour of the day, if he did not forthwith take some part in the combat, and, putting himself at their head, he galloped down

he wrote in a strain of bitter irony. "I make you a present," said he, "of a horse of surprising swiftness, I send one to my son also. You will have need both of the one and the other, for you will be beaten."

Brankowitch, the waywode of Servia, who refused to take part in the war, had the mournful satisfaction of addressing the severest reproaches to Hunyadi. Cardinal Caesarini, and a number of Magyar and Polish nobles, paid with their lives the penalty of their treachery or their rashness, whilst Amurath found himself, by his victory, raised to the position of the champion of the laws of nations.

This disaster forcibly presented to the minds of the Hungarians the evil of intestine division, and they therefore with one accord offered the crown to Ladislaus, the posthumous son of Albert, Duke of Austria, and Elizabeth, daughter of

CASTLE OF JOHN HUNYADI.—(*See page* 150.)

into the thick of the *melee*. He was instantly surrounded by the Janissaries, and, his charger falling, he was prostrated under a shower of blows, and trampled to death under the horses' feet. Hunyadi made a desperate but ineffectual attempt to rescue him; the battle was lost, and the head of the unfortunate Ladislaus, raised on the point of a lance, was the signal for the general rout. The Magyars and Poles, mingled in the panic, fled towards the river, and there the carnage was so frightful that the water was dyed with their blood. Amurath visited the field when the engagement was over. "Look at these bodies," said he to Asa Bey, "they were warriors in the prime of life." "Of course they were," replied the old soldier; "old men would not have been guilty of the imprudence which has given us the victory."

Drakul, the waywode of Wallachia, seems to have foreseen the defeat, for, on sending four thousand cavalry to the King,

Sigismond. We have, however, already stated that the child and his mother had, during the disputes relative to the succession to the crown, placed themselves under the protection of Frederick II., Emperor of Germany, who now refused to allow the latter to return to Hungary. Under these circumstances, the Diet, acting in his name, appointed John Hunyadi regent of the kingdom, who, after having defended the state on the battle-field, now wisely governed it for six years. He was the first Governor of Hungary, a dignity which has never since been conferred with similar forms upon any one except Louis Kossuth.

Hunyadi made unceasing efforts to obtain the liberation of the King, but the German Emperor seldom returned any other answer than vain promises or exorbitant demands of money, by way of indemnification. The Governor also found himself hampered by the jealousy of Ulric de Cilly, the uncle of Ladis-

laus, who himself aspired to the regency Hunyadi did not in the meantime, however, relax from his endeavours to humble the pride of the Turks, whom the triumph of Varna had rendered more than usually haughty and overbearing. Though the loss of so many gallant soldiers prevented him from acting on the offensive, and compelled him to use great caution, he nevertheless was successful in various minor encounters with the Ottomans. He then turned his attention to the chastisement of Giska, the chief of the Bohemian bands, and Brankowitsch of Servia, for their defection and treachery in the hour of peril. His moderation, and justice, and integrity in everything, raised him to the highest position in popular estimation. At the disastrous battle of Cassova, he sustained a tremendous defeat, and was near losing his own life. Thrown off his horse, he was seized by two Servians, who began to quarrel for the possession of the golden cross which hung around his neck, when he suddenly extricated himself, grasped his arms, and killed one, and as no single man of ordinary stature and skill in the use of weapons ever stood before Hunyadi, the other immediately took to flight. Even this misfortune did not lessen his popularity. On his return to Hungary the nation again hailed him as the greatest of her statesmen and the first of her military chiefs.

JOHN HUNYADI.

Frederick at last consented to give up the young King, but [illegible] made the guardianship of Count de Cilly, who was [illegible] Hunyadi, Wh[illegible] crowned at Vienna, Hunyadi, and his eldest son Ladislaus Corvinus had a good deal of influence over him, but upon his return, the intrigues of a cabal devoted to Cilly rendered him prejudiced and unjust towards the Regent, although he had previously loaded him with favours, and named him hereditary Count of Bistricz. But this did not prevent Hunyadi from doing his duty, and he now set an example of pure and disinterested patriotism, which, perhaps, no man but Washington has ever followed. A brave warrior, an able statesman, honoured for his public services, and supreme in the affections of the people, nothing could have been easier for him than to have repudiated the claims of a boy, who had not set his foot in the kingdom since his infancy, and who had been educated in a court whose policy was hostile to Hungarian interests. But that great heart did not know what it was to hesitate between the dictates of duty, and the whisperings of ambition. He instantly placed the government in the King's hands, and afterwards signed all public acts simply as Count of Bistricz, and Captain-General of the King and the Magyar Empire.

The barons of Rozgony assigned the castle of Posonia, or Presbourg, to Ladislaus as his residence, and, after the estates had sworn allegiance, he confirmed the ancient charters of the realm. From that time Presbourg became the seat of the Diet, and the place in which all the Princes of the House of Hapsburgh were crowned (for engraving see next number). Ladislaus was obliged to continue Hunyadi in the office of Lieutenant-Governor, but he never afterwards acted towards him with any degree of cordiality. During his stay at Presbourg he was cold, reserved, and cautious; and, very soon yielding to the suggestions of his maternal uncle, Count de Cilly, he returned to Vienna, under pretence of regulating the affairs of the Archduchy of Austria.

THE UNPARALLELED ADVENTURE OF ONE HANS PFAALL.

It appears that on the - — — day of — — (I am not positive about the date), a vast crowd of people; for purposes not specifically mentioned, were assembled in the great square of the Exchange in the well-conditioned city of Rotterdam The day was warm —unusually so for the season—there was hardly a breath of air stirring and the multitude were in no bad humour at being now and then mikled with friendly showers of momentary duration, that fell from large white masses of cloud profusely distributed about the blue vault of the firmament Nevertheless, about noon, a slight but remarkable agitation became apparent in the assembly, the clattering of ten thousand tongues succeeded; and, in an instant afterwards, ten thousand faces were upturned towards the heavens thousand pipes descended simultaneously from the ten thousand mouths, and a shout, which could have nothing but the roaring of Niagara, resounded long, long and furiously through all the city, and through all the country of Rotterdam

The origin of the hubub soon became sufficiently evident. From behind the huge bulk of one of those shapely-domed masses of cloud already mentioned was seen slowly to emerge into an open area of blue space, aque heterogeneous, but apparently solid substance, so oddly shaped, so whimsically put together, as not to be in any manner comprehended, and never to be sufficiently admired, by the host of sturdy burghers who stood open-mouthed below. What could it be What could it possibly portend? No one knew, no one could imagine, no one—not even the burgomaster, Mynheer Superbus Von Underduk

In the meantime, however, lower and still lower towards the earth came the object of such curiosity and the cause of so much smoke In a very few minutes it arrived near enough to be accurately discerned It appeared to be—yes! it was undoubtedly a species of balloon but surely no *such* balloon had ever been seen in Rotterdam before For who, let me ask, ever heard of a balloon manufactured entirely of duty newspapers? No man in Holland certainly yet here, under the very noses of the people, or rather at some distance *above* them noses, was the identical thing in question and composed—I have it on the best authority—of the precise material which no one had ever before known to be used for a single purpose It was an egregious insult to the good sense of the burghers of Rotterdam As to the shape of the phenomenon, it was even still more reprehensible—being little or nothing better than a huge fool's-cap turned upside down. And this similitude was regarded as by no means lessened when, upon nearer inspection, the crowd saw a large tassel depending from its apex and, around the upper rim or base of the cone, a circle of little instruments, resembling sheep-bells, which kept up a continual tinkling to the tune of Betty Martin But still worse Suspended by blue ribbons to the end of the fantastic machine there hung, by way of car, an enormous cocked hat, with a brim superlatively broad, and a hemispherical crown with a black band and a silver buckle It is, however, somewhat remarkable that many citizens of Rotterdam swore to having seen the same hat repeatedly before, and, indeed, the whole assembly seemed to regard it with eyes of familiarity, while the view Gretchel Pfaall upon sight of it, uttered an exclamation of joyful surprise, and declared the identical hat of her good man himself. Now this was a circumstance the more to be observed, as Pfaall, with three companions, had actually disappeared from Rotterdam about five years before, in a very sudden and unaccountable manner, and up to the date of this narrative all attempts at obtaining intelligence concerning them had failed

The balloon (for such no doubt, was) had now descended to within a hundred feet of the earth, allowing the crowd below a sufficiently distinct view of the person of its occupant This was, in truth, a very singular somebody He could not have been more than two feet in height, but the rotundity, little as it was, would have been sufficient to destroy his *equilibrium*, and tilt him over the edge of his tiny car, but for the intervention of a circular rim reaching as high as the breast, and rigged on to the cords of the balloon. The body of the little man was more than proportionally broad, giving to his entire figure a rotundity highly absurd His feet, of course, could not be seen at all. His hands were enormously large. His hair was gray, and collected into a *queue* behind. His nose was prodigiously long, crooked, and inflammatory; his eyes full, brilliant, and acute; his chin and cheeks, although wrinkled with age, were broad, puffy, and double; but of ears of any kind there was not a semblance to be discovered upon any portion of his head. This odd little gentleman was dressed in a loose suit out of sky-blue satin, with tight breeches to match, fastened with silver buckles at the knees His vest was of some bright yellow material; a white taffety cap was set jauntily on one side of his head, and, to complete his equipment, a blood-red silk handkerchief enveloped his throat, and fell down, in a dainty manner, upon his bosom, in a fantastic bow-knot of supereminent dimensions

Having descended, as I said before, to about one hundred feet from the surface of the earth the little old gentleman was suddenly seized with a fit of trepidation, and appeared disinclined to make any nearer approach to *terra firma* Throwing out, therefore, a quantity of sand from he became stationary in an instant He reached, in a hurried and la pocket in his surtout a large morocco pocket book This he suspiciously in his hand; then eyed it with an air of extreme surprise and was evidently astonished at its weight He at length opened it, and, drawing therefrom a huge letter sealed with red sealing-wax and tied carefully with red tape, let it fall precisely at the feet of the burgomaster, Superbus Von Underduk His Excellency stooped to take it up But the aeronaut, still greatly discomposed, and having, apparently, no further business to detain him in Rotterdam, began at this moment to make his preparations for departure, and it being necessary to discharge a portion of ballast to enable him to re-ascend, the half dozen bags which he it, one after another, without taking the contents, tumbled, every one of them, most unfortunately, upon the back of the burgomaster, and rolled him over and over no less than half a dozen times, in the face of every individual in Rotterdam It is not to be supposed, however, that the dignity of Underduk suffered these indignities on the part of the little old man to pass off with impunity It is said, on the contrary, that during each of his half dozen circumvolutions he emitted no less than half a dozen distinct and furious whiffs from his pipe.

In the meantime the balloon arose like a lark, and, soaring far away above the city, at length drifted quietly behind a cloud, similar to that from which it had so oddly emerged, and was thus lost for ever to the wondering eyes of the good citizens of Rotterdam All attention was now directed to the letter, the descent of which, and the consequences attending thereupon, had proved so fatally subversive of both person and personal dignity to his Excellency, Von Underduk That functionary, however, had not failed, during his circumgyratory movements, to bestow a thought upon the important object of securing the epistle, which was seen, upon inspection, to have fallen into the most proper hands, being actually addressed to himself and Professor Rubadub, in their official capacities of President and Vice-President of the Rotterdam College of Astronomy It was accordingly opened by those dignitaries upon the spot, and found to contain the following extraordinary, and, indeed, very serious communication —

TO THEIR EXCELLENCES VON UNDERDUK AND RUBADUB, PRESIDENT AND VICE-PRESIDENT OF THE STATES' COLLEGE OF ASTRONOMERS, IN THE CITY OF ROTTERDAM

Your Excellencies may, perhaps, be able to remember an humble artisan, by name Hans Pfaall, and by occupation a mender of bellows, who, with three others, disappeared from Rotterdam, about five years ago, in a manner which must have been considered unaccountable If, however, it so please your Excellencies, I, the writer of this communication, am the identical Hans Pfaall himself. It is well known to most of my fellow-citizens that, for the period of forty years, I continued to occupy the little square brick building at the head of the alley called Sauerkraut, in which I resided at the time of my disappearance. My ancestors have also resided therein time out of mind—they, as well as myself, steadily following the respectable and, indeed, lucrative profession of mending of bellows, for, to speak the truth, until of late years, that the heads of all the people have been set agog with politics, no better business than my own could an honest citizen of Rotterdam either desire or deserve. Credit was good, employment was never wanting, and there was no lack of either money or good will. But, as I was saying, we soon began to feel the effects of liberty, and long speeches, and Radicalism, and all that sort of thing. People who were formerly the very best customers in the world had now not a moment of time to think of

us at all. They had as much as they could do to read about the revolutions, and keep up with the march of intellect and the spirit of the age If a fire wanted fanning, it could readily be fanned with a newspaper; and as the Government grew weaker, I have no doubt that leather and iron acquired durability in proportion, for, in a very short time, there was not a pan of bellows in Rotterdam that ever stood in need of a stitch or required the assistance of a hammer This was a state of things not to be endured. I soon grew as poor as a rat, and, having a wife and children to provide for, my burdens at length became intolerable, and I spent hour after hour in reflecting upon the most convenient method of putting an end to my life. Duns, in the meantime, left me little leisure for contemplation. My house was literally besieged from morning till night. There were three fellows in particular, who worried me beyond endurance, keeping watch continually about my door, and threatening me with the law. Upon these three I vowed the bitterest revenge if ever I should be so happy as to get them within my clutches, and I believe nothing in the world but the pleasure of this anticipation prevented me from putting my plan of suicide into immediate execution by blowing my brains out with a blunderbuss. I thought it best, however, to dissemble my wrath, and to treat them with promises and [illegible] I knew me good turn of life, an opportunity of [illegible] had me

One day, having given them the slip, and feeling more than usually dejected, I continued for a long time to wander about the streets without object, until at length I

stopped at the corner of a bookseller's stall Seeing a chair [illegible] the use of customers, I threw myself doggedly into it, and, hardly knowing why, opened the pages of the first volume which came within my reach. It proved to be a small pamphlet treatise on Speculative Astronomy, written either by Professor Encke, of Berlin, or by a Frenchman of somewhat similar name. I had some little tincture of information on matters of this nature, and soon became more and more absorbed in the contents of the book— reading it actually through twice before I awoke to a recollection of what was passing around me By this time it began to grow dark, and I directed my steps toward home. But the treatise (in conjunction with a discovery in pneumatics, lately communicated to me as an important secret, by a cousin from Nantz) had made an indelible impression on my mind, and, as I sauntered along the dusky streets, I revolved carefully over in my memory the wild and sometimes unintelligible reasonings of the writer There were some particular passages which affected my imagination in an extraordinary manner. The longer I meditated upon these the more intense grew the interest which had been excited within me The limited nature of my education in general, and more especially my ignorance on subjects connected with natural philosophy, so far from rendering me diffident of my own ability to comprehend what I had read, or inducing me to distrust the many vague notions which had arisen in consequence, merely served as a further stimulus to imagination, and I was vain enough or perhaps reasonable enough, to doubt whether those crude ideas which, arising in ill-regulated minds have all the appearance, may not often in effect possess all the force, the reality, and other inherent properties of instinct or intuition.

It was late when I reached home, and I went immediately to bed My mind, however, was too much occupied to sleep, and I lay the whole night buried in meditation Arising early in the morning, I repaired eagerly to the bookseller's-stall, and laid out what little ready money I possessed in the purchase of some volumes of Mechanics and Practical Astronomy. Having arrived at home safely with these, I devoted every spare moment to their perusal, and soon made such proficiency in studies of this nature as I thought sufficient for the execution of a certain design with which either the devil or my better genius had inspired me In the intervals of this period I made every endeavour to conciliate the three creditors who had given me so much annoyance. In this I finally succeeded—partly by selling enough of my household furniture to satisfy a moiety of their claim, and partly by a promise of paying the balance upon completion of a little project which I told them I had in view, and for assistance in, which I solicited their

By these mean (for they were ignorant men) I found little difficulty in gaining them over to my purpose.

Matters being thus arranged, I contrived, by the aid of my wife, and with the greatest secrecy and caution, to dispose of what property I had remaining, and to borrow, in small sums, under various pretences, and without giving any attention (I am ashamed to say) to my future means of repayment, no inconsiderable quantity of ready money With the means thus accruing, I proceeded to procure at intervals cambric muslin, very fine, in pieces of twelve yards each; twine, a lot of the varnish of caoutchouc; a large and deep basket of wicker-work, made to order, and several other articles necessary in the construction and equipment of a balloon of extraordinary dimensions. This I directed my wife to make up as soon as possible, and gave her all requisite information as to the particular method of proceeding. In the meantime I worked up the twine into net work of sufficient dimensions, rigged it with hoop and the necessary cords, and made purchase of numerous instruments and materials for experiment in the upper regions of the upper atmosphere. I then took opportunities of conveying by night, to a retired situation east of Rotterdam, five non-bound casks, to contain about fifty gallons each, and one of a larger size, six in tubes, three inches in diameter, properly shaped and ten feet in length, a quantity of a *particular metallic substance, or semi-metal*, which I shall not name, and a dozen demijohns of *a certain common acid*. The gas to be formed from these latter materials is a gas never yet generated by any other person than myself—or at least never applied to any similar purpose. I can only venture to say here, that it is *a constituent of azote*, so long considered irreducible, and that its density is about 37 4 times *less than that of hydrogen*. It is tasteless, but not odourless burns, when pure, with a greenish flame, and is instantaneously fatal to animal life. Its full secret I would make no difficulty in disclosing, but that it of right belongs (as I have before hinted) to a citizen of Nantz, in France, by whom it was conditionally communicated to myself. The same individual submitted to me, without being at all aware of my intentions, a method of constructing balloons from the membrane of a certain animal, through which substance any escape of gas was nearly an impossibility I found it, however, altogether too expensive, and was not sure, upon the whole, whether cambric muslin, with a coating of gum caoutchouc, was not equally as good

On the spot which I intended each of the smaller casks to occupy respectively during the inflation of the balloon, I privately dug a small hole, the holes forming in this manner a circle twenty-five feet in diameter In the centre of this circle, being the station designed for the large cask I also dug a hole of greater depth In each of the five smaller holes I deposited a canister containing fifty pounds, and in the larger one a keg holding one hundred and fifty pounds of cannon powder. These—the keg and the canisters—I connected in a proper manner with covered drains, and having let into one of the canisters the end of about four feet of slow-match, I covered up the hole, and placed the cask over it, leaving the other end of the match protruding about an inch, and barely visible beyond the cask. I then filled up the remaining holes, and placed the barrels over them in their destined situation

Besides the articles above enumerated, I conveyed to the *depôt*, I there secreted, one of M. Grimm's improvements upon the apparatus for condensation of the atmospheric air I found this machine, however, to require considerable alteration before it could be adapted to the purposes to which I intended making it applicable. But, with severe labour and unremitting perseverance, I at length met with entire success in all my preparations My balloon was soon completed. It would contain more than forty-thousand cubic feet of gas, would take me up easily, I calculated, with all my implements, and, if I managed rightly, with one hundred and seventy-five pounds of ballast into the bargain It had received three coats of varnish, and I found the cambric muslin to answer all the purposes of silk itself, being quite as strong, and a good deal less expensive

Everything being now ready, I exacted from my wife an oath of secrecy in relation to all my actions from the day of my last visit to the bookseller's-stall, and promising, on my part, to return as soon as circumstances would permit, I gave her what little money I had left, and bade her farewell, indeed, I had no fear on her account. She was what people call a notable woman, and could manage matters in the world without my assistance I believe, to tell the truth, she always looked upon me as an idle body—a mere make-weight—good for nothing but building castles in the air—and was rather glad to get rid of me. It was a dark night when I bade her good bye, and taking with me, as *aide-de-camp* the three creditors who had given me so much trouble, we carried the balloon, with the car and accoutrements, by a round-

about way, to the station where the other articles were deposited We then found them all unmolested, and I proceeded immediately

It was the first of April. The night, as I said before, was dark, and there was not a star to be seen; and a drizzling rain, falling at intervals, rendered us very uncomfortable But my chief anxiety was concerning the balloon, which, in spite of the varnish with which it was defended, began to grow rather heavy with the moisture: the powder also was liable to damage I therefore kept my three duns working with great diligence, pounding down around the central cask, and stirring the

In about four hours and a half I found the balloon sufficiently inflated I attached the car, therefore, and put all my implements in it—a telescope, a barometer, with some important modifications; a thermometer, a chronometer, a compass, a magnetic needle, a seconds watch, a bell, a speaking trumpet, &c &c also a globe of glass, exhausted of air, and carefully closed with a stopper—not forgetting the condensing apparatus, some unslacked lime, a stock of sealing-wax, a copious supply of water, and a large quantity of provisions, such as pemmican, in which much nutriment is contained in comparatively little bulk

It was now nearly daybreak, and I thought it high time to take my departure Dropping a lighted cigar on the ground, as if by accident I took the opportunity, in stooping to pick it up, of igniting privately the piece of slow match, the end of which, as I said before, protruded a little beyond the lower rim of one of the smaller casks This manœuvre was totally unperceived on the part of the three duns, and, jumping into the car, I immediately cut the single cord which held me to the earth, and was pleased to find that I shot upwards with inconceivable rapidity carrying with all ease one hundred and seventy-five pounds of leaden ballast, and able to have carried up as many more In a little while after the match did its work, and an explosion took place, the consequences of which to my creditors I know not to the

It is now high time that I should explain to your Excellences the object of my voyage Your Excellences will bear in mind that distressed circumstances in Rotterdam had at length driven me to the resolution of committing suicide It was not, however, that to life itself I had any positive disgust, but that I was harassed beyond endurance by the adventitious miseries attending my situation. In this state of mind, wishing to live, yet wearied with life, the treatise at the stall of the bookseller, backed by the opportune discovery of my cousin of Nantz, opened a resource to my imagination I then finally made up my mind. I determined to depart, yet live—to leave the world, yet continue to exist in short, to drop enigmas, I resolved, let what would ensue, to force a passage, if I could, *to the moon*

Thus, may it please your Excellences, after [illegible] anxieties, unheard-of dangers, and unparalleled escapes I had, at length, on the nineteenth day of my departure from Rotterdam, arrived in safety at the conclusion of a voyage undoubtedly the most extraordinary and the most momentous ever accomplished, undertaken, or conceived by any denizen of the earth But my adventures yet remain to be related And indeed your Excellences may well imagine that, after a residence of five years upon a planet not only deeply interesting in its own peculiar character, but rendered doubly so by its intimate connection, in capacity of satellite, with the world inhabited by man, I may have intelligence for the private ear of the States' College of Astronomers of far more importance than the details, however wonderful, of the mere *voyage* which so happily concluded. This is, in fact, the case. I have much, very much, which it would give me the greatest pleasure to communicate I have much to say of the climate of the planet, of its wonderful alternations of heat and cold, of unmitigated and burning sunshine for one fortnight, and more than polar frigidity for the next, of a constant transfer of moisture, by distillation like that *in vacuo*, from the point beneath the sun to the point the farthest from it; of a variable zone of running water, of the people themselves, of their manners, customs, and political institutions, of their peculiar physical construction; of their ugliness; of their want of ears, those useless appendages in an atmosphere so peculiarly modified, of their consequent ignorance of the use and properties of speech, of their substitute for speech in a singular method of inter-communication, of the incomprehensible connection between each particular individual in the moon, with some particular individual on the earth a connection analogous with, and depending upon that of the orbs of the planet and the satellite, and by means of which the lives and [illegible] are interwoven with the lives and destinies of the inhabitants of the other, and above all, if it so please your Excellences—above all of those dark and hideous mysteries which lie in the outer regions of the moon—regions which, by the almost miraculous accordance of the satellite's rotation on its axis, with its sidereal revolution about the earth, have never yet been turned, and, by God's mercy, never shall be turned, to the scrutiny of the telescopes of man All this, and more much more, could I most willingly detail. But, to be brief, I have my reward I am pining for a return to my family and to my home, and, as the price of any further communication on my part—in consideration of the light which I have it in my power to throw upon many very important branches of physical and metaphysical science I must solicit, through the influence of your Excellences, a pardon for the crime of which I have been guilty in the death of the creditors upon my departure from Rotterdam. The favor, as the object of the present paper Its bearer, an inhabitant of the moon, whom I have prevailed upon, and properly instructed to be my messenger to the earth, will await your Excellences' pleasure, and return to me with the pardon in question if it can in any manner be obtained

I have the honor to be, &c, your Excellences' very humble servant,

HANS PFAALL.

Upon unfolding the [illegible] of this very extraordinary document, Professor Rubadub, it is said, dropped his pipe upon the ground in the extremity of his surprise, and Manheer Superbus Von Underduk, having taken off his spectacles, wiped them and deposited them in his pocket—a fact forgot both himself and his dignity, as to turn round three times upon his heel in the quintessence of astonishment and admiration There was no doubt about the matter—the pardon should be obtained So at least one, with a round oath, Professor Rubadub, and so finally thought the illustrious Von Underduk, as he took the arm of his brother in science, and, without saying a word, began to make the best of his way home to deliberate upon the measures to be adopted. Having reached the door, however, of the burgomaster's dwelling, the professor returned to suggest that, as the messenger had thought proper to disappear—no doubt frightened to death by the savage appearance of the burghers of Rotterdam—the pardon would be of little use, as no one but a man of the moon would undertake a voyage to so vast a distance To the truth of this observation the burgomaster assented, and the matter was therefore at an end. Not so, however, rumours and speculations The letter, having been published, gave rise to a variety of gossip and opinion. Some of the over-wise even made themselves ridiculous by decrying the

these sort of people, is, I believe, a general term for all matters above their comprehension. For my part, I cannot conceive upon what data they have founded such an accusation Let us see what they say

Imprimis,—That certain wags in Rotterdam have certain especial antipathies to certain burgomasters and astronomers

Secondly,—That an odd little dwarf and bottle companion, both of whose ears, for some misdemeanour, have been cut off close to his head, has been missing for several days from the neighbouring city of Bruges.

Thirdly,—That the newspapers which were stuck all over the little balloon were newspapers of Holland, and therefore could not have been made in the moon. They were duly papers very duly—and Gluck, the printer, would take his Bible oath to their having been printed in Rotterdam.

Fourthly,—That Hans Pfaall himself, the drunken villain, and the three very idle gentlemen styled his creditors, were all seen, no longer than two or three days ago, in a certain public house in the suburbs, having just returned, with money in their pockets, from a trip beyond the sea.

Lastly,—That it is an opinion very generally received, or which ought to be generally received, that the College of Astronomers in the city of Rotterdam, as well as all other colleges in all other parts of the world—not to mention colleges and astronomers in general—are, to say the least of the matter, not a whit better, nor greater, nor wiser than they ought to be

LORD PALMERSTON.

The visit of Kossuth to England has turned the attention of all to the foreign relationships of the country, and to the statesman who presides over them. Perhaps no member of the Cabinet has ever been more prominently before the world than the present Secretary for Foreign Affairs, and who is certainly the most abused man in the Ministry—Sir Charles Wood even having incurred less odium with his budgets than Lord Palmerston. One main source of his unpopularity, however, is creditable rather than otherwise. It is clear that the reactionary and despotic Governments of the Continent hate Lord Palmerston because he refuses England's support to their treason against human rights. Were he more complaisant to them, we should hear less of the mischievous activity of the Foreign Secretary—a cry which the emissaries of foreign powers, not very creditably to ourselves, are easily able to raise. It is only strange that, mischief maker as he has been represented, he has not long ere this been driven from office. Our Foreign Secretary must not only be a cleverer but a better man than he has the credit of being, otherwise his career of office would by this time have been involuntarily closed.

The principles in accordance with which his lordship has shaped his course have been so well stated by him that we cannot do better than reprint part of the speech to which we refer here. In answer to the deputation from Islington and Finsbury, congratulating his lordship on the aid he had given to the Sultan of Turkey, in effecting the liberation of the late Governor of Hungary, his lordship is reported to have said — "There was no question of the great moral power which the Government of this country had over foreign affairs, so long as the Government were backed in the exercise of that power by the public opinion of the people. No doubt the moral power of the British Government was immense, more than people generally imagined, but it would only be effective so long as the people and the Government went together. There could be no doubt that, with regard to its Hungarian policy, the Government had been backed by the people—as was instanced by the fact of the appeals which had been made from all quarters, and from all the large towns and cities in the kingdom, urging on the Government interference in that important question. It was not necessary that England should exercise a power with its armies, with its bayonets, or with its cannon. The moral power, where the Government was backed by the people, would do a great deal more. The moral power was greater than anything else, but even that could not be made effective, unless the Government and people acted in unison. The Government, more especially the Foreign department, were sometimes accused of keeping too much secrecy in diplomacy; but, upon the same ground that men in the ordinary business transactions of life did not make public all the details of such transactions, until the bargains in which they might be engaged were completed, so also was it necessary that the publication of the proceedings of diplomacy should be left to the judgment and discretion of that department of the Government in order properly to transact the business of the nation." This statement at any rate cannot be charged with mystification. The people must decide the foreign policy of Government. Without them the Foreign Office is powerless. If in our name a helping hand be held out to nations struggling to be free, the oppressor may in vain march his bannered hosts to war. A people backed by British sympathy—by such sympathy as America and England are prepared to give the noble Hungarian nation—will not long wear the oppressor's yoke, but must become free. There is no such thing as non-intervention. We cannot isolate ourselves. We are members one of another. We have common hope and joy, and destiny, and aim. God made of one blood all nations that dwell on the face of the earth.

Lord Palmerston has long been a public man. In 1809, when Sir R. Peel first entered Parliament, and long before Lord John Russell was known to fame, he was Secretary-at-War. His lordship is an Irish viscount, and was born in 1784. In 1839 he married Lady Cowper, sister of the late Lord Melbourne, a lady whose fashionable *soirees* have done so much to smooth the way to the political triumphs of her lord. Lord Palmerston became a Lord of the Admiralty under the Duke of Rutland in 1807, and with wonderful versatility has retained office in almost every Cabinet that has been formed since then. In the first Grey Cabinet of 1830, Lord Palmerston was Foreign Secretary, an office which he has ever since retained, with the exception of intervals, one of them extending nearly five years, when Sir R. Peel held the reins of office.

Like most of our really great men, Lord Palmerston is a growing statesman. Years have taught him wisdom. His vision has become enlarged. He was brought up in bad company, yet we see in him little that would lead us to suppose that he had been trained under Castlereagh, or had sat at the Council Board with Lyndhurst. This explains his hold of power. The waves of progress, otherwise, long ere this would have swept him away. Instead of idly bewailing the past, he has become obedient to the spirit of the age, and followed it. Peel did the same thing, and when he died every heart was touched, and a common wail of sorrow was heard all over the land. This is the true statesmanship in these modern times. He who would aspire to rule must learn to obey. Great principles must be left free to fructify and bear fruit. A man can not patronise and pet them as he would his poodle. The blunder of statesmanship hitherto has been that it thought it could do this—that it forgot that progress was but the development of one great whole; that it forgot that—

"Through the ages one increasing purpose runs"

THE SEARCH FOR SIR JOHN FRANKLIN.

The newspapers have recently informed us that a lieutenant in the navy has started for Petersburgh, on his way to Russia to detect, if possible, traces of Sir John Franklin. Lord John Russell has supplied him with five hundred pounds for that purpose. The assistance of the Czar has been graciously promised. It is to be hoped that Lieutenant Pim gallantly may win for us some particulars of the brave men on whose fate so dark a cloud at present rests. Attention being afresh directed to the subject, we propose to give a sketch of what has hitherto been done.

On the 19th of May, in 1845, with good spirits and in robust health, the Arctic expedition sailed from England, her Majesty's Government having deemed it expedient that a further attempt should be made for the accomplishment of a north-west passage by sea from the Atlantic to the Pacific, and having for that purpose fitted out the Erebus, 370 tons, and the Terror, 340 tons, under the command of Sir John Franklin, K.C.H. He was directed by the Admiralty instructions to proceed, with all despatch, to Lancaster Sound, and, passing through it, to push on to the westward, in the latitude of 74½ deg., without loss of time, or stopping to examine any opening to the northward, until he reached the longitude of Cape Walker, which is situated in about 98 deg. west. He was to use every effort to penetrate to the northward and westward of that point, and to pursue as direct a course for Behring's Straits as circumstances might permit. He was cautioned not to attempt to pass by the western extremity of Melville's Island until he had ascertained that a permanent barrier of ice or other obstacle closed the prescribed route. In the event of his not being able to penetrate to the westward, he was to enter Wellington Sound in his second summer. He was further directed to transmit accounts of his proceedings to the Admiralty, by means of the natives and the Hudson's Bay Company, and, after passing the 65th meridian, to throw overboard, daily, a copper cylinder, containing a paper stating the ship's position. It was also understood that he would cause piles of stones, or signal-posts, to be erected on conspicuous headlands at convenient times. In July, letters were written by Sir John Franklin and his companions, all bearing evidence of their buoyant and hopeful spirit. On the 26th of the same month the Erebus and Terror were seen in latitude 74 deg. 48 min. north, longitude 60 deg. 13 min. west, moored to an iceberg, waiting for a favourable opportunity of crossing to Lancaster Sound. Since then a painful mystery has attached to their proceedings. Have they suddenly been buried in the deep, or do they yet live on some frozen shore? We are unable to give any definite reply. The expe-

ditions for their rescue have been singularly barren of results. With one exception, to which we shall presently refer, not a trace of them remains has been found.

At the close of the autumn of 1847, the Admiralty determined to send out three several searching expeditions—one to Lancaster Sound, another down the Mackenzie River, and the third to Behring's Straits. The object of the first, and most important one, was to follow up the route supposed to have been pursued by Sir John Franklin, and by searching for signal posts to trace him out, and carry the required relief to his exhausted crews. Of this expedition, consisting of the Enterprise and the Investigator, Sir James Clark Ross was the commander.

Behring's Straits expedition was composed of the Herald, Capt. Kellett, and the Plover, Commander Moore. The main object of the searching party under the command of Sir John Richard , C.B. was to trace the coast between the Mackenzie the Copper Mine Rivers, and the shores of Victoria and Wollaston lands, lying opposite to Cape Krusenstern. The latter expedition was altogether in vain, not were the others more successful. Sir James Ross reached the three islands of Baffin on the 26th of July, and in a month after Possession Bay, where he landed, and found a memorandum left by Sir Edward Parry, in 1819. On the 1st of September, the ships arrived off Cape York, where a conspicuous landmark was erected. Sir James next examined Maxwell Bay, and the north coast of Barrow's Strait, but as the ice prevented his running for the west, the ships were hove into winter quarters at Port Leopold. In the meantime the whole of Prince Regent's Inlet and the Gulf of Bothnia had been examined, and on the 1st of September, 1849, Sir James reluctantly gave the signal to bear up for England. At the same time that Sir James Ross was engaged in the ice on the west side of Baffin's Bay, Mr. James Saunders, in the North Star, was working his way up the east side, with imminent danger to his ship.

In 1849 the Admiralty had, on the return of Sir James C. Ross, that a more vigorous search should be made. Accordingly, again the Enterprise and Investigator were despatched to Behring's Straits, the former under the command of Captain Collinson, C.B., and the latter under M'Clure. At the same time preparations for the search on the side of Lancaster Sound were made on a large scale. The Resolute was commissioned by Captain Austen, and the Assistance, Captain Erasmus Ommaney, was put under his orders, together with the Intrepid and Pioneer, steam-tenders to the two vessels. Captain William Penny, an experienced whale fisher, was also engaged for the search, and placed in command of the Lady Franklin and Sophia. In addition to these expeditions, fitted out by the Admiralty, several from private sources, showed the interest felt in the search by the public at large. Captain Sir John Ross, now advanced years, sailed in the Felix schooner, and by the munificence of Mr. Henry Grinnell, a New York merchant, the United States sent forth the Advance and the Rescue, under the command of Lieutenant De Haven, U.S.N., and Mr. J. P. Griffin. Lady Franklin also despatched the Prince Albert, under the command of Commander Forsyth, R.N.

And what has been the result of all these costly preparations? We regret to say—almost nothing. On the south side of Beechey Island, in Cape Riley, traces were discovered, where the Franklin ships had wintered in 1845-6. In the inside of the above-named island. Three graves were found of men belonging to the party; and the latest death bears the date of April 3, 1846. Seven hundred empty meat tins were also discovered—a small proportion of the 2,400 canisters with which the ships were supplied. It is probable that the expedition remained there till the end of August, 1846. The absence of all memoranda at the winter station is remarkable, and perfectly unaccountable. Had such memoranda existed, Franklin's career might have existed, and by this time, possibly, he might have been saved.

On November 20, Lieutenant Pim proceeded on his expedition. Russia, as we have already stated, is his first destination. It is known that the Emperor is deeply interested in procuring intelligence of the missing expedition, and has long ago given orders to obtain every information respecting it which could be procured from the natives of the northern coast of Siberia. It may, therefore, be hoped that the more definite mission of our countryman, who is well insured to the life of the Esquimaux, will be so countenanced by the authorities at St. Petersburgh as to enable him to carry out, with the Imperial assistance, a survey of the distant and mountainous lands first described by the Russian navigator Wrangell, and since seen by Captain Kellett, of her Majesty's ship Herald, beyond which it is supposed that Franklin's ship may have been frozen up. God grant that his search may not be in vain!

At a recent meeting of the Geographical Society, Lieutenant Osborne contended that Sir John had reached far to the north-west up the channel. He was [illegible] John and his crews could not have perished within of Wellington Channel, as if they had, the current inevitably have brought down the traces. As to no traces up the coasts of the channel, it should be heard that the shore was precipitory and difficult. Sir John would naturally pass it as rapidly as possible. As to the other supposition, that the engine had failed, he held this to be impossible, as, if it had broken down, Sir John would have undoubtedly left so heavy an article behind. His opinion was, that it was a great northern watercourse, which the expedition had reached, and which many reasons conspired to make him think surrounded the pole. How far these [illegible] time alone can tell. It [illegible] Sir John and his companions may yet be frozen up in some northern sea. Had they perished, some traces of them must have been met with before this. We have, therefore, at present no ground for unmitigated despair—still we may cherish a gleam of hope.

EASTERN METHOD OF MEASURING TIME.—The people of the East measure time by the length of their shadow. Hence, if you ask a man what o'clock it is, he immediately goes into the sun, stands erect, then, looking where his shadow terminates, he measures its length with his feet, and tells you nearly the time. Thus, the workmen earnestly desire the shadow which indicates the time for leaving their work. A person wishing to leave his room says, "How long my shadow is coming." "Why did you not come sooner?" "Because I waited for my shadow." In the seventh chapter of Job we find it written, "As a servant earnestly desires his shadow."

ORIGIN OF THE ROTHSCHILD.—The late Baron Rothschild was the son of a Jew at Frankfort of the name of Joseph, he was [illegible] humble circumstances, but very [illegible] to honesty and integrity. At the time the [illegible] the Rhine and entered Germany, the Prince of Hesse Cassel came to Frankfort, and asked Joseph to take charge of his money. Joseph did not much like the undertaking, but the prince pressed it so much that at last he consented, and the treasures were given him. When the French entered Frankfort, Joseph buried the prince's money and jewels in a chest, but he did not hide his own, thinking that if they found no money they would be suspicious and search more earnestly, the consequence was he lost all his own money. When affairs became [illegible], and he could again enter into business, he took some of the prince's money and transacted business with it, which he formerly used to do with his own, thinking it a pity it should be quite useless. The Prince of Cassel had heard of the French cruelty in plundering poor Joseph Rothschild, and concluded all *his* money and jewels were gone. When he went to Frankfort he called on him, and said, "Well, Joseph, all my money has been taken by the French"—"Not a farthing," said the honest man, "I have it all, I have used a little in my business; I will return it all to you, with interest on what I have used." "No," said the prince, "keep it, I will not take the interest, and I will not take my money from you for twenty years, make use of it for that time, and I will only take 2 per cent interest for it." The prince told the story to all his friends, Joseph was in consequence employed by most of the German princes, he made an immense fortune, his sons became barons of the German empire, and one of them settled in England.

MISCELLANEA.

STATIONERS.—Books and paper were formerly sold only at stalls, hence the dealers were called stationers. The Company of Stationers of London is of great antiquity, and existed long before printing was invented, yet it was not incorporated until 3 Philip and Mary, 1555. Their old dwelling was in Paternoster-row

DRUNKARDS.—The phrase "Drunk as a lord," arose out of an older proverb, "Drunk as a beggar;" and we are told it was altered owing to the vice of drunkenness prevailing more among the great of late years Drunkenness was punished in many of the early nations with exemplary severity In England, a canon law restrained it in the clergy so early as A D 747 Constantine, king of Scots, punished this offence against society with death. He used to say, that a drunkard was but the mimic of a man, and differed from the beast only in shape. A D 870. Drunkenness was restrained in the commonalty in England in 975, and by several later laws.

THE ROYAL MOTTO OF ENGLAND.—*Dieu et mon Droit* was the parole of the day given by Richard the First of England to his army at the battle of Gisors, in France. In this battle the French were defeated; and, in remembrance of that victory, Richard made *Dieu et mon Droit* the motto of the royal arms of England, and it has ever since been retained

INK.—The ancient black inks were composed of soot and ivory black, and Vitruvius and Pliny mention lamp-black, but they had likewise various colours as red, gold, silver, and purple Red ink was made by them of vermillion and various kinds of gum. Indian ink is brought from China and must have been in use by the people of the east from the earliest ages, most of the artificial Chinese productions being of very great antiquity It is usually brought to Europe in small quadrangular cakes, and is composed of a fine black and animal glue *Invisible or Sympathetic Ink* is the name given to fluids, which, when written with, will remain invisible until after a certain operation Various kinds were known at very early periods. Ovid teaches young women to deceive their guardians by writing to their lovers with new milk, and afterwards making the writing legible with ashes or soot A receipt for preparing invisible ink was given by Peter Borel, in 1653 Receipts for making it were given by Le Mort, in 1669, and by others

MYSTERY OF THE AMERICAN LAKES.—Lake Erie is only sixty or seventy feet deep, but the bottom of Lake Ontario, which is 452 feet deep, is 230 feet below the tide-level of the ocean, or as low as most parts of the Gulf of St Lawrence, and the bottoms of Lakes Huron, Michigan, and Superior, although their surface is so much higher, are all, from their vast depth, on a level with the bottom of Lake Ontario Now, as the discharge through the river Detroit, after allowing for the full probable portion carried off by evaporation, does not appear by any means equal to the quantity of water which the three upper great lakes receive, it has been conjectured that a subterranean river may run from Lake Superior to Huron, and from Huron to Lake Ontario. This conjecture is by no means improbable, and will account for the singular fact that salmon and herring are caught in all the lakes communicating with the St Lawrence, but in no others. As the falls of Niagara must have always existed, it would puzzle the naturalist to say how these fish got into the upper lakes without some such subterranean river, moreover, any periodical obstruction of this river would furnish a not improbable solution of the mysterious flux and reflux of the Lakes.

When one of Lady Jane Grey's attendants begged, at her execution, that she would bequeath some memorial to her, she gave her this last advice, "Live to die."

TOBACCO PIPES.—When the Golden Lion Inn, at Fulham, was pulled down, in April 1836, a tobacco pipe of ancient and foreign fashion was found behind the old wainscot The stem was a crooked shoot of bamboo, through which a hole had been bored, and a brass ornamental termination (of Elizabethan pattern) formed the head of this pipe

SCAVENGERS OF THE OLDEN TIME.—Wild and shy as hawks are it will scarcely be credited that at one time, the common glides or kites were numerous in London streets In the time of Henry VIII, they were attracted by the offal of the butchers and poulterers stalls and as, on account of their use in removing so offensive a nuisance, they were not allowed to be killed, they became so tame as actually to mingle with the passengers and take them prey in the greatest crowd

PROFESSOR GORINI.—The gentleman, whose province is that of natural history at the University of Lodi made recently before a circle of private friends a remarkable experiment illustrative of his theories as to the formation of mountains He melts, some substances, known only to himself, in a vessel and allows the liquid to cool At first it presents an even surface, but a ferment soon begins from beneath, and gradually a mass is formed, until at length ranges and chains of hills is formed, exactly corresponding in shape with those which are found on the earth Even to the stratification, the resemblance is complete, and M Gorini can produce on a small scale the phenomena of volcanoes and earthquakes He contends therefore, that the inequalities on the face of the globe are the result of certain materials, first reduced by the application of heat to a liquid state, and then allowed gradually to consolidate In another and more practically useful field of research the learned professor has developed some very important facts He has succeeded to a most surprising extent in preserving animal matter from decay without resorting to any known process for that purpose Specimens are shown by him of portions of the human body which without any alteration in their natural appearance, have been exposed to the action of the atmosphere for six and seven years, and he states that at a trifling cost he can keep meat for any length of time in such a way that it can be eaten quite fresh The importance of such a discovery, if on practical investigation it is found to answer, will be more readily understood when it is remembered that whole flocks of sheep in Australia are boiled down into tallow, their flesh being otherwise almost valueless, and that in South America vast herds of cattle are annually slaughtered for the sake of their hides alone.

ANSWERS TO CORRESPONDENTS.

ARGUS.—The Government Emigration Commissioners would be likely to aid you in emigrating to Australia Application for the general requirements and official form, should be made to the Secretary, 9, New Park-street, Westminster We believe a guide to Australian settlers has been issued by Messrs Chambers, and there are many, of the same class which would afford you considerable information Australia is a country in which the sober, honest, and industrious labourer is sure to succeed, the timid, the discontented, the idler, and the drunkard, will succeed nowhere

T T.—Writing and drawing papers are those on which the greatest care is bestowed The principal distinction in these papers is between [illegible] papers The former exhibit [illegible] while the latter are perfectly smooth and even, in consequence of the mould in which they are made being constructed of very fine copper wire, woven into a sort of cloth—hence the name A difference of colour is observable in writing-paper, the yellow is nearly the colour of the rags from which the paper is made, but the blue tint is given by the mixture of smalt (powder-blue) with the pulp. We frequently see blue-wove writing-paper that one side is bluer than the other, this arises from the smalt settling to the bottom of the pulp, and dyeing the lower surface more than the other The general terms by which qualities (independently of the sizes) of writing-paper are known are *bill*, *yellow-wove*, and *blue wove*, and these are almost universally done up in reams of twenty four sheets each, twenty of which quires make a ream. The size of the sheet of drawing or writing paper is through [illegible] commonly thirty different sizes from *pott* paper, of which the sheet is 12½ inches by 15 to *Atlas* paper, which is called *extra quadruple*, of which the sheet is 26 inches by 36 The common letter-paper sold in the shops however, is seldom of the size of any of the above, it is made There are about 4 or 5 different kinds of letter paper, of which the sheets are made, on an average, about 2 feet by 1½ feet, and are cut into [illegible] and third folds, and the edges on the fold which forms the [illegible] The common *Bath post* of the shops is of the average size which we have mentioned, it is ribbed at the edge, and is the paper used for the folding and printing by hand machines

HAMMOND.—The sceptre royal, which the sovereign bears in the right hand is made of [illegible] inches in length, and [illegible] the top [illegible] globe and cross, the [illegible] of which are erect and [illegible] but the [illegible] flower or is a mound formed of a large amethyst, [illegible] with precious stone, and upon the mound [illegible] *patte* of jewels, with a large diamond in the midst. The sceptre is a mere [illegible] emblem of royal dignity in the crown [illegible] Homer makes it the only cognizance of the Grecian kings, and the Christian church declare that the ancient kings of Rome used no other ensign of royalty The Greek poets describe the gods as bearing sceptres to indicate their empire, and declare that an oath taken on the sceptre was the most solemn that could be sworn The queen-consort's sceptre in England is formed like the king's, but it is shorter

A P.—Widdin is in Turkey, and obtained its notoriety from its having been the receptacle of Kossuth and other Hungarian refugees It is situated on the right bank of the Danube, and contains more than 20,000 inhabitants It is the residence of a pacha, and a landing-place for steamers, many of which are employed in its trade It is defended by two castles, the one new and the other old. The latter is by far the largest, and contains many houses, shops, and other buildings, so that it looks rather like a little town

ROBERT BRYNNE.—The expenses of a patent are still fearfully heavy A bill for the purpose of lightening them was brought in last session but was deferred, owing to the late period at which it was introduced.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER IV.

ONE of the most tremendous catastrophes that have ever fallen the modern world, occurred about this time. Constantinople and a small territory adjoining it, had, like the wing of an ancient and honourable house, survived the fall of Western Empire, and still preserved in her language, refinement, arts, magnificence, and even in her vices and profligacy, some remains of the ancient glory of the mighty people who

Mahomet II., the son of Amurath II., stormed Constantinople on the 30th of May, 1453. Constantine was the name of the last of its emperors, as well as of its founder, and he proved himself not unworthy of it by fighting on the ramparts and in the breach, from the commencement of the siege until he fell covered with wounds, upon the last fatal day. His kingdom departed with his life. Some few of his subjects rallied round

ALLEGORICAL COURT OF MATHIAS CORVINUS.—(*See page* 166.)

put their feet on the necks of the kings of the earth. Rome had long before succumbed to the strokes of the barbarians. The Greeks, farther removed from the reach of the invaders, continued to drag on a precarious existence, supported and protected by the prestige of an ancient fame, rather than present power. But their hour was now come; the destroyer was at hand, there was no eye to pity, and no hand to save them.

him in defence of their city and their faith, but the great majority were licentious, indolent, and corrupt—more intent upon sensual pleasure and hair-splitting in theology, than their duty to themselves and their neighbours. The Magyar ambassadors who had been sent to mediate between Mahomet and the Greeks, just arrived in time to see the former seat himself upon the throne of his fallen enemy, and divide among his

followers the spoils of the vanquished. "Return to your own country," said he, addressing them, "and tell your King that he must speedily make his choice between war and peace, for as the heaven obeys only one God, the earth must henceforth be subject to one master only."

Ladislaus immediately prepared for war. The Diet voted money, and took all other needful steps, but great as was their zeal, it was scarce sufficient to make them ready for the storm that was now rolling towards the frontiers of Hungary. Hunyadi opened the campaign in spring, and in the first engagement, defeated Ferez Bey near Semendria, in Servia, and returning in triumph to Belgrade, he knighted [illegible], who, though not more than fourteen, had already proved himself by his bravery in battle. Girding on him the sword of Andrew Laczkoff, the companion-in-arms of Louis the Great, he dubbed him Knight, in the name of God, of the holy Virgin, and of all the holy Kings of Hungary.

During all this time the efforts of Hunyadi were constantly frustrated by the intrigues of the Palatine Nicholas Garai, a man of no talents and greatly addicted to tricks of low intrigue, who was entirely devoted to Cilly, the King's uncle. But Ladislaus could not forget that he owed his throne to Hunyadi, and the services which he had rendered to the country were so striking, and so widely acknowledged by the people, that it would have been dangerous to have attempted his removal from the post of Lieutenant-Governor. Perceiving that nothing could be effected by intrigue, the conspirators had recourse to assassination; but Hunyadi escaped the snare. At length, yielding his personal feelings to the interests of his country, he consented to a reconciliation with his enemies, and even to allow his son, Ladislaus, to marry the daughter of the Palatine.

In the meantime, the other nations of Christendom were terrified at the progress made by the Turks, and seemed about to afford efficient aid to the Magyars in their defence, and, in many respects, unequal struggle. A crowd of English, French, German, Genoese, and Venetian knights hastened to Hungary to enlist themselves under the banner of the king. Ladislaus himself furnished twenty thousand men, but who amongst so many renowned warriors and men of illustrious names was to assume the chief command? Hunyadi offered to bring twenty thousand men into the field at his own expense, in case the allied sovereigns allowed him to lead the united Christian forces, pledging himself, in case they adhered to him faithfully, to fight his way to Jerusalem itself. The unanimous voice of the Diet bestowed upon him the wished for post, and Ladislaus, returning from Vienna, without hesitation ratified their decision. As it, however, this short interval of attention to imperative duties had disabled the King for further effort, he secretly made his escape from the camp, and returned to Austria. His flight spread a panic through the whole army, and thousands of soldiers immediately deserted. But Hunyadi was not discouraged. Supported by the monk John of Capistrano, he set out to the relief of the fortress of Belgrade, which was defended by his brother-in-law, Szilagi, against a large besieging force of the Ottomans. Collecting all the boats from the rivers for miles around, he rapidly descended the Danube, destroyed the Turkish flotilla, and threw himself into Belgrade, where he was received with shouts of rejoicing. The siege which followed was one of the most remarkable in history, from the unexampled bravery of the defence, and the terrible renown of the assailants. Europe watched the conflict in dread suspense. Hunyadi not only displayed the highest qualities of a general, but fought in the trenches as a common soldier, killing twelve Turks in one day with his own hand. The Sultan, enraged at his repulse, swore by the beard of the Prophet that he would take the town or die. "It is easy to die," said the chief of the Janissaries, "but not to conquer Hunyadi." At last, after repeated failures, having in a single assault lost 30,000 of his best troops, Mahomet raised the siege in despair.

But Hunyadi did not survive to hear the shouts of joy with which the whole kingdom hailed this triumph. The war-worn soldier who had faced death upon fifty battle-fields, to whom the bravest of a brave people had looked to lead them in the deadliest onset, escaped the thousand dangers of hostile swords to die by slow disease upon the bed of sickness. The hardships of the siege brought on fever, and after lingering for some weeks his iron constitution gave way, and he sank into the grave at the mature age of eighty years. His career is a striking example of how much a man may achieve by the force of his own character, and the strength of an unconquerable will. Most of the great men of the world have received but little from fortune, and left nothing to her that they could themselves achieve by courage and perseverance. "Children of destiny" are, after all, but shadowy phantoms pictured in the day-dreams of indolent enthusiasts. Strength, whether physical or intellectual, is the invariable reward of striving, and those only who have striven faithfully and earnestly, know how noble, and holy, and joyous it is to be strong. Hunyadi was essentially a child of the people. Even if the story of his kingly birth be true, he derived nothing from it of those great features of his character which caused his countrymen to look upon him as a tower of defence against the face of their enemy. To be a successful warrior he needed but a fine figure, a fair face, and a [illegible] blood, though it flowed through the vilest intrigue that ever sullied woman's fame, or stained the escutcheon of a noble, but to be a gallant warrior, a great statesman, a true man of spotless honour, he needed a brave heart, and expansive intellect—precious gifts that crowns and coronets can never bestow. He possessed them both, and never man used them better. Without entering into the abstract question why there was justifiable under any circumstances whatsoever, all will acknowledge that on tented field or in the halls of council, it is the duty of every man to do well what he conceives to be his duty—to consider prudently and honestly, to strike hard, and speak boldly. All this did John Hunyadi. With manners as simple and heart as tender as a child, he won the delight of his immediate friend, whilst his lofty and commanding stature, and lion-like courage, won the affections of the masses. Christendom did not forget to honour its greatest champion. Pope Calixtus III., the head and representative of the visible Church, instituted the feast of the Transfiguration to be a continual memorial of the last defeat of the Mussulmans, and the glory of the departed hero.

When Hunyadi was gone, the intrigues which he had kept in check had free course, and the malevolence which Ladislaus had always entertained towards him upon his family. Its first manifestation was in the appointment of Count Cilly to the government of the kingdom, and Nicholas Uzlaki to the command of the military forces. The garrison of Belgrade, irritated at what they considered to be an insult to the memory of Hunyadi, swore to be revenged both on Cilly and the King. On the other side, the Count openly declared his intention of repairing to Belgrade for the purpose of "making an end of the dogs of Wallachians," as he called the sons of Hunyadi. Upon his arrival, however, the commandant of the citadel refused to admit the foreign infantry who accompanied him; and although this disappointment in some measure frustrated his schemes, it did not diminish the overbearing insolence of his manner. In his very first interview with Ladislaus Hunyadi, he loaded him with threats and reproaches, and then, drawing his sword, wounded him severely on the head and hands, when the friends of the young soldier, rushing in, cut Cilly in pieces on the spot.

This murder was disapproved of, as a matter of course, by every one. There was nothing to excuse it but the gross provocation, or, perhaps, we should rather say the stern necessity of self-defence. The King swore on the Eucharist that no evil should befal Hunyadi for what he had done; but the Palatine Nicholas Garai, the intimate friend of Count de Cilly, at last succeeded in overcoming his scruples, and the two brothers were arrested and imprisoned in Buda, in March, 1457. Without any investigation, or even the form of a trial, Ladislaus was sentenced to be beheaded in the Square of St. George. In the full persuasion that throughout his short life he had in everything acted for the safety and honour of his native country, and in a manner worthy of the great name he bore, the young man walked to the place of execution with the firm and heroic air of a martyr, wearing the purple robe with which the King had presented him when he adopted him as his brother. When the vast crowd which had assembled to witness his execution saw the son of their hero ascending the scaffold, with his hands tied behind his back, they could not refrain from uttering a loud groan of grief and indignation. His ban having been cut off, he uttered a few words in justification of the act for which he had been condemned, and knelt to receive

the stroke of the executioner. Three times the latter missed his aim, through nervousness, and Ladislaus, rising up, told him, in a calm voice, that it was the law to repeat the attempt so often. The King, who was present, threatened the functionary with heavy punishment in case he again failed in the performance of his horrid task, and in another moment the head of his victim rolled towards him along the scaffold, as if reproaching him with this great crime. He could no longer remain in Hungary. Wherever he appeared he was followed by a howl of hatred and indignation, and he therefore took his departure directly for Austria, followed by the curses of the people.

The whole kingdom was roused into a ferment. Hatred to Ladislaus, contempt for his government, and sorrow for young Hunyadi, combined to give rise to scenes of perfect ... thy all over the kingdom, and it soon became evide... that it was no fleeting ebullition of popular indignation, but deep-rooted discontent, which could only be quieted by the death of its author. This took place shortly afterwards. He was poisoned by the Bohemians, when on his way to celebrate his marriage with Margaret of France, daughter of Charles VII. No sooner was the news spread abroad, than the revolutionary movements ceased, and the most earnest desire was manifested by all, to repair as far as lay in their power the injustice done to the Hunyadi family.

The great objection to an elective monarchy is found in the turbulent intrigues to which it gives rise upon the close of each reign. The right of the people to elect their rulers, viewed in the abstract, does not admit of a doubt, but it may well be questioned, whether it is at all probable that in a vast multitude of men, agitated by the passions of avarice, envy, ambition, and selfishness, the might of the strong, and the wealth of the great, will not, in nearly every case, overcome the calm reason and unbiassed judgment of the thinking and right minority. The prize is so splendid, that in the struggle to obtain it men too often become deaf to the voice of honour and patriotism, and the precepts of religion. If ever the truth of this observation was well supported by examples drawn from real life, this is above all. An elective monarchy ruined Poland, and we are greatly mistaken if our readers, before they reach the end of this history, do not arrive at the conclusion that it was the remote cause of the ruin of Hungary also.

At the death of a Hungarian monarch, there was no fixed rule found, either in the constitution or the traditions of the people (often more powerful than any constitution), to guide in the election of his successor. A host of competitors to the throne arose on every side, and each set to work every engine of bribery and corruption within his reach to insure his own election. The quarrels thus raised were often protracted for years, or through the entire space of the succeeding reign, and entailed severe injury upon the commerce and national prosperity of the country.

Upon the death of Ladislaus, three claimants appeared for the Magyar crown—Frederic III., Emperor of Germany, Ladislaus, son of Casimir, King of Poland, by Elizabeth, the sister of the deceased King. A Diet was convoked at Pesth, in December, 1457, and there Nicholas Gara put forward his claims also, grounding them upon his relationship with the royal family, having married the sister of Count Cilly. But Szilagyi, the commandant of the fortress of Belgrade, determined not to suffer injustice to be done to the widow and surviving sons of John Hunyadi, and therefore marched upon Pesth at the head of forty thousand men, declaring that he entertained the utmost respect for the constitutional rights of the Diet, and would not interfere with the exercise of them right of election, but at the same time stated his firm resolve not to allow the Hungarian sceptre to be grasped by the hand of a foreigner.

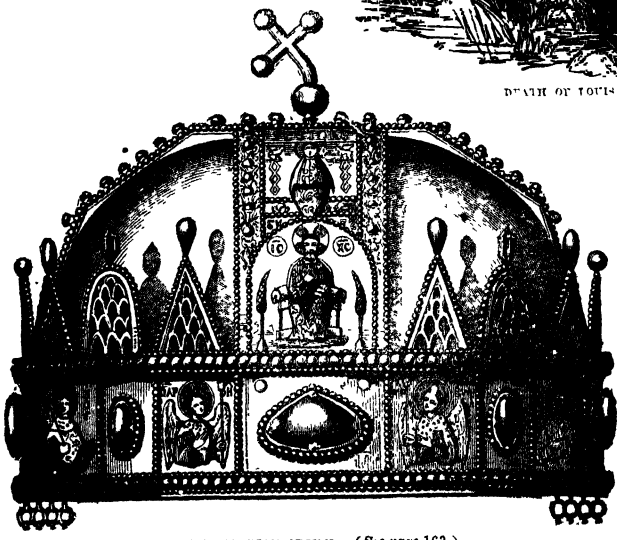
The foreign ambassadors next appeared to state the wishes of their sovereigns. Among them Charles VII. of France demanded the crown for one of his sons, or for the man upon whom he should bestow his daughter's hand. But Szilagyi cut short the deliberations by surrounding the place of meeting with an armed force; and whilst every one was expecting him to proclaim himself king, he disappointed all by proclaiming his relative, Mathias Corvinus, the youngest son of the great Hunyadi. A shout of assent from the majority of the Diet, testified their respect for the memory of the hero, and their sorrow for the untimely death of his son, Ladislaus. For a few minutes Gara made desperate efforts to retard their decision, but the shouts of the troops, "Long live King Mathias!" put an end to all hesitation.

Mathias was still a prisoner at Prague, when the news of his election reached him, in the keeping of Podiebrad, who refused to release him until he had received 40,000 golden florins, and extorted from him a promise that he would marry his daughter Catharine. Few men have ever had finer intellectual qualities, united with a more commanding personal appearance, than Mathias Corvinus, and when we take into account the greatness of the name which he inherited from his father, we may readily believe that few monarchs have ever ascended the throne under more favourable auspices. Passing over his able and upright suppression of the intrigues which disturbed the commence... of his reign, we find his administration of the internal affairs of his kingdom marked by an ability and broadne... of view that were wonderful in so young a man, and procured for him from his people the title of Mathias the Just. His foreign policy, however, was not so well considered, nor based on so solid a foundation. It seemed to be dictated rather by a thirst after renown as a warrior, than by that wise ... of personal views to the true honour and interests of the kingdom which distinguished the reign of Louis the Great, and gave Hungary so great an amount of influence in the politics of every European state. Having calmed the internal discord in which his accession found the kingdom, he sternly refused the offer of an alliance made him by Mahomet II., and defeated the Turks in many brilliant engagements, and reduced all the dependent provinces, such as Servia and Bosnia, to complete subjection. These successes were, however, in some measure counterbalanced by the loss of the brave Szilagyi, to whom Mathias owed his throne. Having been taken pri... by the enemy, he was remorselessly put to death. The coasts of the Adriatic, most valuable to the Magyar empire as affording it an extensive sea-line, did not appear to possess its true value in the eyes of Mathias, for when reminded that this territory had formerly belonged to Hungary in the time of Louis the Great, and had been lost since his death, and that there was now a favourable opportunity of recovering it, he coolly replied, that he could not now offend the Venetians, as he hoped to form an alliance with them and the Pope against the Ottomans.

The Emperor Frederic III. of Germany, who by the death of Ladislaus had become sole master of all the Austrian possessions, by his wrongheadedness, obstinacy, and incapacity, was continually involving himself and his dominions in misfortunes. But all did not prevent him from proclaiming himself King of Hungary, either through an idle boast, or from a false estimate of his own strength. He grounded his claim upon his having possession of the Hungarian crown, which, as has been already stated, was deposited in his hands as a security for a loan of money by the mother of the late King.

Mathias had just returned from a successful expedition against the Turks when he received the news of Frederic's insolent assumption. He marched against him instantly, defeated him, and was already under the walls of Vienna, when the Emperor sued for peace. It was granted, but only on condition that he should forthwith deliver up the crown, but Mathias was generous enough to pay him in return for it 60,000 gold florins, being about the sum which had been advanced upon it. The King then led back his army against the Turks, and, uniting his forces with those of Venice, he took the town of Jaicza, in Bosnia, by assault. The whole of the conquered districts were placed under the government of Emeric, Duke de Szapolyi.

The satisfaction inspired by these successes was in some measure marred by the death of Catharine, the Queen, without leaving any children. All the sovereigns of Europe hastened to express their sympathy with the King's bereavement. Embassies were sent, laden with splendid presents, and bearing letters filled with expressions of condolement. Louis XI. of France distinguished himself above all others by the courtliness of his message, and the splendour of his presents. The short interval of peace which ensued was employed by Mathias in Transylvania, Moldavia, and Wallachia, all of which he reduced to subjection.



We have now to refer to an episode in the life of this great

King, which must meet with an unqualified condemnation. We doubt much whether even the notions of the age in which he lived, the influence of education and early prejudices, can extenuate a crime so repugnant to the dictates of Christianity. He now undertook a war, which could in no way advance the interests of Hungary, and which, in point of morality, could not defend its shameless cruelty and injustice, even by the poor plea of necessity. He was urged by the Pope to set out on a crusade against the Hussites, then the advanced guard of the Continental Reformation, and to stifle the voice of opinion, and the freedom of religious worship, by the weapons which modern Rome has ever used so adroitly—the sword and the faggot. He undertook the task the more readily, because Podiebrad, the King of Bohemia, seemed disposed to take them under his protection. At the Diet of Agria, held in 1461, this war of extermination was formally declared, and Mathias took the field in person at the head of the Hungarian army, surrounded by the generals, who had received their military training in the late conflicts with the Turks. There was Emeric Szapolyai, an able and experienced officer, never at loss for an expedient in the midst of the most unpromising circumstances, always cool and collected. There was Blaise Magyar, a man of tremendous bodily strength and physical courage—no bad qualifications when gunpowder was in its infancy; there was Paul Kinisi, the Murat of the Magyar army—fiery, brilliant, ostentatious, galloping to the charge with flashing sabre and in splendid costume, with kindling eye and brow of pleasure, like a lover to meet his bride. Like Murat, too, he had been raised for his valour from the ranks, looked upon the camp as his home, and death upon the battle-field as the necessary and only fitting exit from the turmoil of the world.

Wherever such men led, success was sure to follow. The Catholics of Bohemia flew to arms to aid them, and the Hussites were everywhere compelled to give way before the terrible attacks of the "black legions," as the Hungarian troops were called. As in all religious wars, the most terrible atrocities were committed upon both sides; and the Serbes, who followed the Magyars as auxiliaries, inflicted horrible devastation upon the districts through which they passed. In a few weeks, Moravia, Silesia, and Lusatia were all conquered, and, although Podiebrad still retained part of Bohemia, Mathias caused himself to be crowned King of the remainder, at Olmutz, the capital of the first of the above provinces.

DEATH OF LOUIS II.—(*See page* 107.)

THE HUNGARIAN CROWN.—(*See page* 163.)

In the meantime the Sultan had been recruiting his strength, and again commenced the war by laying seige to Negropont, which he stormed. The Venetians, in consternation, appealed to the Magyars for succour, but Mathias refused to interfere, unless they gave him up possession of Dalmatia. He now began to perceive his error in neglecting to promote the growth of a maritime power, and to regret that, in expending his energies and strength in useless war against the Hussites, he had given breathing time to a far more formidable enemy.

Having quelled some internal tumults he now turned his attention in right earnest to the expulsion of the Turks. By their erecting a strong fortress at Szabacs, upon the confines of Sclavonia and Croatia, the whole country was laid open to them. It was absolutely necessary that this should be taken at all hazards. Mathias headed the besiegers in person, and the place was stormed after a desperate defence. This success

was in a great measure owing to the personal valour of the King. Before the assault, he went alone in a boat on the river disguised as a fisherman, and reconnoitred the place. A ball struck the boat, and extinguished the light, but he continued his observations, without the least sign of perturbation. He was the first to mount the breach, and animated his followers by his daring courage. The Turks were finally driven back to their own frontiers, and Mathias returned in triumph to Hungary, and celebrated his victory by his marriage with Beatrice of Naples, a woman devoured by pride and ambition.

He then raised a dispute with Venice, as an excuse for wresting Dalmatia from her, but no sooner had he set out, than the news arrived that the terrible Ali Bey was on the march towards the Hungarian frontiers with a large army. Mathias appealed to the nation to support him, and men of all ranks took up arms with the most fervid enthusiasm. Upon the plains of Kenyermezo, in Transylvania, then took place the most tremendous conflict recorded in the annals of Hungary. In the heat of the battle Bathori received six wounds, and fell under the hoofs of the horses. Paul Kinisi rushed forward, with a sword in each hand, and his armour broken, overthrowing every one who stood in his way, for the purpose of saving him. Making his way through the *melee*, he raised his fallen friend, and carried him out of danger. This exploit inspired the Hungarians with so much enthusiasm, that they precipitated themselves upon the Turks

INCIDENT OF HUNYADI.—(*See page 162*)

with such fury that they took to flight in a few minutes, their tents, baggage, and money-chest falling into the hands of the victors. In the midst of the rejoicings consequent upon this triumph, Kinisi was seen holding the body of a dead Turk between his teeth, and two others in his arms, and thus executing the Hungarian national dance.

Strengthened by this success, Mathias was enabled to detach the famous black hussars to the assistance of his father-in-law, the King of Naples, who was threatened by the Mohammedans with another invasion. There was now a favourable opportunity for striking a heavy blow at the Turks, as two brothers were disputing the possession of the throne of the Sultans. But, far from receiving any co-operation from the other sovereigns of Europe, Frederick of Austria invaded Hungary, and obliged Mathias to relinquish his designs against the Ottomans, and turn his attention to the defence of his own kingdom. An army was despatched against Vienna, under the command of Zelenyi and Szapolyai, which surrendered, after a short siege, in June, 1487.

Mathias continued to reside in Vienna for a considerable length of time, to the great regret of the Hungarians. He there concluded a treaty for the marriage of his natural son, John, with Blanche, of Milan, as he had no children by either of his wives. He soon after lost his old friend and companion, Emeric Szapolyai, and after his death

he himself began visibly to decline. In the presentiment that his end was approaching, he bestowed the government of Vienna upon Stephen Szapolyai, who possessed but little claim to his confidence, and set out, in 1489, to meet the Diet at Buda, where his son John was declared heir presumptive to the throne. He then took his departure, with the intention of returning to Vienna, in order to become reconciled with the Emperor Frederic, but on his way was carried off by an attack of apoplexy.

In addition to his fame as a military leader, Mathias was renowned and admired for his patronage of literature and the fine arts, and was followed to the grave by the regrets, not of his own subjects only, but of the whole of Europe. His remains were transported with great pomp to the vault in the church of the Royal Alba, and an epitaph, of which he himself was the author, was placed over the tomb.

"Mathias, jaceo rex, hâc sub mole sepultus,
Testatur vires, Austria victa meus.
Terror eram mundo, metuit me Cæsar uterque,
Mors potuit tantum sola nocere mihi."*

His reign was distinguished by brilliant victories, without any great conquests or great results, and by the impulse given by his tastes and those of the gay court which surrounded him to the arts and sciences, and the pursuit of whatever was luxurious or magnificent. Everything was sacrificed to splendour of dress, equipage, and furniture. The palace of Corvinus at Buda, of which the foundations had been laid by Simond, was radiant with ornaments of gold and silver; and the Bishop of Castella, the Pope's legate, stated that fifty carriages could not contain the royal plate, all of massive gold, and set with precious stones. The outward pomp displayed at *fetes* and ceremonies corresponded to the internal magnificence of the houses. When John Pius was sent as an ambassador to France, he took with him three hundred horses of the same size and colour, ridden by young men belonging to the first families in Hungary, clothed in scarlet and sparkling with diamonds. "See what a display these nobles make," exclaimed Pessler, "just before the dissolution of their empire!" It seemed as if Mathias foresaw that he would be the last great King of Hungary, and determined that his sun should at least set in glory. It would be in vain to attempt, within the limits of our space, to give any accurate idea of the gorgeous splendour of the royal palace at Buda. Some of the first masters of Italy superintended its erection, or were employed upon the paintings that adorned its walls. It was there the King loved to retire from the fatigues of war or business, to revel amongst the creations of art, or hang over the classic remains of the authors of antiquity. Having a passionate veneration for the works of the ancient Greeks and Romans, he never grew weary of reading them, and surrounded himself with statues modelled after them best sculptures, and at the great court festivals his guests found themselves surrounded by figures illustrating by their costume the mythology, customs, and traditions of the two great nations whose mutilated remains still excite the admiration and astonishment of mankind. (See engraving.)

But Mathias was not only a patron of scholars, but a scholar himself. Unlike many of the grandees of our own day, who think that their conventional rank can confer honour upon letters, he felt that the pursuits of literature would reflect lustre upon himself. Besides his native tongue, he spoke Latin, French, German, and Italian, with ease and fluency, and was familiar with the writings of Virgil, Cicero, Horace, Lucan, Pliny, Livy, and Sallust. He carried on correspondence with the greatest men of his day. He was the intimate friend of Bandini, of Ficini, and of Lorenzo de Medici. In laying the foundation of the great library of Buda, he left a striking monument of his wisdom and greatness. It contained the richest collection of oriental works that could then be found in the known world. Thirty copyists, of great skill in penmanship, were constantly travelling from one part of Europe to another for the collection or transcription of the rarest and most valuable books to enrich the King's collection. He founded an additional university, and by his command the first printing-press was erected in Hungary for the diffusion of literature amongst the people generally.

A crowd of competitors appeared to claim the crown upon the death of Mathias, and notwithstanding the promises previously made to John Corvinus, it was offered to Uladislaus II., King of Bohemia, the son of Casimir of Poland, and Hungarian princess, the daughter of Albert. The most active promoter of his election was the same Stephen Szapolyai, whom Mathias had loaded with favours. The jealousy and ambition of this man in some measure paved the way for the downfal of the empire. John Corvinus, moved by pure patriotism, sacrificed his personal feelings and undoubted political rights, and submitted quietly to the new monarch, who made him Ban of Croatia, Sclavonia, and Dalmatia. Maximilian, son of Frederic III., now laid claim to the Archduchy of Austria, and Stephen Szapolyai, anxious to renew his intrigues nearer home, delivered up possession of Vienna to him and returned to Hungary.

Upon the expiration of the last truce with the Turks, both parties again took the field, but in this campaign the Hungarians, torn by intestine divisions, and headed by an indolent and bigoted prince, sustained several severe reverses. By a series of misfortunes, into the particulars of which our space will not permit us to enter, the great empire of Louis the Great gradually fell to pieces, until there remained only Hungary Proper and a nominal possession of Moldavia and Wallachia, which were in reality occupied by the Turks. A revolution in Turkey about this time deposed Bajazet, and Selim, having been beaten by Hungarians, was about to agree to a truce for three years, when Thomas Bakocz, the Cardinal-Archbishop of Strigonia, arrived in Hungary, bringing a bull from the Pope calling upon the Hungarians to enter upon a crusade against the Ottomans. Some have ascribed this act of the Cardinal to a desire for the honour of the Church and the spread of the Christian faith, while others have alleged, and with greater appearance of truth, that it was owing rather to a desire to be revenged upon the *nobles* for the frequent insults he had received from them on account of his birth, as well as to the great influence which the successful issue of the enterprise would throw into his own hands, as he was already casting his eyes upon the papal throne.

At the call of the legate the peasants flew to arms, but this time it was not to march against the Turks. They declared that they had been ruined by the tyranny and exactions of the aristocracy, and that, as the nobles were more dangerous than the infidels, upon them would they wreak their vengeance. They chose for their motto "God and Liberty," and assembling in immense crowds from every side, swore to exterminate their ancient masters. This revolt was the war of the peasant against his seigneur—of hunger against exacting riches. These men of labour and misery, whose life was a bitter cup of sorrow and trial, were the brothers in misfortune of the followers of William Longbeard, of Jack Cade, and Wat Tyler. Burdened with taxes, incapable of possessing hereditary property, daily exposed to the incursions of the enemy, and the no less terrible exactions of their own landlords, they at length lost patience.

The King was feeble, inert, and cowardly, and had no resources within himself for any emergency. The nobles seemed to have lost their ancient military prowess, and fled in terror to take refuge in the walled towns. There was no union, no organisation, no foresight. Everything seemed to promise an easy victory to the peasantry. Bakocz appeared to be the only one who had resolution enough to face the crisis, and put himself at the head of the armies.

George Dozsa, a Sicilian peasant, a straightforward, blunt, and sincere man, and full of courage, had been named by the Cardinal commander-in-chief of the crusading forces, or, as it now appeared, of the insurgents; but a priest named Lorenzo, or Lawrence, was the soul of the insurrectionary movement. Though devoted to the interests of the people, he sought by his eloquence to induce the nobles to listen to their demand, and at least endeavour to come to an amicable understanding before proceeding to open force.

His efforts were unsuccessful; and, in a sanguinary engagement which soon afterwards took place, the peasants, though the artillery made lanes in their ranks, were victorious. The

* "Here I, King Mathias, lie, buried beneath this tomb. Conquered Austria attests my strength. I was the terror of the world, the two Cæsars feared me, and Death alone could subdue me.'

aristocracy perceived that its existence was at stake, and strained every nerve in preparations to continue the war. The insurgents on their side called in the aid of the waywode of Transylvania, John Szapolyai, who at once granted it; but in a second battle, near the town of Temesvar, the steady discipline of the nobles triumphed over the rude and untrained valour of the rebels, who were totally defeated. Dozsa was taken alive by the victors, and in that awful hour, when all hope of human mercy or relief was gone for ever, he showed that he had a soul worthy of a higher station and a better fate. There was no pity for the base-born serf who had dared to rise up in arms against his lords. "To-morrow," said they, taunting him, "your majesty shall be crowned, but it will be with an iron crown, made by the blacksmith, your sceptre will weigh five pounds, your throne, too, will be large, and you shall recline upon it at your ease. You will then have need of a stout heart." Dozsa's face blanched for a moment, and his hair stood erect upon his head, as he heard of the frightful punishment that awaited him; but, recovering himself quickly, he exclaimed—addressing the crowd whom he saw shuddering at his approaching doom—"Come back to-morrow, and I shrink in the midst of my sufferings! If a single groan escapes my lips, may my name be covered with eternal infamy!"

On the following day he was placed almost naked on a burning throne, and his head was encircled by a crown of red-hot iron, and thus he died, after enduring all with that calm fortitude called forth the admiration even of his enemies.

Vladislaus II. soon after died, and was succeeded by his son, Louis II., who, while still very young, ascended the thrones both of Hungary and Bohemia. The reigning emperor, Maximilian I., of the House of Austria, had affianced Mary, his grand-daughter, to Louis when the latter was only six years old, and at the same time demanded the hand of Anne, the sister of Louis, in marriage for his grandson, Francis I., the head of the House of Hapsburgh to the Hungarian throne doubly.

In the meantime the intestine divisions of the nobles, the poverty and discontents of the peasantry, were fast wasting Hungary, and in the midst of all Paul Tomori, archbishop of Kalocsa, and one of the ablest soldiers in the kingdom, [illegible] by the corruption and disorders which he saw around him, entered a convent, and Soliman I., surnamed *The Magnificent*, the terror of Christendom, ascended the throne of the Ottomans. Whilst the Turks prepared for war with diligence, the feeble and unfortunate King of Hungary, whom disease had rendered old at eighteen, vainly implored assistance from the other European princes. He obtained nothing but barren assurances of sympathy. Verbeczi alone, a man of great courage and ability, but too ambitious, came to his aid with a small body of troops. The Pope, who was now more than ever alarmed for the safety of the Catholic faith, in consequence of the progress Luther was making in Germany, sent him his blessing, and promised that he should have the prayers of the Church for his success.

Belgrade, which had previously defied the assaults of two Turkish armies, led on by the bravest Sultans, was taken by Soliman in 1521, after a sanguinary struggle, and that fortress, the key of the Danube and the bulwark of Hungary, now became the head-quarters of the Moslem.

What was now to be done? The useless discussions of thirty Diets, held since the death of Mathias, had only widened the breach between the people and the aristocracy, and the *noblesse* and the crown. The regular army, so large and well disciplined in the time of Mathias, was now only a shadow of its former self. Indolent and corrupt, the prelates and magnates did not wish to march against the enemies of their country and their religion, but provided mercenary substitutes, so that the weight of the whole contest fell upon the peasantry and the petty *noblesse*. Louis wrote to Francis I. of France, and Henry VIII. of England. The latter sent him a large sum of money; the former sent nothing.

In the meantime it became evident that a great battle must shortly take place, which would decide the fate of Hungary, and it might be of Europe itself. Soliman II. crossed the frontier at the head of 100,000 men, and Louis marched in person to meet him, as several of the nobles refused to take the field unless under the royal banner. Orders were given to Szapolyai to attack the rear of the Turkish army conjointly with the Wallachians. The two armies met near the village of Mohacs, upon the Danube. Louis with difficulty could find generals to command his army. Paul Tomori was at last induced to quit his solitude, and take the lead. Broderics, the Chancellor of the kingdom, urged upon him the propriety of awaiting the arrival of the Transylvanian army, and that of Christopher Frangepan, who was advancing with 5,000 Croats. But the impetuosity of the nobles could brook no delay, and they shouted out to Tomori to begin the onset immediately. "Then, sire," said Perenyi, the Bishop of Great Varadin, turning to the King, "twenty-six thousand Hungarians" (the Magyar army consisted of that number only) "will fall martyrs in the cause of religion under the conduct of our dear brother Paul Tomori. There remains only one thing more to be desired—that the Chancellor Broderics, who is known at Rome, should survive the carnage, that he may plead for them canonisation as saints before the Pope and the cardinals."

The two armies, after skirmishing and reconnoitring for three days, began the engagement in several detachments. At that moment a forest of lances were seen glancing upon the crest of an adjacent hill. Gaspard Rackai set out to observe their movements. It was now three o'clock in the afternoon, and the Turks seemed still resolved to remain in the camp, but it was only a feint to induce the Hungarians to leave the advantageous position. Paul Tomori at last gave the signal of battle, on the 29th of August, 1526. The army advanced to the attack with loud shouts and beating of drums, and overthrew the first body of Turks they encountered with so much impetuosity, that Andrew Bathe conveyed to the King the assurance of a speedy victory. Their ardour was now redoubled, and they hotly pursued the fugitives, but soon found that they had as yet only defeated an advanced guard, which served to hide the main body of the Turkish army, which stood firm, awaiting the attack. Soliman was in the centre, and had confided the command of his forces to old experienced generals, while 300 pieces of artillery were [illegible] forth destruction upon the confused masses of the Hungarian army. In a few minutes the right wing was swept away, confusion spread on every side, and they were soon flying over the plain in woeful confusion. Broderics, who was [illegible] by the side of the King, stated that at that moment he was [illegible] from his sight, but whether he had fallen by the hands of the enemy, or had been dragged away by his guards, fearing for his safety, he could not say. The left wing still continued the combat, with the heroism of despair, charging up within ten feet of the batteries, and vainly attempting to storm them. After several brave but vain efforts, they were driven back into a marsh, in which the greater number were engulphed. A few escaped, but so astonished were the Moslems at their desperate valour, that they did not attempt to pursue them. Paul Tomori did not survive his defeat, and with him seven bishops, twenty-eight of the higher nobility, and twenty-two thousand men, lay dead upon the field.

It was long before the body of the King could be recovered. It was at last found, with that of his horse, buried in a swamp, [illegible].

The Turks overran the whole country, more as brigands than as conquerors, pillaging, burning the towns, and putting to death those of the inhabitants they did not wish to carry away as slaves. To such a horrible pitch did they carry their cruelties, that mothers were known to bury their children alive, lest they should fall into the hands of the soldiery, or their cries betray them to the hiding-place. "The infants," says the Hungarian writer, Jaszai, "put their little hands together, and promised not to cry, and the wretched mothers, lost in misery and despair, besought God to have mercy upon them, and forgive them the unnatural but necessary crime. Buda was taken and plundered, and the splendid library of Mathias Corvinus committed to the flames; the bronze statues, vellous workmanship, were carried to Constantinople and cast into cannon, and the entire country presented [illegible] of beauty or value to the eye, but all was [illegible]."

The small number of inhabitants who escaped owed their safety to flight. Others submitted to be carried into slavery, or perished in a desperate and courageous struggle, like Mi-

chael Dobozi, a country gentleman, who is still celebrated in the popular ballads. When the Turks entered the district in which he lived, he mounted his horse and rode away, carrying his wife before him on the croup. At length he found himself surrounded on every side, and that escape was impossible. "Surrender your arms," said his wife; "you may one day escape from slavery, and avenge your country; but as for me, I could only find dishonour and infamy amongst the infidels. Dear Dobozi, if you love me, do me a last favour. Get down from your horse, and run me through the body with your sword." The husband shuddered, hesitated, and endeavoured to encourage her by the hope of escape. The Musulmans were in the meantime approaching, and then the heroine dismounted, and exclaimed—"Do you wish me to perish by your hand, or that of the barbarians?" Her husband immediately drew his sword, and stabbed her to the heart, and then, madly rushing upon the Turks, fell, covered with wounds.

More than two hundred thousand men were slain or led into captivity. The victors did not retire until they had destroyed all means of subsistence, so that famine well nigh completed the work of destruction.

The battle of Mohacs was even more disastrous to Hungary than Flodden Field to Scotland. It decided her fate. She had been for a long time envied by Austria, and considered a legitimate prey by some of her own nobles. To the former she fell a victim. That terrible disaster is to this day an object of general mourning amongst the Magyars. On each recurrence of its anniversary the whole nation prays for the repose of the souls of the gallant and true-hearted men who fought so well and died so bravely. Like the Welsh air of "Rhuddlan-Marsh," a piece of Hungarian music has been consecrated to the memory of the great misfortune, and, wedded to harmonious Magyar poetry, sounds like the sighing of the night-wind through the withered branches of an ancient tree.

Here end the bright pages of Hungarian history. Henceforth the record is one of decline and disaster, but filled with many a fair deed of good promise. The dynasty of Arpad expired, after reigning for four centuries, and having given twenty-three princes to Hungary, two of whom were canonised—six were men of great merit—six legislators—some few feeble and inconsistent—not one a tyrant, in the worst sense of the word, and all good warriors. The princes of the other houses were forty in number, and reigned for two centuries. Under the latter the people exercised their right of election with more of vigour than under the House of Arpad. Hungary never flourished so much as in the time of Charles Robert and Louis the Great, and Mathias Corvinus, who proved themselves in everything worthy of the choice of the nation. But it was not the mass of the population which enjoyed the rights of the constitution, but a proud and ambitious caste, who too often neglected their duties to follow their inclinations. Louis the Great laid the foundation of a system which might in time have been developed into another constitution like the British, but those who came after him had neither the wisdom nor the ability to follow up his work. During considerable intervals the kingdom was left in the hands of ambitious regents, who governed in the name of absent kings. There was a continual conflict going on between the magnates, the crown, and the inferior nobility, and at last the first of these succeeded in obtaining the division of the legislature into two chambers—*status* and *ordines*. The former comprehended the prelates and the magnates, who sat in the upper chamber; the latter the *noblesse* of the counties and the delegates of the towns

PRESBURG, ON THE DANUBE.—(*See page* 153.)

to which Sigismond, as a counterpoise to the aristocratic principle in the legislature, gave the right of representation

Mathias the Just gave great proofs of legislative capacity in the reforms which he introduced into the internal administration of the kingdom. Besides the tribunals which sat every three months, he instituted others for the summary punishment of offenders in cases requiring despatch, even when the persons concerned were nobles, who claimed the right of being tried by the King alone. He appointed a judge to represent the King, whose court answered very much to our Court of Queen's Bench. He rigorously enforced the laws against the great lords, who were often in the habit of seizing upon the property of others, and, while a tedious and intricate process was being carried on for its recovery, enjoyed the fruits of their wrongfully-acquired possessions in peace and quietness

The dependent provinces were governed by bans or waywodes, and enjoyed under the protection of the Magyars the same privileges as the dominant race, and were allowed to preserve their municipal institutions In a future number we shall present our readers with a sketch of the position of the Croats, Sclavonians, Serbes, and Germans,

HUNGARIAN IN FULL COSTUME.

when Hungary, "like a bastinadoed elephant, is kneeling to receive her paltry rider." Before commencing the history of the Hapsburgh or Austrian domination in Hungary, we cannot do better than quote the words in which the great Montesquieu characterises her policy, as it appeared in his own day.

"We see," says he, "Austria oppress the Hungarian nobility without intermission She is ignorant of what it will one day cost her. She seeks gold where there is none, and does not perceive the men that are everywhere. A crowd of princes divide her states between them—all the parts of her monarchy act without harmony or co-operation, and fall, so to speak, one upon the other." Previous to the battle of Mohacs the Hungarians had often been beaten, but never before had the enemy taken root in the country. Under the Hapsburgh dynasty—so prodigal of promises, so deficient in performance—the Sultan possessed more power in Hungary than her rightful king. In the midst of the various revolutions which have taken place upon the banks of the Danube, the Magyar people has never been blinded to the evils of foreign rule—has never failed to see that it can give nothing in return for the enormous sacrifices which it requires. But now the right of election ceases to be acknowledged, hereditary right and the law of force meet us everywhere. The king of Hungary is no longer a national

now by another.

We have arrived at a new era. The age of triumph and glory has passed away, and we are now fallen upon evil days,

Diet, which is obliged to employ all its energies in defending itself against his encroachments, to the neglect of the internal affairs of the country.

THE FOUR LACE DEALERS.

M. Brissot, my employer, was an extensive lace merchant of Lyons His establishment was the largest of its kind in France. His correspondents were scattered all over the Continent, but his principal agents were at Paris, which was at that time in a state of agitation and terror, consequent upon that daring act of the Convention—the decapitation, by the axe of the guillotine, of "the Austrian woman," that is to say, Marie Antoinette, the Queen of France.

M. Brissot was in a state of feverish excitement His large establishment presented the melancholy picture of a host of workmen and machinery, and an empty treasury Worse than this, notes were rapidly falling due, and unless he received remittances from his Paris agents, who were very heavily in his debt, there was nothing to save him from that ultimatum whose bare name is so appalling to the ear and mind of all honest tradesmen—bankruptcy.

In this condition of his affairs, M Brissot came and said

"Francois, you are my confidential clerk, and consequently, understand my position without my telling it to you."

"Yes, Monsieur."

"It is in your power, Francois, my friend, to save me. Will you do it?"

"How could you ask such a question, Monsieur, when you know I am devoted to you? Explain to me how I can assist you, or take you out of this extremity, and you may rely upon me"

"I understand you, my good Francois You keep the books, and consequently understand the delicacy of my position, you know that I have a large number of heavy bills to pay within the next thirty days, and that to pay them I have scarcely a franc on hand or in expectation, you know that my Paris correspondents, who are deeply in my debt, and whom I have drawn on repeatedly without receiving any replies, are silent, you know that all my hopes, all my credit, all my reliance, hang on Paris agents, and that unless I hear from them speedily, I am ruined, swallowed up, lost'"

"Yes, Monsieur, I know all that"

"And therefore—"

"And therefore, Monsieur," said I, seeing that he paused, "if you will permit me, I will at once to Paris see those men, obtain what I can from them, then return with the money, and deliver it to you."

"This is what I wished, but had not the heart to ask of you, for it is at the risk of life to enter Paris now The capital is mad with blood, terror reigns everywhere, and Robespierre, that demon of destruction, never raises his finger but to point to the guillotine, and never moves his lips but to pronounce a sentence—and that sentence is death."

"I know all that, Monsieur."

"The gates of Paris are guarded by soldiers, and the walls are environed by his spies. To enter the gates is comparatively easy—to emerge from them, impossible"

"I know it, Monsieur."

"The city is filled with people, one half of whom look on the other half with distrust for every man is either an accuser or a victim"

"'Tis true, Monsieur"

"If you enter Paris spies will hang upon your footsteps—spies who, should you enrage them, would at once denounce you, and never take their eyes from off you, till they had seen your head upon the block and the axe upon your neck."

"I know it, Monsieur, and yet to save you—you, who have ever been to me a benefactor and a father. I will incur this peril, which in my eyes is not greater than the danger of your bankruptcy, your ruin."

M. Brissot's eyes were humid, his whole frame trembled with agitation He threw his arms around me

"I have an only child," he exclaimed, "my daughter, my Pauline. I know that your heart has long worshipped her in secret. Return from Paris, and whether you succeed or fail, she is yours!"

I could only return the pressure of his hand.

Two hours afterwards a passport was in my hand, and myself on the road to Paris.

In two days I was in the metropolis. I showed my passport to an officer at the gate, and was at once admitted.

Paris presented a frightful picture. Everybody was in the streets, which presented the appearance of a gala day. Men and women mingled indiscriminately together in crowds, dressed in the most fantastic costumes. Here was a group, chanting a hymn of rejoicing at the news of a victory by the army, there a crowd, listening to an orator who was trumpeting the virtues of Robespierre, "the incorruptible," and denouncing the baseness of his enemies, at another point was a concourse, following a cart which was conveying a number of victims to the Place de Revolution, where stood the scaffold, the drop, and the axe—the guillotine, look where you would, a noisy, heterogeneous mass met your eye, wild with excitement, and reeking with blasphemy and meaningless joy

I opened a private memorandum-book that I had brought with me, and found the following

M Rosignol, rue Vivienne,	22,000f
M Berthier, rue de l'Etang,	35,000
M Tonnerre, rue St Denis,	90,000
M. Malhouet, rue Richelieu,	28,000
	175,000

So that my first business was to call on M Rosignol, who was indebted to my employer in the sum of 22,000 francs

I proceeded to the rue Vivienne, and after some difficulty—for I was a stranger to the city—discovered the establishment of the lace dealer. But the windows were closed, the doors locked, and the store apparently abandoned I was alarmed, for if M Rosignol were lost, or dead—if he left not effects sufficient to pay my employer's claim, there was nothing to save M Brissot from bankruptcy, for it required every centime of the above one hundred and seventy-five thousand francs to enable him to meet his obligations

I at once knocked at a side-door leading to the upper stories A porter presented himself

"Monsieur," said I to him, "why is the establishment of M Rosignol, the lace dealer, closed?"

The man looked at me in surprise

"Monsieur is a stranger in Paris" he said, slowly, but in tone of respect

"You have guessed correctly"

"Ah! Then you had better apply to the Prefect of Police"

"M. Rosignol has been arrested, then"

"Yes, Monsieur."

"For what?"

"Monsieur had better ask that question of the Prefect"

I was more and more alarmed

"Another word," I said, seeing that the porter was about to retire.

"With pleasure, Monsieur"

"When was M. Rosignol arrested"

"Two days ago."

A passer-by pointed out to me the direction of the Prefect of Police.

While passing down the rue Vivienne, I noticed a gentleman a short distance ahead, whose slight, noiseless step, and quiet, thoughtful appearance, could not fail to command attention His figure was small, his face, pale almost to lividness, his features sharp, and his keen, restless eyes, of a deep, glittering blue. He was dressed in a dark suit, and wore a round hat with a broad rim, which was thrown so far back on his head that it exposed a small forehead projecting with great force over his temples. The expression of his face was that of a man worn out by vigils and meditations. A sinistrous line about his small, bloodless lips warned the spectator that he was in the presence of a man of great intellectual power.

While examining this strange face, the sudden and quick trampling of hoofs on the pavement caused me to look around, and I beheld a horse, who had evidently thrown his rider, dashing wildly down the street, and to my great horror, making direct toward the personage I have just described.

"Monsieur," I cried, "look out—you will be killed!"

The stranger raised his thoughtful eyes, and, evidently still under the influence of his reverie, fixed them half confusedly upon me.

Seeing that he was not aware of his danger, I sprang forward, seized him around the waist, and at one bound was in the middle of the highway.

The horse at almost the same moment dashed, in his wild flight, right over the spot, and speeding down the street, was out of sight in an instant.

A moment later, and the stranger would have been knocked down, crushed, and in all probability slain, by the affrighted animal.

The shock I had given him recalled the gentleman to self-possession. As his mind took in the extent of the danger, he turned his eyes, humid with emotion, and exclaimed—

"Monsieur, you have saved me How can I repay you '

'Name it not," I answered, desirous of avoiding thanks for so trifling a service. "I only performed a duty that I owed to humanity It is sufficient for me that you are safe."

"Nay, Monsieur," said the stranger, "it is a life I owe you Ha! what do I say—a life—I owe you ten, twenty, ay, a hundred lives, each one of which is priceless, because it is a life—that is to say, a soul, formed by God's own hands, and therefore more priceless than all the riches of the world And it is a hundred of such jewels that I owe you from this hour, for having rescued me from the wretched and ignoble death to which you

ed animal was so near consignin

I looked at him in astonishment Who is this man thought I

"In the hour of danger—in the hour of your greatest peril," continued the stranger, taking my hand and pressing it, "call on me, and I will prove to you—whatever the world may say to contrary—that this breast contains a heart overflowing with gratitude '"

So saying, he lifted his hat and made me a profound bow, then turning on his heel, he passed on till he reached the next corner, around which he turned and disappeared.

I reached, in due time, the office of the Prefect of Police, and was shown into the private room of that functionary.

"I desire, Monsieur, ' I replied, "to learn the whereabouts of a certain M Rosignol "

He is in the dungeons of the Con "

"Can I see him, Monsieur ?"

"Yes, '

"When ?"

"To-morrow. '

"At what hour '

"Ten a m At that hour he, with his compeers in treason, will leave the Conciergerie for the scaffold '

At this brutal answer my heart sank, and I was nigh falling With an effort, however, I mastered my feelings, and left the Prefect Once in the open air, that confidence which had been my best and truest friend, returned to me, and enabled me to think The result of my reflection was, that it was necessary for me to see M Rosignol at all hazards. To do this, it was necessary to get an order from one of the members of the Revolutionary Tribunal. I therefore resolved to wait upon one whose name and fame had spread all over France, and who was noted for his sympathy for the masses- Danton I inquired ' address, and posted at once to his house. The porter declined allowing me admittance, but a piece of gold at once moved his surliness, and served as a passport to the chamber of the patriot.

At a round table, covered with books, papers, letters, and writing implements, I beheld a tall stout man with a bold, laughing eye, a pleasant countenance, and large, light whiskers. I had heard his appearance described a thousand times, and at once recognised the bold and chivalrous Danton

"Who are you ?" said he, in a rough voice, "and what do you want with me ?"

"I am a Lyonese," I replied, "and have come to the great patriot, of whom I have heard so much, and who is so popular in my own city, to ask a favour."

The flattery pleased him, and he was in a moment all politeness.

"So, they speak of me in Lyons, do they ?" he said, with a smile of gratified pride. "And how do they call me ?"

"They speak of you as Danton, the Man of the People."

"Ha! they call me *that!*" And a smile of triumph gleamed in his large blue eyes. "'The Man of the People!' They but do me justice. I am *of* and *for* the people—that is to say, the many, the masses, and not the few. The Lyonese but do me justice. But what can I do for you? What is the favour you have come to ask of me ?" he added, with an encouraging smile.

"I have a friend in the Conciergeric, whom it is a desire of my heart to see."

"You are young," he said, throwing a smiling glance at me "this friend—is't a *lady* ' '

'No, Monsieur, a gentleman."

"Ah '" he observed coldly, seeing that he had overshot his mark. "His name "

"M. Rosignol "

'A lace-dealer ?"

"Yes, Monsieur. "

The pleasant expression of his face passed away and was replaced by a disagreeable frown at this answer

"You should beware of such acquaintances, ' he said, somewhat sternly. "These lace dealers are aristocrats Their very business depends upon the aristocracy for an existence

This staggered me. I saw in a moment the necessity of avoiding all argument with this vain but powerful man It was my policy to appeal to his vanity, which was so conspicuously great, and not to his reason, which was as correspondingly small

'It would not be becoming, Monsieur, for a rude, untutored man like me, to attempt to dispute a point with a mind so keen subtle, and enlarged in its views as yours '

"Well, well," he cried, with a condescending smile, "we will say no more about it 'Tis very evident you are no aristocrat, at all events. '

"Who—I, Monsieur ' Oh, I am, like you, of the people The only difference between us is, that God made me a common man, and you a great one !"

"Enough ' " he said, with an affectation of majesty and magnanimity, "you shall not go back to Lyons without having seen your friend. Danton will, at all times, stretch a point to serve one of the people."

As he spoke he drew towards him a slip of paper, on which he hurriedly traced an order to the Governor of the Conciergerie, and then, with an assumed air of condescension, handed it to me.

The order of Danton was enough to insure me the highest attention and respect, and a turnkey at once conducted me to a low dungeon in which were seven persons. As the jailer opened the door these men turned their eyes upon him with an eager, inquiring look

The turnkey now left the dungeon, saying—

"When Monsieur wishes to retire, let him knock thrice and I will open the door. '

The next moment the door closed, the lock was turned, and I was alone with the prisoners A lamp suspended by three chains hung from the ceiling, and threw a dim light around

"Which is M Rosignol ?" I asked, somewhat timidly

A man exclaimed. "You are looking at him, Monsieur "

"'Tis well," I answered "My name is Francois Dumouriez, I am confidential clerk to M. Brissot, of Lyons, in whose name I now speak to you "

At mention of M. Brissot's name, three others of the prisoners raised their heads and threw their eyes upon me.

"Say on, Monsieur," said M Rosignol, in a tone of subdued grief "I am listening "

"Pardon me, Monsieur," said I, "but before I speak further, I would ask a question '

"Ask it, Monsieur."

"Are you acquainted with M. Berthier, of the rue de l'Etang ?"

"Yes."

"With M. Tonnerre, of the rue St. Denis ?"

"Yes."

"And with M Malhouet, of the rue Richelieu ?"

"And with him."

At mention of these names, the three persons to whom I have alluded pricked up their ears, and looked at one another in surprise.

"And can you tell me, M. Rosignol, if those three gentlemen are, like you, in the Conciergerie ?"

"They are '" was the reply.

"I feared it '" I exclaimed. "And are they here ?"

"They are," answered M. Rosignol "Messieurs," he added, turning to the three prisoners, "permit me to introduce you to

Monsieur Dumourier, confidential clerk to our correspondent at Lyons, M. Brissot."

I was thunderstruck.

"Gentlemen," said I, as I recovered my self-possession, "I will not address you individually. What I have to say had better, I think, be said to you generally, as all of you are interested."

They bowed, and I went on.

"Gentlemen," before I begin, permit me to make my apologies for speaking to you on such matters here and in this unfortunate position. Blame not me, but the necessity which brings me here. When M. Brissot requested me to come to Paris and learn the cause of your silence, it was not here, not in the Conciergerie, that he expected me to see, that I expected to meet you!"

"Gentlemen," I continued, struggling to repress my feelings at their frightful position, "will you pardon me for, in obedience to the duty I owe my employer, intruding my presence on your sorrows here?"

They raised their eyes, and by their looks I saw that I was forgiven.

"Gentlemen," I continued, "let me tell you in one word the cause of my presence in Paris. M. Brissot is on the eve of bankruptcy; and unless he can get some money from you, who are heavily on his books, he is lost. Gentlemen, in one word, can you do anything to save him?"

"Monsieur," said M. Rosignol, "I am in debt to the worthy M. Brissot, whom I sincerely love and respect, in the sum of twenty-two thousand francs. Were I free, I could and would cheerfully pay it. But I am a prisoner in the Conciergerie, and condemned to lose my head at ten o'clock to-morrow."

And he turned his head to the wall, murmuring—"My poor wife—my poor children—who will watch over ye now!"

I was like one who feels the ground giving way from under him.

"Monsieur," said M. Berthier, "I honestly owe the worthy man you represent thirty-five thousand francs. Were I free, I could pay it in an hour. But I am a condemned man, and to-morrow, at ten o'clock, I am to die!"

And he turned his face to the wall, murmuring—"My wife—my poor, poor wife!"

I felt like a wretch on a wreck at sea, who sees, without the power of resistance, the waves wrenching his only support in pieces.

"Monsieur," said M. Tonnerre, with an air of dignity, "I compassionate the strait in which my friend and correspondent, M. Brissot, finds himself. I regret it the more, inasmuch as the large dealings between us leave me heavily in his debt. I owe him the sum of ninety thousand francs, which, large as it is, I could easily pay were I but one hour at liberty. But I am, as you see, a chained prisoner in the Conciergerie, and condemned to lose my head at the hour of ten to-morrow!"

And he turned away his head, exclaiming in accents of deep grief—"Oh, Emily—my only, my darling one—could I but see thee once more ere I die!"

As he concluded, I felt as if my blood had ceased to flow, as if my heart had ceased to beat.

"Monsieur," said M. Malhouet, "like my friends here—like every captive in this cell—I am a lost man, and doomed to lose my head at ten to-morrow. I am indebted to your worthy employer in the sum of twenty-eight thousand francs. Were I free, I could discharge the debt in thirty minutes. I sympathise, like an honest tradesman, with M. Brissot in his strait, and if at liberty would at once do my share, as a correspondent and friend, toward relieving him. But I am chained, imprisoned, helpless!"

And, like the others, he turned his face to the wall, murmuring—"My mother—my mother—who will preserve, who will console thee, when I am gone!"

I could make no reply. The terrible intelligence they had given me—the frightful bearing it had on the position of my unfortunate benefactor and employer, had operated on me like a heavy blow. I felt confused, crushed, annihilated.

I staggered to the door, gave the required signal, and a few moments afterward was in the street, reeling like a drunkard.

Suddenly I found my progress arrested by two long pieces of steel pressed against my breast. I looked up and beheld two gens d'armes, with their bayonets pointed at me.

"Where is Monsieur going?" they demanded.

I made no reply, but gazed at them like one stupefied. I fell back a step or two from their guns, and found myself before the entrance of a large building, which I learnt was the Hotel de Ville.

There was a rattling of wheels upon the pavement, and a few moments afterward a carriage drew up before the main entrance of the Hotel de Ville.

A short, slender gentleman, dressed in a suit of plain black, stepped from it, and was passing from it into the palace, when, as my eyes fell on him, all the blood in my body seemed mounting, like hot lava, to my head. In an instant every attribute of my nature, every sense of my intellect, was alive. I had recognised the gentleman whose life I had saved in the morning!

"Who is that gentleman?" I asked of one standing near me

"The Incorruptible, Maximilian Robespierre!" was the reply.

"Thank you!" I replied. "And can one see him? Is he visible to strangers?"

"Of course," answered the man, shrugging his shoulders at my ignorance. "The people have the right to visit him at any hour. And why should they not? Though the Dictator of France, he is nothing more than the people's steward. He says so himself."

"Thank you!" I repeated. And breaking from the crowd I hurried to my lodgings and penned the following note

"M. Robespierre—Fortunately for France, I was this morning the humble instrument of preserving your valuable life. Your noble nature prompted you to say, in consideration of that service, that you owed me a hundred souls in return. I therefore now ask of your gratitude, not a hundred, but *four* lives, who are as precious to me as my own existence. The names of the four men whose lives I have the honour to ask at your hands are M. Rosignol, of the rue Vivienne; M. Berthier, of the rue de l'Etang; M. Tonnerre, of the rue St. Denis, and M. Malhouet, of the rue Richelieu. These men are in cell No 28 of the Conciergerie, and unless previously set at liberty, will perish at ten o'clock to-morrow. They are charged with being aristocrats. I will answer for them that the charge is without the slightest foundation. I ask their lives of you for the one I saved to France this morning.

"Francois Dumourier."

This missive I folded and sealed, and then took to the Hotel de Ville. Seeing a letter in my hand, and therefore taking me for one of the countless spies of the Revolutionary Tribunal, the guards permitted me to pass, and following the stream that preceded me, I soon found myself in the vast reception hall. It was filled with a motley crowd, and to reach Robespierre, who was sitting at a round table, with a number of his colleagues, it was necessary to work my way gradually along the line of spectators facing the slight railing which divided the Tribunal from the auditors. This was in due time accomplished, and I had now to abide my time till the Dictator's eye should by some fortunate chance meet mine.

I had not long to wait. My uplifted hand, holding the letter, attracted the attention of the President of the Revolutionary Tribunal, and his glance falling from the letter to the hand, and from that to the face of the person owning it, settled at length on me, and in an instant he was on his feet.

"Approach!" he said.

The crowd around me at once gave way, and an officer conducted me to the Dictator.

"Gentlemen," said he, in a loud voice, taking me by the hand and turning to his colleagues, "permit me to introduce to you the hero of whom I have already spoken—the instrument, under God, of saving my poor life!"

The members rose and crowded around me, and at the same instant, the vast crowd in the hall thundered forth—

"Gratitude to the preserver of our Dictator!"

I modestly handed Robespierre the letter. The Dictator perused it calmly, and then silently passed it over to a colleague, who at a sign from the former, read it aloud.

"What say you, gentlemen, said the Dictator, "has M.

Dumourier sufficient claims on us to grant him the lives of those four men ?"

"Yes—yes—yes!" resounded from all sides. Not a voice was in the negative.

"St. Just," said the Dictator, turning to one near him, "write out the order of liberation."

I could scarcely see—everything around me began to grow dim.

I hurried to the Conciergerie, presented the order, and shortly afterwards left the prison with the four lace merchants. I shall not attempt to describe their gratitude nor my happiness Enough, that they paid me their individual amounts in full before night fell.

I quitted Paris early the next morning, and two days afterwards entered the establishment of my employer at Lyons, whom I made happy with the gold which was to save him from bankruptcy.

M. Brissot could scarcely control his emotion at sight of the money. He heard the details of my absence with varied feelings; then, taking me by the hand, led me to his house, and there, raising the hand of his daughter Pauline, silently placed it in mine

THE COUNT DE CHAMBORD.

The recent change in French affairs has excited attention to the claims of the rival aspirants to power in France. The Royalist party was divided by the clashing pretensions of the Prince de Joinville and the Count de Chambord—otherwise called, the Duc de Bordeaux, whose father perished by assassination, but to whom the French Legitimists assert that the throne by right belongs.

The following sketch of the Count de Chambord, the heir of Louis XIV and Henry IV of France, is from the elegant pen of M. De la Guerronniere, one of the editors of the *Pays*.—"The Count de Chambord possesses the finest head of any prince in Europe. The physical beauty of his physiognomy is only the reflection of moral beauty. Frankness, uprightness, benevolence, enlighten his look. Intelligence illuminates his forehead. The *ensemble* of his features presents the harmony and purity of lines

of which the pencil of Raphael, or the chisel of Phidias, can alone reproduce the character and effects. Everything in him, the expression of the eyes, the tones of the visage, the accents of the voice, the cadency of gesture, the movements of the hand, display the manliness of a healthy soul which no breath has dried up, no poison changed, no vice degraded. This soul is seen, and felt, and heard, and this transparency is so luminous that it seems in approaching it that we are only separated from it by a glass. Thus is explained the sort of fascination which this king without a kingdom exercises on all those who approach him His head is discrowned of its diadem, and yet there is on his forehead a sort of halo which is only the escape of internal light into physical life What strikes at the first aspect is neither the perfection of the features, nor the delicacy of the lines, nor the harmony of proportions, nor anything of what constitutes material beauty No it is sympathy, increased by majesty, in a word, something which carries you back to the grandeur of Louis XIV and the goodness of Henry IV. When the prince is on horseback, his open and large breast, which seems to respire life; his strong and supple arm, which holds the bridle with vigour full of *abandon*, gives to ' bearing as much elegance as dignity In seeing him pass thus along the roads of Germany we understand the royal majesty. One would say that he is the equestrian statue of it, reanimated all at once by some new Pygmalion. But Pygmalion does not call himself the people. . . An illustrious lady, much more accustomed to exercise fascination than to submit to it, the Princess de Lieven, one day met the Count de Chambord in the house of the Duchess de Noailles at Ems. She was a competent, and, perhaps rather a severe judge The curiosity of Madame de Lieven was very much excited. The figure of a pretender was wanting to the gallery of her impressions, she laughed with witty and mocking incredulity at the tender enthusiasm which the friends of this new Prince Edward brought from their pilgrimage of fidelity Accustomed as she was to receive, in the familiarity of her elegant conversations, the most illustrious men of Europe, she promised herself to contemplate, without being dazzled, and without emotion, this hereditary grandeur, the pale ray of the setting sun which was about to disappear in time Count de Chambord presented himself The majesty and the goodness displayed as the illumination of his soul on his face first of all struck Madame de Lieven This lady of rank, more difficult to move than the great men whose charm, penetration, and often inspiration she is, was agitated as would have been a simple woman of Brittany In the evening she met M. Berryer, and laughed no more at monarchical tenderness The reception which the Count de Chambord gives to the royalist Frenchmen who visit him in his exile is cordial without familiarity, dignified without pretension, and royal without haughtiness He displays a coquetry of an altogether marked description for the men not belonging to his cause, and whom a sentiment of respect and curiosity leads to visit him It is in particular with them that he gives way freely to the expression of his views, he astonishes them by his knowledge of men and things, and by the richness of his mind, he causes them to forget that he is a pretender and an exile from his country. They fancy that they hear France speaking through his mouth, and that the voice of the present age is heard in his voice, awakening, as it does, all the echoes of past ages."

A chequered career has been his, and a similar fate has attached to all his race. When Charles X. signed the abdication of Rambouillet, the rights of Henry V. were renounced at the same time. When his mother, the ill-fated Duchess de Berri—her Neapolitan imagination fired with the thought of being another Jeanne d'Albert, began the expedition to La Vendée, which was to have resulted in making her Regent of France, when, in reality, it but led her to a lone prison on the banks of the Gironde, the wavering Charles once more guaranteed the right he had already signed away A king without a crown, still French Legitimacy owns the Count de Chambord as its proper head. His age now is about 30. At that age men have gone forth and won immortal fame. At that age, did the Count de Chambord represent a living truth, and not an exploded lie, he might have the great French nation obedient to his will. As it is, we imagine his chance of imperial sway is but small. He belongs to the past. France must seek its future in other men.

WHAT IS A NEWSPAPER?

'WHAT is a newspaper?"—"A paper containing news," is, of course, the ready reply. Softly, my dear sir, if you please The question is a far more difficult one than you have any idea of. Thanks to our lawyers, a very simple question has been resolved into a very perplexing one; and, very recently, Baron Parke gave it as his opinion, that Dickens' *Household Narrative* was a newspaper, while Barons Martin and Platt, and Chief Baron Sir F. Pollock, maintained that it was not. When Lawyers differ, fortunately the majority decides Thus we may congratulate Mr Dickens on the victory he has won in the cause of unlicensed printing—a victory which will not concern him alone.—Mr. Cassell, as publisher of the *Freeholder*, had laid himself open to a prosecution from the Board of Inland Revenue in the same manner Other publishers, also, equally transgressed the law. Fortunately Mr. Dickens has brought the question to a successful issue, and, as a consequence, we may expect the cheap press to become more practical and fraught with real interest than ever. The law will no longer be a scarecrow to frighten the timid degree, been mitigated. It is no longer, but a friend.

From the evidence—given before the Select Committee on Newspaper Stamps of Mr Keogh, Assistant Secretary, and Mr Timms, Solicitor to the Board of Inland Revenue, it appears that the Board consider three classes of publications legally liable to the newspaper stamp - 1 Any paper containing public without reference to price, size, interval of publication to its being published more than once —2. Any paper printed at less intervals than twenty-six days, containing only, or principally, advertisements —3. Any paper containing remarks on public news, printed at less intervals than twenty-six days, where the price is less than sixpence, or the size less than two sheets. The recent decision of the Court of Exchequer has declared that a paper published at greater intervals than twenty-six days, has not the character of a newspaper, though it may be a chronicle of events, bringing up the narrative to a very recent period. decision has relieved the Board of Inland Revenue of a world of trouble. Before, they must have been always in a state of consternation as to what constituted news In his evidence before the committee, Mr. Timms stated that the Queen's speech was "news," and that he thought anyone printing it on a sheet of unstamped paper would be liable to a penalty of twenty pounds. At the same time, by a very delicate distinction, the force of which cannot fully perceive, Mr. Timms is inclined to think that the Chancellor of the Exchequer's speech is not news Thus their seems to have been no very clear idea as to what was news on the part of the Board. At times, also, their interference became very vexatious. Thus, the *Norwich Reformer*—where only one-sixteenth of the contents came under the description of news—was stopped, whilst no opposition was offered to the publication of the *Athenæum*, and other papers, containing far more than was ever published in the *Norwich Reformer*. As to the third class of publications the Board professes to take cognisance of, little action, it appears, has been taken with regard to them. It is clear, that if it be difficult to define what is meant by news, the difficulty is greatly increased in attempting to define remarks upon news, and in drawing the distinction between remarks upon news and news itself Mr. Timms states, in his evidence before the committee, that there has been very little practice at all in reference to this class of publications, because those "that have come under the notice of the Board, have generally contained public news, and, therefore, they have come under the first definition of newspapers. Parties have attempted to excuse themselves, by stating that their paper is not a newspaper within the third definition, but our reply to that is, 'It is a newspaper within the first definition, because it contains public news, intelligence, and occurrences'" It seems, that with respect to comment on news in cheap publications, the law has been allowed to sleep. It is notorious, that a great number of publications, issued at intervals of less than twenty-six days, and at prices less than sixpence, by philanthropic, religious, political, and other societies, are published without a stamp, and contain comments and observations upon public events If the law had been enforced, *Punch* would have been compelled to discontinue his weekly labours. As it is, we wonder so notorious an offender has not been looked after before this.

Thus the question as to what is a newspaper is not to be answered so quickly or certainly as our readers might at first suppose The Board of Inland Revenue wavered in the application of the law—publishers became bold and daring. The Board threatened—timid men succumbed—the strong, on the contrary, went on as usual. At length, the Board screwed up its courage. It threatened Mr Cassell, and then prosecuted Mr Dickens After a more than usual illustration of the law's delay, Mr. Dickens triumphed On Monday, December 1, the decision was given in the Court of Exchequer. The Chief Baron, and three puisne barons, who had heard the argument, met in the large Court, and as they did not agree in their construction of the Stamp Act, their lordships delivered their judgment *seriatim*, commencing, as usual, with the junior baron The papers tell us, the majority of the judges being in favour of the exemption from duty, the judgment was therefore entered for the plaintiff—a result which seemed to give satisfaction to a densely crowded court We give part of the Chief Baron's argument, as it bore upon what concerns all readers in these newspaper-reading times Sir F. Pollock said, after referring to 6 & 7 of Will. IV, chap 76.—'The material part of the statute is that portion of the schedule A (there is, however, no other schedule) which contains a definition of newspapers It says, 'the following shall be deemed and taken to be newspapers, chargeable with the said duties 1. Any paper containing public news, intelligence, or occurrences, printed in any part of the United Kingdom, to be dispersed and made public' This expression does not differ much from what is found in the first statute that imposed a duty on newspapers—viz., 10th Anne, chap 19, sec 101, and which continued in force till it was repealed by the present statute The language of that statute is—'and for and upon all newspapers or papers containing public news, intelligence, nces which shall be printed in Great Britain, to be dispersed and ade public.' Whatever the statute of Anne meant the statute of William means, and neither more nor less I say ecause by its very title the statute of William IV. is an act to *reduce* the duty on newspapers, and its preamble recites that it i xpedient to reduce them. It must, therefore, be taken that no new duty was imposed, and if, therefore, this publication, the *Household Narrative*, would not have been liable to a stamp duty before the 6th and 7th William IV., it is not so now Now, the 0th George III, chap 9, passed in 1819, an act to subject certain publications to the duties of stamps upon newspapers, by the first ection enacts that all pamphlets and papers containing any public ws, intelligence, or occurrences, or any remarks or observations thereon, or upon any matter in Church or State, printed in any art of the United Kingdom for sale, and published periodically, in parts or numbers at intervals *not exceeding twenty-six days* etween the publication of any two such pamphlets or papers, parts, or numbers (the size is then alluded to), not exceeding two heets, and at (the price) a less sum than 6d, exclusive of duty, hall be deemed and taken to be newspapers within the meaning of he 38th George III. chap 78, and other statutes imposing duties on and regulating the publication of newspapers, and in the rth section it notices pamphlets or papers containing any public ews, intelligence, or occurrences, or any such remarks or ob tions as aforesaid, printed for sale and published periodically, or parts or numbers at intervals exceeding twenty-six days between wo numbers not exceeding two sheets, at a less price than sixence; and it does not make them liable to stamp duty, but acts that they shall be published on the first day of every calendar month, or within two days before or after. It appears to me that is is a legislative recognition that a paper published at greater ntervals than twenty-six days has not the character of a newspaper, though it may be a chronicle of events bringing up its narrative to a very recent period; and I think, as the *Household Narrative* is published at intervals exceeding twenty-six days, it ould be difficult with that statute before us to say it was liable to uty under that act. If it was not then, for the reason already iven, it is not now. I do not see in any of the statutes any distinction between a publication chiefly or wholly consisting of intelligence and one containing such intelligence mixed with other matter, nor do I find anything about the main object of a publication; and I cannot, from the distinction between the two expressions, "containing news" and "containing *any* news," come to he conclusion at which my brother Parke has arrived. Looking, herefore, at the whole course of the statutes on this subject, I think it has been considered by the Legislature that a certain frequency of publication gives to a periodical the character of a chronicle or history, and not that of a newspaper; and however it may afford useful information, as it is not likely successfully to compete with the daily or weekly papers, it has not been rendered liable to the stamp duty. An interval of more than twenty-six days is what I think the Legislature has fixed as the criterion. If the interval be twenty-six days or less, it is a newspaper; if it be more, it is a chronicle or history; and the whole question turns on the distinction between news and history, which has, I think, been settled by the legislature."

Thus the matter stands at present A decision that would have been adverse to Mr. Dickens, would have been almost inoperative, for it would have been a heavy blow to many of our largest publishers, and would have been a sad stumbling-block in the way of cheap literature. Such an interpretation of the law would have been intolerable, still there are difficulties connected with the law as it now stands—difficulties which can only be removed by the affirmation of the principle embodied in the report of the committee, to which we have already referred Apart from fiscal considerations, the committee state that they do not consider that news is of itself a desirable subject of taxation Surely Sir C Wood might carry out this recommendation, and manage to give up the tax on knowledge When mind is concerned—when men are to be stimulated, elevated, and refined—when ignorance is to be destroyed—when the dawn of a new and better era is about to come—surely fiscal considerations ought not to stop the way.

BLOWING BUBBLES.

Half our sorrows, half our troubles,
Making head and heart to ache
Are the fruit of blowing bubbles,
Bright to view, but quick to break

All have played the child imbecile,
Breathing hard to swell the sides
Of [illegible] and vessel,
[illegible] the air it rides.

From the infant's cradle rising,
All the bubble mania show,
Oft our richest wealth comprising
In the bubbles that we blow.

Brilliant, buoyant, upward going,
Pleased we mark them in their flight,
Every hue of Iris showing,
As they glance along the light.

Little castles, high and airy,
With their crystal walls so thin,
Each presents the wicked fairy,
VANITY, enthroned within!

But when two have struck together
What of either do we find?
Not so much as one gay feather
Flying Hope has left behind!

Still, the world are busy blowing
Every one some empty ball,
For the seeds of mischief sowing
Where to burst the bubbles fall

Not for self alone to gather
Is our evil harvest found,
Oft with pipe and cup we rather
Step upon our neighbour's ground

Thus, amusing one another,
While the glistening playthings rise,
We may doom a friend or brother
To a life of care and sighs

Do you doubt my simple story.
I can point a thousand ways,
Where this bubble-making glory
Has its darkness hid in rays!

Yet we'll spare a slight confusion
Caused the world by giving names,
Since a right to some delusion
Every one from Nature claims

MISCELLANEA.

ANECDOTE OF CHANTREY. — Many years before his decease, the celebrated Chantrey attended a funeral at St. Martin's-in-the-Fields. The graveyard was strewed with human bones, and the gravedigger was adding irreverently to the heaps. Chantrey inquired what eventually became of the remains. The sexton replied with a smile, that, when they became too plentiful, "they were carted off in loads to the Thames." A friend describes the effect of this answer upon the frame of Chantrey as painful in the extreme. His cheeks grew sickly white, and perspiration poured down them. At the moment he looked himself a corpse newly risen from the grave before him. "I will take care," he said, with a shudder, "that they do not cart my bones to the Thames. They shall be undisturbed under my native sod." And, accordingly, there are five pounds per annum for ten poor boys of the village of Norton, so long as they will remember industriously to pluck the weeds and to remove the nettles that deface the gravestone of Francis Chantrey. The sculptor subsequently paid a formal visit to Norton, and carefully selected the spot for his last resting-place. While looking for it he encountered the grave-digger. "I am looking out a place for a grave," said Chantrey, "but I don't mean you to dig it." "I hope I shall," replied the gravedigger, quietly and civilly; and it is likely enough that he did, "for," says a reviewer in the *Times*, "within a year the renowned sculptor was deposited near the humbler family dust that had mingled with the earth before him."

THUMPING WON'T MAKE A GENTLEMAN.—Two eminent members of the Irish bar, Doyle and Yelverton, quarrelled one day so violently, that from words they came to blows. Doyle, the more powerful man (at the fists, at least), knocked down his adversary twice, exclaiming vehemently, "You scoundrel! I'll make you behave yourself like a gentleman!" To which Yelverton, rising, answered with equal indignation, "No, sir, never! I defy you! I defy you! You can't do it!"

TAKE EXERCISE.—The venerable author of "Music of Nature," Mr. William Gardiner, has written a paper for the *Leicester Chronicle*, recommending "exercise." "My father," he says, "was remarkable for his lightness of step at the age of ninety-four. He was regular in taking his walking exercises every day—sometimes twice a day. In approaching a similar age, I look back upon many of his actions as a guide, and have scrupulously adopted his habits. In summer time I walk before breakfast, as I dine in the middle of the day; and after tea I enjoy a ramble in the evening. In the winter, I avail myself of the prime of the day. A little rain never stops me; if I am caught, I accelerate my pace, and return with a slight perspiration, instantly changing my dress for dinner; hence, I never take cold. The best pace is that which accords with the motion of the pulse; if you hurry beyond that you are sooner fatigued. My pulse seldom varies from sixty to sixty-four. What Handel terms *tempo ordinario*, or "common time"—that is my natural pace. If you walk slowly, you may walk all day. I never walk with a stick. Anything carried in the hand destroys the erect position of the body, and interrupts the swing of the arms. The arms are pendulums, which act like the fly-wheel in machinery, to steady the motion. In my walks I prefer undulating fields to a plain road. If windy, I meet it, and return home with the wind at my back. Walk once a day, and you will never have occasion for a doctor and his calomel."

Dr Parr, when a boy at Harrow, had so old a face for his age, that one day his contemporary, Sir William Jones, said, looking hard at him "Parr, if you should have the good luck to live forty years, you may stand a chance of overtaking your face."

THE ASTOR LIBRARY, NEW YORK.—About three years and a half ago, the sum of 400,000 dollars was left by the late John Jacob Astor, for the purpose of establishing and building a public library in New York. He appointed twelve trustees for carrying the object into effect. The bequest was to be applied as follows:—75,000 dollars for the erection of the building, 120,000 dollars for the purchase of books and rare manuscripts, and the surplus—205,000 dollars, and after paying for the site—to be invested as a fund for the support and increase of the library. In September, 1848, the trustees decided upon a site in Lafayette-place, as one in every way adapted for the purpose, affording from its situation, that remoteness from the public thoroughfare so necessary to secure quietness during the time of study. In the following month the superintendent, Dr Cogswell, was appointed by his fellow trustees to proceed to Europe, and purchase, at his discretion, books to the amount of 20,000 dollars. He accordingly went, and the result has been most satisfactory. His purchases having been selected with care and discretion, and obtained at low rates, consequent on the disturbed political condition of Europe in the year 1848, and the reduction of prices attendant thereon. The building is constructed after the style of the Byzantine school of architecture. The first floor contains reading and lecture rooms, with corridors and vestibules communicating, and will accommodate five hundred persons. The whole building will be lighted by five hundred gas-lights, and is the first, of such considerable extent, that has ever been called at once into existence. That of Gottingen, the nearest parallel, was founded more than a century ago, when the whole number of books was less than half the present number. The library will be arranged after the most approved European system, and, should it equal that of Gottingen in completeness and excellence, it will be a credit to the new world.

THE MARTYR BISHOP.—Queen Elizabeth, attacked by toothache, could get no sleep, night nor day, nor could any of her doctors give relief. The cabinet, deliberating what was to be done, resolved to call in "an outlandish physician," but as "he might possibly be a Jew," or, still worse, "a Papist," he was not allowed to practise personally on the Queen, but only to prescribe. John Anthony Fenatus, the foreign practitioner, recommended certain applications, but said, if the tooth were decayed, the Queen had better have it out. Her Majesty, however, would not hear of extraction; her cabinet in vain attempted to reason her into the sacrifice; until, at length, Bishop Aylmer, to give confidence to his sovereign, submitted to have a tooth drawn in the royal presence, and Elizabeth then consented to the operation.

ANSWERS TO CORRESPONDENTS

JOHN COOKE.—If you want to improve your mind and have but little time, instead of reading books on the cultivation of the mind, do it at once. It is true that "Todd's Student's Manual" is designed for those whose business is study only; but it is equally useful to those who can only study in the intervals of business, and John Cook must be unfavourably situated indeed, if, with a little self-denial and perseverance, he cannot study in the scientific manner there recommended.

J. L. wants to know how the skin can be got off potatoes without paring them? The best way is to skin them after they are boiled.

AMICUS wishes us to recommend him the best book on Nineveh. This is rather a difficulty. Layard's great work has formed the groundwork of so many others, that we have not here space enough to enumerate them. The best of them, we believe, is an abridgment of his larger work, recently done by Mr Layard himself.

J. WATKINS wants to know the best method of making paper maps adhere to calico. The only thing requisite is great care. It requires a tact only got by experience.

ADAM W.—The new series of THE WORKING MAN'S FRIEND will be bound up in half-yearly volumes.

A READER FROM THE FIRST.—No reform as yet has taken place in the patent law. The expense of registering is very small.

DAMON.—The population of the county of Durham is 408,896; of London, 2,361,640; of Manchester, 228,437, of Salford, 87,514; of Newcastle, 89,145, of Glasgow, 333,657.

A SUFFERER complains of his tendency to blush. We presume he is a young man. He will get over it in time. We had the same weakness, we never do it now. We have had another letter, from another sufferer, on the same subject. Our advice is, don't think about it, and do nothing to blush for.

A SINCERE FRIEND wishes to study the Greek, Latin, and French languages. We advise "A Sincere Friend" to master one language first, studying so many will only confuse him. He says he has got the "French Lessons" published [illegible] let him master them, and then try Latin and Greek. If, however, he will at once make a dead set at all three, we recommend him the introductory works of the Rev. Mr. Arnold—he will find none better in the English language.

R. N. has had a dispute with a friend about the meaning of the word *selfish*. The one deems it a virtue and the other a vice. The former is the wrong use of the term. A proper degree of self-love is enjoined by reason and revelation. It lies at the very foundation of human nature. The excess of it we denominate selfishness. We therefore always use the term selfish in a bad sense. When we speak of a selfish man, we speak in the language of censure.

GEORGE HALL wants to know how we reconcile the contradictory statements of two different writers in THE WORKING MAN'S FRIEND—on of them stating that a perfect knowledge of th French language may be acquired without th of a teacher, and the other stating that no language can be acquired without a master. We at once admit there is an anomaly here, but it is one that does not concern George Hall and our readers. The fact is, that many men acquire a practical knowledge of modern and ancient languages without the aid of a teacher. To the complete mastery of a language a teacher may be essential. Be this, however, as it may, George Hall need not give up in despair. A man without a teacher will be able, with ordinary industry and ability, to pick up as much of a foreign language as will enable him to read its authors with profit.

G. W. H. sends us six questions at once. This is really too bad. We are happy to answer all questio[illegible] G. W. H. [illegible] know h[illegible] the morning (a question which he surely can answer for himself), or what we think a tolerably genteel height (a question decidedly of a private character), we really feel that we have some right to complain. Our correspondent must be more merciful.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER V.

IT would be tedious, if it were not endless, to enter into the details of all the base intrigues by which Stephen Szapolyai, the perfidious defender of the national cause, now sought to obtain the vacant throne. We shall merely introduce into our rapid narrative such details as are furnished by the national historian, Paul Jaszay.

The Szapolyai were a family of German origin, whose military services procured [illegible] favour of Louis the Great, and gaining over Peter Perenyi, one of the officers of the household, he got possession of the crown, and thus, from the prestige attached to the insignia of power, secured the royal authority without opposition. He felt, however, that his authority must rest on a more solid basis to prove lasting. This he found in his relationship with Verboczi, who was connected with his family by marriage, a man who had acquired immense popularity by his ardent love of country and brilliant eloquence.

SIEGE OF AGRIA, BY THE TURKS.—(See page 182.)

anged their names from Hecus to that of th domain apolya, in Sclavonia. They were then called Z dlyai, the al s having the same value amongst the Mag as the *de* the titles of the French nobility

While Solyman, at the he d of the Ott m arm, was com- itting the most frightful devastations in every t of the ngdom, Szapolyai remai ued). at the ad of forty thousand me fortune ould give him a fair opportunity of aiming at the crown. By

The winning manners of Szapolyai completely gained him over to his interests.

Sigismond, King of Poland, the brother-in-law of Szapolyai, had it entirely in his power to put an end to all disputes, by openly declaring for him, and thus have avoided the possibility of a civil war. But by vacillating between two part which by this means inflicted upon his neighbou he sought to ward off from h own kingdom.

Ferdinand of Austria, supp ted by the Emperor Charles V.

at that time in the zenith of his power, hastened to seize upon the Bohemian crown, and wrote to his sister, the widow of Louis II, asking her to use every means in her power to advance his pretensions to the throne of Hungary She responded to her brother's appeal with an amount of talent and energy rarely displayed by one of her sex, and, thanks to the treachery of Stephen Bathori, the Palatine, her efforts were crowned with success. Bathori convened a meeting of the Diet at Presburg, and there the supporters of foreign interests found themselves in the majority, and proclaimed Ferdinand "*the restorer and saviour of Hungarian liberty.*" The Croats also intimated their intention of supporting his claims.

He was, however, well aware that his foreign birth and education would damage him seriously in the eyes of the of the people. He therefore issued a proclamation expressing his devotion to the interests of Hungarian nationality, and containing, amongst others, the following remarkable clause:—"That they should pay no attention to the argument put forward by his adversaries against his claim to the throne, viz., that he could not speak the Magyar language, inasmuch as two of his predecessors had governed the country with ability without having known anything of the national tongue." He promised at the same time to protect and honor this valorous nation, and the *Magyar language*" This is worthy of attention in connection with some of the events which preceded the late war of independence and to which we shall refer in due time.

In consequence of the promises put forward in this manifesto, Ferdinand was proclaimed King, and invested with the crown of St. Stephen, which Perenyi, proving false to Szapolyai, placed in his hands.

The country was now placed in the hands of two rival princes, each supported by a large body of the nation, but neither worthy of the office to which he aspired Better materials for protracted civil war, discord, and anarchy, never existed, for neither had the energy or the ability to bring the struggle to a speedy close. Szapolyai can hardly be blamed for wishing to defend in his own person the electoral rights of the nation, when a vacancy had occurred in the throne; but when he undertook a task so difficult, he should have shown more of energy, and above all of self-reliance While Ferdinand was straining every nerve to bring his enterprise to a successful completion, Szapolyai was reposing on his laurels, and relying upon foreign aid, even though it should be that of the Turks, to extricate him from every difficulty.

Finding himself abandoned by Sigismond, he wrote to the Doge of Venice, the King of France, and other European sovereigns, asking for assistance Francis of France was at that time engaged in a tremendous struggle with Charles V., whose enormous power threatened to overwhelm the minor states of the European Continent, but he agreed to supply King John, as Szapolyai was now called, with a subsidy of 30,000 louis a month, to assist him in carrying on the conflict with the Archduke of Austria.

Ferdinand, who feared delay might work defeat, assembled a large army upon the frontiers of Austria in order to support his claims by force. Szapolyai was not wanting in personal courage, but he was indolent, and without decision of character; and, besides, had few soldiers, and his treasury was empty. The Austrians took possession of Buda without striking a blow, and the national King was obliged to fly, first to Transylvania, and then Poland. An unfortunate man has few friends ever; and John found himself abandoned in his flight by everyone but John Banfi, a high-minded Magyar noble. In Poland he found another staunch supporter, Jerome Laski, Palatine of Siradia. The latter was an able and high-spirited man, headstrong and courageous, ready—like most of the Poles—to risk everything for anything. He said to John without hesitation—"There remains but one man to whom you can look for support—it is Solyman, the Sultan. I will set out, and ask him to espouse your quarrel." "Alas!" said the unfortunate Szapolyai, "the remedy would be worse than the disease." The Sultan at first refused to listen to the proposals of the Poles, alleging that he himself was master of Hungary; but afterwards perceiving that he would in Frederick encounter a formidable adversary, he determined upon siding with the weaker party. It is passing strange, and "wondrous pitiful," that Hungary, who had so often saved Austria from the Moslem, should so often be compelled to seek in the arms of the Moslem protection from Austria. The unfortunate Hungarians, however, had then as much to fear from the alliance of Turkey, as from the open expression of her hatred. The Ottoman army soon crossed her frontiers, and there renewed, as friends, the ravages which they had formerly committed as enemies. Szapolyai repaired to the Sultan's camp, and did him homage, on bended knee, for the kingdom which was no longer his. Solyman marched as far as Vienna, under the walls of which he encamped for a few days, and then suddenly retreated. He had no sooner departed than Frederick again took possession of Buda, and again Szapolyai invited the Ottomans back. So great were the devastations committed by both parties, that the Magyars did not know which to dislike more, the Austrians who came to attack them, or the Turks who came to defend. Solyman, who was as unfortunate in sieges as he was successful in battle, was repulsed before Koszeg, which was defended by a Croat chief devoted to the Austrians, and retreated, carrying with him thirty thousand captives as slaves.

The war still continued,—victory inclining now to one side, and now to the other, until both kings had exhausted their strength without deciding their quarrel. At last a treaty was concluded by which Szapolyai was to occupy the throne while he lived, and at his death it was to revert to Ferdinand, and in case he left any children, they were to be placed in possession of a revenue suitable to their rank and birth As his offspring, therefore, could not succeed him, Szapolyai laid aside all thoughts of marrying, and would have continued all his life in single blessedness, had not his courtiers worked upon his vanity, and persuaded him that it was the duty of a prince, circumstanced as he was, to strengthen his kingdom by an alliance with the family of some neighbouring sovereign. He turned his eyes towards Poland. Sigismond, the king of that country, more fortunate than his brother Uladislaus II, of Hungary, had succeeded in raising Poland to a high position amongst the nations of Europe in the arts and sciences and civilisation, and effected the happiest transformation in the habits and life of the people. He had one daughter, the offspring of his marriage with Bona Sforza, of Milan If women envy beauty in their own sex, as many say they do, she was envied by all the ladies of the court, and admired by all the men But her personal charms formed but a very small part of her recommendations to popular respect and veneration. She had manifested a devotion to science and learning, very unusual amongst the women of that age, and combined all the mild charity and devout piety of a nun with the strictest attention to the duties of everyday life. She had learned in the midst of prosperity, and surrounded by the thoughtless licentiousness of a gay court, to perform with uncomplaining fidelity the hardest tasks that the sternest stroke of adversity could impose. The miseries of the poor upon her father's private estates were the subjects of her daily solicitude, and the poor serf, sunk in hopeless poverty, came to look upon her as little inferior to one of the ministering spirits before whose images he had been taught to bow down and adore. The principles of government were a portion of her daily study, more from a love to the people as *men*, and as such, essentially noble, than from any expectation that she would ever be called upon to rule.

Such was the woman whom Szapolyai obtained as his wife. She was worthy of a better lot—worthy of a union with a soul whose aspirations were as lofty, and thoughts as pure and dignified, as her own.

The Hungarians hailed her arrival in the country with universal acclamation, and though impoverished and harassed by five years of war and disaster, they welcomed her with gorgeousness of pomp and display worthy of the days of Mathias Corvinus. In the midst of all these rejoicings, two of the nobles, Majlath and Balassa, stirred up a revolt in Transylvania, a piece of treachery the more disastrous and less excusable, as Isabella already gave promise of an heir to the crown, around whom the national party might rally, and thus put an end to foreign interference and intestine division. Scarcely had the rebellion been put down, than the Queen brought forth a son, and in a month or two afterwards the King found himself dying. In his last will he named George Utjssenovics, Bishop of Great Varadin, and Peter Petrovics,

Count of Temes, guardians of John Sigismond, his son. He had scarcely signed it when he expired.

He was a man who was evidently not born to rule, and he grasped at the sceptre more from childish vanity and love of display, than from a desire for power. His unfortunate position drove him to the commission of acts opposed by his judgment, and at which his heart revolted, and compelled him to seek protection from the worst enemy of himself and his kingdom, to the great humiliation and misery of both. He had but one virtue, stoicism under misfortune, but he did not exercise even for this. His people ascribed it to lethargic indifference, or imbecility.

An infant, a woman, and a monk, were now at the head of affairs, and although, after the death of King John, the Diet of Rakos appointed the Queen and Valentine Frank to the regencies, Martinuzzi and Isabella alone held the reins of government, in the name of the young Prince.

Martinuzzi occupies so prominent a position in Hungarian history at this period, and the information concerning his early life furnished by the Magyar historians is so very scanty, that we must content ourselves with presenting to the reader such details as have been collected by M. Bechet, a French historian. "The family of Martinuzzi was one of the most illustrious in the kingdom, but, either through the troubles of the times, or bad management of their affairs, they had not the means of affording him in his infancy an education suitable to his birth.

"He was born in 1482, in the Castle of Nemezna, in Croatia, of which his father bore the name, with the title of Count, but the castle and the name were all that remained to him of the honours of his ancestry. The young Ujsenovics having been born after his father's death, his mother perceived that he would early have to contend against the twofold disadvantages of poverty and orphanage.

"Under these circumstances, she determined to secure for him a patron and protector, who might aid him even more effectually than his father could have done had he been living. She therefore requested her brother, James Martinuzzi, Bishop of Scandona, in Dalmatia, to become his sponsor at the baptismal font, and to interest him still more in the future progress of his godson, she changed his name to Martinuzzi, which he ever afterwards bore."

Nevertheless, his uncle soon afterwards abandoned him. After many changes he found an asylum in the house of the Szapolyai, but in a menial situation. The dull and degrading nature of his duties soon disgusted him, and he entered the convent of the Hermits of St. Paul, where he made himself known to King John when he fled thither after his defeat at Arta. The unfortunate monarch had not then many friends, and Martinuzzi soon gained his confidence to such a degree, that he became his daily companion. He then made him his ambassador, and soon after his spy. His monk's cowl, the humble respected than even the royal purple, preserved him from the many dangers incident to such a character.

When Szapolyai had retrieved his misfortunes, and resumed the throne, he did not prove ungrateful to his former friend, but admitted him to his council. But this was not enough to satisfy the ambition of Martinuzzi. So well did he manage his intrigues, that he soon became Bishop of Great Varadin, Waywode of Transylvania, and Treasurer of the Kingdom. He soon supplanted all the courtiers who in turn gained the ascendancy over the feeble-minded King, and became virtually master of the kingdom. He had, however, a great soul, far too great for the station and duties of a monk. He was not merely a polite statesman, or a well-read scholar. He never sought peril, but when it came he was not afraid to meet it. He was often present on the battle-field, and at last learned to win battles himself. He was particularly clever in the discovery of the secrets of his enemies, but had the art, so important to diplomaticians, of enveloping his own in the most profound mystery, and paid no regard to the sanctity of an oath. In a word, he possessed all the qualities requisite to make a man great, but hardly any of those that make a man good.

The Austrian faction, which of all things feared the yoke of the Turks, immediately upon the death of John, called upon Ferdinand to assert his rights, and he therefore wrote to Isabella demanding the fulfilment of the treaty concluded by her late husband, and at the same time promising her private estates in his own dominions. Although this treaty had been concluded without the knowledge of the nation at large, and in direct violation of its acknowledged rights, Isabella felt some scruples about breaking it. She felt that she was unfitted for the turmoil of the stormy existence which was then opening up before her, and, as she had no love for power, she looked back with longing regret to the pursuits of quiet usefulness which the days of her maidenhood were spent. She could anticipate with unmixed pleasure her retirement from the pomp and bustle of the court into some peaceful rural solitude, in which she might devote her whole time to the education of her son, and make herself the friend and consoler of the poor peasantry around. She therefore determined upon giving up Hungary to Ferdinand, and hastened to inform Martinuzzi of her intention. The wily priest, seeing at a glance that such a step once taken his occupation was gone, endeavored to divert her mind, steadily opposed himself to it. "I will never," said he, "betray the interests of my ward; I do not respect a treaty signed by King John under fear of coercion, and against the will of the nation. He had no right to convey away his son's claim to the crown, and place Hungary under the rule of a stranger."

His pressing his zeal, and reproached Isabella for her indifference to the welfare of her country. She yielded at last, since the minister had possession of the treasury and the army, and was supported by Solyman, the Turkish sultan. An Austrian army was sent to besiege Buda, but was repulsed with loss, and forced to abandon the enterprise. In the following year Roggendorf marched anew to attack it. A conspiracy formed to assassinate Martinuzzi failed ignominiously, and just as the Turks were being driven back from his gates, the banners of the Ottomans were seen in the distance upon the plain. The Sultan had sent his vizier, Mehemet Pacha, to the aid of the young King, whose dominions he hoped one day to incorporate with his own empire. A terrible battle was fought under the walls of Pesth, in which the besieged, sallying from the town, took the side of the Turks. The carnage was frightful, the Danube being half filled with the bodies of the dead. The town itself soon became the scene of the conflict, and soldiers, inhabitants, women, children, all, in short, who were not Turks, were mercilessly slaughtered. Roggendorf, mortally wounded, took refuge in the isle of Czeplokoz, and there died.

Solyman did not immediately enter Buda, but he expressed the liveliest impatience "to embrace the child on whose behalf he had undergone so much fatigue, and passed through so many perils." Isabella, naturally timid, and excessively fond of her son was reluctant to trust him in the hands of the Sultan, but Martinuzzi, who was fearful of irritating him, succeeded in overcoming her scruples. The royal infant was taken in the arms of his nurse, riding in a magnificent carriage, to Solyman's tent, who received him with all outward marks of affection, then turning to his own children, charged them "to love John Sigismond as they would their own brother." In the meantime, whilst the *cortège* that accompanied the young King was thus engaged, the Turkish troops entered the fortress, disarmed the guard, and took up a position in one of the principal quarters of the town. The young Prince was then sent back, but it was in vain that the Queen wrote a letter, complaining of the Sultan's perfidy. "If you have sufficient experience to govern a kingdom," said he, "why have you not enough strength to defend it? Go to Transylvania; you can there live in peace, which it is impossible for you to expect here, your son shall be my waywode in that province, and you shall be his guardian. Martinuzzi and Petrovics will aid you with their advice." He then named the lawyer Verbocsi, the supreme judge of the inhabitants of Buda. The latter died in a few months afterwards, regretting bitterly on his death bed the equivocal part which he had played towards the close of his career.

The Queen was, as we have already stated, much more attached to her son than to the crown, and she therefore set out for Transylvania immediately. Upon her arrival upon the frontiers, several of the nobles of that province refused to allow her to enter, and fearing that if they did so, they might incur the anger of the Sultan. She was, therefore, obliged to call upon Martinuzzi for assistance, which was rendered so effectually, that Isabella speedily found herself surrounded by

a knot of steadfast friends, but the monk retained all the real influence in his own hands.

Solyman in the meantime remained in Hungary, and Ferdinand loaded him with presents, and asked him to bestow upon him the investiture of the kingdom. He gained nothing from this, however, as the Sultan received the presents but refused the investiture. Hungary, during the next hundred and fifty years, was the scene of continual struggles between the Turks and the Austrians, both inflicting upon the inhabitants all the direst evils of military violence and rapine. To increase these horrors an army was sent by the Electors of Germany to take part in the struggle, but which produced no better result than the prolongation of the struggle and the decimation of the unhappy people by famine and carnage. The Christian belligerents showed no more humanity than the infidel Turks. When a town was taken by either party it was invariably burnt, as the surest means of preventing its occupation by the enemy. Ferdinand of Austria, having exhausted his treasury, levied supplies for the support of his army upon the Magyar population, and Solyman did likewise, with, if possible, less scruple, while both massacred the peasantry with as little remorse as if they had been wild beasts. The evils inflicted upon Hungary by the reckless and insane ambition of the imbecile House of Hapsburgh have been too great to allow us to hope that so infatuated a family can ever expiate them. The regeneration of Hungary must be the work of abler and purer hands.

The Five Churches, Royal Alba, and Strigonia, fell into the power of the Turks, and half the kingdom was soon groaning under the arbitrary government of pachas, and the German and Austrian armies were forced to retreat

Ferdinand was at length successful in obtaining a truce of five years, but only on condition that Hungary should in the

I—(See page 144.)

ISABELLA SZAPOLYAI.—(See page 179.)

interval remain divided between the two parties. He also managed to gain over Martinuzzi to his side. The latter, finding that the Queen had given the Sultan an unfavourable opinion of him, feared to trust himself any more in the Turkish camp, as he was well aware that Solyman recked no more of cutting off the head of an archbishop than that of a vizier. He also doubtless hoped to gain more of dignity or profit from supporting the cause of the wily Ferdinand than from the faithful discharge of his duty towards the widowed Queen and her orphan son. Isabella, hearing of his treachery, appealed to Solyman for aid, who forthwith sent an army to chastise the perfidious minister. Ferdinand sent another to support him; but Martinuzzi, suddenly becoming reconciled to the Queen, took the field in person, and beat the Austrians in several pitched battles. Ferdinand was exasperated beyond measure, and the Sultan, astonished at the prelate's military talents, sent an embassy to effect a reconciliation with him, and to congratulate him upon his success. All this increased the pride and hauteur of the Bishop, and rendered the position of the Queen every day less endurable. Daily subjected to fresh proofs of his insolence and ingratitude, she was an object of pity even to her enemies, and whilst Martinuzzi surrounded himself with a pomp and magnificence but little in accordance with his sacred office, she was compelled to content herself with an establishment suited neither to her birth nor her present position.

The former, whom we must in charity suppose to have had the national cause at

heart, in some degree at least, now broke off his negotiations with Ferdinand, who instantly besought Charles V. to assist

the best soldiers in Europe. Castaldo marched rapidly towards the Tibissa, and entered into communication with Martinuzzi. But the Monk was already engaged in negotiation [illegible] the Sultan, fearing that if Ferdinand once became master of the country, he would deprive him of all authority and influence.

The Spanish general offered to Isabella, in the name of the Archduke, the duchies of Oppeln and Ratibor to hold in her own right as absolute sovereign, in case she resigned all claim to the Hungarian crown, and affianced her son to one of Ferdi-

JOHN BATHORI.—(*See page* 134.)

[illegible]—(*See page* [illegible])

um. General Castaldo was instantly sent to head the Austrian forces, in conjunction with some Spanish troops, at that time

n's daughters. She accepted [illegible] the efforts of Martinuzzi to dissu[illegible]

Ferdinand offered him the Archbishopric of Strigonia—he still made strenuous attempts to induce the Queen to change her resolution. But she steadfastly refused. "The die is cast," said she, "and if Ferdinand breaks his word upon him will the shame fall."

At length the day arrived on which she was formally to sign the act of abdication, and consign herself and her son to the obscurity of a petty princedom in Silesia. The Diet of the nation was assembled in an old abbey near Kolosvar to witness the ceremonial—no longer the united body of brave and enthusiastic men who sat with Louis the Great around the council board, and followed him to the field to carry out their deliberations at the point of their swords. It was now "a house divided against itself;" part, bribed by foreign gold, applauding the step which promised to advance their personal interest, and only a small minority mourning over the downfall of the country, and the wrongs and humiliation of a gentle and amiable woman, wife of their national sovereign.

When Isabella handed over the crown and the sceptre, the young Prince cried bitterly, in the simplicity of childhood regretting far more deeply the loss of the baubles than the power of which they were the symbols.

Solyman, indignant at being made the dupe of all parties, assembled an immense army and invaded Hungary. Mehemmet, finding all his efforts to prevent the Queen's abdication in vain, had renewed his negotiations with the Sultan, when his schemes were discovered by the partisans of Ferdinand, and duly reported at the Austrian Court. It was resolved that he should be forthwith put out of the way in a manner that would for ever prevent his interference in politics. He at that time resided in the Castle of Alvintz, a strongly-fortified dwelling, and well supplied with all the munitions of war. It was to this he retired to repose after the fatigues of business, but Castaldo, the Austrian general, had at all times free access to him, in consequence of his oft-repeated, but hypocritical, protestations of friendship and devotion. [illegible] Ferdinand to five conspirators, Palavicini, Ferrara, Monaco, Piacentino, and Scaramonta, who repaired to the castle on an appointed day. The gates were opened, and Don Lopez, a Spanish colonel, and some soldiers, entered. Palavicini went towards the apartments of the Bishop. Zerilla, Castaldo's secretary, accompanied him, carrying some pipes, as if about to present them for Mahomet's use. As he [illegible] comply with their request, Lopez clubbed him to the neck with his dagger, while Palavicini had open his skull with a blow of his sabre. "What is this, my brother?" said the prelate, and the same moment dropped dead.

Thus perished a man who was born in poverty and obscurity, but before he died made himself wealthy and great. Without doubt, when Ferdinand caused him to be assassinated, it was less with the intention of re-establishing the bulwarks of Christianity, and protecting Hungary from the assaults of Islamism, than of ridding himself of the last champion of Magyar freedom. No one could deny Martinuzzi the possession of great talents, and too much made use of by great men, but from their servant he, by degrees, became their equal, and, at last, their master. He had no friends. Like Napoleon, he was incapable of such a feeling as friendship; but never was there a man who knew better the art of winning the crowd, and attaching it to his schemes. He was ambitious in the highest degree, and patriotic in spite of himself, because his own interests coincided with those of his country. So that, amidst all his treacheries, deceit, and tergiversation, his ulterior aim was ever the triumph of the national cause and the downfall of the enemies of Hungary. A great leader, and an intrepid soldier, he knew how to unite his prudence with a calm dignity, equally removed from fiery rashness or foolish caution. On occasion he was flying from his enemies by forced marches, when his carriage was overturned in crossing a stream, and the gentlemen of his suite remarked to him in terror that it was a bad omen. "Pshaw!" said he, "that broken-down chariot does not rule my destiny—it follows the course of that one!" (pointing to the sun), "which you see shining there in the heavens."

Ferdinand had some difficulty in obtaining absolution for the murder from the Pope, but was at length successful, and then prepared to march against the Turks.

The Poles at last began to manifest some interest in the fortunes of Isabella, as the Archduke was failing to fulfil his engagements towards her, and even refused to pay her the yearly stipend which he had promised. It was in vain she sought for assistance from the European princes. They all pitied her, but none offered to aid her by an armed force—the only argument that would have any weight in the eyes of the Austrian Duke. The intervention volunteered by the Poles was feeble and ineffectual, and, as a last resource, she was compelled to appeal to Solyman.

He agreed to support her, as he had often before persecuted her, from motives of selfish policy. Mehemet Pacha, the Ottoman General of the Cavalry, entered Hungary at the head of one hundred thousand men. Temesvar was carried by assault, notwithstanding the heroic defence of Losonczi, who defended the place for Ferdinand. The arrival of Maurice, Duke of Saxe, soon after revived the courage of the Germans and Spaniards. But this reinforcement did not terrify Mehemet, who advanced to lay siege to Agria, with full confidence in his own good fortune.

Agria was a town founded by St. Stephen, and the garrison was commanded by Dobo for Ferdinand. It was but badly fortified, but it was defended by the best soldiers of Hungary, and the inhabitants, roused by the remembrance of so many brilliant victories achieved by their ancestors, prepared for a desperate defence. When the enemy appeared the whole population assembled in the market-place, and swore with frantic shouts to the observance of [illegible] articles. "The word *capitulation* shall be pronounced by any one but to reject it, he shall be put to death. When the provisions are all consumed we shall eat one another, and the women shall be chosen by lot. The women shall occupy the posts in repairing the walls, and shall follow their husbands and fathers in the breach, and in the sallies."

Mehemet made up close to the ramparts, and summoned the inhabitants that if they surrendered they should be numbered among the best beloved subjects of the Commander of the Faithful. The besieged, without uttering a word, raised four poles upon the ramparts, and placed on the top a coffin covered with a black pall, as their only answer. This sad token of proud but desperate defiance had scarcely disappeared, when the Turkish artillery opened its fire upon them with such tremendous vigour, that whichever way the garrison looked nothing could be seen of the surrounding country, but was smoke and circling flame. In a few minutes the citadel was dismantled, the roofs of the houses beaten in, and the Turks, yelling their scimitars, rushed to the assault with frenzied cries shouts of "Allah il-Allah—there is but one God, and Mahomet is the prophet of God!" Planted firmly in the breach, the Magyars awaited the onset with levelled pikes and drawn swords, and eight thousand of the bravest of the Ottomans slain in the first few moments of the conflict attested their desperate valour. Mehemet, enraged at this unlooked-for check, four times in succession urged on his troops to the charge, and four times were they beaten back, diminished in numbers, wounded, bruised, and weary. In the heat of the battle the Magyar women were seen hurling down huge stones, or pouring boiling oil on the heads of the assailants, and exciting or cheering them their relatives by their tears or their praises. Astonished and confounded by so vigorous a resistance, Mehemet broke up his camp, and retreated with precipitation.

Isabella now renewed her applications to Solyman, who made still greater preparations for a demonstration in her favour; but the officers of Ferdinand, by their cruelties and exactions in Transylvania, rendered her still more [illegible]. Nothing so surely works its downfall in the long run as unrestrained despotism. There is a limit to the endurance of the most slavish of mankind, and when it is once passed, the reaction is instant and disastrous. So in Transylvania, the inhabitants, harassed and annoyed by the tyranny of the creatures of Austria, rose in insurrection, and called upon Isabella to put herself at their head in 1556. Her misfortunes had bestowed upon her new charms, and her son, who already gave indications of future excellence, won the hearts of all who saw him.

They took an oath of fidelity to the mother and son, which was proof to all the intrigues of Castaldo, the power of Ferdi-

nand, and the caprice of fortune. After having appeased many revolts fomented by the Imperial Court, Isabella convoked a Diet at Cibina, and there received the homage of the nobles and people. But, unhappily, at this moment, the disease was at work, which ere long was to cut short her reign and her life.

The abdication of Charles V., and his retirement into convent, after having resigned all worldly power and dignity excited the astonishment of Europe. To his son, Philip II he left the kingdom of Spain, the Low Countries, and his possessions in the Italian peninsula, but all his efforts were not sufficient to prevent the election of his brother Ferdinand to the dignity of Emperor of Germany. The latter believed that the mere title would supply him with power sufficient to retain all his old conquests, and acquire new ones To Solyman, the elevation of his old adversary formed a new motive for again attacking him; and aware of the dissensions caused by religious differences in Germany, he proclaimed himself, as if sarcastically, protector of the Catholic faith.

All this had but just taken place, when Isabella died, at the early age of forty years. Her life, from the period of her marriage, was but a series of misfortunes, and never woman deserved them less. She was the gentlest of her sex, and with the patient endurance of a woman, she united the courage and devotion of a martyr. She gave up the crown to carry out the plighted faith of her dead husband, and resumed it only when Ferdinand had violated his solemn oaths, and even then acted in a manner which clearly manifested her integrity, straightforwardness, and truth.

After her death, her son, John Sigismond, was in danger of being crushed by his enemies, and Poland at last interfered on his behalf Whilst negotiations were being carried on, with the view of reinstating him in his rights, Ferdinand of Austria died, and Maximilian II, his son, succeeded him on the throne, and immediately declared his intention to assert his father's claim to Hungary and Transylvania But the nobles rallied round Sigismond, and his cause made rapid progress Maximilian sent two able generals against him, who gained many victories over the Turks and Transylvanians. Solyman, irritated by the defeats of his lieutenants, determined to visit the scene of war in person. Having arrived, he determined, as the first of his operations, to lay siege to Sziget—a town upon the frontiers of Sclavonia, built in the middle of a marsh, and approachable only by a narrow causeway. Nicholas Zrinyi, a scion of the illustrious Croat family of Sabics, commanded the garrison, and made every preparation for a vigorous resistance, although his resources were extremely limited He had only three thousand soldiers, but they were all picked men, and had the most unbounded confidence in the courage and talents of their leader.

The artillery of the Turks had not played upon the town for many hours before the slender rampart which surrounded it was levelled to the ground, and the besiegers entered it sword in hand. There was a stern conflict in the breach, but the garrison, overpowered by numbers, were obliged to take refuge in the citadel, and leave the inhabitants to their fate. Zrinyi had now only six hundred men remaining, the rest having fallen in the encounter, but with these he determined to hold out to the last extremity The Turks kept up a continued fire of their heaviest cannon, and made use of every possible contrivance to set the place on fire, but in vain. Solyman, enraged beyond measure at so unexpected a resistance, and fearing that if he were baffled in an enterprise apparently so trifling, it would dim the glory won in forty years of warfare, summoned his generals to his tent. "Good-for-nothing scoundrels!" said he, in a fury, "if Sziget be not taken in one hour, I will fill up the ditch with your heads, and march the army across your carcases to the assault." He was not able to say more; the violence of his anger brought on a fit of apoplexy, and he died that night He was the soul of the Ottoman power. Since his time, it has been gradually declining; but during his lifetime his very presence seemed to convey an assurance of victory.

His death would have had a fatal influence in damping the courage of his troops, had the news been immediately announced to them, but the vizier, in obedience to the dying orders of his master, strangled the physician, and the attendants who waited upon him, before they left the chamber. The body of the Sultan was then clothed in royal robes, and placed sitting on an elevated throne in front of the camp, and within sight of the scene of conflict, and the trumpet immediately gave the signal for a general assault. The soldiers imagining they were now about to fight under the eye of their Sovereign, whom they saw only from a distance, advanced to the attack with redoubled ardour An unforeseen event, however, saved them from the dangers of the breach—the fort had taken fire, and the fortifications, which had hitherto withstood the artillery, gave way before the flames, burying many of the garrison in the ruins. The stores of every description were consumed, and when Zrinyi assembled his men, he found that, out of six hundred, he had only two hundred and seventy able to fight But not one face in the little band lost its colour at the sight of their dreadful situation. "My friends," said Zrinyi, addressing them, "we must bid each other farewell, and die in the midst of the enemy. It is our duty to teach the infidels what the heroism of the Christians is Let us show them that it is better to die like us than conquer like themselves!" He was answered by a shout of assent, and, retiring for a few moments, he came forward, dressed in a splendid uniform. "We should dress as for a banquet," said he, smiling, "for to-night we shall enter Paradise." He then went from rank to rank, embracing each man separately, and bidding him an everlasting farewell. He then opened the gate, lowered the bridge, and, leading his men outside of the fort, awaited in silence the approach of the enemy. The Turks hesitated for a moment, suspecting some stratagem, but, becoming reassured, rushed furiously to the attack. Zrinyi fought with great coolness, dealing death with every stroke. At length he was wounded in the neck, and the blood gushed out in torrents—still he fought with unshaken courage. Another stroke of a scimitar severed the sinews of his legs, and he held his foes at bay upon his knees, till a bullet passing through his brain laid him dead at the feet of his enemies. The rest of the garrison were cut to pieces. Four men only survived, who steadily refused all offers of quarter, till their arms were wrested from their hands, and they could no longer fight The Turks then entered to take possession of their conquest, but found nothing save a mass of blackened ruins to reward them for a siege of thirty-three days, twenty fierce assaults, and the loss of thirty thousand men.

Whilst these brave men were shedding their blood in the cause of Austria, an army of ten thousand men, under the command of the Archduke Charles, was within thirteen miles of Sziget during the siege, and another of a hundred thousand under the command of the Emperor himself, within two miles distant, and neither offered to move to their assistance. Upon receiving the news of the disaster, Maximilian, forgetting that he owed the support of the national party to his promises to repel the invasions of the Turks, retreated to Vienna, leaving Hungary a prey to the most horrible convulsions. The Grand Vizier knew better than he the loss that Austria had sustained. Sending him the head of Zrinyi, he thus wrote:—"I forward you as a testimony of my good-will the head of the greatest and bravest of your generals. You will feel his loss before long His remains have been interred with all the honours due to such a hero."

The inaction of the Austrian armies led soon after to the fall of the fortress of Gyula, and a third of Austrian Hungary

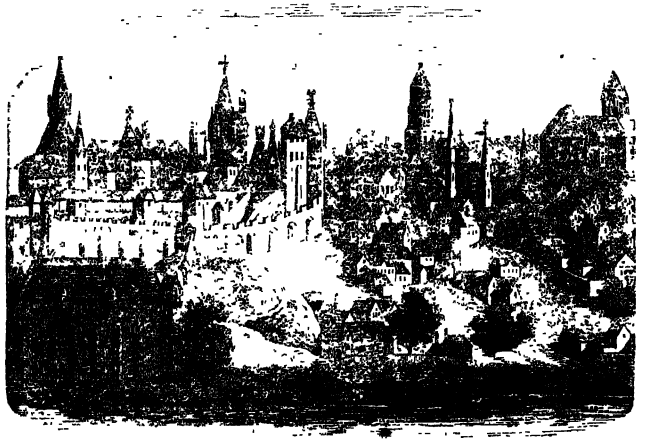
[illegible]

[illegible]

[illegible]

abandoned public life, and retired to their estates; or went over to the camp of George Bocksai, a powerful noble of Transylvania, whose family had ever been devotedly attached to the national cause. Tovok, Drugeth, and some others, united to dethrone a prince whose mea[illegible] nd whose policy promised, at no distant day, to dismember nd ruin a state, the interest of which he had sworn to protect. he conspiracy was, however, discovered, and the authors of . banished. This defeat, and the intrigues of Behessi, who ossessed great influence with John Sigismond, but was

secretly bribed by the Austrians, at last induced the young King to conclude a treaty with Maximilian upon the following ter[illegible]s:—That John [illegible] should renounce the title of King and take that of Most Serene Prince, that Transylvania [illegible]ny, and that part of the Hungarian frontier, which he then possessed, he should enjoy during his lifetime, [illegible] at his death it should [illegible] Austria. If the Sultan should take umbrage at the conclusion of a treaty of this nature without his knowledge, and should drive him from his dominions, that he should have the castle of Oppola in Silesia, as a place of refuge. Lastly, that if John Sigismond should die without issue, the states of Transylvania should elect a prince, who would be dependant on the Court of Vienna.



Like all the kings chosen from the rank of the oligarchy in the later days of Hungarian history, Sigismond had more regard for the splendour of his house, and the possession of a precarious title, than for the prosperity and happiness of the country. A marriage was about this time upon the *tapis* between himself and a niece of Maximilian, which seemed likely to give rise to new difficulties, when his death, in 1571, put an end to all uneasiness on that ground. With him ended the short-lived dynasty of Szapolyai. He was a staunch supporter of religious liberty, but in politics as weak and feeble as his father.

The Transylvanians elected as his successor a man in every way worthy of the Hungarian throne--Stephen Bathori. His past achievements and services to the state at once procured for him the suffrages of the people, and even Maximilian himself confirmed his election. The reign of Bathori in Transylvania, however, did not last long. He was soon after called to the throne of Poland, from which Henry of Valois had fled upon receiving the news of the death of his brother, Charles IX. The Polish Diet had then declared the throne vacant. It was in vain that Maximilian endeavoured to purchase their votes; Bathori ca[illegible]ed everything by the weight of his character. The Emperor the[illegible] made preparations to assert his claims by force of arms, w[illegible]n his death put a stop to the expedition which he had f[illegible]ted out for the purpose. Thus placed in peaceable possess[illegible]on of the throne, Bathori re-established dis-

cipline in the army, and silenced, for the time at least, the contentions of the nobles. The long peace which they had enjoyed under the two Sigismonds, rendered the Polish army little better than a horde of undisciplined cavalry. By the introduction of well-trained Magyars, and by paying attention to the science of artillery, a vast improvement was now effected.

Bathori practised in his government those principles of toleration, which were promulgated for the first time in the history of the world in the fifteenth century. He declared "that to God alone belonged the right of controlling men's belief, and that he was not impious enough to interfere with him."

At the same time with Bathori two other sovereigns ascended the thrones of their ancestors—Amurath III., at Constantinople, and Rodolph, as the heir of the Austrian Cæsars. The latter had been crowned King of Hungary at Presburg in 1572. He was the slave of his passions, capricious, fickle, and "variable as the shade by the light quivering aspen made." Unable to rule himself, he was beyond all doubt unworthy to reign over even a fallen people. Pimped, every week of his sickly, miserable existence, in some new, and always gross amour, unredeemed by one trait of tenderness or feeling, so vile was his sensuality, that the princesses of the most profligate court of Rome, of the first kingdom in Europe, has come to be "a of a profligate age loathed his alliance, and spurned the shaking of the head amongst the nations," and through many offer of his hand. Like most other *roués*, he was avaricious even of [illegible] lawlessness, and stingy. He liked animal pleasure of all other things oppression, and in fortune, the black eagle of Austria with his reach, but he liked to get it cheap. If it cost much he would have none of it, or make others pay for it. He was [illegible] with wings in darkness furled."

a very fair specimen of the disposition and capabilities of all the men of his race. The very best that can be said of any Prince of the House of Hapsburgh since Charles V. is, that he was not a bad man. Their virtues have all been negative. They have sometimes abstained from doing evil, but they have seldom, if ever, done good. The genius and talents of the whole line seem to have been centred in one man, and when he died, the greatness of the family died with him. His effo [illegible] which he ruled.

It would be a painful and, in many respects, a useless task to follow out the details of the "battles, sieges, fortunes," of which Hungary, during the reign of Rodolph, was the scene. Every day added new names to the long and glorious list of her martyred patriots, men who feared the moral degradation of a slavish life more than the sword of the foreign conqueror, or the eternity of the Father of all mankind. But the tongue that tells of the thousand glories of her declining age, must tell too in sadness and humiliation of the many traitors who forsook her, and of the many false hearts who denied the land of their birth, and dishonoured the bones of their dead fathers by their falsehood and villany. Whilst Rodolph, in company with his friend Tycho Brahe, followed the course of the stars in a lonely tower at Prague, the Turks were overrunning the land, until the crescent floated from the walls of the proudest cities. In the streets of Buda and Royal Alba, the burying-place of royalty itself, the long drawn cry of the muezzin, as he called the followers of the Prophet to their evening prayer, disturbed the Christian priest, as with bated voice he chanted the hymn of the Virgin, and implored her intercession on behalf of the afflicted kingdom.

MIGNIONETTE.

BY MISS H. M. RAIDI

CHAPTER I.

Mrs Wright was the mistress of an excellent free-school for girls in the small market town of Evesham, and her strong mind, original turn of thinking, and lady like deportment, rendered her company generally acceptable to all classes. For a few years she had lived alone, while fulfilling the duties of her arduous post, but long before our story opens she had taken under her charge the orphan daughter of a poor curate, whose church, though situated in the village of Hyde, five miles distant, she had commonly attended, in preference to the Puseyite chapel-of-ease which supplied the spiritual needs of the inhabitants of Evesham. Left in utter destitution within a year of her marriage, Mrs Leslie, the young curate's widow, died in giving birth to a little daughter only two months after her husband's death, her last moments inexpressibly cheered by the assurance of Mrs. Wright that her helpless child should never want a friend so long as the good schoolmistress's life and health were spared. It was in an orderly, comfortable home, possessing a sunny back garden, filled with fruit-trees and old fashioned flowers, that the little girl grew up, her childhood carefully yet judiciously cherished by her second mother, and the clean, tidy servant who had been in her service nearly twenty years. The child, called after her maternal parent by the fanciful name of Mignonette, fully justified the appellation as she advanced in life, by her sweet temper, gentle sportiveness, and a kind of quiet grace which seemed inherent, and which pervaded every movement. To qualify her as a governess to teach young ladies of the higher rank, was the object of Mrs. Wright's ambition, and to accomplish this purpose she worked early and late, that she might engage the best masters for her *protégé* which the little market-town afforded, while she made a point of her visiting at such houses as she thought likely to benefit her mental advancement and improve her manners.

So simple, modest, well skilled in all housewifely accomplishments, and fond of being useful without boast, Mignonette at seventeen had become a sweet, loveable girl, and grown so dear to her kind friend, that Mrs Wright perpetually found excuses for refusing the many advantageous offers which were made to her of different eligible situations.

One evening Phœbe, the old servant entered to take away the tea things, and, after clearing her throat three or four times rather loudly, as was her wont when about to say anything she deemed of importance, she remarked—

"I dunna think Miss Minonet is as well as she should be, Mistress Wright."

"What reason have you for supposing anything is amiss with her?" her mistress asked, somewhat anxiously.

"Well, she doesna sing her bits of songs as she used to, and when she takes her sewing in her hand it's mighty little work that she gets through, though she sits at it a couple of hours together; and when she has a book I've seen her look at the same page for a whole evening. You may take my word for it, mistress, she is either sick or in love."

'In love—what nonsense!" muttered Mrs Wright to herself, as Phœbe left the room; and she remained absorbed in uncomfortable meditation until Mignonette came in with a fragrant bouquet of clove pinks and jessamine, which she gave to her friend, and then took her favourite seat on a low stool at her feet. Mrs Wright looked at her fondly and attentively, and, struck with her unusual gravity and paleness, she said—

"Mignonette, are you ill? You look paler than you used to do."

"No, indeed, I am quite well, thank you, dear mother."

"Then, do you feel unhappy about anything, my child, that you seem so grave and silent this evening?"

"I grave!" said Mignonette, in surprise, with a light, happy, laugh, whose mirthfulness seemed to give the lie to such a supposition. "No, mother; I am perfectly happy. How could I be otherwise in this pleasant home? It is you, I think, that are fanciful to-night."

"Least of fancy that my new cambric handkerchiefs, Mrs. Ross gave me, are not yet hemmed, Mignionette."

The young girl blushed deeply, and, notwithstanding her protestations, burst into tears, and buried her face on her kind friend's knee, who, now certain that Phœbe's suspicions could not be altogether wrong, soothed her tenderly, and entreated her to confide in one whose indulgence and readiness to sympathise she could not doubt.

At length, with much difficulty, Mignionette confessed her fears—nay, her certainty—that her sight was failing, and her consequent dread of becoming blind—an idea too startling to Mrs. Wright to allow her to admit of its possibility until a full detail of all symptoms showed her that there existed only too sufficient cause for considerable anxiety.

The next morning, before school commenced, Mignionette accompanied Mrs Wright to the house of Mr Ross, a very clever young surgeon, who divided the town and county practice of Evesham pretty equally with its senior physician, Dr. Hope. Most kind in manner, his benevolence and energy in his professional duties, his high principles and well-cultivated mind, caused him to be exceedingly liked and looked up to by all his patients, and, as acceptable in society as in his medical capacity, he visited no one so often as Mrs Wright and sweet Mignionette. Only long practice now enabled him to suppress his agitation on hearing what had occasioned the latter to apply to him for advice; and his voice shook when he gently and cautiously communicated to her his opinion that cataract was forming in both eyes, and of a species that rendered it doubtful whether a cure would eventually be possible.

"But it *is* possible?" said Mrs Wright, who, pale as marble, never lost her composure for an instant during the examination.

"Quite possible," was the answer. "Only it is right you should be warned of the danger that exists, that it may not be. I trust you will allow me to see you often, Miss Leslie, that I may do all that human skill admits of in alleviating this intermediate stage of your sufferings."

"Certainly—thank you—thank you!" Mrs Wright replied, and, with one grateful glance from Mignonette, they both returned home, sadly enough, the younger one perhaps, the former of the two, for to her the dread prospect had long been comparatively familiar.

It is one of the compensations of sorrow, whether it come in the form of bereavement or illness, that it draws forth so largely the disinterested benevolence of friends, neighbours, and acquaintances. And peculiarly did it prove so on the present occasion. No sooner did the news, kept concealed as long as it was possible, of Mignonette's too probable fate get about, than the greatest courtesy and the warmest kindness was shown, not only to herself, but to Mrs Wright, to whom so many parents owed obligations on account of their children which could never be repaid. And those attentions were the more welcome, that Mignonette's hitherto blooming health gave way, and a sort of low fever hung long about her, which needed all the care and kindness which she so abundantly received. Game, hot house fruit, and the use of their carriages were freely offered by the gentry, the school children, who loved the young girl because she was so lovely in person, and so very kind to them at all times, brought her the sweetest flowers that their home-gardens and the fields afforded, or picked wild strawberries and blackberries, and gathered the ripest hazle-nuts, while the butcher, whose wife had once been attended by Mignionette through a long illness, daily brought the small dainties which he thought might tempt Miss Leslie's feverish appetite, and the schoolmaster, who had little spare time, yet contrived to come over three or four times a week, from the village where Mr. Leslie had officiated as curate, to read to his suffering daughter, whose darkening sight precluded her from this great source of enjoyment to the sick when alone.

Edward Allingham, the schoolmaster, was at this time some five-and-thirty years old, and was always received with pleasure by Mrs. Wright, who admired him for his honest, self-denying, studious character, and valued his thoughtful conversation, sound judgment, and gentle, though sometimes abstracted, manners. Less generally popular than his clever friend, the young surgeon, Edward Allingham and Mr Ross were yet very intimate, and few days passed on which they did not meet at one or other of their respective homes, or at a favourite haunt in the country, where they had erected a seat under three old plane trees of curious growth, and where they mutually liked to fancy themselves in Greece, conversing with Plato and his followers.

Almost daily Mr. Ross visited his interesting patient, and Mrs. Wright could not but perceive with pleasure the sentiments of love

and admiration which he felt for Mignionette, and honoured him for the self-command with which he resolutely refrained from communicating them to their object at a time when, though suitable opportunities presented themselves with tantalising frequency, such a revelation could only have been distressing to her. Many months passed over, and as her mind became more and more resigned to whatever might hereafter be the will of Heaven regarding her, Mignionette grew stronger, and when total blindness came upon her it found her resolute and patient, and, though still unequal to such exertion, yet capable of bearing the journey to London, which had then become necessary. But new difficulties arose. The expenses of her long illness, and her inability to work, had, despite the kindness of their many friends, reduced the finances of Mrs Wright to their lowest ebb; and feeling sure that Mr Ross would never accept payment for his long attendance, she could not bear to ask him to lend her the requisite money; so, after much cool

appeared very flourishing, whether he would become her temporary banker. Often as he had called upon her, she had never seen his abode, and she was surprised to find how very plainly his two rooms adjoining the school-house were furnished, containing, indeed, only the most necessary articles for daily use, and she almost hesitated whether to name her object in coming. But Allingham, who appeared delighted to see her, preparing coffee for her with ready alacrity, and doubling up his morning dressing-gown to make a cushion for one of his two very uncomfortable chairs, asked so many questions about Mignionette, and when and how he was going to London, that she took heart, and made her application. It was the first time she had ever been so placed, and she fancied her heart beat audibly as her audition panted [illegible] moments before it replied. When he spoke, however, it was to express his utmost will ngness to help her as far as lay in his power, explain that the claims of his old mother upon his salary made him [illegible] he could not do all that was required, and then retreated to be told how much would be necessary. Mi and she hoped five and twenty pounds might suffice, and, although Allingham at all, she took her leave, he promising to call with the money at [illegible] evening, and hinting that whenever he should [illegible] could spare

"How shall I manage it?" he thought, on her departure. "I must not trench on my dear mother's portion, and I have never saved anything beyond my quarter's pound, in case of [illegible] and they will go but a small way. I [illegible] must give up coals for the next half-year, and live first on oatmeal gruel, then would save five to ten shillings, and then there is my college prize—they are the only handsome books in my possession, but they are so valuable they ought to bring a tolerable price. I must take them over to Squire Gretton's to-night, for there is no time to be lost. There's my grandfather's watch, too, I shall not like parting with that, even as it was to me on his dying bed; but if he can still see me, I think he would not disapprove of my selling it in such a cause."

By this time Allingham was equipped for his expedition, and, putting by the Eschylus, which he had selected for his evening's recreation before Mrs. Wright's visit, he tied up his five large, octavo volumes in morocco bindings, and, slinging the heavy package over his shoulders he was, after a walk of two miles, ushered into Squire Gretton's dining-room. The receipt of a five-pound-note from that gentleman, in exchange for his precious books, gladdened his heart, and he then walked to Evesham with a light step to dispose of his watch. But in this matter he was less successful, and four guineas was all he could obtain from the grasping pawnbroker, for whom his unbusiness like habits proved no match. How to increase the eleven pounds which his little hoard and the proceeds of his only valuable property amounted to, was the next consideration, and he went to the rector of the parish to see if a half-year's salary could be advanced him, and was well pleased to receive it, without any comments being made or questions asked. But, after deducting the large proportion of it necessary to aid in paying the annuity which he had for years been endeavouring to purchase for his mother, and after putting aside the smallest sum absolutely necessary for himself to live upon during the ensuing six months, he only obtained five pounds more, and now nothing remained but clothing, of which he possessed only a very moderate supply. He could not endure the thought of taking less than twenty pounds to Mrs Wright, though he too plainly saw that the five-and-twenty would be out of the question, and, late as it was, he returned to Hyde, and, stripping his bed of [illegible] ket and the counterpane, and taking his new cloth cloak with its fur collar, which his mother had given him for winter wear, with a pair of shoes which he fancied he could do without, he again set out for Evesham, and proceeded to the house of Mr. Ross. His friend, who had been kept up long past midnight by a scarlet fever patient, was not in bed, and admitted him in great surprise, which was not a little increased when he learned his errand, and perceived by the articles he brought that Allingham must be in great want of the money he asked for. But as his friend's extreme

Quixotic generosity was well known to him, he naturally supposed he had met with some especial case of distress, and he kindly gave him the three guineas which Allingham requested, and which made up the much-desired twenty pounds, and then, waiving all further discussion at that time of night, persuaded him to remain where he was until morning.

(To be continued.)

PREMATURE INTERMENTS AND THE UNCERTAIN SIGNS OF DEATH.

Nothing can be more horrible than being shut up in a living tomb, with life still animating the frame, yet being buried as one of the dead. Where interments have been sudden, undoubtedly such melancholy catastrophes have occurred. We have collected some well-authenticated cases. At any rate they may teach us how carefully to watch the signs of life that may exist though the trace of it be invisible in the corporeal frame. The mysterious principle may be intact, the silver chord may not be loosed, though to the eye even of affection it may seem that the spirit has gone forth, and that dust has [illegible] to

Peter of Philip Doddridge, an eminent lawyer of London, in the city of Westminster, while a Member of Parliament, died a sudden death, on which occasion, he had narrowly escaped the melancholy fate of being buried alive. He had [illegible] convulsion. His respiration had ceased, [illegible] throbbed, his limbs were perfectly rigid, [illegible] face in the embrace of death. The family and friends all, with the exception of his [illegible] Mr D., however, would not relinquish [illegible] hope, and continued to apply, from time to time, every means he had at hand to restore vitality, and finally succeeded in administering a small quantity of brandy, which immediately restored him to life and the command of his limbs. He lived many years afterward, and was wont to relate, with [illegible] that he was supposed to be dead. He said that though he was perfectly unable to move his finger or give the least sign of his being alive, he could hear, and was conscious of every thing that was going on around him. He heard the announcement that he was dead, and the lamentations of his family, the directions for his shroud, and all the usual preparations for his burial. He made desperate efforts to show that he was not dead, but in vain, he could not move a muscle. [illegible] and the immediate presence of a face more appalling to humanity than any other earthly terror could not move the [illegible] body to perform the slightest of its functions. At last he heard Mrs Doddridge call for the brandy, with a delight [illegible] for her which the horrors of the situation [illegible] He felt that he was saved. He humorously observed, "that it was little as brandy could do to restore him to life, as it had produced his living death." Mr Doddridge was unfortunately addicted to the intemperate use of ardent spirits, and a fit of intemperance had, no doubt, produced the condition from which he was relieved by the perseverance and love of his wife, who administered, at the last moment, the powerful stimulant which restored him to life. Otherwise his fate would have been that of many others, who have been buried before life was extinct.

Another instance of prevention from the horrors of premature interment occurred in America, and has been related by Mrs. Child in her "Letters from New York." It is an additional proof of strong conjugal affection, and of the necessity of retaining the body, where there remains the least doubt of the

extinction of life. The uncle of Mrs. Childs was attacked in Boston with the yellow fever, and considered as dead. His affectionate wife, however, did not abandon all hope, but continued with him during his illness, contrary to the strances of her friends, and persisted in refusing to allow his body to be taken from the house for interment. "She told me," says Mrs. Childs, "that she never knew how to account for it; but though he was perfectly cold and rigid, and to e appearance quite dead, there was a powerful impression on her mind that life was not extinct.

"Two calls, at intervals of half an hour, had been made with the death-carts, to take away the dead bodies, and the constant cry was, as usual on such occasions, 'Bring out your dead;' but her earnest entreaties and tears induced them reluctantly to grant her another respite of half an hour. With trembling haste, she renewed her efforts to restore life. She aised his head, rolled his limbs in hot flannel, and placed he onions on his feet. The dreaded half hour again came round, and found him as cold and rigid as ever. Again she renewed her entreaties so desperately that the messengers began to think that a little gentle force would be required. They accordingly attempted to remove the body against her will, but she threw herself upon it, and clung to it with such force and strength, that they could not easily loosen her grasp. At last, by dint of reasoning on the necessity of the case, she promised that, if he should show no signs of life before they again came round, she would make no further opposition to the removal Having gained this respite, she hung the watch upon the bedpost, and renewed her efforts with redoubled zeal. She placed kegs of hot water about him, forced brandy between his teeth, breathed into his nostrils, and held hartshorn to his nose; but still the body lay motionless and cold. She looked anxiously at the watch; in five minutes the promised half hour would expire, and those dreadful voices would be passing through the streets. Hopelessness came over her, she dropped the head she had been sustaining, her hand trembled violently, and the hartshorn she had been holding was spilled on the pallid face. Accidentally the position of the head had become slightly inclined backward, and the powerful liquid flowed into the nostril. Instantly there was a short, quick gasp— a struggle—his eyes opened, and when the death-men came again, they found him sitting up in the bed. He is still alive, and has enjoyed unusually good health."

Many additional cases are recorded of persons apparently dead, who have been so fortunate as to escape the horrors of premature interment. Among these is the case of the elegant Lady Russell, that mentioned by the celebrated Odier of Geneva, and one by Dr. Crichton, physician to the Grand Duke Nicholas, now Emperor of Russia. Lady Russell remained for the space of seven days and nights without any signs of life, and her burial was prevented only by the violent grief of her husband. On the eighth day, as the parish bells were ringing for church, Lady Russell suddenly raised her head, and to the amazement and indescribable joy of Lord Russell, told him to get ready to accompany her to church Her recovery was rapid and complete, and she lived many years afterwards, and had several children.

"I knew a girl," says Odier, "twenty-five years old, named Ellen Roy, who narrowly escaped being buried alive. She lived at a distance of two leagues from Geneva. For some years she had been subject to nervous attacks which frequently deprived her of every appearance of life; but after the lapse of a few hours she would recover and resume her occupations as if nothing had happened. On one occasion, however, the suspension of her faculties was so protracted that her friends called in a medical man, who pronounced her dead. She was then sewn up in a close shroud, according to the barbarous custom of the country, and laid upon the bedstead. Among those who called to condole with the parents was a particular friend of the supposed deceased, of her own age. The young woman, anxious to take a last look at her friend, ripped the shroud, and imprinted a kiss upon her cheek. While she was kissing her, she fancied that she felt her breathe. She repeated her caresses, and being shortly assured of the fact that her friend was not dead, she applied her mouth to that of the girl, and, in a short time the latter was restored to life, and able to dress herself."

'A young girl," says Dr. Crichton, "in the service of the Princess of ——, who had for some time kept her bed with a nervous affection, at length, to all appearance, was deprived of life. Her face had all the character of death—her body was perfectly cold, and every other symptom of death was manifested. She was removed into another room, and placed in a coffin. On the day fixed for her funeral, hymns, according to the custom of the country, were sung before the door; but at the very moment when they were going to nail down the coffin, a perspiration was seen upon her skin, and, in a few minutes it was succeeded by a convulsive motion in the hands and feet In a few moments she opened her eyes, and uttered a piercing scream. The faculty were instantly called in, and in the space of a few days, her health was completely re-established. The account which she gave of her situation is extremely curious. She said, that she appeared to dream that she was dead, but that she was sensible of everything that passed around her, and distinctly heard her friends bewailing her death; she felt them envelope her in the shroud, and place her in the coffin. This sensation gave her extreme agony, and she attempted to speak, but her soul was unable to act on her body She describes her sensations as very contradictory, as if she was and was not in her body at one and the same instant. She attempted in vain to move her arms, to open her eyes, or to speak. The agony of her mind was at its height when she heard the funeral hymn, and found that they were about to nail down the lid of the coffin. The horror of being buried alive gave a new impulse to her mind, which resumed its power over the corporal organisation, and produced the effects which excited the notice of those who were about to convey her to a premature grave."

The Leipsic *Chirurgical Journal* records the following distressing event as having occurred to an officer of artillery, who was a man of gigantic stature, and robust make. Being mounted on an unmanageable horse, he was thrown from his back, and received a severe contusion on the head, which rendered him insensible He was successfully trepanned, bled, and other usual means of relief adopted, but he fell gradually into a more and more hopeless condition of stupor, and was finally believed to be dead. The weather being sultry, he was buried with indecent haste, in one of the public cemeteries. He was buried on Thursday, and on Sunday following, the grounds, as usual, being thronged with visitors, an intense excitement was produced by the declaration of a peasant, that while he was sitting on the grave of the officer he had distinctly felt a motion of the earth as if some one was struggling beneath. Of course but little attention was at first paid to the man's assertion, but his evident terror, and the dogged obstinacy with which he persisted in his story, had at length their natural effect upon the crowd. Implements were hurriedly procured, and the grave, which was very shallow, in a few moments was so far thrown open as to render the head of the occupant visible. He was then apparently dead, but he sat nearly erect in the coffin, the lid of which, in his furious struggles, he had partially uplifted. They conveyed him to the nearest hospital, and there he was pronounced to be still living, although in a state of asphyxia. In a few hours he so far revived as to recognise his acquaintances, and in broken accents spoke of his agonies in the grave. It appeared that he had been conscious of life for more than an hour, while buried, before he relapsed into a state of insensibility. The grave, it seems, was filled loosely with a very porous earth, and some air was thus admitted. He heard, he said, the footsteps of those over his head, and endeavoured to make himself heard in turn. It was the noise and tumult within the grounds which appeared to awaken him from a deep sleep, but no sooner was he awake than he became fully aware of the horrors of his position. This man would have lived, no doubt, for he was doing well, had it not been for some silly experiments with the galvanic battery, which was applied without any necessity, and he suddenly expired in one of those ecstatic paroxysms which its application is said occasionally to superinduce.

HUSBANDS.—It may be said generally of husbands, as the woman said of hers, who had abused her, to an old maid, who reproached her for marrying him,—'To be sure he is not so good a husband as he ought to be, but he is a powerful sight better than none."

JOHN JAMES AUDUBON.

To most men, in their childhood, natural history is a passion; few, however, are enabled to devote themselves to it in after life. The world calls them from roaming beneath God's heaven and on God's green earth, and they become denizens of the crowded city, classed among

"Creatures, whom the soul would flee,
And with the sky, the air, the peak, the heaving plain
Of ocean, and of stars, mingle, and not in vain."

An illustrious exception, however, we have in the subject of the following sketch:—

John James Audubon was born in Louisiana about the year 1782. He was of French descent, and his parents, perceiving early the bent of his genius, sent him to Paris to pursue his education. While there he attended schools of natural history and the arts, and in drawing took lessons from the celebrated David. He returned in his eighteenth year, and his father soon after gave him a farm near Philadelphia, where the Perkiomming creek falls into the Schuylkill. Its fine woods offered him numerous subjects for his pencil, and he here commenced that series of drawings which ultimately swelled into the magnificent collection of the Birds of America. Here too he was married, and here was born his eldest son. He engaged in commercial speculations, but was not successful. His love for the fields and flowers, the forests and their winged inhabitants, was readily supposed, unfitted him for trade. At the end of ten years he removed to

AUDUBON.

There were then no steamboats on the Ohio, and few villages and no cities on its shores. Reaching that noble river in the warm days of autumn, he purchased a small boat, in which, with his wife and child and two rowers, he leisurely pursued his way down to Henderson in Kentucky, where his family resided several years. He appears at first to have engaged in commerce, for he mentions his meeting with Wilson, of whom till then he had never heard, as having occurred in his hunting-room in Louisville the spring of 1810. His great predecessor was procuring subscriptions for his work. He called on Audubon, explained the nature of his occupations, and requested his patronage. The merchant was surprised and gratified at the sight of his volumes, and had taken a pen to add his name to the list of subscribers, when his partner abruptly said to him in French, "My dear Audubon, what induces you to do so? your own drawings are certainly far better, and you must know as much of the habits of American birds as this gentleman." Wilson probably understood the remark, for he appeared not to be pleased, and inquired whether Audubon had any drawings of birds. A large portfolio was placed upon the table, and all its contents exhibited by the amateur ornithologist. Wilson was surprised; he had supposed he was himself the only person engaged in forming such a collection; and asked if it was intended to publish them. Audubon replied in the negative; he had never thought of presenting the fruits of his labours to the world. Wilson was still more surprised, he lost his cheerfulness, and though before he left Louisville Audubon explored with him the neighbouring woods, lent him his drawings, and in other ways essayed to promote his interests and happiness, he shook the dust from his feet when he departed, and wrote in his diary that "literature or art had not a friend in the place."

Audubon must soon have abandoned or neglected his day-books and ledgers, for in 1811 we find him with his rifle and drawing-paper among the bayous of Florida, and in the following years making long and tedious journeys, searching the forests and prairies, the shores of rivers, lakes, gulfs, and seas, for the subjects of his immortal work, of the publication of which, however, he had never yet had a thought.

On the 5th of April, 1824, he visited Philadelphia, where the late Dr. Mease, whom he had known on his first arrival in Pennsylvania, presented him to Charles Lucien Bonaparte, who in his turn introduced him to the Lyceum of Natural History. He perceived that he could look for no patronage in this city, and so proceeded to New York, where he was received with a kindness well suited to elevate his depressed spirits, and afterwards, ascending the Hudson, went westward to the great lakes, and in the wildest solitudes of the pathless forests renewed his labours. He now began to think of visiting Europe; the number of his drawings had greatly increased, notwithstanding a misfortune by which two hundred of them, representing nearly a thousand birds, had been destroyed. "Happy days and nights of pleasing dreams" followed, as he retired farther from the haunts of men, determined to leave nothing undone which could be accomplished by time or toil. Another year and a half passed by, he returned to his family then in Louisiana; and having explored the woods of that state, at last sailed for England, where he arrived in 1826. In Liverpool and Manchester his works procured him a generous reception from the most distinguished men of science and letters; and when he proceeded to Edinburgh and exhibited there his four hundred paintings, "the hearts of all warmed toward Audubon," says Professor Wilson, "who were capable of conceiving the difficulties, dangers, and sacrifices that must have been encountered, endured, and overcome before genius could have embodied these, the glory of its innumerable triumphs." "The man himself, at this period," writes the same eloquent author in another work, "is just what you would expect from his productions; full of fine enthusiasm and intelligence, most interesting in his looks and manners, a perfect gentleman, and estcemed by all who know him for the simplicity and frankness of his nature."

His reception encouraged him to proceed immediately with his plans of publication. It was a vast undertaking, which it would probably take sixteen years to accomplish, and when his first drawings were delivered to the engraver he had not a single subscriber. His friends pointed out the rashness of the project, and urged him to abandon it. "But my heart was nerved," he exclaims, "and my reliance on that Power on whom all must depend brought bright anticipations of success."

Leaving his work in the care of his engravers and agents, in the summer of 1828 he visited Paris, and received the homage of the most distinguished men of science in that capital. The ensuing winter was passed in London, and in April, 1829, he returned to America to explore anew the woods of the middle and southern states. Accompanied by his wife he left New Orleans on the 8th of January, 1830, for New York, and on the 25th of April, just a year from the time of his departure, he was again in the Great Metropolis. Before the close of 1830 he had issued his first volume, containing one hundred plates, representing ninety-nine species of birds, every figure of the size and colours of life. The applause with which it was received was enthusiastic and universal. The Kings of England and France had placed their names at the head of his subscription list, he was made a fellow of the Royal Societies of London and Edinburgh, a member of the Natural History Society of Paris, and other celebrated institutions, and Cuvier, Swainson, and indeed the great ornithologists of every country, exhausted the words of panegyric in his praise.

On the 1st of August, 1831, Audubon arrived once more in New York, and having passed a few days with his friends there and in Philadelphia, proceeded to Washington, where the President and other principal officers of [illegible] gave him letters of assistance and protection to be used all along the coasts and inland frontiers where there were collectors of revenue or military or naval forces. He had previously received similar letters from the King's Ministers to the authorities of the British colonies.

The ensuing winter and spring were passed in the Floridas and in Charleston; and early in the summer, bending his course northward to keep pace with the birds in their migrations, he arrived in Philadelphia, where he was joined by his family. The cholera was then spreading death and terror through the country, and on reaching Boston he was himself arrested by sickness and detained until the middle of August. "Although I have been happy in forming many valuable friendships in various parts of the world all dearly cherished by me," he says, "the outpouring of kindness which I experienced in Boston far exceeded all that I have ever met with," and he tells us, with characteristic enthusiasm, of his gratitude to the Appletons, Everetts, Quincys, Pickerings, Parkmans, and other eminent gentlemen and scholars of that beautiful and hospitable city.

Proceeding at length upon his mission, he explored the forests of Maine and New Brunswick, and the shores of the Bay of Fundy, and chartering a vessel at Eastport, sailed for the gulf of St Lawrence, the Magdalen Islands, and the coast of Labrador. Returning as the cold season approached, he visited Newfoundland and Nova Scotia, and, rejoining his family, proceeded to Charleston, where he spent the winter, and in the spring, after nearly three years' travel and research, sailed a third time for England.

The second volume of "The Birds of America" was finished in 1834, and in December of that year he published in Edinburgh the second volume of the "Ornithological Biography." Soon after, while he was in London, a nobleman called upon him, with his family, and on examining some of his original drawings, and being told that it would still require eight years to complete the work, subscribed for it, saying, "I may not see it finished, but my children will." The words made a deep impression on Audubon. "The solemnity of his manner I could not forget for several days," he writes in the introduction to his third volume, "I often thought that neither might I see the work completed, but at length exclaimed, 'My sons may;' and now that another volume, both of my illustrations and of my biographies, is finished, my trust in Providence is augmented, and I cannot but hope that myself and my family together may be permitted to see the completion of my labours." When this was written, ten years had elapsed since the publication of his first plate. In the next three years, among other excursions, he made one to the western coast of the Floridas, and to Texas, in a vessel placed at his disposal by government; and at the end of this time appeared the fourth and concluding volume of his engravings, and the fifth of his descriptions. The whole comprised four hundred and [illegible] plates, containing one thousand and sixty-five figures, from the bird of Washington to the humming-bird of the size of life, and a great variety of land and marine views, and floral and other productions, of different climates and seasons, all carefully drawn and coloured after nature. Well might the great naturalist felicitate himself upon the completion of his gigantic task. He had spent nearly half a century "amid the tall grass of the far-extended prairies of the west, in the solemn forests of the north, on the heights of the midland mountains, by the shores of the boundless ocean, and on the bosoms of our vast bays, lakes, and rivers, searching for things hidden, since the creation of this wondrous world, from all but the Indian who has roamed in the gorgeous but melancholy wilderness." And, speaking from the depth of his heart, he says, "Once more surrounded by all the members of my dear family, enjoying the countenance of numerous friends who have never deserted me, and possessing a competent share of all that can render life agreeable, I look up with gratitude to the Supreme Being, and feel that I am happy."

In 1839, having returned for the last time to his native country, and established himself with his family near the city of New York, Audubon commenced the publication of "The Birds of America" in imperial octavo volumes, of which the seventh and last was issued in the summer of 1841. The plates in this edition, reduced from his larger illustrations, were engraved and coloured in the most admirable manner by Mr Bowen, of Philadelphia, under the direction of the author.

Audubon was too sincere a [illegible] to be content with inglorious repose, even [illegible] information more than was ever dreamed of by [illegible], and while the "edition for the people" of his "Birds of America" was in course of publication, he was busy among the forests and prairies, the reedy swamps of the southern shores of America, the cliffs that protect the eastern coasts, by the currents of the Mexican Gulf, and the tide-streams of the Bay of Fundy, with his sons, Victor Gifford and John Woodhouse, making the drawings and writing the descriptions of "The Quadrupeds of America," a work in no respect inferior to that on birds.

Audubon's highest claim to admiration is found laid upon his drawings in natural history, in which he has exhibited a perfection never before attempted. But he has also indisputable claims to a respectable rank as a man of letters. Some of his written pictures of birds, so graceful, clearly defined, and brilliantly coloured, are scarcely inferior to the productions of his pencil. His powers of general description are also remarkable. The waters seem to dance to his words as to music, and the lights and shades of his landscapes show the practised hand of a master. The evanescent shades of manners also, upon the extreme frontiers, where the footprints of civilisation have hardly crushed the green leaves, have been sketched with graphic fidelity in his journals.

After his many travels, Audubon died peaceably at his residence in New York, on January 27, 1851. He had arrived at a ripe old age. Two sons survive to deplore his loss, and to prosecute the science in which the father won such fame.

GERMAN LITERATURE.—We see it stated in correspondence from Leipsic that the catalogue of books for the fair in that city shows that in the short space of time between the Easter fair and the 30th of September, there were published in Germany no less than 5,869 new works, and that there were on the latter date 1,130 new works in the press. Nearly five thousand new works in one country of Europe in one half-year! How impossible it would be for us strangers, having their own life to live—their own literature to read—to keep on the advanced lines of a national mind exhibiting this prodigious literary activity! The amount of intellectual labour dimly represented in the catalogue appears to have had, on the whole, a healthy impulse. Of the 3,860 works already published, more than half treat of various matters connected with science and its concerns. That is to say, descending to particulars, 106 works treat of Protestant theology, 62 of Catholic theology, 36 of philosophy, 205 of history and biography, 102 of languages, 194 of natural sciences, 118 of military tactics, 108 of medicine, 169 of jurisprudence, 101 of politics, 184 of political economy, 83 of industry and commerce, 87 of agriculture and forest administration, 69 of public instruction, 92 of classical philology, 80 of living languages, 64 of the theory of music and the arts of design, 168 of the fine arts in general, 48 of popular writings, 28 of mixed sciences, and 18 of bibliography.

TRIUMPH OF LABOUR.

Onward! is the mighty voice,
Onward! is no dreamy theorie;
Millions faint, and pine, and die;
Yet a brighter dawn draws nigh

What is life? the toilers say
Though hands of cunning skill array
Regal head with regal art,
Tyranny hath not a heart

Such as [illegible] thine
Honest toil! to God's stubborn mine,
Thine the grain and thine the gold,
Thine the wealth of field and fold

From the quarry's granite rock
Thou hast torn the massive block,
And upheld with arm of might
What the artist soul had planned

Reared God's holy temples high,
Towering to God's holy sky,
And built the solemn senate hall,
Towering the empire's fate

Idleness, and greed, and crime,
Base born deeds of by-gone time,
From model, render stern,
Fail to claim its claim to glory.

Over earth's remotest seas,
Treasure-laden argosies
Soon to prosper, and the sail
Golden fruit of Labour's hand —

But the dawning day appears,
Earth and sky assure of cheers,
War and famine, woe and moan,
Shall be change to regal gladness.

Proud oppression's power shall cease,
Into their hands in calm decline
Of kings and lords a down-trod race,
Weary-eyed Labour's patient reign

And they, in blood-dyed robes
Emperor, chief of royal mobs,
Bid long reign of tears and sorrow
Ends before the brightening morrow.

Still, the conquest to be won,
Is by thee, O, Nature's son!
Whose hand at anvil, or at loom,
Or wells, or weaves, the time to come

When valleys rich and hill sides fair,
The inmost powers of earth and air—
The circling sea, the teeming river—
Shall be thy heritage for ever

Image of Power Creative! free
Nature owns no prince but thee,
No right on earth but God's and thine,
No other crowns or thrones Divine

KEEP MOVING ONWARD.—Cobbett said he despised a man who was contented with his condition. We do not like the boldness of this expression, but we hold that a man should always be seeking [illegible] so, therefore, in all cases, for the very largest profit and advise no farmer to be satisfied, while in a fair race, his neighbour is so much as the length of his nose before him. We advise every farmer, in the religious sense of the term, to be content with his condition, and thankful for all the blessings which God gives him, but we advise no man to be satisfied when he can honestly mend his condition, until that condition is amended. In the competition of life never cross your neighbour's path so as to take the road from him, never throw him down, never run him over if he falls down, have the magnanimity to help him up; but never try to hit yourself up by pulling him down, or try to stand upon his shoulders, give him fair play and cheer him on if he comes out first, but determine to look no efforts, if you are beaten, to come out first next time. Don't mind the lazy dogs who are always croaking and crying out, "You'll fail, you'll fail." Those fellows do not get their eyes open in nine days, indeed they never get their eyes open, but are always lying in the way of other people. If you get sixty bushels of corn this year per acre, resolve that next year you will [illegible]

THE PRESS AND THE PROGRESS OF LIBERTY.

Mr. F. K. Hunt, in his "History of Newspapers," says. Those who enjoy the liberty of these our latter days owe a great debt of gratitude to the press. This debt has not been imposed by one great act, or on one grand and showy occasion, but has been growing up day by day and year by year, since the time when the Long Parliament showed the people what publicity for public proceedings would do for the common good. The very thought of those old times calls up a recollection of the good and brave, and clever men who have been contributors to this great and excellent work. We call to mind the indefatigable Prynn, with his pen that never tired, and his heart that no punishments could break, the republican Lilburn, schooled under the rod of a tyrannic monarchy, yet ready to denounce a tyranny and hollow commonwealth, the noble-souled Milton, with the genius of a poet, the patient endurance of a political martyr, and the strong and lofty mind of a republican statesman, and the clever and ready Marchamont Nedham, careless and irregular, perhaps, in days of mingled toil and suspense, but yet well able, when at liberty to do so, to use his pen against an ancient tyranny, which the people were striving to cast off. And painful memories have forced them upon us, for who can overlook the wretched martyrs, Twyn and others, who were made victims when Charles II turned the palace of Whitehall into a huge bawdy-house, and employed the Cavalier L'Estrange to find out, and to send to the gaol and the gallows, the men who dared to sign in type for the stern republican-hearted commonwealth, which preceded a debauched and degraded restoration. Then, again, we recollect Tutchin, goaded by the brutality of Jefferies to a career of political pamphleteering, which gave many an opportunity of revenge upon the enemies who had inflicted mischief upon him. Next following in the list come the sturdy Defoe, who wrote so fully and so well, the bitter and witty Swift, the ambitious and sceptical Bolingbroke, the graceful and correct Addison, and the versatile Steele, and the rest, who gave a polish and a perfection to writings on current topics for public prints, which they had before needed, and the limits of which we trace in our modern leading articles. Wilkes and Churchill, with all their vices, present themselves for a share of our esteem, and, to a catalogue of newspaper worthies, who could omit Sam Johnson, with his reports from the lobby, and Chatterton, with his contributions that failed to keep him in bread? A Lord Mayor beckons us from the Tower, to remind us that his incarceration gained one step in advance, whilst the eloquent Erskine pleads in Westminster Hall, and the humbler hero, William Hone calmly but manfully boards an intolerant judge at the Old Bailey. And so we come from name to name—human stepping stones, as it were, through two centuries—here to our own time. As we approach the present day, the number of the labourers in the field of the press becomes greater and greater, and our gratitude has to be spread over a wider space. The germs of liberty, planted under the shadow of the press in the earlier days of its existence, have scattered the elements of their multiplication on all sides, and these newer vitalities have been true to the ancient stock. Within the present century, whenever a great truth has demanded to be known, there has been found a man ready to put it into words, and a printer bold enough to put it into type. When-[illegible] has been no lack of lawyers to prosecute, and (sometimes) of juries to convict; as witness the number of victims offered up at the shrine of intolerance by George the Third, Castlereagh, and Eldon. Gaols have from time to time been filled, but still the ball rolls on, and liberty is the winner in the end.

A NEW DISCOVERY.—Some attention has been excited by the alleged discovery, by an engineer of some celebrity, named Andraud, of the means of *seeing the air*. "If," he says, "you take a piece of card, coloured black, of the size of the eye, and pierce with a fine needle a hole in the middle, you will, on looking through that hole at a clear sky, or a lighted lamp, see a multitude of molecules floating about, which molecules constitute the air." We shall see whether the theory will obtain the sanction of the Academy of Sciences to which it has been submitted.

MISCELLANEA.

PLAYFULNESS OF ANIMALS.—Erdl, who has bestowed great attention to the habits of the crustacea, says that he has seen the Cancer Moenas play with little round stones and empty shells, as cats do with a cork or a small ball. Dogs, particularly young ones, are carried away with the impulse, rolling over and chasing each other in circles, seizing and shaking objects as if in anger, and enticing even their masters to join in their games. Horses, in freedom, gallop hither and thither, snort and paw the air, advance to their groom, stop suddenly short, and again dash off at speed. A horse belonging to one of the large brewing establishments in London, at which a great number of pigs were kept, used frequently to extend his glance [illegible] ground with his mouth [illegible] pig came within his reach, he would seize it without injury, and plunge it into the water-trough. The hare will gambol round in circles, tumble over, and fly here and there. Brehm witnessed one which playing the most singular antics with twelve others, coursing round them, feigning death, and again springing up, seemed to illustrate the old saying of 'mad as a March hare." The same thing [illegible] rabbits, and many others of the rodentia, and on warm days fish may be seen gambolling about in shoal water. Carp in early morning, while the mist still hangs on the water, wallow in the shallows, exposing their broad backs above the surface. Whales, as described by Scoresby, are extremely frolicsome, and in the [illegible] leap twenty feet out of the water. Small birds chase each other about in play, but perhaps the conduct of the crane and the trumpeter is the most extraordinary. The latter stands on one leg, hops about in the most eccentric manner, and throws somersets. The Americans call it the "mad bird," on account of these singularities. The crane expands its wings, runs round in circles, leaps, and throwing little stones and pieces of wood in the air, endeavours to catch them again, or pretends to avoid them, as if afraid.

THE GREAT VALLEY.—The Mississippi valley has no parallel on earth. Its length may be estimated at no less than 2,500 [illegible], and its main breadth is from 1,200 to 1,500. There are many facts to prove that it was once covered with a vast ocean, and that the great change was brought about by repeated and long-continued volcanic convulsions. This valley is the most delightful, the richest, and the largest portion of the earth, and capable of sustaining a population of 100,000,000.

AN ODDITY.—Among the peculiarities of Cavendish, the celebrated chemist and natural philosopher, was his excessive dislike of women. On the authority of an old inhabitant of Clapham, it is stated that Cavendish would never see a female servant, and if an unfortunate maid ever showed herself she was instantly dismissed. He was in the habit of ordering his dinner daily by a note which he left on the hall table, whence the housekeeper was to take it, and such was his horror of the sex that, [illegible] one day met a maid-servant on the [illegible] with a broom and pail, he immediately ordered a back staircase to be built.

A THEORY OF THE AURORA BOREALIS.—According to all account, the aurora borealis takes place after a thaw. By this means then, a proportion to the rapidity of the thaw, the immense quantity of negative electricity bound there in the earth, and accumulated moreover on its warmly kept snow-covered surface, is liberated and finds its way into the upper regions by creeping up the sides of the numerous hills and mountains of these places, or is carried up by the rising vapours to the region of the positive electricity flowing above our atmosphere towards the equator, as does the negative below. By these means the aurora borealis takes place: it is the union of the positive and negative electricities in a different clime, [illegible] under different circumstances, and no doubt for different ends. Its sensible effect upon [illegible] must be obvious, considering the disturbance caused by the quantity of the fluids brought into action from a state of rest. The shape of an arch [illegible] accounted for by the atmosphere's forming a ring round the earth, and the circumference of the earth be[illegible] wed towards the poles, the arch of the atmosphere at the poles must naturally be more contracted and lower in proportion than the arch which it forms nearer [illegible] round the equator, and the electricity of the upper regions, floating [illegible] way, will present to our view the [illegible] bo[illegible].

HIGH LIVING AMONGST THE MONKEYS.—A writer in the current number of the *Westminster Review* expresses, from experimental knowledge, his incredulity as to the strength of the maternal instinct in the [illegible]. "This instinct," [illegible] ubt a very amiable and charming [illegible] ly self-sacrificing, delightful to contemplate. But we confess we have never seen it proof against a shot in the hinder parts, nor indeed do we believe it can be. The larger monkeys certainly [illegible] off th[illegible] ble, but we have heard with pain [illegible] the natives assertions which, [illegible] nfess, throw strong suspicions on the purity and disinterestedness of their motives. The natives assert that they carry off them dead, or, if they are wounded, at [illegible] ably put them out of pain, cover them over with leaves, and let them [illegible] o, like the babes of the wood, for so [illegible] days, but that, when they consider that their deceased friends have become sufficiently tender, they assemble and enjoy the epicurean feast, and that all then apparent sensibility really arises from their *liking their monkeys a little high!*"

A SAXON NOBLEMAN'S HOUSE.—The Saxon thegne built his "hall" from the woods of his demesne, by the labour of his bondsmen, it was thatched with reeds or straw, or roofed with wooden shingles. In plan it was little more than its name implied, "capacious apartment," which, in the day time, was adapted to the patriarchal hospitality of the owner, and formed at night a sort of stable for his servants, to whose rude accommodation their master's was not much superior, in a small adjoining chamber. There was, as yet, but a slight perception of the decencies of life. The fire was kindled in the centre of the hall, the smoke made its way through an opening in the roof immediately above the hearth, or by the door, windows, or eves of the thatch. The lord and his "hearthmen"—a significant appellation given to the most familiar retainers - sat by the same fire at which their repast was cooked, and at night retired to share the same dormitory, which served also as a council-chamber.

ANSWERS TO CORRESPONDENTS.

D G says that he has a plot of land joining his neighbour's house, that his neighbour has put a side window in, facing his land, and that he is told, if he lets that remain, his neighbour will be able to prevent his building so as to interfere with that side-light. He wants to know if that representation is correct. We believe it is.

S E wishes to know if the series of "Lessons in French," and the "French Manual," published at our office, are the same size? We beg to inform him that they will be the same size, and will be bound together for sale. They will be ready by the 20th.

W. C. asks if a railroad is in formation in Norway? Yes.—W. C. then asks if a smith could better himself there? This is a question we really cannot answer. W. C. also wants to be told the best way of getting to Norway. We [illegible] owestoft to Denmark, fro[illegible] by the [illegible] means of steamers. If W. C. lives in Yorkshire, his best plan is to go by a Hull boat to Hamburg, thence to Kiel by rail, thence to Copenhagen by [illegible] way. In the winter W. C. w[illegible] uld be from five to six days. [illegible] depend [illegible] the personal habits of W. C. him[illegible]

addition to the stock of gold [illegible] ared during the year 1851 is

From California	£15,000,000
[illegible] Russ[illegible]	4,000,000
[illegible] Various	1,000,000
	£20,000,000

As to the year 1852, it seems certain that the production must be greatly increased, even over that of 1851, as in California the mines turn out richer every day, and in Australia there are indications of the mines leaving all others upon earth far behind in productiveness. The "standard of [illegible] new a cause. It seems to us that the [illegible] it be in the direction of continuing human labour as the only standard of value.

A CAMBRIAN.—The Society for the Diffusion of Useful Knowledge published some very good [illegible] tal maps, which are still to be had, we [illegible] Chapman and Hall's, [illegible] Baldwin's, in the "Row." The [illegible] on Asia [illegible] ld, we should imagine, suit him.

[illegible] ats to know where he can learn to draw? We should recommend him to join one of the drawing classes at one or other of the various mechanics' or literary institutions in London or its neighbourhood.

THOMAS asks us the question, whether Greyson and Co, and not Messrs. Greyson and Co, is a right address? Certainly.—Thomas also wants to know what is high treason. High treason is an offence against the security of the commonwealth, or of the king's majesty, whether by imagination, word, or deed, as to compass or imagine the death of the prince or the queen consort, or his son and heir apparent, or to deflower the king's wife, or his eldest daughter unmarried, or his eldest son's wife; or levy war against the king in his realm, or to adhere to his enemies by aiding them; or to counterfeit the king's great seal, privy seal, or money; or knowingly to bring false money into this realm, counterfeited like the money of England, and to utter the same; or to kill the king's chancellor, treasurer, justice of the one bench or the other—justices in eyre, justices in assize, justices of oyer and terminer—when in their place and doing their duty, or forging the king's seal or privy signet; or diminishing or impairing the current money. High treason subjects the offender to the severest punishment exacted by the laws of the realm.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER VI.

national institutions perished one by one To the rgetic remonstrances of the Diet the Emperor responded by ue promises, intended to pacify them, while he asked for plies. The money once voted, the promises were forgotten, the constitution trampled under foot At last he broke ugh a custom of which the Magyars were particularly years to elapse from this period without ever convoking a meeting of the estates of the realm

It may be easily imagined that in such a state of things, when the co-operation of the people, accustomed from the earliest period of their history to share in the administration of the country, was now but an obstacle to the evil designs of

SIEGE OF VIENNA BY THE TURKS, 1689.—(*See page* 196)

to appear in person at the meetings of the the Archduke in his stead. Provoked by his neglect, or contempt, they passed a resolution declaring their intention to vote no more money, until ir grievances were redressed. The reply of the characteristic. He informed them that their precautions e useless, as he could do without them, and allowed four

the prince, the kingdom became a prey to discord, rapine, and murder, and the occupation of the Turks was still further prolonged.

The government of Transylvania, after the death of the illustrious Bathori, had passed into the hands of Christopher, his brother, who in turn transmitted it to his son, Sigismond. The latter, far more attentive to his personal interests than

those of the province over which he ruled, gave up his throne, bought it back again, and again renounced it; making himself the toy of the flatteries and fallacious promises of Austria. To obtain the hand of an archduchess, he delivered up Transylvania to the Emperor, and very easily took it back again, after having ignominiously dismissed his wife.

In the midst of these capricious freaks, Ferhat Pacha took the command of the Turkish forces stationed in Buda, and Sinan, the Grand Vizier, persuaded the Sultan to quiet the perplexities of the janissaries by employing them in a war against Hungary.

It lasted for five years, and was signalised by the atrocities of the Turks, and the imbecility of the Austrians. The Croats on this occasion suffered as much as the Magyars; and when they complained to Rodolph of his repeated violation of their national rights, they obtained no better redress than a promise that John Draskovics, a man attached to the House of Hapsburgh, but animated by the sincerest patriotism, should be appointed ban.

It was Hungary that proved the salvation of the Croats. Nicholas Palfi, George Zrinyi, and Forgush, had intimidated the Turks, whose fanaticism was on the wane, by their desperate valour. After having driven them from a great number of towns, Palfi, acting under the orders of Schwartzenberg, laid siege to Arabon. In reply to the first summons, the Pacha who commanded the town replied that, until the weather cock upon the tower of the church would crow three times, the Magyars need not hope to take the place. In an hour afterwards the gate was blown open by means of a petard, and an end soon put to the bravadoes of the Pacha; for Palfi, entering the breach at the head of a forlorn hope, overthrew all who attempted to oppose him, and slaughtered great numbers of the Ottomans. Arabon was thus retaken in 1598. Pesth was also stormed in the same manner by Hungarian generals, acting under Austrian orders.

Religious dissensions now came into operation to augment the evils of the foreign invasion. The reformed doctrines had been making rapid progress in Hungary, despite the efforts of Rodolph to arrest it. His gloomy and fanatical temperament led him to regard Luther, Calvin, and Socinus, as but one degree removed in affinity from the Prince of Darkness himself. The proselytes to the Protestant faith were more numerous in Transylvania than anywhere else, in consequence of the greater freedom there enjoyed under the national princes. In all matters of religious belief, the Turks allowed a perfect liberty. Rodolph at last began to imagine that he might turn these religious animosities to good account, and, by acting on the old principle of "divide and conquer," by hallooing on Catholic against Protestant, and Protestant against Catholic, he might be enabled himself to walk slipshod over the necks of all. He at one time declared his intention of protecting the Catholic faith in its pristine purity; at another he expressed his astonishment that anyone could expect him to interfere with the exercise of a prerogative which every man received directly from the Almighty—the right of judging for himself in all matters of opinion. He in this manner fostered the flame of religious animosity, and soon had the satisfaction of seeing the whole nation divided into two hostile parties, ever ready, upon the slightest provocation, to commit the most frightful violence.

By surreptitiously inserting an article in the decrees of 1604, forbidding the Diet to take religious questions into consideration, he committed an error, which was well nigh putting a to a close the domination of his family in Hungary. To submit of an edict this would have been to deliver up the consciences people to be controlled by the diets of a foreign despot. A people to be controlled by the diets of a foreign defended by a Magyars, therefore, attacked by the Turks, and from their proto Germans, believing that they had more to fear the Sultan, not more than their enemies, sought the alliance of

Stephen Bocksa very desirable, but as the less of two evils. warrior, assembled the son of George, a brave and able the Porte, and soon the discontented, obtained succours from It was in vain that found himself at the head of a large army. trian generals, attempted and Count de Belgiojoso, the Austhey were every where beaten, and to oppose his progress. They were Emboldened by success, ged to retreat.

the 29th of March, 1603, in the partisans of Bocksai assembled on presentatives of all the great castle of Szecsencz. The families of the country w

Turck, Szecsi; and Bocksai was proclaimed King of Hungary, Transylvania, Moravia, and Wallachia, and Count of the Sicules. The Sultan approved of the measure, and Bocksai soon saw himself master of the whole of the upper part of Hungary.

Rodolph was terrified by his disasters, and when the revolutionary assembly offered to come to terms with him, he eagerly grasped at the proposal. Peace was soon after made by Illeshasi and the Austrian plenipotentiaries upon the following terms:—"1. The question of religion shall remain as it was in the reigns of Ferdinand and Maximilian, and the arbitrary clause introduced into the laws by Rodolph shall be expunged. 2. Mathias shall be Lieutenant-General of the kingdom, having a palatine under him to be hereafter appointed. 3. Bocksai shall preserve the dignity of Prince of Transylvania and of part of Hungary, but in case he shall die without leaving issue those provinces shall revert to the Emperor."

It may be said that after such brilliant success, the revolutionary party should have obtained greater concessions from the Emperor; but it must be remembered that so dreadfully had the country been torn and distracted by civil war that all who had its welfare really at heart were most anxious to avoid taking any step which might lead to the renewal or prolongation of hostilities; and so strong was this desire for repose that it led also to the conclusion of a treaty with the Sultan, fixed to last for twenty years.

Let us glance at the state of dismemberment in which Hungary was placed at the close of the war. Hungary, Croatia, Sclavonia, and their frontiers, comprised in all superficial extent of 4,427 square miles, and Transylvania 736. Of these

Bocksai did not long reign. He died in 1606, and was succeeded by Sigismond Rakoczi, who soon after abdicated in favour of Gabriel Bathori.

The tyranny and incapacity of Rodolph did not bring evils upon Hungary alone. Austria itself at last began to find his government intolerable. In 1609 the Archduke Mathias placed himself at the head of a conspiracy which the Magyars supported, and succeeded in wresting the crown of the two kingdoms from Rodolph, his brother. The Hungarian Diet seized this opportunity of procuring a redress of their grievances; and before they proceeded to the coronation of Mathias they presented a "bill of rights" for his signature. The preamble contained the following words:—"It is now time that justice were done towards us; our grievances are of eighty-two years standing, and we are tired of high-sounding words and vague promises." Mathias, taken by surprise, and still in doubt as to the security of his new position, had no alternative but to sign the charter, with the intention, however, of breaking through it upon the first opportunity.

It contained the following articles:—"1. Religious liberty is guaranteed: the king shall propose four candidates for the dignity of palatine, two Catholics, and two Protestants, upon one of whom the Diet shall confer the office. 3. The crown, now kept at Prague, shall be sent back into Hungary, and shall be entrusted to two guardians, chosen from among the laity. 4. The Chamber of Finance of Hungary is independent of that of Austria, and shall be presided over by a native. 5. The Jesuits shall not be allowed to p the country. 6. No dignity or office of state shall be conferred upon a foreigner. 7. The king shall reside in the country, or during his absence be represented by the palatine, who shall be invested with full powers to act in his place."

The Roman Catholic clergy, fearing the loss of their influence if the liberal party were suffered to triumph, protested against the new compact with all their might. But George Thurzo, the Palatine, a man of great talents, and strict impartiality, frustrated all their intrigues and machinations. Acting throughout upon the principles of enlightened toleration, he induced the Diet to intercede with the Emperor, to induce him to grant religious liberty in Austria. But his efforts were less success-

ful in Croatia. The Croats declared that they separate entirely from Hungary than suffer "the Lutheranism" to come amongst them. The indefatigable whilst their own interests are at stake thing in their power to sow the seeds of discord. In the midst of these commotions a revolution broke out in Transylvania, which threatened for a while to furnish new elements of strife and division. Bathori was driven from the throne in the midst of his debaucheries, and Gabriel Bethlen, an able general, and a statesman of consummate ability, elected in his stead. His moderation and prudent counsels prevailed over the tergiversations of Austrian policy and through his influence the peace with Turkey was confirmed. Soon after, in 1619, Mathias died, leaving the crown to his cousin, Ferdinand II.

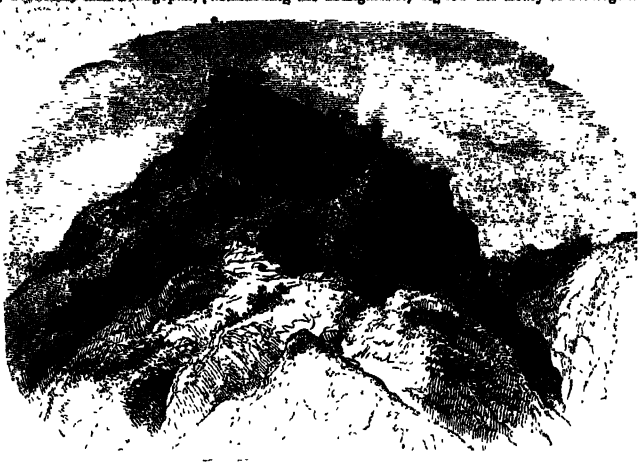
At the accession of this prince, the Austrian States were groaning under the tyranny of the clergy, among whose blindest adherents was the new Emperor himself. He said on one occasion, "that he would sooner beg his bread than yield an inch to the perverse principles of Lutheranism." It soon became apparent, therefore, that the Hungarian Diet would have to seek new guarantees for the preservation of their liberties. Before his coronation, they had made the Emperor not only swear to respect religious freedom, but acknowledge their right to elect their sovereigns. But all their precautions could not guard them against the subtle tactics of the Viennese court, and to such a pitch was religious persecution carried that Gabriel Bethlen felt it his duty, notwithstanding his mild and conciliating disposition, to interfere on behalf of the Magyars. He set out with a large army, and his march to the gates of Vienna was a series of triumphs. Aided by the Bohemians, who were also alienated from Austria, he took possession of Presburg, where the crown of St. Stephen had been deposited, and was there proclaimed King of Hungary. But, fearing to shut out all hope of reconciliation, he concluded a truce with Ferdinand, and returned to his own dominions. This act of rare moderation was not appreciated by the Austrians. They ascribed it to fear rather than to integrity, and continued to follow their old course. Bethlen again took the field, and was this time as successful as before. Ferdinand was obliged to surrender at discretion, and Bethlen was about to exact severe retribution for so shameful a breach of faith, when his death in 1629 relieved the Emperor from all anxiety. George Rakoczi, his successor, did not display any remarkable talent, and Ferdinand was allowed to follow his inclination, which led his death in 1637.

Ferdinand III., his son, succeeded him, and his reign presents nothing but a continued series of tumultuous and intrigue

of personal encounters. Even the Emperor thought the exactions of the Hungarian prelates exorbitant, and felt himself compelled to interfere. In the midst of the deliberations upon one occasion, the Palatine, John Draskovics, a man of Croatian origin, threatened "the clergy" his sword and strike off the head of any who should dare to injure the Catholic Church. These disturbances were still raging when Ferdinand III. died in 1656, having some time before caused his son Leopold to be elected King of Hungary.

Having been educated for the Church, Leopold was narrow-minded and as intolerant as the Church could require. He was jealous of his rights, aspired to be a despot without possessing any of the talent which alone can make despotism tolerable. He acted in everything under the direction of the Princess Lobkowitz and Portia, the deadly enemies of the Magyars; and to add to the misfortunes of the latter, the Turkish Vizier, Achmet Kiuprili, broke the truce, and entered Hungary at the head of a large army, plundering the towns and slaughtering the inhabitants. But the ancient valour of the Magyars was not dead, it only slumbered. Nicholas and Peter Zrinyi, Nadasdi, Esterhasi, and a many others, disputed every foot of ground with the Turks, and notwithstanding the immense superiority of the latter, they were worsted in several sanguinary battles. Nicholas Zrinyi, above all, a worthy descendant of his gallant ancestor, who died upon the bridge of Sziget, distinguished himself by the most brilliant triumphs. In testimony of their admiration of his valour, Philip IV. of Spain, bestowed on him the order of the Golden Fleece, and Louis XIV. fixed a pension on him for life. At last Count Montécuculli was placed at the head of the imperial and royal armies in Hungary, and John de Coligny, and the Marquis de la Feuillade, joined him with six thousand French troops. A great battle was fought in 1664, near Kormend, a village on the frontiers of Styria, in which the Turks were totally defeated, and the Sultan was obliged to sue for peace, which was at once agreed to.

Torn by religious animosity, ruined by the extortions of the foreign soldiery, despoiled of their national rights, treated as wild beasts by the two powers, which were constantly at war.



But adversity had not as yet so broken the spirits of the nobility as to cause them to sink into slavery without a struggle. A great conspiracy was organised by Francis Vesselenyi, the Palatine—a man of great talent and influence. Nearly all the great nobles, Catholic as well as Protestant, entered into it. The greatness of their misfortunes had caused them to forget their differences, but at the moment when the plot was ripe for execution, Vesselényi died, and his accomplices finding that they had been betrayed by a servant sought safety in flight. Their property was instantly confiscated (this was a measure always peculiarly pleasing to Austria, as she has always been in great want of ——). Christopher Frangepan Peter Zrinyi the Ban of Croatia, who had achieved so many brilliant triumphs over the Turks, Francis Nadasdi and even Lattenbach, the governor of Styria were brought to trial, and executed at Vienna. A great number of men slightly compromised and some entirely innocent, were thrown into prison. Among these was the unfortunate Balthasar Zrinyi, the brother of the Princess Rakoczi, and the last of his family. His only crime was that he bore an illustrious name. He ended his days in prison, forgotten by every one even his own relatives, who believed him to be dead long before.

The vengeance of the Austrian government extended itself even to the female relatives of the conspirators. The widow of the Palatine Vesselenyi the beautiful Mary Szecsi, had remained shut up in her castle of Murany, after her husband's death. Charles of Lorraine the Austrian general, came to summon her to surrender; and thinking resistance vain, she opened the gates, and her castle was filled with Austrian garrison. But scarcely had Lorraine departed when a sergeant at arms of the Austrian court appeared at the castle arrested her, and took her to Vienna where she died in a filthy dungeon. Frances Rakoczi the husband of the charming Helena, succeeded in obtaining a pardon by giving immense bribes to the ministers of Leopold and Emerik Tokoli then only thirteen years of age, took refuge in Transylvania.

These cruelties excited universal indignation. The county assemblies protested against the course pursued by the Emperor, the Archbishop of Strygonia, Szelepcsenyi, who was also Lieutenant General of the Kingdom, was consulted by the Austrian Court as to the best means of overturning the constitution, and evinced his indignation by instantly resigning his office. The administration was then confided to a German named Caspard of Ampringen. Almost at the same time, Lobkovicz was banished from Vienna, and replaced by John Hocker—a man, if possible, still more arbitrary.

We cannot enter in to all the details of the religious war which was now carried on against the defenders of civil and religious liberty in Hungary. The French Court at last interfered, in the belief that it might be able to turn the struggle to its own profit. Acting under the advice of Catholic ministers, Leopold had sought to render the crown hereditary by persecuting the Protestants, and making inroads upon the privileges of the Hungarian nobility. The long war in which Louis —— at that time engaged with Leopold, seemed to afford a favourable opportunity for the recovery of their lost freedom; and to the former they therefore applied for aid, which was afforded feebly and tardily. At length the Poles and Magyars uniting, the Austrians were beaten in two pitched battles. Exasperated by their defeat, they wreaked their vengeance on the defence less peasantry, who were obliged to fly for refuge to the woods and mountains. At last, after many alternations of success and failure, the command of the revolutionary army was placed in the hands of Emerik Tokoli, and from that moment "Victory sat on the helms" of the patriots.

Emerik was the son of Count Tokoli, the friend and companion of the unfortunate Zrinyi, Nadasdi, and Frangepan, who were beheaded in 1676. More fortunate than they, Tokoli fell sword in hand on the field of battle, leaving his son to avenge his death, and assert the cause of his country. Pre-eminent for his talents, his valour, and his patriotism, the young Emerik took the field, carrying a banner in his right hand upon which were inscribed, in letters of gold, the words "*Pro aris et focis.*" All the free-born men of the nation gathered around him, burning to avenge the wrongs of a century of misgovernment. The war lasted for six years, during which the Austrians were six times defeated. The Magyars overran Moravia, and even penetrated into Austria itself, until at last the Emperor was forced to sue for peace; but he was above all things anxious to secure the submission of Hungary as a preliminary to all subsequent arrangements. But Tokoli having ascertained that the negotiations were but a pretext to gain time for the formation of underhand plots, therefore broke off the treaty, and, following the advice of the French ambassador, called in the aid of the Turks. Kara Mustapha, Grand Vizier of Mahomet IV., responding to the appeal, entered Hungary, in 1689, at the head of 200,000 men. The national party forthwith proclaimed Tokoli king; but, as it was not vain honours that he sought, he refused to accept any title but that of prince. In the meantime Louis XIV., abandoning the Hungarians, signed the treaty of Nimeguen,

FORTRESS OF MURANY.

and Leopold was thus enabled to direct his whole force to the subjugation of the Magyars. He entrusted the command of his army to Charles, Duke of Lorraine, who, however, was unable to prevent the Turks laying siege to Vienna in July, 1689. Tokoli cannot be made responsible for this celebrated attack, as he was strongly opposed to it; but the hope of a

NICHOLAS PALIT.

FRANCIS TESSELENYI.—(*See page* 195.)

rich booty caused the Ottomans to disregard his remonstrances. It was the freedom of Hungary he sought, and not the downfal of Austria. John Sobieski, King of Poland, anxious to gain the favour of the Emperor, who had opposed his election, came to the aid of Austria, and charging upon the Turkish host at the head of the Polish cavalry—the proud corps whose boast it was "that if the sky should fall they would bear it up on the points of their lances" —chanting loudly "Non nobis domine," &c., utterly routed them. After the battle Leopold asked Charles of Lorraine in what manner he should receive Sobieski. "With open arms," was the noble answer, "for he has saved the empire." But the Emperor barely murmured a few words of empty acknowledgement, and this was the only reward the Polish hero ever received for saving Christendom.

After the defeat of the Turks, the Imperial armies marched in triumph into Hungary. Visegad, Eperies, the Five Churches, and Szeguedin, were carried by assault. The Duke of Lorraine, Louis of Baden, Maximilian of Bavaria, and Eugene of Savoy, performed prodigies of valour, and displayed consummate military skill, and it is the union of so many great generals alone which can account for the repeated defeats of the Ottomans.

The Sultan, enraged at the repeated failures of his Vizier, recalled him, and sent Solyman Pacha in his place. The latter immediately marched to the relief of Buda, at that time besieged by the Imperialists, but was defeated under the walls, and the city soon after surrendered, after having been in the possession of the Ottomans for a century and a half.

As our next Number will bring us down to the period of the war of independence in 1848, perhaps this may be the best opportunity of entering into a few details of the history of

GEORGE BRANKO.

EMERIK TOKOLI.

JOHN DRASKOVICS.—(*See page* 194.)

this celebrated town, the name of which appears so often upon the pages of Hungarian history, It was the residence of Attila, and the favourite resort of all the early Hungarian kings. By Mathias Corvinus, who was as great a lover of splendour and decoration as Louis XIV. in later times. But his love of the beautiful did not prevent his paying the strictest attention to his duties as a sovereign. His memory is still dear to the Magyars, and around it is woven many a web of popular tradition, which charms us by its graceful beauty and delight, by the simple but fervent character of its veneration. The traveller, on passing out of Buda, cannot fail to observe the remains of an old and massive wall which runs from an angle of the fortress towards the part of the town called Christineville. It is related that these ruins are those of a viaduct which Mathias commenced to erect across the valley on a level with his palace, in order that he might thus have easier access to the mountains on the opposite side, in which he was in the habit of hunting. Having, above all things, an indomitable resolution, whatever the King willed, he forthwith proceeded to execute, despite any obstacles that might stand in the way. The causeway was, therefore, immediately commenced, but an insurmountable difficulty soon arose, which bid fair to prevent its completion. It was, of course, necessary to obtain the consent of the various proprietors, through whose lands the proposed viaduct was to pass. Of these there was an old woman, known in the neighbourhood under the name of *Vasfogubaba*, whom neither threats nor entreaties could induce to part with her little garden; because, as the tradition goes, the possession of the herb vervain gave her the power of opening all locks, and breaking all fetters and shackles. It was in vain that the King, enraged at her obstinacy, called her before him and swore that, unless she consented to receive a fair price for her piece of land, he would shut her up for life in the *Czonka Torony*, or Bastille. The hag laughed at his threats, and replied, with great *sang froid*, "Do you want my garden for the good of your people or the glory of your kingdom? Is it to avoid the effusion of blood, or bring joy to the hearts of the sorrowful, that you seek to despoil the poor woman of her heritage? No, no; it is that you may more readily make war upon the innocent animals, and spend in hunting the hours that others spend in labour. Go on, go on, my lord! but the loss of the crown would be nothing compared with the price this mad freak of yours will cost you."

The King, irritated by the boldness of her speech, ordered her to be shut up in prison during the remainder of her life. The guards forthwith removed her, and as she left, she laughed in mockery at the King. They put her in prison, and placed fetters upon her; but on the following morning, when Mathias looked out of his window across the valley, there he saw her at work, as usual, in her garden. His anger knew no bounds. He ordered her to be confined in a dungeon still deeper, and under a still stricter watch; but all was in vain—she escaped again. At last, Mathias declared that if he again saw her out of prison, the gaoler should expiate his negligence by his life. Two keepers were accordingly executed, but with no better success; and at last, to avoid being any longer the butt of popular ridicule, the king resolved to shut her up himself, and to place the royal seal upon the door, which formed the only means of egress from the prison, and was strongly defended with iron. But to his surprise, he found that his signet ring was gone, and the old sorceress, thrusting out her withered hand through the bars of her cell, there was the ring twirling round on her finger. "Seal it up! seal it up!" said she, with a sneer. "but every time I want to visit my little garden, I will borrow it from you again." "Vile sorceress!" said the King, placing the ring on his finger, "your hopes shall be disappointed; I won't yield to you, should it cost me my crown." He then sealed up the door and walked rapidly away. "Open the door wide!" shouted Vasfogubaba, seeing him depart, "and release me, or you shall curse the dawn of the morrow."

But Corvinus paid no attention, but retired to his chamber, hoping that he would henceforth be delivered from all annoyance

The day began to break. The lofty peak of St. Gerard, and the surrounding hills, were casting their shadows on the golden surface which the rising sun had shed on the broad bosom of the Danube, when the messengers of evil tidings arrived in the royal palace. Beatrice, the beloved daughter of the King, was the mother of a still-born child; and thus, in one moment, his long and fondly-cherished hopes were blasted. He rushed towards the chamber of the Queen, but scarcely had he approached her bed when he stopped suddenly, uttering a groan of terror and despair. He found himself standing face to face with the hideous Vasfogubaba. There she stood, enveloped in the folds of her large cloak, and darting, now on the King and now on the Queen, withering glances from her dull and glassy eye, and murmuring some unintelligible incantation. Mathias did not move or speak, and the old woman slowly retired without molestation. But the viaduct remained unfinished, and her garden untouched; but the Queen had no more children.

In the mountains which surround Buda, there is a retired and picturesque spot, which the Magyars call *Szepjuhaszne*, or the "Pretty Shepherdess," in memory of an adventure which here befel Mathias Corvinus. Every legend which concerns this monarch, as we have already said, is still listened to with as much interest by the Magyars as if it were the recital of an occurrence of the present day.

The place to which we have referred is a deep and shady valley surrounded by precipitous heights, overgrown with flowers and wild vines, and cooled by a softly-flowing stream of flowing water. In this delightful retreat Mathias erected a hunting-lodge. On a slight elevation close at hand there stands a large and wealthy monastery, dedicated to St. Paul. The King was in the habit of paying frequent visits to it when riding to the chase—often passing whole hours at a time in company with one of the monks named Gregory, who, from being a canon in Strygonia, became general of his order.

Very different from Charles Robert or Louis the Great, Mathias was too much a man of the world to have any faith in the professions of temperance and self-denial made by the monks. He had tasted all the pomps, pleasures, and follies of life, and therefore paid but little heed to the devout homilies of the holy superior, and remained quite incredulous as to the asceticism of his pious hosts. It is related of him, that having passed a day in 1472 with Gregory, he saw, in passing through the corridor of the monastery, some of the produce of last year's vintage in casks, waiting to be placed in the cellar. He thereupon remarked that Tristian, the rigid General of the Order in 1363, in restricting the repast of the monks to two dishes, should also have placed some limit to the depth of their potations.

Upon one occasion the King arrived at the convent at supper-time, accompanied by his suite, and wearied with the chase. One of the monastic rules was, that every person seeking admittance should knock, and wait until the porter had obtained permission from the Superior to bring him in. The brother who then held the keys, upon looking through the chinks of the grating, at once recognised the King, but instead of opening the gate, rushed to the refectory to inform the Superior of the unexpected visit. Gregory rose from the table, and hastened to receive the royal guest. He knelt at his stirrup, and besought him not to impute the delay in admitting

punctuality. "What say you, my lords and gentlemen," turning to the nobles who accompanied him, "would not you do well to follow so good an example? I should feel but too happy to have my orders executed with such fidelity and respect."

We have already alluded to the King's want of belief in the austerity of the monks. He resolved to convince himself of their dissimulation by coming upon them unawares and in disguise. With this intention he one evening wrapped himself up in his cloak, and entering the chapel, was gliding stealthily towards the body of the monastery, when he was perceived by a monk, who seized him and dragged him towards the infirmary. The brother then recognised him, and, terrified at his indiscretion, poured forth volleys of excuses, and implored pardon in moving terms, and offered to go and inform the Superior of his Majesty's presence, but Mathias sternly forbade him. Very soon the bell sounded the hour, and the monks began to assemble to perform their devotions. Mathias with his guide remained concealed behind one of the pillars of the chancel. When mass was over, all threw off their garments, and presented their backs to the lash of the Superior. This functionary

performed his duties with a holy ardour, sparing neither the scourge nor the penitents. The King, smiling, whispered to his companion—"How is this? Is this monastic justice? Does the superior give all the blows and get none himself?" "Sire," replied the monk, "if your Majesty will have a little patience, you will see him get his share also." "I hope so," was the reply, "for example is generally more efficacious than precept." Very soon the Superior knelt down and received a due allowance of moderate flagellation from the hands of one of his subordinates, and the King was satisfied.

About the year 1512, a famous sculptor, known in the convent as Brother Vincent, assumed the cowl, and henceforth devoted all the time he could spare from his prayers to the embellishment and decoration of the chapel. There are still extant numerous accounts of the wonders wrought by his indefatigable chisel; but only one fragment of his works remains to corroborate their testimony. Many of his brethren also distinguished themselves by their literary labours. During these prosperous days the convent had five hundred inmates; but when Solyman took possession of Buda, in 1541, after a sanguinary struggle, consummated by murder, pillage, and devastation, the monastery was levelled to the ground; the curious and valuable collection of rare manuscripts was scattered or destroyed. The Order of St. Paul, or, as it is sometimes called, that of the Hermits of St. Paul, was abolished in 1784, by Joseph II., and its revenue applied to the endowment of the Hungarian clergy.

We must not here forget to mention the legend from which this delightful valley derives its name. It is another charming story, of which Mathias is again the hero. In the good old days of Hungarian history, the mountains to the north of Buda were covered with immense forests, where the hardy oak and odoriferous linden-tree flourished in all their vigour and beauty. The declivity descending towards the villages of Kovacksi and Budakeszi was covered with meadows fragrant with wild flowers. It was in this vast forest that Mathias followed the chase, and in the meadows the Queen's flocks grazed.

On one occasion the King separated from his attendants, and, issuing from the wood, found himself opposite the royal pasturage, and stood for some moments wrapt in admiration of the beauty of the scene which surrounded him. In the distance were Buda and the great plain of Rakos, and at his feet the Danube rolled on in calm and quiet splendour. On every side smiling villages, fertile valleys, lofty forests, and lofty mountains, met his eye, all radiant with the light of the summer sun. Very soon, however, his attention was drawn to an object more attractive than the landscape. Looking in the direction of the straight pathway which led towards the royal park, he perceived the young wife of the principal shepherd going towards the cottage, after having carried her husband his breakfast. In passing the King, she gracefully curtsied to the handsome hunter, without suspecting in the least who it was. The King followed her to her abode, and pretending that the mountain air and exercise had given him a very sharp appetite, begged of her to supply him with something to eat. She forthwith told him to sit down under a large oak close at hand, and she would there bring him a dish of *tarho* (a milk thickened with rennet), which she had prepared for her own breakfast. He thankfully accepted the offer, and sat down on the grass. The girl entered the cottage, and returned in a few minutes with the *tarho* and two wooden spoons, one for herself and the other for her guest; and, sitting down by his side, and holding the dish on her lap, they eat until all was finished. Before they had done, Mathias had obtained from his pretty hostess the history of her whole life; and she had learned from him that he was one of the royal huntsmen, and that his name was Nicholas, and that he considered her the prettiest woman in the world, not excepting the Queen, whom he had often seen. "Seen the Queen!" exclaimed Theresa; "how fortunate you are!" and she immediately insisted on his describing her. But he steadfastly refused to do so, unless she consented to reward him for his trouble by a kiss, which she consented to do sooner than suffer him to depart without having gratified her curiosity. The stipulated recompense had scarcely been paid when the sound of the horn announced the approach of the royal hunting party. Mathias cast down his eyes, assured Theresa that if he were discovered he would be severely scolded for his absence, and proposed to exchange a large partridge with her for another kiss. She agreed, and he immediately afterwards departed.

When Sandon, the shepherd, returned in the evening, from placing the sheep in the fold, his wife showed him the partridge, and told him frankly all about the handsome huntsman, and the favours she had bestowed upon him. Sandon's brow grew a little darker while listening to the narration; but he eat the partridge with a very good relish, several times remarking, however, that he considered it rather dearly purchased.

In the meantime the visits of the King became every day longer and more frequent, and as Theresa invariably gave her husband a full and true account of all that passed in his absence, they determined to lay the matter before the Queen. As Nicholas was in the immediate service of the King, they believed that it would require powerful influence to affect him, and they were afraid to complain to his master lest he should look upon it as mere trifling. They therefore set out for Buda one morning at an early hour, dressed in their best clothes, and when the Queen was informed that her chief shepherd craved audience of her, she gave orders that he should be admitted directly. But it was not, as she imagined, some important communication respecting the flocks that he had come to lay before her. On the contrary, he commenced with some embarrassment, but with an air of offended dignity, by informing her that he found it harder to take care of a wife than of all the flocks on the banks of the Danube. This opening amused the Queen so much that she pressed him for an explanation. Theresa here broke on the conversation, and insisted upon telling the story herself; and expressed herself with so much freedom and *naivete*, that the Queen felt great interest in the affair, even before she had the slightest suspicion that the King was one of the leading actors in it. When the recital was finished, she asked for a minute description of this handsome huntsman. The sketch given by Theresa was true to the life—a young man, fresh complexion, large black eyes, aquiline nose, and hair the colour of hazel, flowing in long tresses upon his shoulders, he was well made, with broad shoulders, and of middling height. The Queen recognised in a moment the original of the portrait; and told the young couple that she would visit their cottage in the evening, at the hour when Nicholas was expected to arrive, as she would like to speak to him herself. Sandon and his wife retired full of cheerfulness and hope, believing that an end would now be put to their anxiety. About sunset, Beatrice, the Queen, arrived at the hut of the shepherd, dressed as a peasant girl. She told Theresa to be ready with a candle in the adjoining room, to come to her whenever she called her, but not to show herself sooner. She then sat down in the dark, and awaited the arrival of the huntsman. At nightfall the King arrived alone, and when the sound of his horse's feet was heard, the inmates of the cottage made all ready to receive him. He dismounted, tied his horse to a tree, and entered. Fortune seemed to smile far more graciously upon him than he had dared to hope; for, no sooner had he got inside the door, than he found himself clasped in the arms of a female. He was delighted—proffered a thousand vows of love, kissed and hugged her a hundred times over, when, at a preconcerted signal, the door of the adjoining apartment opened, and Theresa, coming forth with the lamp, Mathias discovered, to his astonishment and chagrin, that he had been all the time caressing his own wife.

The story adds, that the Queen treated the whole affair very good humouredly, and made Theresa a great number of rich presents, as did many of the surrounding nobility also, who, hearing of the adventure, came to visit the rustic beauty, from whose lap the King had eaten his plate of *tarho*.

Having said thus much of the legends connected with the town of Buda and its neighbourhood, we shall now confine ourselves to a short sketch of its history. Attila was the first of the Hungarian monarchs who fixed his residence in it, and it was improved and extended by his successors. It was during the reign of Bela that the fortress was built on the summit of the rock, and it soon after was made a "free" or royal" town. Louis the Great built there a magnificent

palace, and often lived in it in preference to Visegrad. It was in the gardens of this residence that those splendid tournaments were given by Sigismond, in which the bravest chevaliers from all parts of Europe jousted. Sigismond also laid the foundation of the fortress, known as the *Czonka Torony*, the bastille of Hungary, in which all state prisoners were confined. It was here that Ladislaus Corvinus, the son of Hunyadi, was imprisoned previous to his execution. By Mathias Hunyadi the fortress was still further enlarged and embellished, so that in his time it was one of the most splendid palaces in Europe. The gardens extended almost to the neighbouring mountains. On the side of the river a terrace of porphyry overhung the water, and presented a spectacle of great magnificence. Numerous statues in bronze—amongst

GABRIEL BETHLEN.

others, a group of centaurs—were placed in various parts of the building. In the great hall there were three colossal figures—that of the King, leaning on his lance, that of his father, and that of his brother, who was beheaded. The royal baths surrounded the gardens, and were in no way inferior to those of the East.

The cathedral, commenced by Bela IV., and finished by Mathias, was a *chef d'œuvre* of Gothic architecture. Art, luxury, grandeur, were all three combined in Buda. But the palmy days of Hungary were never destined to last long. The great battle of Mohacs, fought against the Turks in 1526, decided her fate. It is related that, before the unfortunate Louis set out for the field, a deformed wretch—half man, half demon, presented himself at the palace gates, and asked to see the King. The more the guards repulsed him, the more obstinate he became. At last, the King hearing of the circumstance, sent his aid-de-camp to see him in his place; but the stranger detected the deceit, and broke out into loud bursts of laughter, after which he shouted to the astonished officer: "Go and tell your proud master that I have but to announce to him a plain prophecy: in one month Louis will be glad to exchange his spacious palace for a narrow chamber!" In four weeks afterwards the battle of Mohacs was lost, and Louis was engulphed in a marsh. For a long period afterwards, whilst Hungary was governed by princes of the House of Hapsburgh, the Turks never once ceased to infest the country, and Buda, a prey to continual devastations, remained for 150 years in their hands, who made it a second Stamboul. In 1686 it was as we have stated in the commencement of the present chapter, owing to the valour of the Hungarian family; but a bomb falling into the midst of the powder, entirely destroyed the palace of Mathias Corvinus;

and there only remained of the whole town two churches, and the tower of the Dominican convent. The Emperor Charles II. caused some repairs to be made in the fortifications, and they were completely restored in the reign of Maria Thèresa. The castle is the residence of the Palatine. In the chapel are the crown of Hungary and all the other insignia of royalty. They are guarded by a captain and sixty veteran grenadiers, placed under the orders of two supreme guards, who are chosen by the King and the Diet from amongst the first nobles in the country. There is another relic preserved in the church of St. John at Buda with religious care—the arm of St. Stephen. On the 20th of August, in each year, all the great dignitaries of the country, civil and military, assemble in the church to assist at the ceremony of the coronation and of the death of this great man.

All these reminiscences of the ancient glory of their country excite the courage of the people, and infuse into them high and chivalrous feelings of nationality. The peasant, as he jogs to the market, hums with lively voice,—

"*Till Magyar, all Buda meg.*"
"The Magyar lives still, for
Buda still is standing"

Never was there a people harder to bow down by misfortune than the Magyars. Their implicit confidence in the power of individual valour leads them to hope against the most unpromising prospects. Forsaken they may be, but it is impossible to cast them down. They unite, in a singular contrast, a calm goodness of heart and an irritability of temperament which the most trifling cause rouses to action. Liberal and generous towards their adversaries, they have never abused the confidence they may repose in them. Faithful to their religious creed under every vicissitude of fortune, they have fulfilled the duties it imposes without feebleness and without ostentation.

Every religious reform which has taken root amongst them has found its chief support in the progressive character of the people, and their ardent love for nationality, not in the impulse of a blind fanaticism. The adoption of protestantism shews above all the desire of Hungary to separate herself from Austria, an absorbing Catholic power. It is for this reason that it has been called *Magyar Vallas*, the Magyar faith, and the men who profess it have been at all times distinguished by the greatest toleration for their neighbours of a different faith. Although modern civilisation has made great progress amongst the inhabitants of the towns, the peasantry remain much as they were when the Turks took Buda. Their usages may be less refined than those of Western Europe, but they are purer and more dignified. For them their own country is the height of perfection and the height of happiness. Tied, as it were, to the soil on which they were born, the Hungarians are seldom found in foreign countries until the late misfortunes have driven out so many of them. To them there is peace and safety nowhere but in their own country. Hence the proverb—"Out of Hungary there is no life; or, if there is life, it is altogether of another kind."

PRINCESS RAKOCZI (HELENA).

MIGNIONETTE.

BY MISS H. M. RATHBONE.

CHAPTER II.

It seemed as if the idea of losing the privilege of watching over Mignionette caused Mr. Ross to redouble his attentions. He called twice daily, and thought of everything that could contribute to her comfort during the long stage-coach journey from Durham to London, bringing air-cushions of different shapes, a high foot-stool of his own contrivance, whose hollow inside held the various cordials and condiments which he thought might be necessary, and providing Mrs. Wright with abundance of cloak-wrappings, interesting books to read to her patient, and letters of introduction to the great London doctor, to a lady friend, whom he fancied would be a comfort to both the travellers, and to the mistress of the lodgings which he had engaged for them. The good schoolmistress wondered whether Mignionette had any suspicions of the young surgeon's sentiments, and, anxious to know before they set out, she said to her, on the eve of their departure, "Mignionette, if you recover your sight, you will owe it to Mr. Ross, for I am sure he saved your life in the fever, and that we should never have ventured to undertake this long journey without his help and encouragement."

"I do, indeed, owe him more than I can ever repay, mother, and I wish we had anything to give him that he would care for when he comes to take leave of us this evening. Don't you think, as it is getting late, that I had better go to bed before he comes, and then he can see me upstairs?"

"No, my dear, unless you feel too tired to stay, I think you had better remain where you are awhile longer." For Mrs. Wright, whose serious anxiety could not prevent her from admiring Mignionette's personal appearance just then, thought she was now looking so very pretty in her nicely-frilled white dressing-gown, her pink-bowed little cap, and her pale, sweet face, lighted up by the rays of the setting sun, that she did not like that Mr. Ross should not also have the pleasure of seeing her on the sofa, while Mignionette had her own reasons for wishing a different arrangement, but she dared not say more.

A knock was soon heard, and Phœbe showed in not only Mr. Ross, but Edward Allingham, who had both come to spend this evening with their friends—a circumstance which embarrassed Mignionette, who wished to speak to the former alone; and she felt pained to see him looking so depressed, though as assiduous as ever in trying to keep up her spirits. But it was a difficult task to all the party that night to seem cheerful, and it afforded a seasonable relief, by giving them something to laugh at, when Phœbe, who had cried herself nearly blind the two preceding days, and who thought good eating a panacea for all misfortunes, brought in an extraordinary supper of her own contrivance, and enough to feast a dozen guests. The visitors both took something to please the kind-hearted old servant, and then rose to say farewell, Allingham bidding adieu with expressions of evidently heartfelt hopes, which the rest did not experience, and a sort of happy, though feeling, manner, which contrasted strongly with the irrepressible agitation of Ross.

"[redacted] I not forget me?" the latter said, in a low tone, as he held her hand [redacted] to part with it,

"Oh, no! no! do I not owe everything to you?—and I promise that you shall be the first to hear if any good befalls me."

She could say no more; and the young surgeon, afraid of exciting emotions which might be injurious to her, commanded himself so as to take leave without any further expression of his feelings.

The next day he sent to ask Mrs. Wright particularly how she seemed, but he did not appear himself until just in time to silently hand them into the coach, and after one low "God bless you, Mignionette!" to return home and dream of what life would be in the future if this fair girl were his companion.

Allingham could not leave his school to pay this parting compliment, and lavished his cares upon Mrs. Wright's favourite dog, which she had confided to his charge in preference to that of Mr. Ross, because the latter had no garden, and could not, she knew, take the dog out on his professional rounds.

The two friends continued to meet occasionally at the three plane-trees, but less frequently as winter approached; and in November Allingham was taken so ill, that his friend spent almost every evening and most part of every night at Hyde; nor could he feel at all astonished at Edward's attack when he found him sleeping with only one blanket in a room without a fire, a broken window, badly mended with paper, and the temperature almost at freezing-point. These pressing wants were soon supplied, and, in answer to his repeated inquiries, Allingham told him how it came to pass that he was in such a destitute condition, a communication which seemed to throw a cloud over his friend; and their intercourse, without Edward's knowing why, henceforth became less intimate, though not less kindly.

At length, after anxiously watching the post for more than three weeks, a few lines from Mrs. Wright conveyed the joyful intelligence that Mignionette's sight was restored, and that she was going on as well as possible. In the first tumult of his joy, Ross thought he would write to Mignionette at once and offer her his hand and heart; but on the whole, waiting for the sweet possibility, he preferred of acceptance from her own lips, and, though he wrote to Mrs. Wright, he once more refrained from betraying his sentiments.

The Rector, Allingham, old Dr. Hope, and many others, wrote then to Mrs. Wright or Mignionette to congratulate them on the great blessing which had been vouchsafed them; and a fortnight later, on the day the travellers were expected at Evesham, a crowd of persons had assembled round the school-house, when the coach drove up, and the clear, liquid young voices of eighty children sang one of their prettiest hymns as Mignionette entered the house, looking brighter and lovelier than ever.

Again did Ross and Allingham hasten to spend a pleasant evening with these dear friends, and rejoice with them in their happiness; and a few nights later the former came by himself, and, taking the opportunity when Mrs. Wright had left the room, he told his love, and entreated Mignionette to set the seal on his happiness by pronouncing that magic word, which he fondly hoped was to herald years of peaceful bliss.

"Oh, Mr. Ross, what can I say? It must seem so ungrateful to refuse the only request you have ever made me, and, oh! I am so very sorry that you ever saw me, for I cannot do what you wish—it is impossible! and yet—and yet—"

"Mignionette!" said Ross quietly, though he looked deadly pale, "answer me truly—why is it impossible? Do you love some one else? Can it be that I have so deceived myself, and that you do not care for me?"

"Oh, I esteem you, and prize your friendship more dearly than words can tell!"

"Then you love some one else? Answer me, Mignionette."

"Yes!"

There was a long silence, which the poor girl thought would never end, and then Ross took her hand, and kissing it many times, quitted the house without another word.

Mrs. Wright's displeasure was at first considerable, and sadly increased Mignionette's distress, who wept bitterly, as she thought of all she owed her faithful medical friend, and the great pain which she had been compelled to inflict upon him. But the schoolmistress thought so highly of Edward Allingham, that when she learned that he had won the young girl's first affections, and that, having at the close of the present year purchased his mother's annuity, he would in future be able to devote the whole of his salary to Mignionette, and support her comfortably, she soon gave way, and made her child feel as happy as she could under the sense of what Ross must go through on her account, by a glad and free consent.

It was many months before Mignionette and the young surgeon met again; not that he had withdrawn his friendship, or ceased to feel an interest in her, but the trial of renewed intercourse to his own feelings was too great to be borne for a much longer period to come. Neither did his intimacy cease with Allingham, but rather became deepened, and he took a generous pleasure in contributing to the furnishing of his friend's house, and in providing a small, good-toned piano-forte, as his own especial present to Mignionette.

That he should decline attending the marriage, excited no wonder; but after it had taken place, both Edward and Mignionette felt deeply the loss of his society, and did all that lay in their power to induce him to come to Hyde; while Mrs. Wright, who thought him acting unwisely as time went on, spoke still more freely to him, and tried to rouse him from the state of apathetic misery into which he had sunk. Their endeavours all seemed useless, and he refused to visit Mignionette when she was ill the following autumn.

Nor did the birth of a little daughter to his friend, some time afterwards, exert any influence in changing his determination. At church, in the market-place, and in the street, he now and then saw Mignionette, when he would shake hands with her warmly, remark how fine the day was, and disappear before she could reply; and so matters went on until the baby was just twelve months old, and beginning to suffer from teething. It was Christmas eve, when the anxious parents in much distress were bending over the crib of their first-born, and forced to acknowledge in bitter anguish that its feeble frame seemed sinking under a feverish state of things that had succeeded a violent attack of croup the preceding week.

"Edward," said Mignionette, "though Dr. Hope is a clever man in his way, he is not so young and ready to improve upon old ways as he once was; and you may think it strange, but I can't help fancying that he is not treating baby rightly. She seems to me very weak, and as if she needed nourishment instead of so much calomel and antimony."

"You may be right, love; but what shall we do? Would you like me to call in the doctor from Cole-Orton?"

"Oh, no, Edward! I have more faith in Mr. Ross than in anyone else, and I think he would not refuse to come if he knew that your baby, that *my* baby, was dangerously ill."

This last word overset her composure, and her husband, to reassure her, immediately wrote a note to request his friend's good offices, and old Phœbe, who was helping Mignionette to nurse the child, said she would take it quicker than anyone else could, whose heart was not in the business like hers.

Having no other messenger readily at hand, Allingham thanked her and let her go, little thinking how soon she would return.

By a stroke of good fortune, as Phœbe afterwards declared, she found Mr. Ross visiting a patient in the village, and in twenty minutes after she had left the school-house, he stood beside the sick child; and, asking a few questions in his customary clear rapid way, he immediately gave fresh directions, and himself administered food and medicine. Without knowing what Mignionette's opinion had been regarding Dr. Hope's treatment, he changed it at once, and giving it small doses of some mild soothing medicine, alternating with beef-tea and chicken-broth, he succeeded in a few hours in procuring a slight alteration for the better. During that long night, sitting in the closest communion of thought, feeling, and interest, which can engage human beings, and talking to Mignionette as if they had never been separated, he was surprised to find how completely his sentiments towards her seemed to undergo a change. His seeing her look so much older, and engaged in the fulfilment of a wife's and mother's duties, so realised the irrevocable barrier between any nearer connection, and altered their mutual relations, that he soon felt he could henceforth visit Hyde without risking his own peace or her comfort. Cold and frosty broke the morning of Christmas-day, and the pale sunshine found the watchers still uncertain whether the child would live, and the hour for service was approaching, when Ross, laying his hand on that of Mignionette, said—

"A change has taken place in the last twenty minutes—the baby is better—indeed, I think it is out of danger."

Allingham clasped her in his arms in great agitation, as he murmured, "Thank God, thank God, for so great a mercy!" and wringing the hand of Ross, the latter, with a lightened heart, and feeling more happy than he had ever expected to do again, went away to see after his other patients; even able to think it possible that he too might some time enjoy the blessings of wife and children, provided only, he could meet with some one as good and as lovely as sweet Mignionette.

WHITFIELD'S ELOQUENCE.—Of English preachers Whitfield was far the first. Many have surpassed him as sermon-makers, but none have approached him as a pulpit orator. His influence was the same whether addressing the most learned or the rudest auditory. Garrick used to weep, and Hume said he was worth going twenty miles to hear. But the greatest proof of his power is, that he could gather and keep around him in awed silence the whole of Bartholomew Fair. For a time in England he was decried and abused, caricatured by Hogarth, and ridiculed by Foote; but he soon lived down such hostility by the nobility and blamelessness of his character, as well as by the wonderful effects of his eloquence and zeal. Since Cowper's worthy panegyric of him, as has been the case with Bunyan also, men of taste and learning have forborne to speak of the great Methodist preacher otherwise than with admiration and praise.

LORD JEFFREY.

In the days when "George the Third was King," the *Edinburgh Review* was a great fact. All writers tremblingly waited its decisions. From them there was no appeal. We live in other times now. The reading public has risen in intelligence, and cares less for the verdict of the critic. Consequently, to us the *Edinburgh* can never be what it was to our fathers.

The proud position the *Edinburgh* gained, undoubtedly was in no small degree due to its editor, Lord Jeffrey. The story of his life may be briefly told. He was the eldest son of George Jeffrey, Esq., one of the Court of Session in Scotland, by his wife, the daughter of a Mr. Loudoun, of Lanarkshire, and was born in Edinburgh on the 23rd of October, 1773. He was educated at the High School of his native city, and at Glasgow University, but completed his university education at Queen's College, Oxford. In 1794 he was called to the Bar, where he soon became distinguished for the vigour of his eloquence and the wit and boldness of his invective. He attended debating clubs—spoke with readiness and knowledge;—and with no other introduction than his own talents, formed the acquaintance, at the Speculative Society, of Sir Walter Scott, then a young man busy with his "Minstrelsy," and of the Rev. Sydney Smith and Lord Brougham, both ardent for distinction in the Church and at the Bar. Acquaintanceship soon ripened into intimacy; and at a late supper after a debate at the Speculative Society the *Edinburgh Review* was projected by Smith, and approved of by Jeffrey and Lord Brougham. Assistants were soon found; and in October, 1802, appeared the first number of the new periodical, under the editorial care of the Rev. Sydney Smith—its original projector, as he is called by Lord Jeffrey, "and long," he adds, "its brightest ornament."

The success of the new Review was beyond the expectation of its founders—and after a few numbers, beyond all precedent in publications of a similar nature. Nor is this to be wondered at when we look at the character and variety of its articles, and contrast its vigour and wit with the tame productions of any publication then at all approaching it in matter or in manner. The new Review contained the views and thoughts, most fearlessly expressed, of a young and vigorous set of thinkers, on some of the most important subjects of the day, connected with politics, religion, jurisprudence, and literature. The writers flew at all kinds of game:—nor was it difficult to see from the first (what was indeed obvious afterwards) that the politics of the Whig school gave a turn and colour to the whole character of the Review. "The Review," said Jeffrey, "has but two legs to stand on: literature no doubt, is one of them—but its *right* leg is politics."

Mr. Sydney Smith was the editor of the first three numbers; and would, no doubt, have continued his editorial care, had not his views of promotion in the Church called him away from Edinburgh to London. On Mr. Smith's retirement, Mr. Jeffrey took his place; which he continued to fill without interruption till late in the year 1829, when he was elected to the office of Dean of the Faculty of Advocates—a judicial appointment of distinction at the Scottish Bar, hardly to be held, it was thought, in conjunction with the editorship of a party Review. He continued, however, to write occasionally, not on politics it is understood, but on literary subjects, from which his judicial functions could not be held by any means to have excluded him.

His retirement from literature as a part of his profession gave him fresh opportunities of distinction in his original pursuit of the law, and in the line of politics to which he seems to have been especially partial. He was elected member of Parliament for his native city—was listened to in the House more for his reputation's sake, and for what he *might* say, than for anything that he said, or for his manner of delivery:—and soon growing weary of attendance even in a "Reformed House" (to which he had so long looked forward, and which he had in a great measure contributed to bring about), he asked from Lord Melbourne (1841) what he had long coveted—a seat on the Scottish Bench—received the appointment, and retired to Edinburgh and the beautiful scenery of Craigcrook.

A few further particulars of his life may not be thought unimportant. He was chosen in 1821 Lord Rector of the University of Glasgow; was twice married, first to the daughter

of the Rev. Dr. Wilson, of St. Andrew's, and secondly, to the daughter of Charles Wilkes, Esq., of New York, grand-niece of the famous Wilkes "and *Liberty*." Let us add (what future ages will no doubt care to know), that he was swarthy in countenance and diminutive in stature.

Lord Jeffrey is to be looked on as an editor and as an author, not as a Dean of Faculty or even as a Judge. "Envy must own" that he conducted the *Edinburgh Review* with admirable tact and skill, and that he showed great judgment as to the writers whom he brought about him. He was well supported by men like Sydney Smith, Mackintosh, Brougham, Horner, Allen, and Hazlitt. His subjects were well chosen for the time, and generally maintained consistent principles both in politics and in taste; but his great object, it should not be concealed, was to attract attention and to draw readers. We are not, however, to tax him with all the editorial errors of the Review. Let us remember his own apologetical defence to Sir Walter Scott, that he was a "feudal monarch who had but slender control over his greater barons, and really could not prevent them from occasionally waging little private wars upon griefs or resentments of their own."

Lord Jeffrey's position as editor led him now and then into more than one unpleasant quarrel. Southey, Wordsworth, and Coleridge seldom spoke of him except in terms of hatred and contempt; and his memorable duel at Chalk-farm, in 1806, with Mr. Moore, partly occasioned by a clever application of a passage in Spenser to Tom Little's Poems, will long be remembered by the "Little's leadless pistol" of the "English Bards and Scotch Reviewers," and the contemporary epigram which ends—

"They only fire blank cartridge in Reviews."

The quarrels with the Lake school were never made up; but the author of "Little's Poems" and the editor of the *Edinburgh Review* were afterwards reconciled, and the critic even courted by a friendly dedication.

The great defect in Lord Jeffrey's editorship of the *Edinburgh Review* was his short-sightedness in appreciating the merits of Scott, Byron, Southey, Wordsworth, Coleridge, and others. He praised Scott for a time, but a cold notice of "Marmion" threw the future novelist into the arms of the *Quarterly Review*.

We are now to look on Lord Jeffrey as an author:—and it is somewhat singular, we may observe, of one who has written so much, that he is not an author in any other sense than as a critic in a review. This cannot be said of any of his leading associates, or of any of the opposition writers in the *Quarterly*, or indeed of any other writer who has exercised one half the influence in literature that Mr. Jeffrey possessed. His legal as well as his editorial duties must, it is true, have left him very little time for anything else:—and we are not, perhaps, to suppose that he was without the ambition of being an author, or that he wanted leisure for the due consideration of any subject of importance. We may attribute more justly his not appearing as an author in his own person to an unwillingness to endanger his high reputation by the production of a separate work, and to some fear of the "wounded great" who were ready to ask him on all sides and with every kind of weapon. He is, therefore, to be judged by the four volumes of his "Essays," or contributions to the Review, which he was induced to collect and revise in the year 1843. These volumes, he tells us, form less than a third of what he wrote in the Review; but they, no doubt, embrace his best productions—those, in short, by which he was willing to stand. His friends would have made a somewhat different selection; one that would have represented the history of his mind and opinion, and that would have thrown more light on the history of critical judgment in this country than can be gathered from his volumes as they at present stand.

These "Essays," it must be confessed, are not very remarkable productions. They are little distinguished for subtlety of opinion, nicety of disquisition, or even beauty of style. Though printed uniformly with the contributions to the same Review of Sydney Smith and Mr. Macaulay, they have not made the same impression on the public mind, nor been read with the same avidity. So that, while the essays of Mr. Smith and Mr. Macaulay are now in fourth editions, the public have been content till very recently with a single impression of Lord Jeffrey. Yet his "Essays" will more than repay perusal. His paper on Swift is the best elucidation of the Dean's character that we have yet received:—while his articles on Penn and the Quakers exhibit qualities of mind not easily to be found in authors of even greater celebrity.

CONQUEST THROUGH LABOUR.

WORKERS for men, whoe'er you are,
No matter what your sphere,
Who still for human progress war,
And bow with hearts sincere
Before the heavens' high arching dome
Of Light and Truth, and God the home—

Take courage! brief as is our life,
And though our task be great,
Our strength is equal to the strife,
And we shall yet defeat
The foes that stop man's upward road
To holiest freedom's high abode.

Around us countless millions bend
O'er dull mechanic toil,
Their labour's best and highest end
Grim Poverty to foil,
That, wolf-like, still pursues their way,
With dread persistance, day by day.

Within their minds, chill, bleak, and dead,
There dwells no inner sight—
No intellectual sun-rays shed
Their vivifying light;
A polar winter ever keeps
Its empire in those gloomy deeps.

From glorious Shakspere's words there shines
No orb to light their sky,
While Milton's brave and god-like lines
Pass unregarded by.
They never wake to find their souls,
Yet Life to Death unceasing rolls.

What then? Although the night be dark,
And our worn courage droop,
We wait not for the morning lark,
But still, upborne by hope,
And strong in faith that scorns delay,
We hasten on the coming day.

Yon flower, whose sweetness lures the bees,
And sheds its perfume round,
So frail, it quivers in the breeze,
And vibrates with a sound,
Wrought through the earth its skyward course
By resolute and constant force.

Green vales and gentle slopes arise,
Upon old ocean's breast;
Like brightest stars in clearest skies,
They in their beauty rest;
And, strong as beautiful, they form
A sure protection from the storm.

Those isles beneath the restless waves,
Minutest insects reared—
Myriads of builders filled their graves
Ere the first peaks appeared—
Peaks that the sun migh tip with gold,
Firm rock where shifting waters rolled.

Do not these things a lesson teach
Of patience, courage, power?
Though far from land, we're sure to reach
The distant hoped-for shore.
If to our work we prove but true,
There's nothing that we may not do.

Our earth shall yet an aspect wear
Of nobleness and truth,
When all shall human life revere,
Wise age and earnest youth;
And the old Eden less be known
Than that which shall the Future crown.

HOME—SWEET HOME!

In the daily papers we have just seen an account of a meeting of the workmen of the metropolis for the purpose of putting down the brewers' monstrous monopoly. One of the speakers suggested that the workmen present should drink less beer; that with the money thus saved they might raise capital and start a brewery on their own account. The suggestion, so far as it went to the saving of money and its power as capital, was a good one; but the hint to the workmen to start a brewery on their own account was of a very different character. Workmen can make a better use of their savings. Nor do they need breweries, nor the strong drink made in them. No class of men feel the ill effects of strong drink more bitterly than workmen. When the husband is an intemperate character, the happiness of the family is gone for ever; home is robbed of all its charms. When the wife and mother has unhappily adopted the same fatal practice, the curse weighs more heavily still. We read of poverty and wretchedness — of mutual recrimination—and too often of a cruel brutality that ends in death.

The picture is a melancholy one, but the worst feature in it is that it arises necessarily from the compulsory and social customs of working men. They make the transition easy from what is called good companionship to habitual intemperance. The punctual and obliging youth by them is made a sot. The results are — idleness—loss of time and money—want of punctuality, dispatch, ingenuity, contrivance, trustworthiness, and other qualities, so desirable to a working man. The victim stays away from work because he has been drinking; gradually his master becomes tired out; the man gets the "sack," and for the rest of his life he becomes a prey to rags and poverty and want.

Such instances, we fear, are far too common, and our artist has selected one of them. In this melancholy picture there is a history involved, which, if fully revealed, would make our hearts ache. Here we have an operative or mechanic dismissed from work for drunkenness. He is probably a good workman, and could earn high wages; and his master, knowing his value as an artisan, has borne with him until all patience is exhausted, and at last is literally compelled to send him away. But this is not all; his miserable wife is evidently a partaker of his sin. Look at her dress, her countenance, and that disgusting pipe in her mouth; and yet she is a mother, and has an innocent baby in her bosom, whom she is nourishing from her breast, although she has spent the money which would have supplied it with shoes and stockings, and other warm clothing. The prospects of the child of such a father and mother, and especially its future life, should it arrive at mature years, are too dreary for us to anticipate; we tremble to survey its hereafter, either in time or eternity.

We have under our eye a case which just illustrates this representation, and shows that the artist has not been guilty of the least exaggeration. The young man to whom we refer was, when a youth, remarkably steady, and though he often went to the alehouse to fetch home his drunken father, yet always refused to taste strong drink. We should say that his father was once the member of a Christian Church and his mother, who is lately gone to heaven, was eminently pious. The boy received a good education, his friends were respectable, there he learnt his business, and became a very superior workman. But, alas! the love of strong drink by degrees prevailed, and until at last he settled down in absolute drunkenness. His increasing drunkenness for liquor led him to a little low ale-house, and here he became fascinated with the landlord's daughter, and eventually took her "for better and for worse."

The last place we should recommend a young man to go to for a wife is a gin palace, a tavern, or an inn. The bodies and minds of such women have generally been deeply polluted. Of course they have been educated in the school of strong drink, and the company they have had to associate with has been of the most immoral character. "Filthiness, foolish talking, jesting, blasphemy," and "other things which are not convenient," are the discourse which they have been doomed to hear. Well, the lass referred to above came from one of these academies of Satan, and is now a degraded a drunkard as her husband. Two or three children they have drunk into the grave, and the one they have left has no prospect for the present or the future world. Hundreds of masters would be glad to have this young

ast all se er a pipe and plenty of strong drink, and she asks for
all th g more. Her only Eden or heaven is in the wretched-
atures of debauchery. Some, who have studied human nature,
ave h us, that to raise a debased man is hard, but to elevate a
othi cious woman is ten thousand times harder. And as preven-
ess tion is so much better than cure, we would press the prin-
ll ciples of temperance on all, but especially on the attention of
young women.'

CHEVALIER CLAUSSEN'S FLAX-WORKS.

All the world at this time has heard of the improvement made in the manufacture of flax by the Chevalier Claussen. In the beginning of December of this present year his flax-works at Stepney-green were opened to public inspection. The following is a brief account of what the Chevalier has done:—

His invention may be classified under the following heads:—The preparation of long flax for the linen manufacturer; the conversion of flax and hemp into substances resembling cotton, wool, and silk, capable of being spun and manufactured upon existing machinery; and bleaching vegetable fibres, yarns, and fabrics. It must be understood, before giving a brief description of the different processes employed, that Chevalier Claussen's patent terminates with the chemical part, and that his object is to produce flax and cotton (that is, a substance resembling cotton) in a state fitted for the operation of the existing flax, cotton, or woollen machinery. To comprehend the advantages of the invention, we must allude occasionally to the present system employed. At present the flax-straw is steeped in streams or pits of water. By these means it is fermented, and the woody part separated from the fibre. This process occupies from ten to twelve days, and great care has to be observed to prevent the fermentation being carried to too great a height, in which case the fibre itself would be partially destroyed. To shorten the time, steeping in hot water has also been tried, and the separation has been effected in 60 hours, but the risk of injuring the fibre is perhaps augmented. The straw of the flax is of course lost, and the operation tedious. Chevalier Claussen, by his method, takes the flax-straw as it comes from the field, but he proposes that the farmer should mechanically separate the straw from the fibre by the use of a very simple machine, which pounds or breaks the straw, and effects their separation; this reduces the substance to one-half its bulk, and the straw may be returned to the soil, or, mixed with cake, crushed seed, &c., be used as cattle-food. Now, the stem of the plant consists of three parts—the shove or wood, the pure fibre, and the gum, resin, or glutinous matter which causes these fibres to adhere together. The first has been got rid of by the farmer by the process described, and it remains to remove the third constituent, namely, the glutinous substances. Chevalier Claussen contends that the present system of steeping in water, either hot or cold, will not effect this, as a large portion of them are insoluble in water; but he has recourse to chemical agents. The fibre is either boiled in weak caustic soda for two hours, or steeped in a cold solution for 24 hours. It is then "soured" in a bath consisting of 500 parts of water to one of sulphuric acid, washed, dried, and further cleaned, scutched, and so on, through the ordinary modes of manufacture. The flax obtained in this way, being free from all colouring matters, may be bleached afterwards with greater ease, and, as the plant need not be cut till ripe, the grower has the advantage of fully ripened seed, and a greater weight per acre of pure fibre. It is calculated that from four tons of flax straw, one of fibre may be obtained. From this 15 per cent. of long fibre is prepared by the method described, leaving 75 per cent., which, with a further reduction of 15 per cent. in the ensuing processes, may be converted into 60 per cent. of flax-cotton, at a value of £56 per ton. On the old system five tons of straw will yield one of fibre, from which also 15 per cent. of long fibre may be obtained, but the remainder is not worth more than £7 a ton. We will now pass to the most interesting part of Chevalier Claussen's invention—the conversion of this 75 per cent. of fibre into a substance resembling cotton. The fibre is first cut into short lengths by a circular-knived cutting-machine. The appliances for the metamorphosis of flax into cotton are very simple, consisting of four wooden vats, containing solutions which will presently be named, and an open wooden box, or cage, rather, made of strip of wood, which, by means of a rope and blocks, is suspended from a small carriage running along a transverse beam overhead and thus can be lowered and raised, successively into and from the four vats. The cage, being partly filled with the cut flax or wast "tow," is lowered into the first vat, containing a solution of col water, and 10 per cent. of common carbonate of soda. It remain in this about a quarter of an hour, by which time the liquid ha permeated by capillary attraction every part of the small tube The cage is then hoisted up and lowered into the next vat, con taming one part of sulphuric acid to 200 parts of water. Th acid, by its superior affinity to soda, forms a sulphate of soda wit it, and liberates the carbonic acid, which in its escape acts mecha nically by its elastic force, and separates the fine flax filamen from each other. Mr. Hudson, in his report to the Royal Ag cultural Society on this experiment, explains the action ve graphically. He says, "The flax fibre soaked in the solution sub-carbonate of soda was no sooner immersed in the ve containing the acidulated water than its character became at on changed from that of a damp rigid aggregation of flax to a lig expansive mass of cottony texture, increasing in size like leavenn dough or an expanding sponge." It is then immersed in a seco bath of carbonate of soda solution, and if only required to be us in an unbleached state, may be washed and dried. If, however, is to be bleached, it is immersed in a fourth vat, containing a sol tion of hypochlorite of magnesia, and in about fifteen minu attains the colour, as in a previous similar time it had acquired t texture, of cotton. In fact, it goes in brown flax, and in less th one hour comes out white cotton. It is then washed, drained baskets, dried in cakes, hanging across iron horses in stoves heat to 98 deg. Fahr., and is then ready to be tortured by "devilling "combing," and all the other operations incidental to cott manufacture. The time of draining and drying is not more th twelve to fifteen hours, so that the whole process, from the ti

the flax is brought to the pounding-machine to when it is converted into a cotton similar to, say, a bale just landed from America, allowing the cold-steeping process, would not exceed 48 hours. Chevalier Claussen affirms that this "British cotton" may be manufactured as low as 2½d. per lb., which would readily sell for 4d or 6d. per lb; and to show the field open to flax-growers, gives the following statistics of importation in his paper read before the Royal Agricultural Society. The value of flax fibre imported he places at £5,000,000; seed for crushing, £1,800,000; seed for sowing, £200,000; oil-cake, £600,000; and hemp, £1 500,000, making a total amount of £9,100,000. With regard to the profits of cultivation, Mr. Druce, on a piece of land in Oxfordshire, found it amount to £8 6s. 2d per acre on 5a 2r 36p grown in flax Chevalier Claussen, in his pamphlet on the subject, adduces at length the different advantages, and combats the different objections against flax cultivation, and points out the superiority of his process over any of those already used, but even an enumeration of them, beyond what we have said, would occupy too much space, and as the further processes of manufacture do not belong to his invention, we will, having brought flax into the state used by manufacturers, and, by further change, into the state of an American bale of cotton just landed on our shores, conclude our description.

THE MORAL EVILS OF WEALTH Orville Dewey says I am obliged to regard with considerable distrust the influence of wealth upon individuals I know that it is a mere instrument, which may be converted to good or bad ends, but I more than doubt whether the chances lead that way Independence and luxury are not likely to be good for any man Leisure and luxury are almost always bad for every man I know that there are noble exceptions But I have seen so much of the evil effects of wealth upon the mind making it proud, haughty, and impatient—robbing it of its simplicity, modesty, and humility—bereaving it of its large, and gentle, and considerate humanity, and I have heard such testimonies, such astonishing testimonies to the same effect, from those whose profession it is to settle and adjust the affairs of large estates, that I more and more distrust its boasted advantages, I deny the validity of that boast In truth, I am sick of the world's admiration of wealth Almost all the noblest things that have been achieved in the world have been achieved by poor men—poor scholars and profound men—poor statesmen and artists—poor philosophers, and poets, and men of genius It does appear to me that there is a certain sturdiness and sobriety, a certain moderation and restraint, a certain pressure of circumstances that is good for a man His body was not made for luxuries it sickens, sinks, and dies under them His mind was not made for indulgence—it grows weak, effeminate, and dwarfish under them It is good for us to bear the yoke—and it is especially good to bear the yoke in our youth I am persuaded that many children are injured by too much attention, too much care, and by too many servants at home, too many lessons at school, too many indulgences in society, they are not left sufficiently to exert their own powers, to invent their own amusements, to make their own way—they are often insufficient and unhappy—they lack ingenuity and energy—because they are taken out of the school of Providence and placed in one which our own foolish fondness and pride have built for them Wealth, without a law of entail to help it, has always lacked the energy even to keep its own treasures—they drop from its imbecile hand. What an extraordinary revolution in domestic life is that which, in this respect, is present d to us all over the world! A man, trained in the school of industry and frugality, acquires a large estate, his children possibly keep it, but the third generation almost inevitably goes down the rolling wheel of fortune, and there learns the energy necessary to rise again. And yet we are, almost all of us, anxious to put our children, or to ensure that our grandchildren shall be put, on this road to indulgence, vice, degradation, and ruin This excessive desire for, and admiration of, wealth, is one of the worst traits in our modern civilisation We are, if I may say so, in an unfortunate dilemma in this matter. Our political civilisation has opened the way for multitudes to wealth, and created an insatiable desire for it; but our mental civilisation has not gone far enough to make a right use of it

LITERARY NOTICES.

MR CASSELL announces, in answer to numerous inquiries, that by permission of the Postmaster General the "French Lessons" can now be had through the Post-office, on receipt of seven postage-stamps.

On January 3, 1852, will be published by John Cassell, price Twopence, the First Number of a New Series of "The Illustrated Exhibitor," under the title of

THE ILLUSTRATED EXHIBITOR
AND MAGAZINE OF ART.

This work, though published at so small a price, will greatly surpass everything that has yet appeared, even at double the sum The Engravings will form a Gallery of Fine Art The first artists in the world will be employed upon them and the printing, and all the details, will be executed with the greatest care, a new Printing Establishment being fitted up expressly for the purpose of bringing out this New Series of THE ILLUSTRATED EXHIBITOR The First Number will be ready with the Magazines for January, 1852 Monthly Parts, price 8d., or, when Five Numbers 10d each

THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART will not only form a Gallery of Fine and Illustrations, but will also contain admirably-written articles on a variety of subjects interesting and instructive to all classes, arranged under the following heads —

I *Works of the Great Masters* —Copies of the most celebrated Works of the Great Masters of all Nations in Painting, Sculpture, and other branches of Art

II *The Portrait Gallery* which will be enriched with Biographical sketches and Reminiscences The portraits will be engraved with the greatest care by first-rate artists, and together with the biographies, will prove of deep interest and profit

III *Historical Events* —Each article will be accompanied by a splendid Engraving As the most striking events in the history of other nations, as well as our own will be included, this will prove a medium for the communication of much valuable and instructive information

IV *Architecture* This department will comprise the finest specimens of Architecture of Europe including the cathedrals and other ecclesiastical buildings of England and the Continent Norman castles, noble residences public institutions and other buildings possessing claims to architectural taste and beauty

Useful Discoveries, Inventions, and Improvements —This department will embrace a vast range of subjects, and as the articles will be illustrated in practical style and illustrated and explained by suitable drawings and engravings it will be deeply interesting to all who desire information on such subjects, but especially to mechanics and mechanics

VI *The Principal Manufactories and Laboratories of England and the World* — Under this grand object of the recent Exhibition the Industry of All Nations will be fully carried out—namely, *the development of the Useful Invention* It will include minute descriptions of the various processes by which the raw materials with which the earth abounds are made to supply the necessities, and to minister to the comforts and elegancies of life The Literary Illustrations will be numerous, and the descriptions will be written in a truly educational style such as to convey instruction and entertainment to family and general readers

VII *Local and Domestic Scenes* —These will include some of those events which occur in our towns and in familiar life, which are well deserving a place and which admit of beautiful pictorial illustration such as to make them ornamental to the internal arrangements, of Government establishments and domestic life, &c &c

VIII *Remembrances of the Great Exhibition*—consisting of Pictorial and Literary illustrations of the most interesting objects in Art and Science for which object would not be found in Volume the First Although THE ILLUSTRATED EXHIBITOR retains a larger and more choice selection of the valuable illustrations the World's Fair has been ever before exhibited yet the various and unique articles still to be introduced will be found worthy the reader's attention

IX *The Ladies' Department* —This curious and useful portion of the work will be under the superintendence of one of the principal *femmes de chambre* of the day, and will be made peculiarly acceptable to female readers as it will be accompanied by a series of illustrations of the most useful and elegant designs in embroidery and every kind of ornamental needlework the latest fashions in dress, &c., &c.

It must be obvious to the most casual observer that the specimens of art and manufacture recently collected in the Great Exhibition of the Industry of All Nations have wonderfully improved the taste of all classes of the community, and have inspired them with a love of the beautiful, a [illegible] which no lecturer or books, however well written, could possibly have done The object of the ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART will be to combine lucid writing and pictorial illustration, adorning itself at once to the understanding and the eye And should this New Series, published as it will be at so low a price, answer the description given in this Prospectus, it will evidently be the greatest literary undertaking of the present day The bringing out of each weekly number will involve a large outlay, but JOHN CASSELL relies with confidence on the support of all classes of the community he believes that this his publican on will be truly national in its character, and will secure not fewer than 200,000 subscribers.

MISCELLANEA.

PROGRESSIVE IMPROVEMENT IN BUILDING OPERATIVES.—The improvement in the condition of the building operatives of this country has been, and we sincerely hope will be, progressive. Mr. Macaulay shews us that, in the seventeenth century, the ordinary pay of a skilled workman was 6s. to 7s. per week, whilst the ordinary pay of a labourer was 4s. per week, and on referring to the table of the prices of wheat, given by Adam Smith, it is seen that, during the Commonwealth and subsequently, a workman must have paid about as much for his bread as he now pays, while he received rather less than one quarter of his present wages. "If we look back," says Mr. Smirke, in an interesting paper on the subject, "to so recent a period as the year 1810, I have it, on excellent living testimony, that the wages of a good mason in London were only 4s per week who now receives from 30s to 33s. In the year 1800 wheat was, on an average of five years as appears by the tables given in Tooke's History of Prices 90s 6d per quarter, and, indeed, during a year of great scarcity about that period, the quartern loaf, for which we now pay 7d or 8d., cost 1s. 10d."

'HOW TO JUDGE OF A BOOK.—A worthy tobacconist in the High street of Auld Reekie was complaining one day of a book which a very erudite doctor had published. "It's a bad one," said he. "How?" said his friend, "I always thought Dr. Finlay had been a worthy, good man." "It's the worst book I ken," said the shopkeeper, "it's owre big for a penny worth o' snuff, and it's no big enough for three bawbees' worth."

THE civilisation of antiquity was the advancement of the few and the slavery of the many.—In Greece, 30,000 freemen and 300,000 slaves—and it passed away. True civilisation must be measured by the progress, not of class or nation, but of all men. God admits none to advice alone.

YANKEE BELL-RINGER.—A tall, awkward-looking fellow, just from the Green Mountains of Vermont, came on board one of the splendid North River boats at Albany. His curiosity was amazingly excited at what he commenced "peeking," as he called it, into every nook and corner of the boat. The captain's office, the engineroom, the cabins, the barber's shop, all underwent his inspection; and then he went on deck, and stared in amazement at the lofty beam, the chimney, and the various "fixins." But at last he caught sight of the bell. This was the crowning wonder, and he viewed it from every position—walked round it, got down on his hands and looked up into it, exclaiming "Wal, reely, this beats the bell in our meetin'-house!" By this time the attention of the captain and several passengers was attracted to the "greenie." "How much would you ask to let a feller ring this bell?" "You may ring it for a dollar, sir," said the captain. "Wal, it's a bargain—all fair and agreed, and no backing out." "It's a bargain, sir," said the captain. Our hero went deliberately and brought a seat, and took hold of the bell-rope, and, having arranged everything to his satisfaction, commenced ringing—very slowly at first, and gradually faster and faster—till everybody on board thought the boat was on fire, and rushed on deck, screaming with alarm. There stood the captain, and there sat the "Vairmounter," ringing away—first slow, and then fast, then two or three taps at a time. The passengers began to expostulate; the captain said it was a bargain. But the passengers became urgent that the clangour should be stopped. All the while there sat our hero undisturbed, ringing away more ways than a Cockney chimne ringer ever dreamed of. At last the captain began to think it time to stop the simpleton, but his answer was—"A fair bargain, and no backing out,' and he rang away for dear life. "Well," says the captain, "what will you take to stop?" 'Wal, captain, I guess I sheant lose nuthin' if I take five dollars and a free passage to New York, but not a red cent less. "Well, walk down to the office and get your money and passage ticket, said the captain. After that we all went to sleep.

If every person were to count fifty each time before taking a glass of beer one hundred before taking a glass of wine, and one thousand before taking a glass of grog there would not be so much intemperance in the land.

A FERTILE SUBJECT.—The *Hants Independent* announces a forthcoming lecture, by the Rev J W Wyld, on "Fudge!" We shall not be surprised to find this eccentricity of the lecture room extend, and to see notices, in various provincial papers, of orations on 'Oh!' 'Pooh pooh,' 'Pshaw,' 'Fiddle,' and 'Stuff,' "Nonsense."

A TOBACCO VICTIM.—A gentleman travelling on an unfrequented road in Maine, and passing a solitary shanty, was arrested by a loud cry of—"Hallo there! I say! Murder! the Longs Gridirons! Brimstone! Hallo!" and a man was seen rushing in great haste wearing a leather apron, but without a coat, and approaching the traveller. What is the matter—what is the matter? 'Oh I'm out to tobacker,' he replied. 'Got any about yer?'

GEORGE STEPHENSON.—Born in a small cottage in Newcastle, and dying owner of the fine estate of Tapton, commencing life on a coal-heap and ending it in a mansion, mending the peasant's clocks to pay for his son's schooling and living to see that son a senator during in his youth in the mine of Killingsworth, and amusing his age in a horticultural contest with a Duke taught arithmetic at fourpence a week, and planning the most difficult railways in the kingdom consulted by the Premier, receiving honour from Kings, a kind son, a faithful friend, and a loving father, the name of George Stephenson is one to which all men delight in doing homage. His life was a lesson to the world.

'Southey, in his 'Omniana,' relates the following:—When I was in Lisbon a nun made her escape from a nunnery. The first thing for which she inquired, when she reached the house in which she was to be secreted, was a looking-glass. She had entered the convent when only five years old, and from that time had never seen her own face."

'Will you take this woman to be your wedded wife?' said an Illinois magistrate to the masculine of a couple who stood before him. "Well, squire," was the reply, "you must be a green un to ax such a question as that ar. Do you think I'd be such a plaguy fool as to go to the bar hunt and take this gal from the quiltin' frolic if I wasn't conscriptiously certain and determined to have her? Drive on with your bizziness."

ANSWERS TO CORRESPONDENTS

R W wants to know if there is any deception in electro-biology, and whether it will do any good? To the latter part of the question we reply, all knowledge must, directly or indirectly do good. The first part of the question is also easily disposed of. There is no deception for deception is impossible. Individual cases may be cases of deception. When general laws are arrived at, they are deduced from facts to which belief cannot be refused, and in which deception cannot successfully be carried on.

JOHN COOK.—You should write on one side at a time, and ought to be able to write without lines.

A GREAT ADMIRER asks—"Does the Lord Mayor of London, by any constitutional right possess the claim to govern England when the throne becomes vacant? If so, has that right ever been called into exercise, and when?" We must answer this question in the affirmative. On the death of a king of England the officers of the Government appointed by the deceased monarch cease to hold any authority, and the only legal magistrate in the kingdom is the Lord Mayor of London, whose office continues till the expiration of the period of his mayoralty, and is not affected by the demise of the king. The Lord Mayor is in consequence the President of the Council till the proclamation of a new king, and this authority has been acknowledged. When, on the death of Queen Elizabeth, James VI, King of Scotland, was declared her successor, and invited to take possession of the English throne, the first signature to the invitation was that of Robert Lee, Lord Mayor of London. The same high authority was exercised by the Lord Mayor of London previous to the accession of William III. to the throne of England.

A ZEALOUS SUBSCRIBER had better consult his Bible than us—or, perhaps, he had better not trouble his head about the subject. All the Bible tells us of Mary is, that she was the wife of Joseph. Nothing else is said of her. "A Zealous Subscriber," we can imagine, will draw from the silence of Scripture a very obvious inference.

T G I.—Lord Palmerston cannot declare war on his personal responsibility.

COMO.—We cannot answer your question very satisfactorily. Rock salt is chiefly exported. The export is immense—we believe somewhere about 4½ million bushels to Europe, and 5½ to America.

WILLIAM M KAY.—Free passages are given by the Emigration Commissioners, under certain restrictions but the Commissioners have only a that and when the colonies provide the necessary funds for the purpose. New South Wales and South Australia are at present the only colonies which supply the means for emigration. The Government emigration officer, in Glasgow, is Captain Patey, R.N. Our correspondent had better apply to him, or to the office of the Emigration Commissioners, 9, Park-street, Westminster.

R H (Halifax).—Gray and Davidson were builders of the largest organ in the Exhibition. It is now erected at Gateshead church. The next in size was Willis's organ.

C W. P.—Lord Carlingford became Lord Privy Minister on the death of Lord Clarendon.

VIATOR.—By the last number of the *Illustrated London Chronicle* we find that printers' wages in Van Diemen's Land are 8s. per day. As a general rule, we recommend no artisan going out to America. The man who goes to America with the expectation of being employed in his own trade, should be a first-rate workman; but indeed a man can make quite as good a living in this country.

W BROOKHOUSE.—We should think Australia would suit you. We cannot recommend any recent work on emigration, but we believe a hand-book, containing the latest information on the subject, will shortly be published by Mr. Cassell.

THOMAS.—The Act of Parliament you refer to came into operation on the 1st of November last. It states:—'If any person shall keep, or suffer to be at large, within fifty yards of any public road, any dog, without being muzzled or having a log of wood fastened to the mask, of sufficient weight to prevent such dog from being dangerous, such person shall be liable to be fined; and any magistrate may order any dangerous dog so kept to be destroyed."

Printed and Published by JOHN CASSELL, 335, Strand, London.—December 27, 1851.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER VII.

IN the ranks of the imperial army, which defeated the Turks under the walls of Vienna, and took Buda, there was a crowd of Magyars, some of them the most illustrious men in the country, Esterhazi, Batthyanyi, Nadasdi, Palfi, &c., whose valour contributed in no small measure to these memorable successes. But in place of making any return for these valuable services, the counsellors of Leopold determined rather to take

advantage of them more completely to subjugate Hungary. They seemed entirely to forget that it was the oppression and injustice of Austria that had driven the Hungarians to throw themselves into the arms of Turkey, and that, after having supported all the horrors of war through a great number of years, they were at last obliged to save themselves from conquest by the sacrifice of their goods, and even of their lives.

The imperial armies soon overran the whole of Hungary, and everywhere the national party was compelled to submit

to them. But in a lonely castle, in a far-off corner, a woman was found worthy of the land that bore her, and the great man who wooed and won her as his bride. It was Helena Zrinyi, the daughter of Peter Zrinyi, who had been beheaded at Vienna, and widow of Francis Rakoczi (see engraving in last number).

After the death of her first husband, who left two children by her, Francis and Juana, she received the hand of one of her old suitors, Emeric Tekeli. The royal army surrounded the castle, and soon [illegible] to submission by the [illegible] her of the [illegible] husband, but she bravely repulsed their efforts, and made preparations for defence with as much vigour and determination as Emeric could have shown had he himself been present.

The Sultan determined to wreak vengeance upon Tekeli for the defeat of his Vizier, and therefore caused Caran to be erected

and dragged off to Constantinople. One of the ablest defenders of Hungary was thus removed from the scene of action, and was subjected to the humiliation of defending his conduct before the throne of a foreign despot, whilst his country was in the meantime suffering all the violence of a foreign soldiery.

Having once put down all opposition, the Austrians showed themselves by no means disposed to repose on their laurels, and endeavoured to remedy, by a wise and liberal system of administration, the evils and misfortunes of so long a war. With a tiger-like cowardice, which seems to cleave to every generation of the Hapsburgh family like an evil demon, they had set their hearts on blood, and were determined to glut their appetite for revenge in the gore of the helpless and unarmed. The public edifices were converted into prisons, and crammed with men, women, and children, indiscriminately, who were left to die by inches in the pangs of hunger, or waste away through the miserly attendance upon a state of moral putrefaction. Those, whom any one could be found to accuse, were executed, those whom none accused were tortured to force them to accuse themselves, and if they did so, they were executed; and if they did not, they were racked until they were dead, so that in any case death was certain. General Caraffa, who presided over these infamous proceedings, was another Haynau for savage ferocity. At Eperies, the scaffolds were erected close under his own windows, so that he might feast his eyes upon the dying agonies of his victims without the trouble of moving from his room. Thirty executioners, adepts in the invention of new modes of torture, were employed at the various scaffolds in this one town during thirty consecutive days, and received 600 florins as the reward of their horrid labours. When, at length, a general cry of execration was raised all over Europe against this horrid barbarity Leopold pretended that they were committed without his knowledge, but the [illegible] of the Golden Fleece upon Caraffa, is the reward of his services.

Persecuted by the Turkish pachas, and deprived of the support of his country, Tokoli retired to Nicomedia in Asia Minor, where he could only deplore in silence the misfortunes of Hungary. But he had left an avenger in the person of Francis Rakoczi (*see engraving in last number*), his stepson, who had been shut up with his mother in the Castle of Munkacs, but they had at length been compelled to yield to superior force. Rakoczi's education had been confided to the Jesuits, but he was fortunate enough to escape the contaminating influence of the flexible morality of his instructors. Having obtained permission to travel in foreign countries, during his journey he fell in love with the daughter of the landgrave of Hesse Rheinfels, and married her. Upon arriving in Paris, he was introduced to Marshal Villeroi, who at once perceived the talents and fiery bravery of the young Magyar. By painting in strong colours the degradation and misery of his country under Austrian rule, and [illegible] to the [illegible] of a speech of [illegible] suggested [illegible] would be likely to [illegible] ate intrigues of Louis XIV., and advised him forthwith to return [illegible] on his arrival there he found the whole [illegible] agitation, as it was suspected, and not without foundation, that the Viennese Court had it in contemplation to abolish the Magyar constitution, and incorporate Hungary with the other hereditary states of Austria. But the opposition of Paul Szechenyi, and the fear of causing a formidable insurrection, caused the execution of the project to be deferred for the present.

But the Hungarians were not content. The whole nation seemed determined not to [illegible] bondage, but to strike a last blow for [illegible] their wrongs, their sufferings, and their glory, was still fresh in the minds of the people. All eyes were turned to Rakoczi, with that instinctive homage to great talent, which seems inherent in men of every land. Experience taught the Magyars, sadly, but profitably, that [illegible] and was to lean on a broken reed, and that they should themselves work out the salvation of their country. They had before implored the assistance of the Turks, but dearly had they paid for it.

rise against Austria, and trust to their own resources for success.

Never was there a man better fitted to head such an enterprise than Francis Rakoczi. He was young, ardent, and energetic, full of the fire and enthusiasm, so necessary in struggles, by which there is much to gain by success, and little to lose by failure. An ardent patriot, and of dauntless personal courage, his whole career was a splendid example of disinterested integrity. He was offered the crown of Poland and refused it, without hesitation, that he might wholly devote himself to the service of his native land. What he said of himself, in his own memoirs, was perfectly true. "The love of liberty, and the wish to deliver my country from a foreign yoke, were the sole motives of all the public act of my life." Having been betrayed by a French officer, Rakoczi fell into the power of the Austrians, and was for some time kept a close confinement in Vienna. Having succeeded in [illegible] escape, he took refuge in Poland, where he time, closely occupied in making preparations for struggle.

His appearance in Hungary was the signal for a [illegible] rising. He was invested with the title of Prince and the famous Nicholas Bercsenyi was given the command in chief with Magyar armies. The old national flag was [illegible] bearing the words, "For God, for country, and for liberty." Men of all ranks threw themselves into the [illegible] to devote [illegible] a manifesto drawn up, very much resembling the American Declaration of Independence. It commenced as follows: "We, the undersigned representatives of the Hungarian people, hereby [illegible] known to all men that, even in spite of the efforts of the perjured House of Austria [illegible] despotism, in violation of its oaths, and its [illegible] to destroy our laws, annihilate our [illegible] and [illegible] people, and subject the most illustrious of our countries [illegible] ignominious, and shameful death, - we, [illegible] and illustrious Lord, Francis Rakoczi, [illegible] Prince determined to appear in arms for the assertion of the Magyar nation." This celebrated document was signed at Paris, with the signatures of [illegible] attached to it. We subjoin *fac similes* of those of Rakoczi and Count Bercsenyi, which stood at the head of the list.

The power of Austria thus received a [illegible] blow. The Hungarian army marched from victory to victory, until they pitched their camp within a few hours' march of Vienna. The Emperor, in dismay, knew not where to look for succour. Humiliated and spurning, he sought the mediation of [illegible] and said that Holland and England, but with no more effect. Another enemy than Rakoczi, in the zenith of his success, delivered him from his difficulty and embarrassment. He died on the 8th of May, 1705. His life, like that of all statesmen, was troublous and redoubtable, and his last moments were darkened by the recollection of a thousand great crimes. He was personally a bad man, but he was always a man of one purpose, and was thus often led into the perpetration of many wickednesses which his own heart must have [illegible] prompted. Dearly did he pay for the [illegible] of his [illegible] and of [illegible] which he shared to such a fearful [illegible] his soul [illegible] but no deathbed repentance could heal the wounds which he had inflicted upon Hungary, rest the victims who fell under the stroke of the executioner of Eperies, or hinder his memory from going down to posterity blackened with the execration of an entire nation.

Joseph I., who succeeded his father, was a man of mild, conciliatory disposition, and immediately upon his accession published an amnesty for all past offences, and made very favourable offers as to the future. About the same time, a [illegible] generals obtained some advantages, and, if the grievances of the Magyars had not been of long standing, it is extremely probable that they would have accepted his proposals and laid down their arms. Rakoczi was anxious that they should come to terms when they could do so without loss or disgrace, but despite his persuasions, the Diet, at a meeting held in June 1707, pronounced Joseph a traitor, formally deposed him, declared the throne vacant, and in the adjoining room the time playing "Rakoczi's March," the Hungarian National [illegible].

The Austrian Court now determined to endeavour to w

upon the personal feelings of the head of the revolutionary party, and for this purpose sent Juha, his siste[illegible]l John Palfi, his friend, to persuade him to come to terms To the tender entreaties of the former, whose husband was in the Austrian service, Rakoczi was near giving way. After a long and affecting interview, he remained for some time in gloomy silence, and at last exclaimed: "Terrified, wearied, panic-struck, destroyed by the sword, or driven into exile one by one, I see my friends and supporters disappearing from my side Slowly and stealthily, but surely, the merciless hand of foreign force, led with the blood of my fri[illegible] pursued [illegible] us with the extirpation of tyrants." [illegible] by Louis XIV., who had hitherto supported him, and secing divisions every day showing themselves in the Diet, he at last began to hesitate. He saw that his part in the great game he had played so bravely was now drawing to a close, but he determined that he should retire with dignity and honour He was again offered the throne of Poland, and [illegible] his power into the hands of his [illegible] quitted for ever the country he had loved so well, and strove so hard to save. It was in vain that the highest magnate in the country were sent as a deputation to induce him to re-assume his office, he gave them no answer save to reproach them for their mutual dissensions, and their refusal to treat with the Emperor of Austria, whom they might have done so with honour and advantage. It was in vain that Joseph himself made him the most dazzling offers, in case he chose to reside in Vienna He steadfastly refused them all, and at the same time expressed his unmitigated disgust at the bad faith which for centuries had distinguished the House of Hapsburgh

Though born amongst the highest of Hungarian aristocracy, Rakoczi had little of the aristocrat about him He was too great a man to live in bondage to petty conventionalisms His whole life was guided in abeyance to great principles *Fiat justitia, ruat cœlum*, was a motto ever on his lips, and he uttered nothing which he did not feel It was impossible that he could ever have lived [illegible] to an absolute prince His spirit was [illegible] He would have have everything progressing All his statements were characterised by severe and truthful brevity, wholly unsuited to the atmosphere of courts Whatever he thought he would do; and what he thought true he would say, let others think as they might, and in truth by the secret of his greatness An accomplished gentleman and man of the world, he was distinguished by his lofty and dignified, but brilliant and winning, courtesy of the Magyar nobleness, but with this was united a republican simplicity of manners. He won the attachment of all around him by his gentleness and benevolence, and his stern observance of the law and the constitution drew towards him the hearts of the people

He went first, accompanied by a few private friends, to Poland, and thence to France For nearly a century and a half, the latter had kept up communications more or less intimate with Hungary. During the long and glorious reign of Louis XIV, in the greater part of which Hungary was in a state of complete prostration, Paris was the general resort of the Magyars whom the troubles of the times obliged to fly from their own country. In the various accounts which have come down to us of festivities and splendour of the Court of the Grand Monarque, the names of Hungarian nobles are constantly recurring The King [illegible] wishing to efface the remembrance of his many desertions of their cause, frequently invited them to court, and the French nobility vied with one another in showing them kindness and attention

The great Conde invited them to his seat at Chantilly, studied with them the military tactics of the Turks, [illegible] was then as fickle and as foolish as now, and the Hungarian mania raged for a time as strongly amongst the frivolous aristocracy as any folly of the time There were boots worn *a la Transylvanie*, and the unfortunate Zrinyi, who was beheaded at Vienna, gave his name to a sort of cloak, which was called the "Zrinyi cloak," a garment of great richness and beauty Sympathy with Hungary was then "genteel" Now it is decidedly "low," and this to noblemen makes all the difference in life. Rakoczi lived in the closest intercourse with all the great personages of the court There was never a reunion, a ball, or hunting party, at which he was not present. He became the intimate friend of Madame de Maintenon, and of Madame du Maine. Madame Dunoyer, in one of her letters, says—"There is no good society here without Prince Rakoczi." After having passed six years in the midst of this gaiety, he determined upon going to Constantinople, in order to be near his native country, towards which his heart still turned with longing and regret. There he died, in April, 1735, at the age of sixty years, in a quiet, rural retreat, far away from the bustle of camps, or the follies and intrigues of courts. Far from entertaining any feeling of chagrin at the disappointment of his hopes and the failure of his enterprise, his last moments were soothed by the most sublime of all philosophies—the resignation of a Christian. "I thank thee, Almighty God," said he, during the last hour of his life, "that thou hast deprived me of all power, and of all that men long for here below that thou hast brought me to die in this lonely corner of the earth, where everything around me puts a restraint upon my ambition, and prevents me ever again reposing any confidence in the power of the mighty!"

Whilst the leaders of the revolutionary party were thus wandering in exile, Joseph I himself was drawing near his end He died in 1711, without ever having had time to sign the treaty concluded after Rakoczi's departure This treaty granted an amnesty for all past offences, and guaranteed the maintenance of the constitution in its full integrity, both in Hungary and Transylvania The Prince of the latter, Apafi II., had a short time before very foolishly resigned his power into the hands of the Austrians But the question of religious grievances, as well as most of the other causes of discontent, were reserved for the consideration of a Diet, to be afterwards convoked This was [illegible] to procure the assertion in all [illegible] The final settlement of the questions in dispute was postponed until a favourable opportunity might enable her to revoke what she had already accorded

Joseph was succeeded by his brother, the Archduke Charles, who was celebrated for his dispute with Philip V. about the succession to the crown of Spain Enfeebled by this war, he continued the enmity of Scarlimau, and restored to the Hungarians their own and the other assigns of loyalty. This comes somewhat [illegible] Hungarians, but it was prompted by a deep, far-sighted policy He well knew the frank and chivalrous character of the Magyars, and as he, for want of male issue, would be compelled to leave his throne to his daughter, the celebrated Maria Theresa, he was anxious to secure for her the support of Hungary, which, in the troubled state of Europe, he would stand greatly in need The event justified his expectations The Diet met at Pressburg in 1722, and proclaimed her the heiress of the Hungarian crown with one voice After a long war with the Turks, in which he met with various vicissitudes of success and failure, Charles died in 1740

Maria Theresa now ascended the throne, under the name of Mary II She was married to the Grand Duke of Tuscany, Francis of Lorraine, and to him she committed the government of her states, with the title of Regent and Co-Emperor

She was one of the most celebrated characters in the history of the eighteenth century, and few female sovereigns ever trod a shorter path in the field of politics, and none with so great success A woman or empress possesses a double hold on the allegiance of her subjects, to the ties of legal homage are added those of chivalrous gallantry Never did woman better avail herself of these two than Maria Theresa She flattered, entreated, and commanded, as suited the occasion or the persons with whom she had to deal She was of lofty stature, and possessed all the charms of face and figure to which women owe so much of their influence, and she was always graceful, winning, and dignified, even when meditating some ruse or intrigue. She was destined to undergo terrible trials.

Scarcely had she ascended the throne when she saw the whole of continental Europe making preparations to attack her, as all the neighbouring courts were dissatisfied with the Pragmatic Sanction, as the treaty was called, in virtue of which she succeeded to the imperial crown To unravel the webs of diplomacy which led to this would require a volume, and we doubt much whether even this could make it clear to the minds of our readers. Be this as it may, however, it would be folly

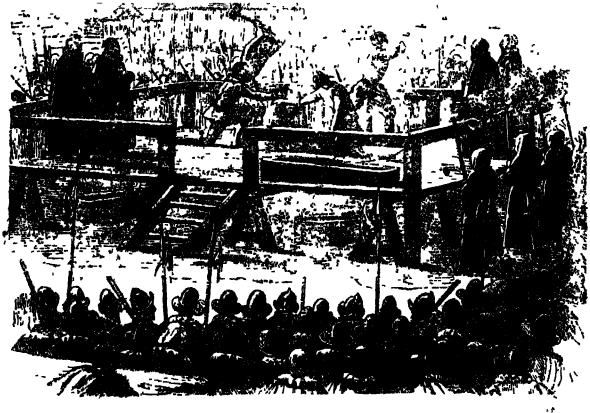
for us to attempt it in the narrow limits of our space, even if the detail had the smallest chance of proving either interesting or instructing. It is enough to say, that from every side armies prepared to march upon Austria, and make it their prey. The empire was invaded from every side, and Maria Theresa fled to take refuge in Hungary. And now the Magyars proved themselves worthy of their ancient fame, as gallant gentlemen and brave soldiers. Faithful to their oaths, and forgetful of all their wrongs, they determined to stand by the exiled Empress in the hour of peril. She convoked a Diet at Presburg, and appeared before it dressed in mourning, and carrying her infant son in her arms. Womanly dignity and maternal love seemed to beam through her face, as she addressed them in sorrowful and imploring accents: "I am attacked from every side by my enemies; I am deserted by my friends; I see my empire on the brink of dissolution. The safety of my country is wrapt up in that of myself and my children. Nothing remains to me but my faith in your attachment, and in the strength of your arms. I place myself and my infant under your protection. You are my last hope, and I rely on your courage and fidelity." The appeal was irresistible. The whole assembly sprang to their feet, and drew their swords and clashed them fiercely, while the lofty hall rang with the wildness of their shouts. The Empress, for the moment, terrified by the loudness of the acclamation, trembled and turned pale, till the members rushing towards the throne, crying out—"Our lives and fortunes are at your service!" reassured and delighted her. The haughty body, which had never given way to the menaces of despotism, was quite vanquished by the prayers of the helpless woman; and Maria Theresa thus found the proudest of her triumphs in the excess of her misfortune. A painting of this memorable scene is still preserved in the Gallery of the Luxembourg, from which our engraving

CHARLES DE LORRAINE.

on page 209 is taken.

The noblesse immediately took up arms, and brought into the field a large and valiant army of their tenants and dependents. The Croats also rivalled the Magyars in zeal and devotion, and distinguished themselves by their ferocious valour, under the command of Baron Trenck. Charles Batthyanyi defeated the allied armies, commanded by the greatest generals of the age, in several desperate encounters, and Nadasdi, in 1744, forced the passage of the Rhine, notwithstanding all the efforts of the French Marshal Crequi, who had promised his sovereign to take possession of the left bank of that river, to prevent him. Everywhere the Magyars were victorious, and the coalition was at last compelled to confess itself beaten, and sign the treaty of Aix la Chapelle, by which the Pragmatic Sanction was fully recognised.

Scarcely had peace been proclaimed, when war broke out between Austria and Frederick the Great of Prussia; and having lasted for seven years, ended by the cession of Silesia to the latter. Austria determined to recompense herself for this loss by the partition of unfortunate Poland. Taking advantage of the internal dissensions which raged in that unhappy country, the minister of the Empress proposed to Anne of Russia and the King of Prussia to divide it between them. The base act was forthwith accomplished, and in virtue of the ancient claim of Hungary to the provinces of Gallicia and Lodomeria these



ARREST OF TOKOLI. (See page 208.)

two fell to the share of Maria Theresa. The war now over, the Empress made her court the gayest in Europe. To masculine strength of mind, she, as we have already said, added all the charms of female grace and beauty, and she drew around her all the great men of the age. Vienna became the centre of literature and art, fashion and gallantry. But ever none did she exert so great a fascination as the young Magyar nobility, who, after having carried the empire triumphantly through the dangers of a bloody war, now thronged to pay homage to the genius which had inspired them with enthusiasm. Around about the throne of this second Semiramis, music, beauty, poetry, and love, severally spread their enchantments, and under their influence despotism ceased to be hideous, and slavery seemed to lose its degradation and deformity. The Hungarians began to forget the evils which still weighed upon their country, and with some the reticency went so far that they became ashamed to speak their national tongue.

Maria Theresa's favourable disposition towards the Magyars was extended to all the men of merit in the country. She confided to Charles Batthyanyi and Antony Baltai, a churchman, but both Hungarians, the education of her son Joseph, of whose training she was extremely careful. Under their tuition he became one of the greatest emperors that has ever sat upon the throne of the Hapsburghs. His disposition, like all the sovereigns of his family, inclined towards absolutism, but still this *penchant* was not sufficiently powerful to cause him to forget the lessons of his early years. Maria Theresa died in 1780, and her son succeeded her. His whole reign was a series of unsuccessful attempts to do something great.

OLYMPUS PACHA.

EXECUTIONS AT UPERIS.—(*See page* 210.)

He was above all things anxious to emulate Frederick the Great, if not in deeds of arms, at least in something that might be thought equally worthy of admiration. But he soon found that something more than imitation, however successful, is necessary to make a man great, and that to be like Frederick, he should not only do as Frederick did, but have Frederick's energy and talent. He was, however, a man of great benevolence and goodness of heart, and in all his doings at least meant well. His toleration in matters of opinion was beyond that of any other prince of his age. It was his ambition to be at the head of the free, inquiring philosophy of the eighteenth century, but he did not perceive that, far from having the true spirit of a philosopher, an enthusiastic love of truth, apart from all considerations of self, egotism and vanity at the bottom of most of his achievements in the field of science.

He despoiled the clergy of many of their rich domains, and they forthwith set to work to spread disaffection amongst the people. They were particularly successful amongst the Magyars, whose manners and language the Emperor had attempted to modify; and these were points on which they were most jealous of any interference. Doubtless many of the reforms which he tried to introduce were useful, and perhaps needful; but still the nation had not projected them for its own benefit, and this they rightly considered was an objection which should stand good in the eyes of all the world. Joseph issued a decree, suspending the Hungarian Constitution, taking the crown out of the country, and enjoining the use of the

German language in all public assemblies and in all official documents. Here were three distinct and weighty causes of offence. Under the voluptuous and conciliatory reign of Maria Theresa, the Magyars had begun to neglect their language and even to despise it, but when the use of it was openly proscribed by a foreign despot, the reaction was instant and energetic. Violent opposition broke out all over the kingdom. Torrents of invective were poured forth upon the Emperor, and an appeal to arms was openly threatened if the obnoxious measures were not instantly revoked. Joseph was astonished, and for the first time in his life began to imagine that he was wrong, and that the various systems of state polity which he had framed upon philosophic principles were erroneous. The revolt of the Low Countries, breaking out at the same time, completely terrified him, and he immediately proceeded to withdraw his unconstitutional reforms. Discouraged, sick, and in doubt, he signed with a trembling hand the decree which annihilated his projects, and worse still, he signed it in Magyar, the very language the use of which he had recently forbidden; and the document, which testified to his tardy repentance, was deposited in the Chancery of Buda, to be in all time to come a trophy of the victory of the national will over despotism.

Joseph II. died in 1790, after a war which he had been carrying on against the Turks. He gave orders that the following inscription should be placed upon his tomb.:—"Here lies Joseph II., who was unfortunate in his best enterprises." Leopold II., the brother of the deceased Emperor, succeeded him. The Diet had not been convened for nine years, when he called it together upon his accession. The Magyars, in return for this recognition of their ancient constitution, crowned Alexander, the fourth son of the Emperor Leopold, Palatine of the kingdom. It was the first time that this dignity had ever been conferred upon any member of the Hapsburgh family. Leopold then declared that, although Hungary [illegible] one of the hereditary states of the Imperial Crown, it was nevertheless a free country—should be ruled according to its own laws and usages, and that religious liberty should be guaranteed, and that in all acts of administration the Magyar language should take precedence of every other. Leopold died in March, 1792, just as the French revolution was beginning to terrify and astonish all the crowned heads of Europe.

Francis I., his son, ascended the throne in troublous time A compact, which had been entered into between his father and the King of Prussia, at Pilnitz, in which they pledged themselves to march to the assistance of Louis XIV. of France, and restore to him all the powers which had been wrenched from him by his people, so far from benefiting that unhappy monarch, still further exasperated the revolutionists, so that, upon his death, they cast themselves upon Austria and Prussia like a flood. As a strong effort was made to [illegible] the principles of the revolution through the [illegible] nations, the Hungarians, at an early date, attracted the attention of the Assembly and the Convention. They had all along, like most other lovers of liberty all over the world, sympathised with the struggle in France, and a constant correspondence was kept up between the liberal party in both countries by means of newspapers and letters. A great party was soon formed in Hungary, whose principles were republican, and whose avowed object it was to overturn the existing institutions. Like most originators of similar movements, they were distinguished by the ardour of their enthusiasm and the purity of their motives. Their leader was a man named Joseph Martinovics, at one time a Franciscan monk, remarkable for his great learning and love of liberty, but possessing great flexibility of conscience. He had organised under his direction a vast conspiracy. For the dissemination of his views, he distributed an immense number of tracts, such as the "Citizen's Catechism," and other publications of a similar character. But, having been betrayed by a servant living in the house in which the principal conspirators met, the leaders were arrested, and some of them condemned to death—others to long terms of imprisonment. The Emperor determined to crush the movement in the onset by inflicting upon them the full rigour of his vengeance. Sigrai, Laczkovics, Hajnoczi, and others, being led to the place of execution, beheld all the preparations without moving a muscle. Sigrai laid his head upon the block, and the executioner struck him three times without despatching him. A roar of indignation and disgust ascended from the crowd around. "What is the matter?" asked the confessor, addressing Laczkovics. "Nothing!" was the reply, "the people are displeased at the executioner's want of dexterity!" "There is a greater crowd here," he added, looking around, "than would be present at the coronation of a king!" He exhibited the same unshaken firmness when it was his own turn to die. The Maygars looked upon him as a martyr. About the same time the Palatine Archduke Charles was killed by the explosion of an infernal machine near Vienna—it was said, at the instigation of the Court party, who suspected that he was aspiring to the throne of Hungary.

Francis I., in the meantime, was carrying on a bloody and unsuccessful war against the French. The genius of Napoleon overthrew his best generals and bravest armies. His resources becoming exhausted, he was obliged to convene a Diet for the purpose of raising supplies. The county assemblies, while they voted the necessary amount of money, took the opportunity to protest strongly against involving Hungary in wars in which she had no interest, and which cost her such an immense expenditure of blood and treasure. The feeling of the people all over the country ran strongly against the incessant wars with France, and the general outcry filled the Austrian Government with alarm. But when, at length, Napoleon entered Austria as a conquering invader, and threatened before long to march upon Hungary, the old hatred of the presence of the foreign soldiery produced a tremendous reaction, and all classes seemed to be animated with horror of French rule. Vienna had been taken, Francis driven from the palace of his fathers, and the meanest grenadier in the French army was a master in the house of the proudest Austrian noble. The *esprit de corps* of the Magyar noblesse inspired them with indignation and disgust at horrible a profanation Arms, men, and money, were freely voted to the Emperor, but even Maygar bravery was powerless before the legions led on by the "Grand Empereur."

In opening the campaign in 1808, Buonaparte determined to work upon the patriotic feelings of the Hungarians, and their old hatred of Austrian rule, to induce them to make a diversion in his favour He therefore issued a bulletin in the following terms, promising them independence

"Hungarians! the Emperor of Austria, unfaithful to the treaties and ungrateful for my generosity towards him, has attacked my armies after three consecutive wars, and above all after that of 1805 I have repelled this unjust aggression Hungarians! the movement for the recovery of your independence has arrived. I offer you peace, the safety of your territory—of your liberty, and of your institutions. Assemble in your National Diet, upon the plains of Rakos, according to the custom of your ancestry, and make known to me your resolutions—NAPOLEON."

Exciting as this must have been, the Hungarians now know too much of Napoleon's character to trust to his professions. They suspected that he was too deeply occupied in laying the foundations of his own dynasty, to care much about the liberties of any nation. They had, besides, the fate of Poland before their eyes, and they remembered how often Louis XIV. had urged them to make war and then abandoned them. They found themselves now in the presence of a great military genius, whose iron hand crushed every people that came in his path, without hesitation and without remorse. From Francis they could hope for concessions by working on his fears; but what did Napoleon know of fear—and where were the battalions that could stand firm when the drums of his grenadiers beat the *pas de charge?* To adhere to him would be to exchange a feeble despot for one stronger and more unrelenting.

They therefore maintained a cold reserve for a long time, and when at length it became necessary that they should take one side or other in the tremendous struggle in which all the rest of Europe was then involved, they took up arms for Austria, and remained faithful to her in all her after vicissitudes of fortune. But Napoleon still marched in triumph over the Continent, and was not slow to punish Hungary for her rejection of his offers. Crossing the frontiers, his army bombarded Presburg; and Eugene Beauharnois defeated the Archduke John in a sanguinary battle at Gyor (Raab). The

countries bordering on the Adriatic were immediately incorporated in the French Empire.

The Emperor of Austria, reduced to the last extremity, was obliged to bestow the hand of the Archduchess Maria Louisa upon his conqueror; but he never ceased to devise in secret new means of resistance. In 1811 the Diet was assembled at Presburg. The Palatine opened the session with the following significant words:—"It is not the safety of your country only that must now occupy your attention, *the existence of the whole monarchy is at stake.*" This, then, was the second time that Hungary was called upon to save the Austrian Empire; and again did the Diet vote arms and money. But this was not sufficient. The Viennese Cabinet wished to extricate itself from its financial difficulties by the imposition of a new tax to be levied on each person all over the country. This proposal was instantly rejected, with strong protests against the gross want of good faith in commercial matters which has always distinguished the Austrian Government, and which, at that time, had driven Hungary to the verge of bankruptcy. The recent proceedings in Vienna, in which the Government attempted to fix the price of stock at the point of the bayonet, and transport everybody who will not buy and sell at that rate, across the frontiers, is nothing very new. In 1811 the Emperor, by one stroke of his pen, reduced all bank-notes to one-fifth of their former value, to diminish the run upon gold, and thus brought thousands of families all over Hungary to beggary.

In the meantime, the campaign in Russia, the battle of Leipsic, and the crowning victory of Waterloo, broke the might of Napoleon, and reinstated the Austrian Emperor in all his possessions. His manner towards Hungary was instantly changed. In the days of his misfortune, it had been timid and conciliatory; it was now tyrannical and overbearing.

There was little internal progress and development in any kingdom in Europe during the wars which raged at the commencement of the present century. The dangers from without were too pressing to allow much attention being bestowed upon the arts of peace. All that men sought was to preserve their independence. In Hungary everything remained stationary or if there was any movement it was retrogressive. The Diet was constantly on the watch to prevent the loss of what it already possessed, and never thought of seeking more. The Emperors, fearing or thinking the whole nation, pushed their policy of centralisation to its utmost limit. The Royal Chancery was removed to Vienna, and placed under the direction of German ministers. In its place was created a *Council of Lieutenancy*, the members of which were the creatures of the Emperor, and all their acts were performed by his dictation. The regular army was first organised at this period, and recruited from all classes of the people, and placed at the disposal of the Imperial Government, although the cost of its maintenance was levied in Hungary alone. The Emperor was constantly complaining of the want of money, and the Diet endeavoured to meet his necessities by working the gold and salt mines which abounded in the country, and by the sale of the domains of extinct families, which in ancient times, under the rule of the Magyar kings, had been bestowed as rewards upon those who distinguished themselves by their eminent public services. Not satisfied with this, the Government commenced to sell letters of naturalisation to a crowd of foreigners, although such a proceeding was a manifest violation of law, and as the nobles, as we have already said, refused to pay the proposed capitation tax, the whole weight of it fell upon the unfortunate peasantry, who were thus oppressed not only by the heavy rents and dues of their seigneurs, but by the equally merciless exactions of the Imperial Court. A decree of Maria Theresa had, it is true, reduced the contributions payable by the tenant to his lord, but she neutralised the effect of this otherwise beneficial measure by establish a network of custom duties all over the country which seriously crippled industrial and commercial operations.

Intellectual life there was none. The institution of the censorship destroyed the influence of the press, and the miserable education of the clergy was not without its effect upon that of the people. No new schools or universities were established, and the old ones were suffered to go to decay.

It was in the reign of Maria Theresa that Transylvania was erected into a great principality, and received a constitution very similar to that of Hungary; and it was she, also, who established the "Hungarian Guard" and the Order of St. Stephen, for both of which only the high aristocracy are eligible.

It was after the fall of Napoleon that the Hungarians began earnestly to turn their attention to internal reforms. In 1815 they called the attention of the Emperor to the disordered state of the country, foolishly imagining that he would be found as well disposed in a time of perfect tranquility as when his throne was in danger and he was in daily want of money. In 1822 the movements of the *Carbonari* in Italy gave great uneasiness to the Cabinet of Vienna, and the Emperor determined to dispense with the aid of the Diet, and raise supplies for the repression of these conspiracies by the royal power alone. To this attempt the county assemblies opposed the most vigorous resistance. This was the commencement of the struggle, which was closed for a *time*, at least, by the surrender of Georgey in 1849. But for the present the battle-field was not to be the ground of conflict. The times were changed, and the Magyars endeavoured, by a vigorous resistance in their national assemblies, to secure the establishment of their rights upon a firm basis. After a long contest, the Court party gave in, and Francis I. assembled a Diet in 1825. Some supplies were voted, but the utmost care was at the same time taken to guard against any acknowledgment of the Emperor's right to exact them without the free consent of the Diet. It was at this meeting that Count Stephen Szechényi delivered his famous speech in the Magyar language, which, for the first time, thoroughly roused the whole nation to a due sense of its position, its rights, and its duties.

Szechényi was one of the most remarkable men in Hungarian history. He was still young when he made his *debut* in the political world, and had few advantages of fortune or position to recommend him to public notice. He had served as an officer in a regiment of Hussars during many years of the earlier part of his life; and during the tremendous wars of the empire, upon a hundred battle-fields, all over Europe, in danger, defeat, and disaster, the young soldier had pursued his studies with an ardour and industry which would have been deemed worthy of a student in the quiet halls of Heidelberg or Gottingen. He was one of those high-born nobles who fought in the ranks of European despots against Napoleon, from hatred to military despotism, and in the belief that they were winning peace and liberty for their native land—men, whose ideas of national greatness and freedom were drawn from the great models of antiquity, just as they drank in the inspiration of beauty from gazing on the proportions of the Medicean Venus. Forty years of perjury, despotism, and espionage, have cooled the ardour of many hearts that then beat high with enthusiastic hope, and have clearly shown to the world that they who expect moderation and good government from absolute princes, might as well seek to gather grapes from thorns, or figs from thistles.

Upon returning from the army at the close of the war, he travelled in France and England, and during his stay in each of these countries, paid the closest attention to its political institutions and mode of government. Upon his return home, he entered the arena of politics with the determination to remedy, as far as in him lay, the evils which afflicted the country, and to kindle a feeling of forced nationality amongst the members of the Diet. His disposition was cautious and calculating. He was opposed to all violent movements, and as he knew the adversaries with whom he had to contend, he strove to oppose to their subtle tactics the calm strength of gradual development. Above all, he was anxious that the contest should be prolonged. He saw that Austria desired nothing so much as that Hungary should descend from the dignity of constitutional resistance, and stake her existence upon the chances of an armed struggle.

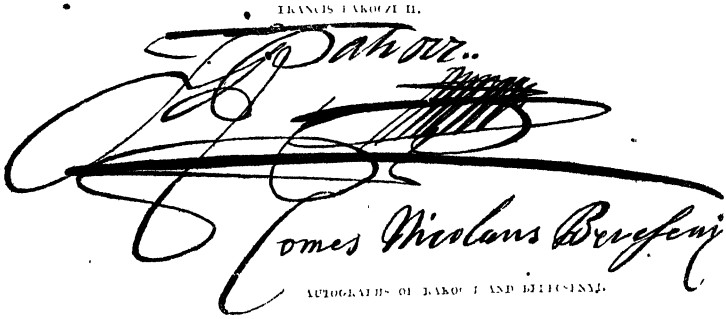
He saw that the Magyar language, being excluded from all public assemblies, and official documents, stood a fair chance of perishing in a few years, and he resolved, in conjunction with Paul Nagy, to use the most vigorous efforts for its restoration. His first step was the delivery of a brilliant and powerful speech before the Diet, in the national tongue. Everyone was taken by surprise, and as much delighted by his eloquence as by the boldness of the effort. The Diet sat

for two years, and Szechényi was, during the whole time, the leader of the opposition, or rather of the party of progress. Francis I. was at length obliged to recognise the use of the Magyar language, to acknowledge the independence of the country, and to promise to assemble the Diet every three years, and to observe strictly the fundamental laws of the kingdom. To crown the glorious consummation to which his efforts had contributed so large a share, Szechényi assigned, out of his private fortune, the sum of 60,000 florins for the establishment of a scientific academy, upon the model of the French Institute. Nor did he relax from his efforts when the sittings of the Parliament were over. He now made the press a medium for the dissemination of his views upon political subjects, and his writings created the liveliest sensation, not in Hungary only, but all over Germany. They were the means of causing many of the Magyars to take an interest in political affairs, who had long before fallen into the state of slothful indifference, so prevalent in all countries subjected to a foreign yoke. By many of the old nobles he was denounced as a dreaming revolutionist, as he offended their pride by exposing all the defects of their character with an unsparing hand. But the good sense of the majority of the people triumphed over all opposition, and he has since been acknowledged by all to be the regenerator of Hungary. He next turned his attention to projects for the development of the material resources of the country, and he was mainly instrumental in establishing a company for the steam navigation of the Danube. Industry and commerce seemed everywhere to arouse themselves, and the whole nation to be about to push on vigorously to intellectual conquests and economic reforms.

Szechényi was just the man for the crisis. No one could be better fitted to arouse the nation from the state of somnolency which is so sure a precursor of death. In his writings he exposed the vices, follies, and ignorance of the people in a manner that made them laugh, and yet be ashamed of themselves. In the Diet he was more of a diplomatist than an orator. His speeches were interspersed with quotations, *bon mots*, anecdotes; but at the same time appealed no less to the reason than the feelings of his audience. His discourses were generally delivered in a tone of fatherly advice or tender remonstrance, and he thus gained many over to his side whom stern denunciations would have exasperated and alienated. He in all his labours sought to reconcile the interests of monarchy and liberty; and he believed that not only could this be done in union with Austria, but that in it lay the hopes and safety of Hungary. The moderate men of all parties listened to him with respect. But events did not heed him. They were evermore progressing towards results, bloody and disastrous, perhaps, but full of promise for the future.

BATTLE OF GYOR, 1809.—*See page 211*

When the news of the revolution in Paris in 1830 arrived, all Hungary seemed electrified, and the sympathy felt for the triumph of the French people was a source of great uneasiness to the Cabinet of Vienna. The "Marseillaise" was sung in the streets of Pesth, and the nobility went in crowds to France to behold in person the scene of so many successful insurrections. In the same year another Diet was assembled for the purpose of procuring supplies, of which the Viennese Government then stood greatly in need. The liberal party were anxious that the Hungarian soldiers should retain in service the feeling of nationality, and therefore wished to make it the condition of their vote that the Hungarian regiments should be commanded by Hungarian officers exclusively. This the Government would not allow; and it required all the



influence of the Archduke Joseph to obtain the grant of any sum whatever.

The representatives for some time afterwards were occupied in the revision of the constitution. In the Lower Chamber, or House of Commons, composed of the petty *noblesse*, all reforms were carried without difficulty; but in the Upper House, in which the magnates and clergy sat, the majority belonged to the conservative party, were allied to the Government, and opposed the most obstinate resistance to all movements in advance.

The insurrection in Poland now broke out, and gave a new stimulus to the free tendencies of the day. The Poles and Magyars were ancient and natural allies. Their geographical position brought them into frequent and close communion, but not nearly so much so as their similarity of character and of institutions. They had reached their prime of glory and of strength together, under the same chiefs, and, step by step, they had gone down the hill from the same causes. This traditional alliance, strengthened and cemented through the lapse of centuries, by a community of successes and misfortunes, had left in the hearts of both peoples an undying belief in the identity of their interests and their future. The Magyars always called Poland, *Testver-hon*, or "brother country;" and, on the other hand, the Pole called himself the "Magyar's brother." So that when the news arrived of the revolution in Warsaw, the youth of Hungary expressed an unanimous desire to march to the assistance of the insurgents. Each county demanded permission to levy troops, to be maintained at its own expense, as long as the war should last. Some of them proposed to furnish two thousand soldiers, and had all done the same there would have been an army of one hundred and four thousand men placed at the disposal of the Polish generals. But Austria laid the cold hands of diplomacy upon these generous hearts, and the expenditure was forbidden.

FRANCIS RAKOCZI II.

AUTOGRAPHS OF RAKOCZI AND BERCSENYI.

MRS. KIRKHAM'S BOARDER.

"Boy, you *will* break my heart!"

"Mother, you would break not only my heart, but my spirit also; yet, if I can help it, you shall do neither!"

"No impertinence, Edward! Again I command you to take this note to your teacher;" and as Mrs. Kirkham spoke she bent down, and, with flashing eye and knitted brow, looked hard in her son's face.

Edward Kirkham did not reply, and for a few moments both were silent. The little porch upon which mother and son stood was shaded and entwined with the creeping wild rose and scarlet trumpet-flower—the bees hummed merrily amongst the fragrant blossoms, and from the spreading branches of the tall trees near, the morning song of joyous birds floated forth. Mingled with these sweet sounds came the silvery gurgle of "Blue Stream," which passed through the village, flowed down the fair meadows, and widened as it entered the deep wood. As these melodies of nature broke the stern silence Edward Kirkham's heart seemed touched. The fierce scowl left his face, and, turning away from his mother's steady gaze with suffused eyes, he murmured

"*Please* don't ask me to take that note, mother, I *cannot* do it."

"I don't *ask* you, I *command* you to do it. Ned, will you obey me?" Mrs. Kirkham spoke harshly, sternly, as one who expected rebellion, and she seemed not surprised when the answer came.

"In all things reasonable I will obey you—in *this* matter, never!" Young Kirkham's head was high as he spoke, and turned full upon his mother's face.

"And do you look that way upon your widowed mother? you whom I have carried in my arms, my first-born, my only boy?" The widow's lip quivered, but she did not weep. At last Edward Kirkham seemed moved; again he spoke in the language of entreaty.

"Mother, I love you!" he pleaded, "I will do anything for you, but I cannot go back to school with that note."

"Your boyish whims *shall not* interfere with you. obedience to me. Ned, take the note and I forgive you—disobey me, and your cross not my threshold *again*." Mrs. Kirkham set her teeth firmly together as she spoke these bitter words, her fierce temper was fully up, but the same spirit lived in her son.

"Very well, I'll drown myself in 'Blue Stream' etc I carry that cringing note to your school House. Mother, *you* have no respect for your son, but he has some for himself, and turning away, Edward Kirkham was about to descend the step when his mother laid her hand upon his arm.

"Boy!" you *have* a fearful temper," she muttered, "but you threat *shall not* frighten me from my duty. My command still rests upon you."

"Does it?" carelessly returned the boy, springing down into the road.

"Take your books,' called Mrs. Kirkham from the porch, flinging the school-satchel after her son, "and don't come home until you have obeyed me," then going in, she closed the house-door with a violent bang.

For a moment Edward Kirkham stood irresolute, and then a sudden thought flashing through his mind, he picked up the satchel, and his slender, boyish figure soon disappeared among the trees. Two little girls sat upon the top rail of an old moss-grown fence, near the entrance of the woods. They were evidently expecting some one. they had merged their long walk that bright June morning, and their school-books were idly scattered about. When Edward Kirkham approached, they raised a shout of joy.

"I told you, Mabel, he would come,' said the younger of the girls, springing to his side, then, looking up in his face, she artlessly inquired, "What ails you, Ned? What *does* make you look so sad?"

Not much, Allie, dear—never mind just now; but here, take care of my satchel while I tell Mabel something down by the spring yonder."

"And not me too?" asked Allie, looking reproachfully at her brother.

"It is nothing that *you* would care about hearing—nothing funny that I am going to tell Mabel—and we won't be gone long," and with this promise and a bunch of wild flowers the little girl was satisfied.

"I will tell *you*, Mabel," said Edward Kirkham, as he walked away with his cousin, "as you are two years older than Allie, and not so childish; besides, I know that you will always love me."

"To be sure I will, dear Ned," returned Mabel Lynn, pressing close to her cousin's side.

"I believe you, Mabel, darling. You know I am nearly sixteen (and the boy proudly raised his head). Well, this very morning, mother ordered me to take a mean, cringing note of apology to Master Jones, an apology for an offence I never was guilty of; it would have been a disgrace to me to have offered it. I told mother this, but she believed me in the wrong, and urged, until at last she looked and talked more like a fiend than a woman."

"Ned! Ned!"

"Hear me, Mabel! She ordered me from her house, and I shall not darken her doors again. I stopped to tell you this, and bid little Allie and yourself good bye."

"Where are you going, Ned? Are you *never* coming back again?" gasped Mabel, eagerly clutching her cousin's arm.

"Don't ask me *where* I am going. Don't ask me *when* I am coming back, I can't tell you, Mabel, darling; but promise always to love and remember me."

"Always! always!" returned the affrighted little girl; and then sobs choked her voice, and, burying her face in her sunbonnet, she cried passionately. When at last she checked her grief, her cousin reminded her of Allie—he bade her dry her eyes, and they returned to the fence. In vain did Mabel Lynn implore her cousin to tell her where he had so madly resolved to go—in vain did she try to soften his boyish wrath against his mother. Edward Kirkham was firm, and ere they reached Allie she had ceased to plead.

"Good bye, my sweet Allie!" said Edward, fondly kissing his little sister, and then, turning to Mabel Lynn he kissed her often-blushing lip, and, with an effort to suppress tears, to hide the tears, he turned away.

"Ned, why do you bid us good bye? Ain't you coming home to dinner?" asked Allie in surprise.

"No, darling, no!" and Edward hurried toward the woods. Allie Kirkham looked after her brother in mute amusement, and for a moment seemed lost in thought; but directly a bright butterfly sprang up before her, and the gay-hearted little girl forgot Ned's "queer behaviour" in her merry chase. Mabel Lynn was sad and silent all the morning, she said nothing to Allie of Edward's strange determination, although it sorely troubled her heart. Edward Kirkham did not come home for dinner, and when evening shades darkened the valley he was still absent. Mrs. Kirkham grew uneasy, the little girls frightened, and when a second day had nearly worn away, and Edward came not, she began to think it was something more than "one of Ned's mad freaks." Ere a third day fleeted by, the villagers went forth to seek Edward Kirkham. Mrs. Kirkham's passion had now gone, and her heart seemed wrung with agony. Not until the close of the fourth day did any [illegible] upon the disappearance of Edward Kirkham. A [illegible] was then furnished to the mystery. The jacket of Edward Kirkham was found floating upon the waters of "Blue Stream," and on the bank near by lay his handkerchief and school-satchel—his footprints were traced in the soft earth close down to the stream's edge. "Blue Stream" was dragged, but the body of the poor boy could not be found, there was little doubt but that it had been carried far down and lost in a wider expanse of water. Mrs. Kirkham now fearfully realized the truth of her son's threat, and for weeks was like one bereft of sense. Suddenly she resumed her stern, calm composure, and after listening with whitened cheek to Mabel Lynn's tale, forbade that her son's name should *ever* be mentioned to her again. The villagers respected her grief, and Edward Kirkham was remembered by them only in silence, or in tearful whispers at their own firesides. Mrs. Kirkham felt that she had provoked that storm of passion in which her proud, yet noble-hearted boy, had rushed into eternity; and with this conviction she was miserable. Mabel Lynn and Allie [illegible] spoke to each other of Edward, and as months flew by their pale, sad faces, told how truly they yet mourned for "poor Ned!"

* * * * * * *

Seventeen years had fleeted by since Mrs. Kirkham's fearful bereavment—seventeen long years. Mingled webs of mercies and chastenings, joys and sorrows, had passed over the village. It had changed; its houses were more numerous, and a spirit of life and

activity had sprang up in its very midst which seventeen years before slumbered. There was a change in the inhabitants, an absence of well-known familiar faces, a presence of new and strange ones. In her old home Mrs. Kirkham still lived. Her step had grown heavy and her eye dim. Silver threads glistened from beneath her widow's cap. The weight of years was beginning to press hardly on Mrs. Kirkham, though her spirit had lost none of its energy. Time and bitter grief had softened her fierce asperity of temper, and Mary Kirkham, sorely chastened, deeply sorrowing, was a subdued and altered woman. Allie Kirkham—the gay little Allie of seventeen years before—was a widow. Childless and alone, her mirthful spirit saddened, Allie Dale returned to her mother's house poorer than when she left it. Mabel (still Mabel Lynn) lived with her aunt. Her brow was smooth and fair, as in earlier years, yet her large black eyes had a mournful gaze, and her cheek was very pale. Many wondered that the gentle and lovely Mabel Lynn had passed thirty years of her life unought, unknown, yet Mabel was calmly cheerful, and repined not at her lonely lot. To her aunt's heart she was very dear. Allie and Mabel were Mrs. Kirkham's treasures—all the old lady had.

Mrs. Kirkham grew poor. She had never been wealthy, but now her little fortune seemed fleeting fast away. Unless help came soon, "the homestead" must pass into stranger hands, and this Mrs. Kirkham shrank from. Mabel and Allie bent over their needles from morn till even, but their labours seemed in vain. Prospects darkened—money lessened. As a last resort, Mrs. Kirkham decided to take a boarder—a gentleman boarder—and for his use she would appropriate her best bed-chamber, a pretty room, over the neat little parlour. With the aid of her old dome-tic she could manage household affairs, and her niece and daughter might still pursue their sewing. Allie and Mabel approved of this, and the next week the following notice appeared in the village paper:—"A pleasant room and boarding for one gentleman to be had on reasonable terms." Apply to Mrs. Kirkham's. No one responded to this advertisement, and for the fourth and last time it filled a corner in the *Weekly Herald*. This time it was successful.

A stranger whom the stage had brought to the village a half-hour before carelessly picked up the paper. Sylvester Trelan—for so he had booked his name—read this notice twice, walked the hotel piazza some dozen times, and then, having apparently arrived at a satisfactory conclusion, desired to be shown the way to Mrs. Kirkham's. During a walk of some minutes, Mr. Trelan asked many questions of his little guide concerning the Kirkham family, expressing his determination, if he liked them, to remain some weeks. I don't know, reader, what pleased Sylvester Trelan so much at the cottage, but this I do know, that, after gazing round the pretty chamber, with its old-fashioned red and green carpet, long white window-curtains, and neatly-made bed, with snowy Marseilles quilt, and after a brief conversation with Mrs. Kirkham, he engaged to be her boarder for several months, at least until autumn.

Sylvester Trelan was a tall man. His figure was good, his eyes dark blue and piercing, his features regular, and when he smiled he looked pleasant. But he was not handsome. His compl deeply bronzed, and he wore his dark brown hair in thick clust ing masses over his brow; which, added to his habitually ..... expression of countenance, rendered him rather unprepossessing in appearance. Sylvester Trelan had travelled much, his home had been in foreign countries, and therefore, when he chose, his conversation became singularly interesting and pleasing. He was wealthy, and paid generously, and Mrs. Kirkham was well satisfied with her boarder.

Alice and Mabel did not like him, at times his manners were strangely abrupt, and, ere Sylvester Trelan had been two weeks in her house, Mrs. Kirkham adopted their sentiments, her feelings underwent a sudden and violent change toward him.

"I heard something in the village to-day which interested me exceedingly," said Mr. Trelan to Mabel Lynn, as he sat with her one evening upon the porch.

"Indeed! what was it?" listlessly asked Mabel.

"An old tale to you, I presume; I refer to the drowning of Mrs. Kirkham's son, years ago."

A deep flush spread over Mabel Lynn's face, and her voice quivered as she spoke:—

"An old tale,' indeed, and one full of misery. Don't talk to me of Ned, Mr. Trelan; you don't know what heart-rending memories your remark has awakened."

"I am surprised, Miss Lynn; you talk as if you loved this Kirkham."

"Loved him! Yes, child as I was, I loved him dearly, sir; he was my cousin—my brother. Oh, Ned! Ned!" and Mabel Lynn wept bitterly.

Mr. Trelan looked troubled, earnest, and perplexed.

"Pardon me; I knew not this subject was so painful to you."

"You might have known," quickly returned Mabel; then, checking herself, she added, "Promise never to mention this subject in this house again, especially to my aunt, we *never* speak to *her* of Ned."

Ere Trelan could reply, they were summoned to tea.

As Mrs. Kirkham took her seat at the tea-tray, Mr. Trelan fixed his large blue eyes intently upon he

"Madam," he said, in a low, thrilling tone, which caused Allie Dale to start, and Mabel to look imploringly upon him, "madam, I heard to-day, for the *first* time, of your son being drowned near this village, many years ago."

A quick contraction of the mouth, a deadly pallor of the cheek, and otherwise Mrs. Kirkham was calm.

"Talk not to *me* of Edward Kirkham," she said, hoarsely; "he went to the bar of his God, a wretched suicide."

"And pray,' Mrs. Kirkham, "*why* did he commit suicide? had he just cause for it—was he unhappy?" coolly asked Trelan.

Mrs. Kirkham's hand trembled violently, and she sat down the coffee-pot. Allie Dale burst into tears, and Mabel leaned back in her chair, and covered her eyes. Notwithstanding this, and the horror-stricken looks of the old servant, who, fly-brush in hand, stood as if petrified, Trelan calmly repeated the question, "Had he cause?"

"Oh, misery! yes—but who are *you*, that *you* dare speak to me of Ned?"

Mrs. Kirkham rose from the table with a sudden shudder, and Alice followed her. Sylvester Trelan's confused apology was lost upon Mabel, she seemed scarcely to hear it. Shortly after, when he took his hat and left the house, Mabel sought her aunt. That night, the first time for seventeen years, Mrs. Kirkham spoke to Allie and Mabel of *Ned*.

. . . . . .

It was a stormy eve—fleeting clouds darkened the face of heaven, and wailing winds and dashing rain sounded mournfully together. Mrs. Kirkham sat alone in her parlour. The small lamp threw its rays full upon her face, it was pale, sad, and anxious. For a long while she was silent, and then, the mother's heart throbbing wildly within her, she moaned forth her grief—

"Oh, Ned, my precious lost boy! would that my tongue had been palsied, ere it spoke those bitter words! Oh, miserable child, and yet more miserable mother!" Tears burst forth, and Mrs. Kirkham laid her head upon the table.

"Did you address me, madam—" asked Sylvester Trelan, stepping from the deep window recess, where he had been standing unob erved.

"Address *you*! No! I knew not that you were in the ed Mrs. Kirkham, hastily subduing her grief, and cham.

"You appeared to be mourning for your-

"Don't mention his name to me again," violently interrupted Mrs. Kirkham, her whole frame trembling with emotion.

Sylvester Trelan covered his face with his hands, and muttered, "It is well!" When he looked up he was alone.

"It is cruel, unaccountable, his behaviour," said Mabel Lynn, as she listened, with flushed cheek, some minutes after, to her aunt's incoherent tale. "Why this man seeks thus to torture you, I know not."

"Mother!" exclaimed the impetuous Allie Dale, fondly kissing Mrs. Kirkham's faded lips—"mother, Sylvester Trelan shall stay here no longer. Let me this very night bid him seek other lodgings, it matters not if we are poor—better so than have your feelings crushed."

"Allie! stay a moment. Our poverty *does* matter much; we cannot so hastily cut from us the means of support; but I promise you, if Sylvester Trelan mentions my boy to me again, he leaves this house for ever."

"I am satisfied," murmured Allie.

Another evening was stealing over the village; not a dim, misty, weeping one, as that of yesterday, but radiant with golden light, balmy and fair. Allie Dale sat upon the porch-step; nature

was joyous, but she was not; and, whilst the birds sang, she sighed.

"You are sad this evening, Mrs. Dale; and wherefore?"

Allie turned, and saw Sylvester Trelan a shiver of dislike crossed her, and she answered, proudly—

"You need not ask, Mr. Trelan. Permit me to inquire why you have twice cruelly wounded the heart of my mother?—twice, and not two weeks have flown since you entered our family. *Why* have you done this?"

"For my own satisfaction," hurriedly returned Mr. Trelan.

"Is your heart of adamant? You know what agony to my mother is the mention of Ned: even Mabel and myself have never dared to advert to him, by word or look, for years; and yet *you*, a stranger, coolly delight in her misery."

"Not so—not so; I have an object in view," said Sylvester Trelan, with strange emphasis.

Allie Dale did not reply. Again she sighed, and again her companion inquired the reason of her grief.

"I will tell you," she answered suddenly, "although you have no feeling. To save mother, Mabel, and myself, from bitter poverty, I have partly consented to wed one I can never love; and now a path of wretchedness lies before"

"Be comforted, Allie—Mrs. Dale! In that path you shall *never* walk. *I* will save you, so help me, Heaven!"

Allie looked up through her tears at Sylvester Trelan, but he turned away from her earnest gaze, and left her alone.

An hour later, Sylvester Trelan entered the parlour where sat Mrs Kirkham, Allie, and Mabel. A chill silence followed his entrance. It was broken at last by Trelan

"Mrs. Kirkham, I wish not to torture you, but I implore you tell me, *do you yet love your son*?" As Sylvester Trelan paused, his frame shook with violent emotion.

"In mercy, speak not his name again to me!" gasped Mrs. Kirkham.

"In mercy, answer my question, and I pledge my sacred honour that I cease to trouble you."

"Man! tormentor! you have pitilessly torn my bleeding heart since you came to this house; now leave it, and take my answer. I love my dead boy with a mad, passionate, undying love!" Mrs Kirkham almost screamed these words out, and then clasping her hands tightly together, she pressed them on her brow.

"I have probed your heart but to heal. Oh, *mother! mother!* I have ever loved you, I have pined for you, mother! Behold your son!" And, with a convulsive sob, the strong man threw himself on his knees before Mrs. Kirkham

"My son!" exclaimed the bewildered woman, looking wildly on Trelan. "Alas! no—my poor son was drowned!"

"Mother he was not, I tell you! *I* am your son. I *am* Edward Kirkham! In a moment of fierce anger, I vowed to be dead to you, and left my clothes and satchel on the bank, that you might think I slept beneath the waters. Oh, mother, forgive me!" As Edward Kirkham spoke, he swept back the masses of dark hair from his brow, and his high, bold forehead was uncovered. A deep, red scar glowed upon it. As Mrs Kirkham's eye fell on this, she uttered a scream of joy

"You *are* my Ned! That scar was on your brow in childhood. I know you now. Oh, child, for seventeen long years parted from your mother, you are mine again! My God, I thank thee!" And Mrs. Kirkham's arms were wound around her son's neck with a wild, rapturous endearment.

Allie and Mabel knelt by Edward Kirkham; and when his mother's head was on his shoulder, and then soft kisses fell upon his cheek and lip, the weary wanderer of seventeen years acknowledged, with a grateful heart, that God had richly blessed him.

"I have gathered wealth, I have brought home gold, mother. It is yours. You are poor no longer. Sweet sister! darling Allie! you shall never walk in the wretched path of which you told me one hour ago."

Some weeks after, there was a wedding in the "old homestead," and Edward Kirkham took to his true and noble heart the fair Mabel Lynn. Allie Dale ever smiles when she speaks of Sylvester Trelan, and her mother declares it to be a blessed day upon which he crossed her threshold. There was no small excitement and joy in the village when it was known that the long-lost Ned Kirkham had come back; and down to the present time the villagers regard "Mrs. Kirkham's Boarder" with wonder and

MONASTIC INSTITUTIONS AND THE POOR.

The monasteries of England once held about one-fifth of the rental of the kingdom, and their dissolution, by throwing their immense wealth into the hands of the territorial aristocracy, contributed materially to the building up and fortifyin of our civil constitution, by rendering them better able to withstand, in those days of absolutism, the enormous prerogative of the Crown. For as wealth is power, the distribution amongst the nobility and gentry of revenues amounting to one-fifth of the kingdom, must have sensibly affected their weight in the balance. Respecting this event, *Hallam* has the following remarks:—"A very ungrounded prejudice has obtained, and notwithstanding its increasingly manifest falsity, it still lingers, namely, that the alms of the monasteries relieved the poor throughout the kingdom, and that the present parochial system took its rise, and was necessitated, by the dissolution of these beneficent foundations. It cannot be denied that many impotent poor did receive support in this way. But the blind cleemosynary spirit generated by the Romish Church, is notoriously the cause, and not the cure, of beggary and wretchedness. The monastic institutions could never answer the ends of local and limited succour, meted out in just proportion to the demands of poverty. Their gates might indeed be open to such as knocked at them for alms, and came in search of streams, which, however, must always be too scanty for a thirsty multitude, but nothing could have a stronger tendency to promote that vagrant mendicity, and thus to perpetuate the enormous evil which very severe statutes were enacted to repress. It was, and always must continue to be, a hard problem to discover the means of rescuing those whom labour cannot maintain, from starvation. The regular clergy were in all respects ill fitted for this great office of humanity. Even while the monasteries were yet standing, the scheme of providing for the poor *had been* adopted by the legislature, by means of regular collections, which, in the course of a long series of statutes, ending in the 43rd of Elizabeth, were almost insensibly converted into compulsory assessments. The first act for the relief of the impotent poor passed in 1535 (27 Hen. 8, c. 25). By this statute, no alms were to be given to beggars, on forfeiture of ten times the value, but a collection was to be made in every parish. The compulsory contribution, properly speaking, began in 1572. (14 Eliza. c. 5.) But by an earlier statute (1 Edw. 6, c. 3), the bishop was empowered to proceed in his court against all refusing to contribute, or *dissuading others from doing so.*" Hallam adds: "In particular districts, it is likely some had cause to regret the cessation of monastic hospitalities, but it is by no means probable that the poor in general were placed in a worse position by that event; nor are we to forget, that the class to whom the abbey lands passed, have been distinguished at all times, and never more than in the first century after that transference of property, for their charity and munificence." It should seem, then, that the common cry as to the former times being so much better than the present, is nothing more than a mistake, arising from ignorance of what the former times really were. Our high civilisation has had a double effect. It not only finds out means to relieve want, and suffering, and to delay, if not even wholly avert, their approach, but also to enhance our ideas of what form the comforts and necessaries of life. And hence what would once have sufficed to sustain life, would now be rejected as unfit for food. The dietary of our poor-houses is vastly superior to that which, three or four centuries ago, would have been considered almost dainty fare for ordinary men.

ADVICE.—There is a well known custom prevailing in our criminal courts of assigning counsel to such prisoners as have no one to defend them. On one occasion, the court finding a man accused of theft, and without counsel, said to a lawyer who was present, "Mr. ——, please to withdraw with the prisoner, confer with him, and then give him such counsel as may be best for his interest." The lawyer and his client then withdrew, and in fifteen or twenty minutes the lawyer returned into court. "Where is the prisoner?" asked the court. "He has gone, your honour," said the hopeful legal "limb." "Your honour told me to give him the best advice I could for his interest, and, as he said he was guilty, I thought the best counsel I could offer him was to cut and run, which he took at once."

FELIX MENDELSSOHN.

We write in the midst of Christmas melodies and music. This recals to us the memories of the masters of that divine art. Foremost amongst them was Dr. Felix Mendelssohn Bartholdy, whose short career—he was but 38 when he died—came to a close at Leipsic, November 3, 1848. "The boy," wrote Goethe of young Mendelssohn, "was born upon a lucky day." He was born at Hamburgh, February 3, 1809, where his father—he son of the celebrated philosopher—was an opulent merchant. Isaac Taylor lays it down as a rule, that genius is on the mother's side. In this case the rule holds good; the son was worthy of the mother, and grew under her tender care. We need not tell the readers of "Coningsby," or "Lord George Bentinck—a Political Biography," that Mendelssohn came of that Hebrew race which, according to Mr. Disraeli, numbers amongst its sons the poets, and orators, and artists, of every clime.

Mendelssohn's youth was one of early development. He soon became a good classical scholar, mastered most of the European languages, and, as he said himself, "got into music, he hardly knew how." But there lay his chiefest power, and his father's house was one where all artists met a ready welcome. His mother, too, was able to give him his first musical lessons, increasing them by a minute daily. He was then transferred to Paris, where he received instruction from Madame Berger, of whose musical taste he always spoke in the highest terms. Then, in Berlin he was placed under the care of Zieter, the friend of Goethe, for the science of music, and of Berger, for the piano-forte. He was also, for a short period, a pupil under Hummel. Nature had given him a singular vivacity and willingness of finger, which made all the combinations of keyed instruments easy to him. His quickness of ear and memory was prodigious, his sense of time unimpeachable. He acquired, too, without trouble, that general knowledge of instruments which befits an orchestral composer—himself playing fairly on the violin, apparently seizing and arranging ideas as quickly as he learned manual processes, and unconsciously forming a style when boys are mostly writing school exercises. His "Piano-forte Quartettes," published in 1821, and probably composed a year or two earlier, as distinctly mark a way of their author's own as his last concerts or the last issue of his "Lieder ohne Worte." The easy circumstances of his parents permitted Mendelssohn to travel, and England, Germany, France, and

FELIX MENDELSSOHN.

Italy, were the countries he explored. Though he had tried his hand at opera-writing in Berlin, it was in England that his fame was established. Our Philharmonic audience was the first to recognise the rare beauty of his overture to the "Midsummer Night's Dream." In 1834, Mendelssohn accepted the musical directorship at Dusseldorf, accompanied with some charge of the opera, conjointly with Herr Immerman—the last appointment, however, he soon relinquished. In 1837, shortly after his marriage with a young lady from Frankfort—Cecilie Jeanrenaud—the daughter of a Protestant clergyman, he took up his abode at Leipsic, as director of the concerts. There he was honoured with the degree of Doctor, by the University of that

town, spent his happiest days, and wrote the larger portion of his works. There, with occasional visits to Berlin and to England, where, at the Birmingham festival, his "Elijah" was produced, and to Switzerland, where he went to mourn the loss of a beloved sister, in whose fate he saw a presage of his own, he resided till his death.

Mendelssohn's contributions to music we cannot attempt to chronicle here. The stores of orchestral music were enriched by him with three grand symphonies. We owe to him two oratorios—the "St. Paul," and the "Elijah." The amount of his concerted vocal music and single songs is extensive. His theatrical music—produced for the Court of Prussia—displays no common versatility and dramatic power. So much for his works; we must now speak of Mendelssohn as a performer. An accomplished critic in the *Athenæum* said, "He might, on the strength of his executive powers alone, have challenged the admiration of Europe. His mechanical facility on the piano-forte was prodigious, his expression true and deep, without a tinge of grimace or caricature, his style was unapproached to and animated by that vivacity which also gave such a charm to his demeanour, his readiness, science, and humour, in extemporising, were unsurpassed. He preferred, however, the organ to the piano-forte; since, on that nobler instrument, his ideas, always cast in large orchestral proportions, amplified by every resource of consummate learning and experience could be most thoroughly expressed by his vigorous hand. His memory was prodigious, and his fancy inexhaustible."

It now only remains that we speak of Mendelssohn as a man. Genius is not necessarily the feverish thing it is drawn by some. A genius may discharge the common duties of common life as well as an ordinary individual. There is no law forbidding him to be a citizen, and the head of a family. There is no necessity that compels a genius to outrage all society, and to become the slave of passion and vice. The higher the genius, the higher and holier is the life. Those who rant about genius being free of all laws, being a law unto itself, should think of John Milton, and have the decency to be dumb. Another instance against this manifold sentiment was exemplified in Mendelssohn's daily life. He was an affectionate son and brother, an exemplary and devoted husband, a wise and indulgent father. He remained faithful to old friends with a constancy rare even among those who are less brilliantly tempted to fickleness. His wit was as ready, his spirit as playful, as his sense was sound. Nor was he a mere musician. Few men possessed tastes and sympathies embracing so wide a circle of pursuits and objects. We can only add here that, as is the case with most men of really great endowments, Mendelssohn's personal appearance was winning in the extreme. Nature had gifted her favourite with one of the brightest and most expressive countenances ever bestowed upon genius. His friends all declare that, as a likeness, the best portrait extant is meagre and pedantic. His *matters* little. Men of genius have immortality in their work. Their features become forgotten, but their ideas can never die.

GUN-COTTON.

A week or two since, a paragraph went the round of the papers, which we trust, for the credit of the softer sex, was not true. A Swiss peasant girl fancied that she had some cause for anger with her lover, and resolved to gratify her passion. Accordingly she folded some gun-cotton in his cravat, knowing well that as he smoked, some ashes from his pipe would be sure to fall upon it. The result is soon told. A few days afterwards the victim of female revenge was found with his head blown to atoms.

After this our readers may think the discovery of gun-cotton an event to be deprecated. Here, however, we must differ from them. The man who invents the most rapid and the most effectual means of destruction, as regards war, is the greatest friend of the interests of humanity. Before gunpowder was invented war was far more of a favourite pastime with kings and people than now; when gunpowder was discovered, and the art of murder consummated, and such butcheries as Austerlitz and Waterloo perpetrated, governments began to reflect that the game was too costly. Thirty years of peace have served to give birth to better ideas in Europe. The folly of war is every day seen in a stronger light, and it is very clear that if any man could invent a means of destruction by which two nations going to war with each other would see large armies destroyed and immense treasure wasted on both sides in a single campaign, they would hesitate before proceeding to war. We may be sure that all possible means of conciliation and concession would first be tried. Thus we see extremes beautifully meet, the man who invents the most murderous instruments of warfare in reality furnishes the most potent arguments for peace. In Exeter-hall itself it would be impossible to find a more genuine peace apostle than he. To this class of peace advocates does the inventor of gun-cotton most assuredly belong. It was first discovered by M. Schonbein, of Basel, a professor of chemistry at Berlin. He found that by immersing the common flax-cotton in equal quantities of nitric acid and sulphuric acid, and then washing it and drying it, that an explosive power was obtained quite equal to that of gunpowder. It explodes at 400 deg. Fahr., while gunpowder explodes at 600 deg. In consequence of this, gun-cotton may be fired on gunpowder without igniting.

This peculiarity results from the minute divisions of the cotton fibres, for gunpowder dust will explode at a much lower temperature than grained powder. Gun-cotton may be prepared in various ways. When prepared according to Schonbein's receipt, it must be done as rapidly as possible by pressing the cotton in the mixture with a glass rod. When this is done it is taken out and as much as possible of the mixture is squeezed out of it. The cotton is then washed in successive portions of water, until it looses all taste of acid. It is then pressed in a linen cloth, and dried. Saw-dust, wood-shavings, and any body consisting principally of carbon, may be rendered explosive by preparations in a similar way. It is stated in a report of the Parisian Academy of Sciences, that "if we are to believe the statements that have been made by persons of high respectability, the explosive cotton of M. Schonbein is a perfect substitute for gunpowder, possessing weight for weight, much more strength than that article, and at the same time being free from the many serious objections which attend the manufacture of gunpowder. On the other hand it does not appear that any of the specimens of other discoverers have given fully satisfactory results, that is to say, they are by no means of so destructive a property as the cotton of M. Schonbein." In France the manufacture and use of gun-cotton have generally been forbidden on account of the danger attendant. It is probable, however, that gun-cotton will supersede powder for the purposes of blasting, for which it possesses the important advantage that it does not generate smoke. At present, however, it appears to be unsuitable for military purposes. The Governments of England and France have both declined to use the gun-cotton because it is alleged that it explodes with such a small degree of heat, that after a few discharges a musket will be so hot as to go off the moment the charge was put in the barrel.

Solomon long since said, "there was nothing new under the sun." Gun-cotton is no exception to this general rule. At the meeting of the Parisian Academy, to which we have already referred, M. Pelouze, one of the members, said, "Although M. Schonbein has not published the nature or mode of preparation of his cotton, it is evident that the properties which he assigns to it can only apply to xylondine. M. Dumas, as well as myself, made this remark in the origin of the first communication of M. Schonbein. Reasoning on the hypothesis that the gun-cotton is nothing else than xylondine, I may be permitted to say a few words with respect to its history, and some of its properties. Xylondine was discovered, in 1833, by M. Braconnet, of Nancy. He prepared it by dissolving starch and some other organic substances in nitric acid, and precipitating these solutions in water. In a note inserted in the "*Comptes Rendûs de l'Academie des Sciences*," in 1833, I showed that the xylondine resulted from the union of the elements of the nitric acid with those of starch, and explained by this composition the excessive combustibility of the substance produced. I ascertained, and this I think a very important result in the history of the application of xylondine, that instead of preparing it by dissolving the cellulose, it might be obtained with infinitely greater facility and economy, by simply impregnating with concentrated nitric acid, paper, cotton, and hemp, and that these organic matters thus treated took fire at 180 degs., and burnt almost without

residuum, and with excessive energy; but I think it right to add that I never had for an instant an idea of their use as a substitute for gunpowder. The merit of this application belongs entirely to M. Schonbein. Eight years ago, however, I prepared an inflammable paper by plunging it into concentrated nitric acid. After leaving it there for twenty minutes, I washed it in a large quantity of water, and dried it in a gentle heat. I have recently tried this paper in a pistol, and with about three grains pierced a plank two centimetres (about three quarters of an inch) in thickness, at a distance of sixty-five metres."

M. Schonbein disposed of his patent-right in England for £40,000. Lately we have not heard so much of the wonderful effects of gun-cotton. We can easily imagine, however, that should war break out, it and Warner's long-range could soon be brought into play, so as to make the destruction not merely immense but sure. With death thus a mathematical certainty, we question whether any amount of pay or glory could reconcile even "high-spirited youths" to their untimely fate. From this discovery, also, another truth looms out—the old truth of the superiority of mind over matter—of mental over brute force. A man of science gets an idea, and with that idea he goes to work, and rocks are blasted, and solid masonry levelled to the earth, and the pride and [illegible] comes a ruin and a wreck. In such times man seems elevated into a nobler life—to be invested with more awful attributes, breathe a diviner air.

UNROLLING A MUMMY

A Gloucester paper describes as follows the unrolling of a mummy at Edgeworth Manor-house: "A few weeks ago we noticed the commencement of unrolling a mummy, which had for a long time been in the possession of Edmund Hopkinson, Esq., of Prior's Hill Mansion in this county, and it having been determined to make a further investigation of this curious relic of antiquity, on Thursday it was again drawn from its temporary retreat, and once more submitted "to the garish light of day." The operations were conducted principally by Mr. Rumsey, surgeon, of this city, and, in the absence of a more scientific account, which can only be drawn up when the numerous emblems, hieroglyphics, and inscriptions, have been decyphered, we give a general description of the appearances. That the rank of the person was high cannot be doubted, from the number and great beauty of the cases, or sarcophagi, enclosing him. Two massive sarcophagi of sycamore wood, the outside one eight feet long by three feet high, and two feet ten inches wide, the thickness of the wood being nearly three inches, and the surface, ends, and sides of which were elaborately covered by symbolical and other signs and inscriptions, were succeeded by a third, made of the finest cedar, on which probably the history of the person is described on a narrow fillet of hieroglyphics running down the front and round the sides. Inside all these was the magnificent case of gummed linen, as much in thickness, the rich painting on which seems to have been laid on a coating of something like papier mache. On this case appear to have been depicted the funeral rites, the judgment of the soul of the deceased, the deities whose peculiar province was the care of the departed, with frequent representations of the greater deities, Osiris and Isis. There were no less than 280 yards of bandage round the body, in alternate layers of longitudinal bands, crossed as a figure of 8 around the shoulders and legs, and of circular bands enclosing the whole body. The interstices between the limbs were padded with pieces of linen of various shapes and sizes; and more than 20 scarfs, six of which were fringed, were ingeniously applied between the layers of bandages, so as to give roundness, uniformity, and steadiness to the whole mummy. The eyes had been replaced by oblong masses of linen neatly rolled inserted within the lids, and steeped in the same fluid composition which had imbued all the bandages and scarfs. The brain had been removed through the nostrils, and this operation had somewhat injured the nose, which was not well defined. The teeth were in excellent preservation, and the eyebrows and a few scattered hairs on the chin and face were very distinct. The nails on the fingers and toes were also in good preservation. The whole surface of the body was of the darkest brown, almost black, smooth; the wrinkles of the skin, the form of the limbs, and even the expression of the countenance, well retained. The skin itself was covered with a saline efflorescence, which had probably resulted from the application of the hot bituminous injections, after the body had been steeped, usually for seventy days, in strong brine. There is reason also to suppose that the body was dried at a high temperature previous to bandaging. The removal of the inner layer of linen, coated with hardened bituminous gum, so as not to injure the body, was a matter of considerable difficulty, and severely tried the patience of the operator on both occasions. There were no papyri or inscriptions among the bandages, no amulets, scarabæi, rings, or jewels, about the person. The art of the embalmer seems to have been less carefully exercised in this instance than that of the casemaker and painter. The hard bituminous matter in which the body lay has been analysed by Mr. Whinfield, chemist, of the city, and found to consist of about two-fifths of aromatic resinous matter, and the remainder of a pure and fine asphalt or bitumen. It is supposed the gummy resinous matter contained the turpentine of the cedar and myrrh.

BENISON UPON THE OLD YEAR.

By Miss H. M. Rathbone.

Live thee well, thou venerable year!
Grief-full hearts shall weep o'er thy silent bier,
For many a pleasant day we've known
In [illegible] days which now are flown,
And [illegible] hours, active mirth
Have spent with friends of long-tried worth
In [illegible] scenes of grief and care,
For us have offered many a prayer.

And for all the rich gifts thou bestowed while here,
We bless thee, and thank thee, thou brave Old Year!
For thy music and sunshine, and fragrant flowers,
And chirping of birds in their leafy bowers,
For fresh, sweet smiles, whose gladness cast
A gleam of light o'er our anxious past,
For voices responsive from fond hearts true,
And words of wise counsel, we bless thee too!

For the hour which to high pure thoughts gave birth
For the hope which such ointment around us shed
Rays of sweet comfort when torn hearts bled,
For every kind deed and each gentle tone,
And the tender memories thou made our own,
And [illegible], oh mercies of each and of all in most dear,
We [illegible] gladly thank thee, thou brave Old Year!

But mostly for every time-hallowed word,
Which aught of good in our souls hath stirred,
[illegible]all, for the cheering and holy creed
Th[illegible]

For [illegible] we most bless thee, Bride
And our requiem sing, o'er thy

[illegible]D THEIR BEING ALL THINGS.—The feel

[illegible]ordering (conscientiousness) is the most important regulative [illegible]action of all the others, within the [illegible] is right. It makes others as we would they should do to us," and [illegible]recently above all things. It is painfully evident to all who thin[illegible] upon the subject, how much the world needs proper cultivat[illegible]n, exercise, and direction of this faculty. It disheartening [illegible]contemplate the vast area which "Vanity Fair occupies, in [illegible]ich each acts a part, each wears a mask, endeavours to [illegible]ceive his neighbour by passing for something or less than he [illegible], and each is satisfied with [illegible] doing or doing craving for [illegible]nction, not excellence—to appear, not to be Praise is the g[illegible]nd desideratum; and as to be virtuous is often too troublesome, th[illegible] semblance is assumed of whatever will best secure the approbatio[illegible] of society. The development of a large conscientiousness [illegible]n alone counteract the wide spreading and infectious tendency

MISCELLANEA.

WANT OF CONFIDENCE.—A little Frenchman loaned a merchant five thousand dollars when the "times were good." He called at the counting-house a few years ago in a state of agitation not easily described. "How do you do?" inquired the merchant. "Sick—ver sick," replied monsieur. "What's the matter?" "Detimes i de matter." "Detimes! what disease is that?" "De malade dat break all the merchants, ver much." "Ah! the times, eh? well, they are bad, very bad, sure enough; but do they affect you?" "Vy, monsieur, I lose de confidence." "In whom?" "In everybody." "Not in me, I hope?" "Pardonnez moi, monsieur but I do not know who to trust at present, when all de merchants break several times to pieces." "Then I presume you want your money?" "Oui, monsieur, I starve for the want of l'argent." "Can't you do without it?" "No monsieur, I must have it." "You must? Oui monsieur," said dimity breeches, turning pale with apprehension for the safety of his money. "And you can't do without it?" "No monsieur, not von leetle moment longare." The merchant reached his bank-book, drew a cheque on the bank to the and handed it to his visitor. "Vat is dis, monsieur?" "A cheque for five thousand dollars, with the interest." "Is it bon?" said the Frenchman, with amazement. "Certainly." "Have you l'argent in de bank?" "Yes." "And is it pantaramte convenient to pay de sum?" "Undoubtedly. What astonishes you?" "Vy, dat you got him in dees times? Oh yes! and I have got plenty more I nothing that I cannot pay at a moment's notice." The Frenchman was perplexed "Monsieur, you shall do me von leetle favour, eh?" "With all my heart." "Vell monsieur, you shall keep de l'argent for leetle vear longare." "Why, I thought you wanted it?" "Tout au contraire, I no want de l'argent—I want de grand confidence. Suppose you no got de money, den I want him ver much; suppose you got him, den I no want him at all. You comprehenez, eh?" After some other conference the little Frenchman prevailed upon the merchant to retain the money, and left the counting-house with a light heart and a countenance very different from the one he wore when he entered. His confidence was restored and although he did not stand in need of the money, he wished to know that his property was in safe hands.

COAL GAS.—To Dr Clayton, the Dean of Kildare, the honour is due of having first obtained gas from the distillation of coal. The gas produced by the distillation of coal is not uniform in its composition. Its illuminating constituents are light carbide of hydrogen and olefiant gas, but many other gases are evolved during the process, most of which tend to diminish the illuminating power; whilst others, such as ammonia and sulphide of hydrogen, are injurious to health. By the assistance of chemistry the composition of coal gas was elucidated, and the nature of its poisonous and useful ingredients ascertained. The chemist, therefore, gave on this knowledge means to the manufacturer for separating the deleterious compounds by the process of purification the cyanogen compounds, with the sulphide of hydrogen, ammonia, sulphurous acid, hydrochloric acid, and carbonic acid, are arrested

Scientific improvements are still going on with relation to gasworks. From coal naphtha a number of interesting oils have been lately separated, which have long been favourites with the cultivators of organic chemistry. Benzol, one of them, readily vapourable, that, when common air passed through the tank containing this oil, it becomes so highly charged with carbohydrogen as to burn with a brilliant light. This, doubtless, will bring benzol into more general use. The consumption of gas is enormous. The following statistics give us an insight into the extent to which this branch of industry has attained. In England 6,000,000 tons of coal are annually employed for the manufacture of gas, and from £12,000,000 to £15,000,000 sterling expended in its production. In London alone 500,000 tons of coal are annually used, producing 4,500,000,000 cubic feet of gas and 700,000 chaldrons of coke, of the latter 12,000 chaldrons are consumed in manufacturing the gas, and the remainder sold for fuel. Upwards of half a million houses in London burn gas, and the length of the main arteries for conveying it is 1,000 miles. The capital employed in the metropolis for the production of gas is £4,000,000.

THE beauty proper for sublime art is lineaments, or forms, or features, that are capable of being the receptacles of intellect.

PAT AT THE POST-OFFICE.—The following colloquy actually took place at an eastern post office.—Pat. "I say, Mr Postmaster, is there a letther for me?" "Who are you, my good man?" "I'm myself—that's who I am." "Well, what is your name?" "An what do we want wid the name? Let it on the letther." "So but I can find the letter if there is one." "Well, Pat Byrne, if we must have it." "No name for Pat Byrne." "Is there no way to get in the No, sir." "Well for ye then isn't I'd teach ye better manners than to insist on a gentleman name but we didn't get it after all—so I must away and ye'll find the bit is my name Byrne."

LORD BROUGHAM now and then lets fall unpremeditated words, the seemingly unimportant events of life succeed one another. As the snow gathers together on mountain heights, and by its own weight, however small, a mass changes, but in the tempest hurls the avalanche down the mountain and overwhelms the inhabitant and his habitation, so acting upon the elements of mischief, which pernicious habit have brought together by imperceptible accumulation, may overthrow the edifice of truth and virtue.

CHOICE TEXTS.—"A text for bachelors—"Whoso findeth a wife findeth a good thing, and obtaineth favour of the Lord." A text for aristocrats—"The rich and poor meet together, the Lord is maker of them all." "He hath made of one blood all nations of men." A text for idlers—"Seest thou a man diligent in his business; he shall not stand before mean men?" A text for the timorous—"The wicked flee when no man pursueth, but the righteous are bold as a lion."

HE who disdains to look closely after the economy of his house and the habits of his servants, would require some more assured source of income than the works of his own hands.

ANSWERS TO CORRESPONDENTS.

X. Y. Z.—Cocoa is the cacao of the West Indies, and is the seed of the cacao-tree. Twenty-three millions of pounds are consumed in Europe, and it is the general beverage of Spain. Cocoa-trees are from 40 to 60 feet, with leaves 10 or 12 feet long, with six or nine clusters of 10 or 12 nuts near the top. They produce timber, covering for houses, oil, arrack, and cordage. The oil is used and preferred all over the East for light and soap, and excellent candles and soap are made from it in London, clearer and sweeter than tallow or whale oil. *Coker*-nuts is a corruption.

A SHOEMAKER.—A master has a right to regulate the hours in which his apprentice works. The law would interfere in a case of great hardship, but not otherwise.

FRANCIS LAKE.—We fear there is no great demand for schoolmasters in the colonies.

J. L.—The moment any man sets his foot on English ground he is free. This is not merely a popular boast. It was the glory of Granville Sharp, the philanthropist, that in a suit which he carried on at his own expense and under great disadvantages, he established the fact that the assertion is sound law.

A SUBSCRIBER FROM THE WEST.—There is no periodical or magazine worth anything. We have at present a short time a handbook for emigrants which is issued from our office.

T. R. M. wants to know if we, or any of our correspondents, can inform him of some cure for his tendency to sleep at night. Directly he takes up a book he falls asleep. If his malady does not arise from over-exertion, over-eating, or ill health we fear that his case is hopeless.

R. G. sees two or three estimates of the value of the Koh-i-noor. In his bewilderment he asks us to reconcile the conflicting statements. This we will easily do. The conflicting estimates are made by different parties, and based upon different calculations. If R. G. wishes us to tell him which is the right one, we must decline answering the question. We believe the value is imaginary more than real.

R. M. BANCROFT.—You can get a French smack at any of the foreign booksellers in We cannot tell you what the price is, but it cannot be very expensive. The French for THE WORKING MAN'S FRIEND is *"L'Ami des Ouvriers."*

S. J.—Light travels at the rate of 192,000 miles a second. We question whether the electric telegraph be this.

COTTAGIANA wants us to tell him how the crystallization of sugar is made, such as is on the hairdresser's shop next door to the robemaker's, corner of Chancery-lane. Had he not better apply at the hairdresser's than to us?

A CONSTANT SUBSCRIBER asks what is the legal authority of the President of a Republic like Louis Napoleon? In such a case we should say Louis Napoleon has no legal authority to rule by might, not right—by the arms, not by the laws, of France. Our correspondent the reader as if we are advocates of total abstinence surely "A Constant Subscriber" could not have been a very constant reader, or he would not have needed to ask such a question.

HENRY.—The Mississippi well deserves the name of the Great River. Its navigable rivers alone show a navigation of 20,000 miles, while their entire length is 51,000 miles. Thus—Mississippi and tributaries, not including those given below, aggregate length, 4,125 miles; Red and all tributaries, aggregate length, 1,125 miles; Arkansas, do., do., 5,510; White, do., 1,058; Ohio, do., do., 10,750; Missouri, do., do., 12,170; Illinois, do., do., 1,270; Wisconsin, 675. Total Mississippi, with all its inlets, 50,525; outlets bayous, in all, 485. Total length of the Great River, with all its parts, 51,000 miles.

WILLIAM IMLAY.—Cannibalism is decreasing. There are, however, barbarous tribes amongst whom it prevails; but we hear very little of it in these times.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER VIII.

HUNGARIAN COSTUMES—HUSSAR AND PEASANTRY.

We have now almost reached the period in which the Magyars were driven from the even ground of constitutional resistance, and compelled to leave their struggle to the doubtful arbitrement of the sword. Step by step we have followed the details of the contest between the Diet and the Emperors, from the days on which Szapolyai signed the treaty with Rodolph of Hapsburgh, to those on which Szechényi sought to break the yoke of feudalism and set free the serfs. In a few years more Austria draws the sword to put an end for ever to the murmurs of discontent, and stifle the voice of constitutional agitation. This is the last argument of kings, and force only can repel force. Before pursuing any further the details of these ill-fated but heroic efforts, we think it may not be amiss to take a cursory view of the countries bordering on Hungary, the races by which they are inhabited, and the political institutions and social life of Hungary itself, previous to 1848.

Something of this sort we feel to be necessary in order that the reader may clearly understand what is to follow.

It was the inherent excellence of the Hungarian constitution which preserved it for so long a period against the machinations of Austria. The strong feeling of individual independence which the Magyars inherited from their forefathers, the Huns, has been at all times an effectual guarantee against any encroachments upon their personal liberty, and their attachment to their institutions, republican in their origin, saved them from destruction by the open violence of Leopold, or the lying diplomacy of the hoary deceiver Metternich.

Despotism is always grasping. No matter how great man's power, he longs for more. Austria was not a field big enough for the exercise of Austrian tyranny. It hungering for three hundred years to thresh Hungary with the same iron flail; so that there has been a continued series of attempts on the part of the Emperor to establish absolutism all over his dominions. To these the Magyars opposed the county assemblies, and the county assemblies the Diet. Both of them, from the very fact of their existence, at all times possessed the confidence of the people; for there was at all times perfect freedom of election. It cannot be denied that the franchise was confined to the privileged classes to the *noblesse*, but we have already remarked upon the large amount of the population which was comprehended under this term. Besides, its very constitution was democratic. It was not derogatory to the dignity of anyone belonging to it to enter into business, to pursue a manual occupation, or to cultivate the soil. In short, the *noblesse* was, to all intents and purposes, the people. It was they who were called upon from time to time to prove the sincerity of their devotion to their fatherland, by flinging away their lives in battle against the Turk. Like the Spanish hidalgos, they were engaged in a perpetual crusade. The community of danger and misfortune tended gradually to level all distinction of ranks. They who had combatted side by side in the ranks of war were equals in peace. All were Magyars, all freemen. Anything that made a man more than these was adventitious of necessity, and was considered of trifling importance.

When the invasions of the Turks had ceased, a new contest began. It was then necessary to provide against the more peaceful, but not less insidious and not less dangerous, inroads of Austria. The necessity of carrying on a constant resistance was another bond of union.

These then, were the men, who, previous to the revolution of 1848, had the right of electing the deputies to the Diet, the viscounts of the counties, the judges, and all other functionaries of an inferior rank. The intentions of Austria were shown by the appointment of supreme court to supersede the viscounts, and the repeated attempts made to get the nomination of the palatine into the Emperor's hands.

The Diet had under its control the general administration of the country. To it belonged the right of making all laws, and to the Palatine, and the Council of Lieutenancy over which he presided, the duty of putting them into execution. Although the inferior counts were appointed by the king, it was the viscounts who exercised all the authority of the situation, and inasmuch as they were elected by the people, they possessed their entire confidence. They also presided in the absence of the count at the quarterly meetings of the county assemblies. Here all questions of local interest were discussed and provided for, and, also, those of a higher order, which were under the consideration of the Diet. Here, also, projects of reform were brought forward and elaborated, new laws adapted to the necessities of the times were proposed and discussed, and instructions were drawn up for the deputies whom they sent to the general Diet, which were to regulate their voting and advocacy on all occasions. It was thus that the young men of Hungary received their political education; and while supported by so many bodies scattered over the whole country whose organisation and mode of action was similar to its own, and who, besides, possessed the confidence of the people in its several localities, the Diet was encouraged to persevere in its defence of the national independence.

In the ranks of every aristocracy, there are men found, who, whatever may have been their political training, love the glitter of court better than the applause of the people, or the welfare and independence of their country. The tendency of free institutions is to elevate the masses and bring down the mighty; to look upon man as a being in himself great and noble, to attach greater value to personal merit, and less to the accidents of birth, or property, or hereditary rank. Freedom always tries to raise human nature; despotism to lower it. I deprecate it. As the despot is himself the fountain of all honour, he is naturally anxious that those distinctions which he bestows should possess great importance, and be anxiously sought after, whilst those that men win by their own exertions should be underrated or despised. As a natural consequence of this, those who value themselves upon their titles or possessions only are induced to gravitate towards him as the centre of their system, and come gradually to look upon the untitled and the poor as beings of an inferior order. But as the latter compose the vast body of every nation, they of course have greatest interest in the national welfare and independence. The high and privileged orders, are anxious as far as possible to separate themselves from the *canaille* and rise towards the monarch. The round of court pleasures has greater charms than the labours of public life. Looking upon themselves in the light of superior beings, they are anxious, as far as possible, to make it appear that their interests too are separate.

So in Hungary there were many who, like Esterhazy, valued ease and court honours and favours too much to offer any resistance to the usurpations of Austria. The free towns were nearly all under their immediate control, but fortunately for the liberal interests, each of these towns, being inhabited by foreign colonists, had only one vote, whatever might be its population.

Originally, the Diet was a single assembly, presided over by the palatine, or the dignitary next to him in rank, afterwards, to facilitate the transaction of business, it was divided into two legislative bodies. In the first or upper chamber, sat those whose rank entitled them to a seat, or private persons, who appeared for themselves either in person or by proxy; such as the bishops, the barons, the guards of the crown, the governor of Fiume, a great sea-port, and the civil and judicial counts. In the lower chamber sat the deputies elected by the entire body of the nobles, and by the towns, and these were presided over by an official called *personalis*, and who was supposed to represent the king. Each county and each town sent two representatives, but, in the towns, the right of voting was restricted to a fixed number of the middle classes. This chamber took the initiative in the passing of all laws. The magnates, or upper house, might affirm or reject them upon examination, and the king had a veto as in England. All the sittings were in public, and everyone might enter who wore the national costume, with the sabre at his side.

Besides the representatives of the towns and counties, the lower chamber contained one or two deputies from each district, such as those of the Jazyges, the Cumans, the Hayducks. There was one deputy from the town of Fiume, one from Buccari, and, last of all, three deputies only from Croatia, one of whom sat in the chamber of magnates, the exclusive attachment of that province to its municipal institutions preventing its sending a larger number. The town of Sepusa, the military frontiers, and the districts adjoining the royal domains, remained up to the revolution of 1848 unrepresented.

The two chambers communicated to one another their acts and consultations by messages, and when any question of grave importance arose, they met and sat together, and the sittings were then called *sessiones mixtæ*, or mixed sitting. On these occasions, no one member of either house had any greater importance than another. Each possessed only one vote. It is but right to add that on many important questions numbers of the magnates gave a sincere and consistent support to all liberal measures.

One should be present at one of the elections of viscount of deputies, or of other functionaries of a similar kind, to understand fully the extent of a Magyar's willingness to sacrifice, on every occasion, personal interests to his desire for the public good. The scene that presents itself in the chief town of each county, on the morning of the election, is one of the most [illegible] in the world.

Before the sun rises the crowd is so great, that

seems as if the whole population of the district had crowded in to witness the ceremonial. Every lane, every street, and every avenue, is filled with an anxious and expectant multitude. Elector, or non-elector, each has his candidate, whose claims he supports with as much warmth and energy, as if his life or fortune was staked upon the result. The interval preceding the arrival of the country electors, is occupied with arguments, guesses, and speculations, as to the prospects of each nominee.

At last, the coming of the electors from the country engages the attention of all. They come in in long files, mounted in carts drawn by three or four horses. Each file is divided into several groups, one for every village or district, and is preceded by a flag, bearing the national colours, and the names of the candidates whom the voters intend to support, and headed by a chief called *Kortes*, around him ride all the most influential men of the locality, each wearing on his shoulder his most gorgeous pelisse, and carrying his heavy sabre at his side. They thus wind their way through the crowd, bands of music, more remarkable for loudness than harmony, playing national airs all the time.

As each vehicle passes in front of the town-house, the passengers, surrounded by their bundles of hay, intended as provender for their horses, and not less ample provision for themselves, in the shape of bread, milk, cooked meat, and bottles of wine, in case the election should be prolonged for more than one day, loudly cheer their favourite candidate. Looking at these tall, sunburnt fellows, with long moustachios, embroidered jackets, and flowing pelisses, strolling about with lofty and graceful air,—and one listening to their wild acclamations, and watching their fierce gestures, it would require no great stretch of imagination to fancy oneself in the midst of a detachment of Tartar horse, or a Mameluke fresh from the plains of the East.

A new *cortège* appears presently. It is composed of the electors of the chief town itself, who are coming out to join and to assist in the preliminaries. At their head rides the city *nobleese*, distinguished by their rich costumes, the gold bullion on their epaulettes, their curved sabres, with hilts chased and set with diamonds, tight pantaloons, ornamented with curious designs, finely embroidered on the cloth, red boots, bright spurs, and caps of the costliest furs, the aigrettes of which glitter in the sun. They are preceded by a splendid band, playing Rakoczi's march, and other national airs, while superb cavaliers surround them, sword in hand, and keep off the crowd. Seats are placed in front of the town-house, the supporters of each candidate appear in the balcony and urge the claims of their favourites in the glowing, oriental style, for which Hungarian eloquence is so remarkable. Murmurs of assent or disapprobation arise from the audience, and in the passionate struggle which follows, and in which each man believes his own cause to be that of his country, swords are often drawn and blood shed. At last some Hercules arises, and, like as a lion, his disposition is like the honey of the *steppe*, and he is the tulip of spring (the favourite flower of the Magyars) for chivalrous and lofty courtesy.

"*Vagyosk a tulipam,*
Nagyan lesz a vice-ispan."—
"The tulip is in flower,
Nagan shall be viscount,"

was the burden of an admired song at a recent election.

At last, the candidates present themselves, and are carried on the shoulders of their partisans through the crowd. It is announced that the election will take place at an early hour in the morning, and all peaceably separate. At the appointed time, the same crowd and same scenes present themselves. Old men, women, and children, are all there, and all believe themselves interested in the result. At last, the palatine arrives, with some men of influence in the county, who act as his assessors. Their entry is hailed by thunders of applause, and then succeeds a religious silence. The president then officially announces that three years having elapsed since the last elections, the term of office of the various public functionaries has expired, and concludes by putting the formal question, "Whom do you wish to be viscount?" The names of the different candidates are shouted forth from various parts of the crowd. A poll is demanded by one of them, and the voting follows as in England. After the election of the viscount, comes that of the chief justice and other functionaries, and then, in a precisely similar manner, that of the deputies.

This short and imperfect sketch is sufficient to prove to us that the Hungarians were, at least, not unworthy of freedom; and to be unworthy of freedom, is the only thing that can deprive slaves of a claim to our sympathy. But the misfortunes of the Magyars are not those of a remote epoch, they are of to-day, as fresh in the hearts of the people as confidence in the valour and the remembrance of their greatness; and the nearer they are, the closer at hand is the day of retribution.

At the time of the great wars against Austria and the Turks, armies were raised *en masse*. The whole people rose in a body, with an enthusiasm of which we in England at the present time can have but little conception. Taking up arms was not only a patriotic, but a religious duty, and as such was faithfully fulfilled. In later times the military ardour of the people has of course not been so great, but enlistment has been always voluntary, and recruits easy to be obtained. The republican organisation of the country, and the military spirit which so strongly pervades the character of the Magyars, has ever caused them to look on war rather as a pastime, full of fierce, but pleasurable excitement, than as an evil occasionally necessary, but [illegible]

[illegible] is called on by detachments [illegible] and the time chosen is, as with us, usually during fairs, or some festival which attracts great numbers of people to the principal towns. It is to the hussars that the task is mostly committed of bringing them [illegible] under the iron yoke of military discipline. Their [illegible] uniforms, dashing chargers, and jovial and soldier-like language, soon work upon the excitable imaginations of the rustics. They [illegible] by the Hungarians, in full national [illegible] playing their favourite national airs. Halting frequently they form a circle, and planting the standard in the centre, dance around it, jingling their spurs to keep time with the music, and charming the bystanders by the richness of their dress and the agility of their movements. The dance is at times slow and solemn, at others lively and animated, and often full of fierce gesticulation and martial enthusiasm. The crowd are delighted, [illegible] young men, unable any longer [illegible] the shako and the sabre, join in the dance, and become soldiers. Very often mere children present themselves for enrolment. The officer of the party caresses them, and promises to enlist them when they grow bigger, and not mere children. The others are content

stirring airs, and the horsemen assume the most studied and warlike postures, as if to leave nothing undone to complete the fascination. But notwithstanding their natural leaning towards a military life, the young Magyars are not always found willing to exchange their liberty for its gaudy trappings and so-called freedom from care. M. de Geiando tells a story of a young man of Jaszbereny which well exemplifies this. "He was," says he, "elegantly formed, and seemed born to be a soldier. He seemed to follow the movements of the dances with the closest attention. The officer observed the animation which lighted up his countenance, and rode up and down before him several times, as if for the purpose of fascinating him. He approached the young man almost involuntarily, possessed with the vague idea that I might in some way assist in making him proof against the temptations of the seducer. 'Does your grace,' said I, with a doubtful air, 'wish to become a hussar?' 'Aye,' he replied, musingly, 'I would have splendid accoutrements and a fine horse;' but then added,

after a short pause, 'but I have a very good horse myself already, and, better still, I can ride him whenever I please.' He immediately went away, as if to guard against the possibility of his yelding.' But disappointments like these do not discourage the hussars, who reap ample harvests from among the lively groups who join in their dances, and feel the wild strains of the music warming their blood like wine.

The first hussars who appeared in France were Hungarians under Louis XIV., and from that time the uniform and the name have spread all over Europe. The regiments raised by

Esterhazi and Berecsenyi, the companions in arms of Rakoczi when in exile, still retained the names of their founders in 1792. Every corps coming under this denomination has ever since worn the long, flowing tress or plume hanging from the

HUNGARIAN RACE-COURSE.

cap, taken from the head-dress of the Magyar peasantry in the eighteenth century. The name *hussar* comes from *husz*, twenty, and *ar*, price—literally, "worth twenty." In remote times, when war was proclaimed, the magnates led into the field twenty foot soldiers for one horseman, whose equipment alone cost as much as that of the whole of the others; and afterwards, when this mode of recruiting had disappeared, the name still continued in use. At the present day the regiments of hussars in the Austrian service are altogether composed of Hungarians, and their uniform is nothing more than their national costume. The word "shako," meaning a military cap or helmet, is one of Hungarian origin, as also many others of a similar kind.

The Magyars, except the very wealthy, have little taste for travelling. They are content to pass their lives in their own country, occupied in training their horses, or cultivating their farms or estates. Except to ride to the county town, to attend the fairs or the elections, they seldom go from home, and then they seize the opportunity of gratifying their curiosity, and, at the same time, seeing their old friends.

The fairs are the great centres of union. They are often held in villages of no importance, except for the goodness of the situation. Here men of all ranks meet, and pass the day in groups in the street, discussing the news of the day, and talking over the affairs of local interest. They read but little, and the fairs are, therefore, to them what our newspapers and liberty of the press are to us, and, perhaps, as powerful in effect; for in addition to the mere verbal communication of a sentiment, necessarily elevated by the influence of a practical political education, it is accompanied by oriental energy of gesticulation, impassioned glances of the eye, and intonation of the voice. To these also must be referred the astonishingly accurate knowledge of public affairs which the Magyar peasant is always found to possess, and the importance which he attaches to these periodical meetings is well illustrated in an amusing anecdote related by M. de Gerando:—"I was travelling one day, and commenced a conversation with the driver, by asking him what he knew of my country—France? 'I know,' he replied, 'that your nation is better taught, more powerful, and more fortunate than mine; and I know also that it is as brave as mine; for Napoleon said, 'With the French grenadiers, and the Hungarian hussars, I would conquer the world!' 'Did Napoleon say that?' said I; 'and how did you come to know it?' 'What!' said he, with a haughty toss of his head, 'do you think I don't attend the fairs?'"

Travelling in Hungary is very rapid, but still, as a French traveller facetiously remarks, "one never gets to his journey's end." The means of progression are not wanting, certainly. There is an "Imperial, Royal, and Apostolic Post," in every direction; but the charges are exorbitant. Many persons, therefore, take advantage of the relays

THE CSIKOS.

of horses established upon the principal lines of route, by merchants, by which they are enabled to travel night and day. The magnates, of course, think it beneath their dig-

nity to travel with any horses but their own, and these are sent forward, to be ready at regular intervals some days before the journey is commenced. The postilions are hussars, who maintain a continued shouting and cracking of their whips the whole way. Their horses resemble a cross between the Arab and the Barb, not large, but lively, strong, and muscular, capable of enduring great fatigue, and, in all respects, admirably adapted to the service of light cavalry.

Another means of locomotion, the *elofogo*, or *vorspann*, was an obligation imposed upon the peasantry to furnish a complete set of horses to the traveller at each stage, in return for the small sum of one florin, which goes to the municipal fund. This impost was abolished by the county assemblies in later times, but the practice still exists; for the peasantry being excessively fond of riding, and often not knowing how to employ their leisure, prefer riding a stage for a florin, with the chance of something extra from the generosity of the traveller, to sitting idle at home.

This is, in many respects, an expeditious mode of travelling, but still has its inconveniences. When once the carriage starts, the whole stage is performed in a gallop if the tourist has no objection; but the hussar will adapt himself without hesitation to all his caprices; he acts as a cicerone the whole way, pointing out the remarkable places on each side of the road, and recounting the legends connected with them. But, once arrived at the end of the stage, it is impossible for him to tell when he can start again. When the carriage stops before the door of the *kisbiro*—a petty magistrate, or village mayor, charged with the duty of attending to the *elofogo* —the man who should ride the next stage is very likely absent in the fields, the horses are grazing in the meadows, and nothing is in readiness. In that case the kisbiro makes his excuses with an air of formal politeness, and declares that he will himself go in search of the absent postilion. He then arranges his caftan on his head, twirls his moustachios, adjusts his pelisse, and stalks off at a dignified pace, jingling his spurs as he goes. In the meantime the villagers remain seated at their doors, with the gravity of senators, eyeing the traveller. To crowd around him, or ask questions, would be beneath their dignity. If they see that he needs any assistance, it is instantly offered, but with dignified reserve. After some minutes of silence, perhaps, one may remark, *Nagy szekér*, "It is a fine carriage," and the others reply, *Nagy ám*, "Yes, it is a very fine one," and, in nine cases out of ten, these will be the only remarks made, unless questions are asked by the tourist himself. The Magyar seldom indulges in idle words. Unless he has something of importance to communicate, he remains silent.

At length the kisbiro returns, often after a long absence, and with him four or five small but hardy horses. The postilion is usually a tall, bronzed, hardy fellow, with enormous moustachios, booted and spurred, and armed with a long whip, decorated with red and white rosettes. He mounts, and starts away at full speed. All men, of whatever rank, who meet the traveller on his way, salute him as a brother; and amongst the Magyars themselves, in the [illegible] life, the most excessive politeness prevails. We [illegible] a country gentleman, who once went to make a request of a magnate, who was his neighbour. He raised his hat, and held it in his hand, while he spoke. The magnate begged of him to put it on, as it was extremely cold. "I shall do no such thing," replied the other, "I know the respect which I owe you." "How so?" was the answer, "are we not equal—both nobles?"

"Doubtless we are, but I am a plain gentleman, and you are a great lord."

"I am no greater than you; our privileges are the same. I am perhaps richer than you, but that is all."

"True, you are."

"Then it is to my purse that you take off your hat."

"Ah, you're right," said the squire; "you are richer than I, but there is no other difference between us," and immediately put on his hat.

The herds of the plains of Hungary form a number of distinct [illegible] habits and mode of life. They are very numerous, hardy, active, and from their skill in horsemanship, and expertness in the use of their weapons, make fine soldiers. Our space will not permit us to enter into details regarding any of them except the *csikos*, or horseherds, and as these played a prominent part in the late war, we shall adopt the vivid sketch of them furnished by an eminent writer:—

"The csikos is a man, who, from his birth, somehow or other, finds himself seated upon a foal. Instinctively the boy remains fixed upon the animal's back, and grows up in his seat as other children do in the cradle. The boy grows by degrees to a big horseherd. To earn his livelihood he enters the service of some nobleman, or of the Government, who possess in Hungary immense herds of wild horses. These herds range over a tract of many German square miles, for the most part some level plain, with wood, marsh, heath, and moorland; they rove about where they please, multiply, and enjoy freedom of existence. Nevertheless, it is a common error to imagine that these horses, like a pack of wolves in the mountains, are left to themselves and nature, without any care or thought of man. Wild horses, in the proper sense of the term, are in Europe, at the present day, only met with in Bessarabia; whereas, the so-called wild herds in Hungary may her be compared to the animals ranging in our large parks, which are attended to and watched. The csikos has the difficult task of keeping a watchful eye upon these herds. He knows their strength, their habits, the spots they frequent; he knows the birthday of every foal, and when the animal, fit for training, should be taken out of the herd. He has then a hard task upon his hands, compared with which a grand-ducal wild boar hunt is child's play; for the horse has not only to be taken alive from the midst of the herd, but of course side and sound in wind and limb. For this purpose the celebrated whip of the csikos serves him; probably, at some future time, a few splendid specimens of this instrument will be exhibited in the Imperial Arsenal at Vienna, beside the sword of Scanderbeg and the Swiss 'morning-stars.' This whip has a stout handle, from one and a half to two feet long, and a cord which measures not less than 18 to 24 feet in length. The cord is attached to a short iron chain, fixed to the top of the handle by an iron ring. A large leaden button is fastened to the end of the cord, and similar smaller buttons are distributed along it at distances, according to certain rules derived from experience, of which we are ignorant. Armed with this weapon, which the csikos carries in his belt, together with a short grappling-iron or hook, he sets out on his horse-chase. Thus mounted and equipped, without saddle or stirrup, he flies like the storm-wind over the heath, with such [illegible] the grass scarcely bends under the horse's hoof, [illegible] horse is not heard, and the whirling cloud of dust above his head alone marks his approach and disappearance. Although familiar with the use of a rifle, he despises such a troublesome article of [illegible], and guides his horse with his voice, hands, and feet—nay, it almost seems as if he directed it by the mere exercise of the will, as we move our feet to the right or left, backwards or forwards, without its ever coming into our head to regulate our movements by a leather strap. In this manner he pursues he chases the flying herd, until at length he succeeds [illegible] the animal which he is bent on catching. He [illegible] his whip round in immense circles, and throws the cord with such dexterity and precision that it twines around the neck of his victim. The leaden button at the end, and the knots along the cord, form a noose, which draws closer and tighter the faster the horse hastens on. See how he flies along with outstretched legs, his mane whistling in the wind, his eye darting fire, his mouth covered with foam, and the dust whirling along, aloft, on all sides! But the noble animal breathes shorter, his eye grows wild and staring, his nostrils are reddened with blood, the veins of his neck are distended like cords, his legs refuse longer service—he sinks exhausted and powerless, a picture of death. But, at the same instant, the pursuing steed likewise stands still and fixed as if turned to stone. An instant, and the csikos has flung himself off his horse upon the ground, and inclining his body backwards to keep the noose tight, he seizes the cord alternately with the right and left hand, shorter and shorter, drawing himself by it nearer and nearer to the panting and [illegible], till at last, coming up to it, he flings his leg across its back. He now begins to slacken the noose gently, allowing the creature to recover breath, but hardly does the horse feel this relief, before he leaps up, and darts off again in

a wild course, as if still able to escape from his enemy. But the man is already bone of his bone and flesh of his flesh; he sits fixed upon his neck, as if grown to it, and makes the horse feel his power at will, by tightening or slackening the cord. A second time the hunted animal sinks upon the ground; again he rises and again breaks down, until at length, overpowered with exhaustion, he can no longer stir a limb."*

The csikos, of course, serve in the cavalry, and make some of the best horse-soldiers in the world. They are of middle height, generally well formed, and possess surprising agility. No sooner had the Diet declared war in 1848 against the Emperor of Austria, than they ran to arms from all quarters of the kingdom, and ranged themselves under the national banner. They then formed a body of light cavalry that was the terror of the Austrian and Russian soldiers. Galloping to the charge with the swiftness of [illegible] shouting loudly, *Elyen a Magyar szabadsag!* ("Hurra for Hungarian freedom!") they flew past the ranks of the enemy, striking the dragoons from their saddles with blows of the leaden ball at the end of their lassos, which they threw with unerring dexterity, and then, while their victims in wondering ignorance of the nature of the instrument by which they had been wounded. In the pursuit, after a victory, they were fiercer and more unrelenting than the Cossacks, cutting down without mercy all who crossed their path. At the horse-races, also, which frequently take place on the plain of Rakos, they display a talent in the pursuits of the turf that would do honour to many an English jockey.

The remainder of the present chapter we shall devote to a short sketch of the various races who have found a home in Hungary, and who have figured prominently in the recent struggle.

In Hungary, the hordes of barbarians who marched to the destruction of the Roman empire made their rendezvous, and great numbers of the Sclave race established themselves there at that period. More recently, it became the refuge of nomade tribes, who had been driven out from their own territory by more powerful neighbours. The pilgrim and crusaders also passed through it on their way to the Holy Land. And, last of all, it was here that the defenders of Christianity and of Western Europe assembled to repel the assaults of the Turks and Moguls. Of this heterogeneous mass of race, all speaking different languages, no one had a great preponderance over the others, either in culture or in civilisation. Nor did the dominant people show itself desirous of extending the use of its idiom; and the early kings showed themselves desirous of perpetuating the distinction of language and manners, believing that in them lay the guaranty of their dominions. This diversity has, therefore, come down to the present day, and has been, in a great measure, the cause of all the misfortunes which Hungary has undergone. It has given rise to the dissensions and broils which have for centuries afforded a pretext for the interference and encroachments of foreign powers. Let us take a rapid view of these various races, and their manners and customs.

Croatia lies to the south-west of Hungary, and comprises an area of about 162,000 square miles, and contains a population of 490,267 souls. It is divided into three small counties, part of which belonged, before the battle of Mohatz, to Upper Sclavonia. It did not receive this addition until the accession of Ferdinand, the first prince of the House of Hapsburgh, who wished in this way to reward the services rendered by the inhabitants to his cause.

The Croats, like the Serbes, are ignorant, and coarse in their manners. Their physical training may in some degree account for this great defect in the national character. He is exempt from their earliest youth are untaught and untended. The mother, when she feels the pangs of approaching labour, retires to some secluded place, and gives birth to the infant alone and unaided. She immediately returns to her work, and pays it no further attention than to supply it with daily nourishment. As a natural consequence the men are physically, perhaps, the finest in the world—tall, strong, robust, and well-made, but violent in temper, and ferocious in their aspect. Those on the frontiers are distinguished by their courage and military ardour. All the able-bodied men of this district are obliged to serve in the frontier guard for a short period, after which they return to their previous occupations. In time of war or *insurrection*, as the levy *en masse* is called, every Croat takes up arms, and serves in whatever capacity may be assigned to him. It was by this means that Jellachich, the ban, was enabled to bring such large forces into the field in the late war to aid the Emperor of Austria in crushing Hungarian and Italian freedom; and if the Croats had made common cause with the Magyars, Austria would have been utterly overthrown. The Croat possesses the Russian virtue of steadiest endurance under fire. Those who have read a graphic description of the terrible battle fought between the French and Russians under the walls of Moscow may form some idea of the ferocious energy of their resistance against any force, no matter how great. They may be mowed down with grape shot, decimated by musketry, or ridden down by cavalry, but still they will not move from their position. The Croat infantry has, therefore, always formed an important part of the Austrian army. In the long wars of succession in the reign of Maria Theresa, and during those waged against the French Republic and Empire, these fierce battalions acquired great renown. They have but a small body of cavalry, mostly belonging to the irregular guard of the ban. To this body and some other regiments is also confided the defence of the frontiers bordering upon Turkey. Their uniform is very rich, covered profusely with gold and embroidery.

The inhabitants of Croatia build their own houses, which, however, are nothing more than miserable cabins, with one apartment for the family and another for the domestic animals. The furniture seldom consists of anything but a few vessels of earthenware, two or three knives, a table, and one or two chairs. Their pleasures are coarse and sensual, and their domestic life unhappy. The dominant religion is Catholicism, which, however, amongst them is nothing more than a stupid mixture of fable and superstition.

The Slavonians, or Slavonic family, dwell to the south of the Drave. Sclavonia was originally a Turkish province, and it was in the year 1687 that Leopold I. granted to a crowd of [illegible] on the left bank of the Danube, and demanded an asylum amongst their neighbours. The request was granted, and, as a return for their services against the Turks, they were invested with civil rights. But they very soon gave signs of their intention to abuse the hospitality of the Magyars, by endeavouring to form a province, independent of the rest of the kingdom. As Austria was ever on the watch to take advantage of discord such as this, in order to rivet her own yoke more firmly, pretended to recognise Servia as an independent state, and established at Vienna a Serbe chancery. The remonstrances of the Hungarian Diet however, induced her to forego her design.

The country known as Servia at the present day comprises the counties of Baty, Verocza, Temes, Torontal, Posega, and the military frontiers, containing 385,742 Magyars, 357,198 Wallachians, 1,985 Greeks, 14,549 Jews, and 5,691 French—altogether 1,116,427 inhabitants, besides 1,295,093 Serbes, and 500,000 Croats or Sclavonians.

The Serbes are generally tall, robust, and capable of enduring great fatigue and privation. At the children are bathed in the rivers in winter as well as in summer, and run upon the snow and ice with naked feet, and without any other garment than a shirt. When they come in the mother gives them a small quantity of *sligovecza*, a sort of brandy made from prunes, to warm them.

The costume of the Serbes differs but little from that of the Magyars. In some districts, however, it very much resembles that of the Turks, many of whose customs they still retain, such as that of sitting cross-legged, and allowing their [illegible]. They are very hospitable, and always manifest the liveliest joy upon the arrival of a stranger. Food is immediately prepared and set before him, and before he goes to bed the mistress of the house washes his feet. Their food is principally vegetables and milk during the summer, and meat during winter, usually pork, but their favourite dish is *sauer-kraut*. They make also a sort of pudding from flour mixed with milk and lard. They are generally very ignorant, and remarked for their cunning and mendacity. Literature they have none, and their only musical instrument is a sort of hurdy-gurdy.

The other Sclavonic races to the north of Hungary do not differ so much from the Magyars as the Croats and Serbes.

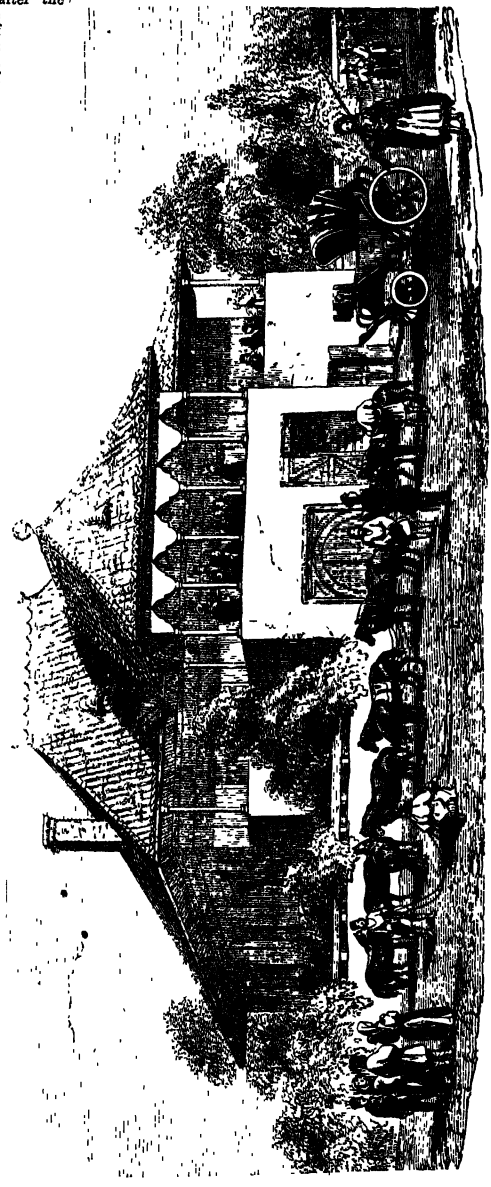
* Schleanger's "War in Hungary."

They have succumbed to the influence of the conquering race, and have in great part adopted their manners and dress. It is a remarkable circumstance, that in those districts in which the Hungarians are in the minority, the Sclaves are coarser, more uncivilised, and more wretched in their style of living. The most uncultivated are the Drotostat, or vagabond tribe, somewhat resembling our strolling tinkers, who earn a livelihood by mending the household utensils of the country people.

THE KORLES, OR LEADER OF THE COUNTRY ELECTORS.

In a previous chapter we have mentioned the settlement of great numbers of German colonists in Hungary and Transylvania. In the former they no onger form a compact and distinct settlement. They are scattered in the north in the county of Sepuse, and towards the south in the neighbourhood and even in the midst of the Serbes. In Transylvania they have preserved their manners and physiognomy. They are distinguished by their industry in agricultural labours, and numerous other handicrafts—a circumstance which fully justified the observation of Joseph II., when giving Maria Theresa the result of his observations upon the people of the country through which he had travelled. "I have seen one industrious Saxon, and one hundred idle Wallachians." The Wallachians certainly have a close resemblance to the inhabitants of Spain and Italy in their hatred to work of any kind. The *far niente* is *dolce* to them also, and whenever they do apply themselves to labour of any kind it is merely to prevent their dying of hunger. Between the two extremes of German covetousness and Wallachian laziness and improvidence, the Magyars and Sicules pursue a wise and happy mean. They have no repugnance to labour, but they do not pursue it farther than may be necessary to secure a decent livelihood for themselves and their families. The Germans, on the contrary, are ever greedy of gain, and spare no pain or fatigue to heap up riches. Although the Germanic race has preserved its distinctive characteristics of manners and physiognomy in Hungary, it is well known that there is none easier of fusion with other peoples, as is proved by the case of the ancient Franks, who became absorbed in the Gauls, and in that of the modern Alsatians, who have become entirely French since the annexation of their province. If the Transylvanian colonists have preserved the distinctive characteristics of their origin, it must be attributed to the circumstances in which they were placed at their first entrance into the country. The Hungarian kings assigned them a separate territory, with permission to regulate their internal affairs in whatever manner pleased them. This they took advantage of to frame a set of exclusive and intolerant laws. Whilst every German could claim the right of citizenship wherever he fixed his residence, no Hungarian was allowed under any circumstances to purchase a house in a German town, and the Wallachians were excluded with still greater rigour. Then came the Reformation to widen the breach still farther. Whilst the Transylvanians became Calvinists, or still remained in the Roman Catholic Church, the Saxons, following the example of the German States, embraced Lutheranism.

The policy of the Viennese Cabinet has always been to foment these divisions, to perpetuate the antipathies of the different races, so that the Germanic element in Hungarian nationality has contributed but little at any time to its extension or elevation. When the German deputies were obliged to accompany those of the rest of Transylvania to remonstrate with Emperor Francis upon their numerous grievances, they feigned illness upon their arrival at Vienna. Upon hearing of the circumstance, the Emperor laughed heartily, and exclaimed, "School fever! my brave Saxons did not wish to cause me any pain,"



Under the name of Germans we may include those colonies which were drafted into Hungary from Suabia, Franconia, and Bavaria — some at the time of Charlemagne, others in the eighteenth century, after the districts bordering on Austria, these Germans are called Suabians by the Magyars. Under the reign of Maria Theresa, after the seven years' war, a great number of French, from Lorraine and Belgium, went and settled in the south of Hungary, on the banks of the Tibissa and Zemes, where the Magyar population had been exterminated by the Turks. But these soon became mingled with the rest of the people, and the French language totally disappeared. Besides these regular colonies, great numbers of emigrés, teachers, priests, and others, fled into Hungary from France at the time of the revolution in 1793, who have still preserved their national manners and language; but they too are now fast disappearing into the mass of the German population.

The GYPSIES are found in great numbers in Hungary, under the names of *Czigany*, or Bohemians. According to the old Magyar historian, Pray, they were driven out of Asia by Tamerlane, and wandered into Hungary through Thrace and Macedonia. They, as is well known, practise the art of divination, and assert that they came originally from Egypt. Like their confrères in various other countries, they persist, notwithstanding all the efforts made to reclaim them, in following a nomade life; but, receiving no education, having no home, no fortune, and no friends, they are generally half-starved, wretched, and degraded. The czigany delights in festivities of any kind. On ordinary days, whenever he does not leave his encampment on the borders of the steppe, or near the river, or at the edge of the wood, he may be seen lounging about amongst his fellows, his breast bare, exposed to the heat of the sun in summer, and the rigours of cold in winter, his only clothing being a sort of dirty, ragged shirt, which is never washed from the day on which it is made to that on which it falls to pieces on the shoulders of the wearer. But on Sundays he cuts a very different figure. He will not appear in the towns and villages, to join in the sports and revels of the people, and tell their fortunes, without assuming very different costume. He then dresses as a Magyar, and, finding himself thus gorgeously dressed, he assumes the bearing of a magnate. He does not pay much attention as to whether the details harmonise with one another. Something brilliant he must have—perhaps the embroidered coat of a noble placed over a pair of tattered pantaloons.

The czigany are the musicians of the common people, playing at dances, fairs, and all other places of amusement, and they seem to enter into the spirit of the national airs with as much fervour as the Magyars themselves.

The WALLACHIANS are the descendants of the ancient Dacians, who were conquered by the Romans under Julius Cæsar. Their country lies to the east of Hungary, in which they were found and subdued by the Magyars, and were, for a considerable period, treated as serfs. Under the government of the Princes of Transylvania, however, a considerable number were ennobled, for their valuable military services, and from that period participated in all the privileges of the Magyar *noblesse*. Traditional dissensions had for a long time previously divided the two races; but far from being oppressed by the Magyars, the Wallachians were, on the contrary, treated with a leniency and impartiality unusual in the earlier periods of modern history. In a single county, that of Marmaros, the number of nobles, according to the latest accounts, were, Wallachians, 350, Sclaves, 717, and Magyars, 483, which proves, at least, that they were not systematically excluded from the higher grades of society. They made various applications to the Austrian Court to be recognised as a distinct people, but their efforts were in vain, until the revolution of 1848.

In our next we shall resume our narrative, and follow the revolution to the overthrow of the national party in 1849.

POST RELAY IN MOLDA WALLACHIA.

REVERSE OF FORTUNE THE TEST OF CHARACTER.

"Do, Edith, have done rubbing up old plate and arranging that glass! One would suppose you intended giving a splendid entertainment, from the satisfaction you appear to take in your occupation. I wonder that you do not call Moses, and let him attend to it, instead of degrading yourself to such a menial employment." And as she thus addressed her sister, Grace Dormer, wrapping a splendid Cashmere around her, threw herself into an elegant velvet *fauteuil* with the air of a spoiled beauty.

'How I wish, dear Grace, you would throw aside your airs fashion, and, realising our present position, come and assist me, for do you not know I have persuaded papa to dismiss Moses?"

"Well, Edith, for a young lady who sets herself up as a pattern of wisdom, I must say you have acted like a fool. Why, what are we to do without Moses?"

"Dear, dear Grace, how many things you will be obliged to do without—articles you have supposed indispensable to your happiness! but, my dear sister, this is not all You will find those who were most forward to flatter and caress you in prosperity shrink from you now that misfortune has reached you"

"You need not be preaching to me, you can do as you like; but I assure you I am not going to spoil my hands with hard work Did not George Augustus Stillwell say last night that I had the prettiest little hand in the world? And that just reminds me I am engaged to walk with him, so I must away and dress" Thus saying, she arose and walked out of the room, with the air of a princess.

Edith Dormer sighed and a bright tear-drop was seen to rest on her cheek; but hastily brushing it away, she resumed her work of arranging all the china, glass, and plate, they possessed, upon a large table in the centre of the room, to the best advantage, for a auction.

While Edith was thus engaged, the door opened, and a gentleman, apparently about fifty, entered, and seemed surprised to find the room thus occupied He said he presumed he was under a mistake; but he was told that he should find Mr Dormer there

Edith requested the stranger to be seated, and said she would call her father, as he had not yet been down stairs, having been quite ill through the night.

While she was absent the stranger took a general survey of the apartment, and could not forbear exclaiming, "It is no wonder honest men suffer when they trust men living in such extravagance," and a frown gathered upon his brow, but just then Edith entered, and said her father would not detain him long, but would e him in a few r

Whether it was the sweet voice of Edith, along with her gentle manner, that soon cleared the brow of Mr. Claireville, or he ashamed to appear unamiable before a lady—whatever the cause, he soon forgot his irritation, and entered into conversation with her. He managed to introduce the subject of her father's failure, and by the interest he manifested, and the kind tone in which he inquired of their arrangements, he drew from her her views and feeling She said she did not regret the splendour and luxury of which they would be deprived; for these she had never cared—but she firmly hoped her father would be enabled, by giving up everything, to satisfy every creditor. After a few other remarks, Mr. Dormer entered, and Edith retired, leaving them to the free discussion of their business.

Mr. Dormer in early life had married a belle a most lovely and fascinating being, but in saying this you have said all She was selfish and ambitious—living for fashion alone In marrying Mr. Dormer—though she could not entirely resist the influence of his fine and noble character—it was her ambition that was gratified, as his immense wealth enabled her to become a leader of fashion, and thus was the first wish of her heart realised.

Mr. Dormer became aware, when too late, how incapable his wife was of constituting his happiness; but, being blessed with two lovely children, he endeavoured in then society to forget his disappointment. Happy was it for Edith she was not born a beauty—on the contrary, she was a very ugly baby—so that her mother gave her over to the charge of a nurse, and but for the fond care of her father she had been desolate indeed.

Edith had now attained her eighteenth year, and there were few that could look upon her without being interested. She was rather tall and delicately made, having full, dark eyes, and chesnut hair, added to a complexion dazzlingly fair; but her chief charm consisted in the intellect that was stamped upon her brow, at once causing respect and admiration, her father often laughingly calling her his ugly baby. For some time before Mr. Dormer's failure, Edith had remarked a care and restless anxiety in her father that caused her many a pang, for with all her fond persuasions she could not draw from him the cause of his uneasiness. But when night after night she refused invitations for amusement, to remain at home and cheer his loneliness, he at last confided to her the cause of his trouble, the fear of bankruptcy.

Care and anxiety had affected Mr. Dormer's health, and for some time he was unable to attend to business. Mr Claireville, being one of his principal creditors, had waited several days to see him in regard to a settlement, until, worn out by impatience and perhaps unconsciously led on a little by curiosity, he sought him at his residence, and fortunately first encountered Edith.

He inquired of Mr. Dormer if that was his daughter he had heard his son speak of so often as the most beautiful and accomplished young lady he knew, the belle of every party.

Mr. Dormer sighed, and said, no; he must mean Grace—that was his eldest daughter, Edith.

Mr. Claireville had many reasons for inquiring about the family and their arrangements, but one most important one was the happiness of his eldest son. He had heard him talk in such rapture about the beautiful Miss Dormer, that he had become quite curious to see her—above all, he dreaded that his present admiration should deepen into a strong attachment, and thus he constantly warned him against marrying a fashionable woman.

Frank Claireville, under a gay and careless exterior, carried calm and sober judgment That he admired Grace Dormer more than any lady he had ever seen, he acknowledged to himself, but when he saw her surrounded by the gay and fashionable men of the day, charming all by her wit and beauty, he could join in with sportive jest and ready repartee ness catching the admiring eye of Grace, he felt he dangerous ground, and, withdrawing himself from her, shake off the influence of her beauty, for well he knew that she who lived alone in the admiration of crowds could never be happy as the star of a domestic home; but had she been all his judgment approved, the admiration he felt for her would have ripened into deeper sentiment.

* * * * *

It was in the evening of the day of Mr. Dormer's auction the B——street was alive with carriages. The elegant and wealthy Mrs Stapleton had thrown open her house to the world of fashion her magnificent mansion reflecting one blaze of light Who, have seen the gay and beautiful, decked in all the taste and extravashion, would have believed beneath the rich folk and satin many carried an envious and malicious spirit Alas, that it should be so!—many there that night exulted in t downfall of the Dor

But among the guests was one who, buoyant with hope and an expated enjoyment, had sought the gay scene fully expecting meet there the beautiful sisters—great, then, was his disappointment and sorrow when the intelligence of Mr. Dormer's bankruptcy was first communicated to him.

Charles Douglass was an orphan, the son of Mr. Claireville only sister, who, having married unfortunately, soon died broken heart, bequeathing to her brother's care her last and treasure Faithfully did Mr. Claireville fulfil the trust. He learned to love the little Charles, and determined to educate him for a lawyer, thus giving him the power to become an eminent useful man, knowing that to a high and noble spirit there is noth so galling as dependence. Deeply did young Douglass feel uncle's kindness, and by attention and the closest application his studies endeavoured to profit by it.

Charles Douglass, unlike his cousin Frank, loved with the approval of his judgment, and had he been master of that which would have enabled him to follow the desire of his heart would have selected Edith Dormer from the world, as the above all others possessing those qualities which would insure happiness But, alas! Charles Douglass was poor, and, shutting heart to all save the exquisite enjoyment of her society, he never any outward sign manifested a preference for her, but he refused an invitation where he thought it likely to meet her, for could not forego the pleasure of seeing and conversing with he so passionately loved.

There was another heart that could not as easily recover tranquillity. Young Claireville, when he heard of the failure,

the rest of the world, was perfectly amazed; but, unlike the generality of mankind, true to the impulse of a generous nature, could not endure the thought of Grace deprived of that station she seemed born to fill, and determined to offer himself at once, and secure to her the continuance of all to which she had been accustomed. Hearing his father was the principal creditor, he wished to consult with him on the subject, and decided upon the night of the party as most convenient to do so. Mrs. Stapleton resided a few doors from Mr. Clareville, and Frank, after escorting his mother and sister there, slipped away to have a few moments quiet conversation with his father.

Fortunately for father and son, there was no reserve between them, and Frank unhesitatingly addressed his father by asking his intentions in regard to Mr. Dormer, and acquainting him with his own respecting Grace. It was a long time before Mr. Clareville answered. He at length said:—"I am happy, my dear son, to see you are above the foolish notion of the day, that children should not confide in their parents, and I will be frank with you in return. I am not one of those who consider that in securing their own interest they have only done their duty, and that is all that is required. No; I have always looked upon it as extremely selfish and unfeeling to secure ourself at the expense, without considering the misery we may be bringing upon others. I have never yet had a debtor to settle with that, when I found his misfortunes originated from a complication of circumstances, and not from dishonesty, I have not endeavoured in some way to secure to him the opportunity of regaining his position; and though I may not have reaped any particular advantage from thus acting, I have never yet lost anything. In regard to Mr. Dormer's affairs, I have been much troubled. His difficulties have arisen from the non-arrival of two of his vessels, which are supposed to be lost. He had depended upon their valuable cargoes to meet his payments, but their not being here in season has obliged him to stop. Of course he intends paying everything, and I am afraid he will have very little left for, too, have thought much of his daughters, but, Frank, it is very hard to break the web of folly fashion has woven around us, and to become that which God intended we should be—useful members of society. I tell you, Frank, misfortune to the character is what fire is to gold—refining it from that base alloy which would otherwise render it useless. Thus they are sometimes blessings in disguise. And now, my dear son, as I have your happiness alone at heart, I will offer Mr. Dormer a situation at a moderate salary, which will enable him to live, and then, should other means, and, at the end of a year, Miss Grace be deprived of any portion of fortune, you shall wed her with my fullest approbation."

. . . . . .

And how did Grace and her mother bear their change of fortune?

Alas for Mrs. Dormer!—her mortification cause her a severe fit of sickness; but Grace did not fully realise the change until settled in her new home, then, as she looked around her, and found everything for their comfort had been provided, but of the plainest kind, she sighed as she thought of the luxurious couches and chairs, and the splendour to which she had been accustomed, wondering how her father and Edith could appear so happy. Mr. Clareville's offer had been gratefully accepted by Mr. Dormer, for he felt it was better to be employed, and trusting still that all was not lost, with a mind now free from anxiety, began to hope that in losing a fortune he might yet find domestic happiness.

Edith had assumed the management of the household, and had arranged everything with the greatest neatness and taste. She had procured for her mother a plain but comfortable chair, and, drawing it near the fire, she placed a small table beside it, upon which lay some of her own beautiful books, and, while engaged upon some useful piece of work, endeavoured by pleasant conversation and the most devoted attention, to beguile her from painful reminiscences, and cheer the tedious hours of illness. At first all that Mrs. Dormer could think of was—what would that one think and this one say? and how glad that vulgar Mrs. Tallman would be, now that she had no fear of being eclipsed by taste, where money could procure everything else; but gradually she seemed aroused by the affection of Edith to think of better things, and conscience began to assert her sway, by asking—why should Edith thus devote to her her time and attention, when she had always neglected her from her birth, preferring Grace?

One evening Edith and Grace had been invited to a large party. Edith persuaded her sister to remain at home, and hear a very interesting book she intended reading aloud. It was a stormy night; therefore they did not fear interruption. Edith, as usual, had drawn the table near her mother; her father was sitting in the opposite corner, his face beaming with love for his wife and daughters, while Grace, carelessly seating herself on a low seat by his side, had gradually become so much interested in the book, that, drawing closer and closer to him, she rested her arm upon his knee, her face turned upwards, with her lips slightly apart, as if afraid to lose a word. Oh, she was the embodiment of a painter's dream, as she sat there in her unconscious loveliness! They had all become so deeply engaged in the story that none heard a ring at the door, and thus the two gentlemen that now entered appeared spell-bound, as if afraid to move for fear of disturbing the lovely scene before them—they were Charles Douglass and Frank Clareville.

Charles had not seen Edith for some time, and had chosen a stormy evening to visit her, being certain of finding her disengaged. Meeting his cousin, he inquired where he was going in such haste? Having answered, he said he would accompany him; and thus they had stood for a moment, each unconsciously tightening that bound him. As the sweet voice of Edith fell upon Charles' ear, the wish arose in his heart that he might thus listen to her for ever, while Clareville, as he gazed, sighed and thought, "Why is she not always thus?" A bright flush suffused the cheek of Grace as she arose to greet her visitors, and Frank would have given worlds, had he possessed them, to know whether it was called forth by pleasure, or embarrassment at being taken by surprise. Edith welcomed them with frank cordiality.

Young Charles he said he regretted having disturbed her in such an agreeable occupation, although he considered by far the most rational way of spending the evening. Frank said it had always been his custom, and was happy now at having an extended audience, and she glanced at her mother as if

[illegible] to the conversation of a highly educated and tried friend that accompanied the remark made at [illegible] heart pulsate with a quicker bound.

"Do you know," said Grace, "I was considering how much happier I have been to-night than if I had gone to Mrs. Jones's party. Indeed, I begin to think the approbation of those we esteem much more to be valued than the approbation of thousands."

As she spoke she caught the eye of Clareville fixed upon her with such a lightning glance of joy and approval, as again sent the eloquent blood in burning blushes to her cheek. And why was it that glance made Grace so happy?

She had not felt the many defalcations of her former friends had, though seemingly unconscious of any change, she had more closely studied the characters of those she met, and with disappointment she did so. But with regard to Frank Clareville it was different. The closer she watched his general bearing in society, the more fully was she convinced of his superiority, until at last she acknowledged to herself that the esteem of him who had never flattered her follies was worth all the admiration he could lavish upon her. That glance was the turning point in Grace's character.

It was not long before Grace learned to assist her sister in the care of the household, so necessary in their present circumstances, and in a short time was rewarded by the sweetest of all pleasures, the consciousness of fulfilling her duty.

And how fares it with Charles Douglass?

Why, Dame Fortune, in one of her fickle moods, had at length given him an opening whereby to make a name.

In overlooking some old papers in the office of the lawyer with whom he was studying, he found an old deed entitling a Mr. James Seymour to a large property, with the copy of a lease to a distant branch of the family for fifteen years, from George Seymour, deceased. Mr. Seymour dying in the meantime, he could not recover the property for want of the original deed. This he knew from part of the property having been offered for sale, and the purchase of it prevented by there not being any title-deed for it.

He determined at once to seek out Mr. James Seymour, and, if possible, to restore to him his rights, but he knew he must be cautious in his proceedings, for the present possessor was not only wealthy, but one that would not easily part with that which he had

so long considered his own. And now to discover Mr. Seymour. After many fruitless inquiries, he began to despair of finding him. One evening, at Mr. Dormer's, he was particularly thoughtful. He had been directed to a family of the name, and had immediately sought them out, but they had removed, and he lost all trace of them. He knew, from many circumstances, that if it was the one he was in search of, they must be fearfully reduced. He was pondering in his heart the changes of life and its disappointments, when he was aroused from his reverie by Grace playfully asking him if he was "conning over his maiden speech with that rueful visage? If so, she was sure she did not wish to hear it."

Charles good-humouredly replied that the object of his thoughts had more influence over his maiden speech than she was aware of He then said he had been very anxious to find a Mr. Seymour, but thus far had been unsuccessful, and he could not but regret it, as it was of importance to him.

"I do wonder if it can be Mary Seymour's father! But here comes Edith, and she can tell you more about them than I can, as Mary is a *protegé* of hers"

Charles then asked Edith what she knew of the Seymours?

Edith said very little, excepting they were very poor, and, she judged, had seen better days. In former times she had given Mary work, but now she could only recommend her to others.

All he heard from Edith concerning them but redoubled his anxiety to discover if it was the one he was in search of, and, after taking the directions, he set out at once, to be satisfied After traversing several lone and dismal streets, he found the house as directed—and a poor, dilapidated place it was.

Knocking at the door several times, it was at length opened by a little boy, who timidly asked, as if half afraid of the answer, what the gentleman wanted?

Charles asked if Mr. Seymour was in?

The little boy replied, "Please walk up stairs as high as you can go, and you will find him;" and then hastily retreated into a back room, leaving Charles in the dark Nothing daunted, he groped his way up the stairs until he found he could go no farther, when, directed by the sound of voices to a door on the right, he cautiously felt his way toward it and knocked.

A soft voice said, "Come in!"

There, before a miserable fire, sat a young girl sewing, while in one corner sat her father, with many a line of care and sorrow furrowed upon his brow, and in the other his wife, endeavouring to warm her chill and wasted frame by the few remaining embers.

As Charles entered, the young girl arose and handed him the only unoccupied seat; then hastily resumed her work, as if fearful of losing a moment—and she was so, for their daily bread depended upon her exertions.

It was some minutes before young Douglass could speak, as he surveyed the apartment, where everything was scrupulously neat and clean, even in the midst of poverty, and thought of the millions that were wasted, and for what?—to pamper a depraved taste for extravagance, while but a small portion would carry happiness and comfort to the homes of many such as this. Shaking off the influence of the scene before him, he inquired if this was Mr. James Seymour, the son of George, deceased, for, if so, he had something of importance to communicate?

The person he addressed hesitated before he answered, then said, "I am! But what you can have to communicate to my advantage I cannot surmise, unless you can restore to me the lost deed." And, for a moment, a ray of hope shot across his pallid face—but it as suddenly died away, and was replaced by a settled look of care and disappointment as he said, "But that cannot be, as I have searched in vain for it, and have given up all expectation of finding it!"

"But it is to bring you that very deed I am here!" said Charles. "And to offer you my services in recovering your property gratuitously," he added, as he handed him the deed to look at.

Mr. Seymour took it and examined it, then hastily covered his face with his hands, while his frame was shaken by fearful agitation; but, recovering himself a little, he caught Mary by the hand as he said, "Come here, child, and kneel with me to call down blessings on the head of him who has been the first to speak one kind and cheering word of comfort for years!"

Charles Douglass, after a few consoling remarks, arose to [illegible], giving Mr. Seymour his address, charged him to [illegible] as early as possible. Many were his ruminations [illegible] vicissitudes of life as he contrasted the expectations of the man he had just left, now living in a garret, while he was the heir of thousands.

The next morning Charles acquainted his friend, the lawyer with the case, and requested permission to undertake the suit His friend not only congratulated him upon the opening before him, but promised, if he gained the cause, to take him in as a partner. Here, then, was a double motive for exertion—the pleasure of assisting the worthy, and gratifying Edith Dormer. His heart beat quickly as he thought of her; but, not trusting himself to indulge in hopes that might be disappointed, he prepared to proceed at once in the business.

The case was decided in favour of Mr. Seymour; and he found to his amazement, the property had increased so greatly in value that he was now master of an immense sum. Turning to Charles he grasped his hand firmly in his, and said, "For this I am indebted to you, but I shall not express my gratitude by empty thanks. I not only consider you a tried friend, but I place my business in your hands, and you shall be rewarded liberally!"

And now, under the firm of Sheldon and Douglass, Charles found as much as he could attend to. His disinterested conduct had not been lost, and he soon reaped the reward of his generosity

Mr Dormer was now an altered man. His daughters married the high-spirited men they had learned to love in more opulent days. Happy in the bosom of his family, he almost blessed the loss of that fortune which had been the means of restoring to him his wife's undivided affection. Deprived of the society of her fashionable friends by her position, and confined by illness, her loneliness was only cheered by a few of Edith's friends, who, admiring her fine and noble character, still considered it an honour to be classed among them. Thus, she had ample time given her for reflection, and, as she learned to value the attentions of the world for what they were worth, she began to appreciate the treasure she possessed in her husband's unchanging love; and, as she still saw him honoured and respected by all, she was prouder of being his wife than she had ever been in the zenith of their prosperity.

WIN AND WEAR.

By T. Mills.

There's no royal road to greatness
Men must ever *climb to fame*,
All the wealth in misers' coffers
Wouldn't buy a deathless name
Is a noble goal before you?
Would you great achievements dare?
Brother, then, be up and doing—
Brother, you must "Win and Wear"

Toil and labour, never stopping
Till you make the prize your own;
For, you know, 'tis "constant dropping
Wears away the hardest stone."
Never slack sublime endeavour,
Nor midst cheerless toil despair;
If you'd rise above your fellows,
Brother, you must "Win and Wear!"

'Tis the lesson Nature teaches
All throughout her wide domain;
And the text from which she preaches
Is "that labour lead to gain."
Moral worth, and honest merit—
Brighter crowns than monarchs bear—
These you never can inherit—
Brother, these you "Win and Wear!"

A Last Look.—There is a feeling that resembles deat the last glance we are ever to bestow on a loved object. girl you have treasured in your secret heart, as she pass on her wedding day, it may be happy and blissful, lifts u laughing eyes, the symbol of her own light heart, and leav that look darkness and desolation to you for ever. Th your father-spirit has clung to, like the very light of you istence, waves his hand from the quarter-deck, as the gig ship bends over to the breeze; the wind is playing throug locks you hand so oftentimes has smoothed; the tears dimmed his eyes, for mark! he moves his fingers over th and this is a last look.

M. THIERS.

AMONGST the victims of the recent *coup d'etat* in France was no less a personage than the renowned statesman and politician, Thiers. Probably by the time this meets the reader's eye, he may have sought refuge on our hospitable soil; for to England flee for protection the exiles and refugees of every clime. Under these circumstances, we imagine our readers will gladly welcome a portrait of M. Thiers, and a short narrative of his life.

Louis Adolphe Thiers was born at Marseilles on the 26th Germinal, An. V. of the Republic (16th April, 1797). By his mother's side he could trace his descent from an old and honourable family of merchants, who had fallen into extreme poverty. His father was one of the working classes, and, if we

LOUIS ADOLPHE THIERS.

are not mistaken, followed the trade of a locksmith, or seller of old iron. When the University was reorganised, by the assistance of some of his mother's friends, young Thiers obtained a *bursary*, or exhibition, at the Imperi l Academy at Marseilles, where he pursued his studies for some years with great assiduity. In 1815, at the age of eighteen, he left to enter the Faculty of Law at Aix. Here he met with a young man, who, like himself, was sprung from the people, and like him also was destined to attain to great celebrity, with whom he was soon on terms of intimate friendship—Thomas Mignet, who has since become so famous both as an historian and as a publicist. The friendship thus formed has never since been interrupted. While paying sufficient attention to the Digest and the Civil Code, to enable them to pass their examinations with credit, Theirs and his companion were passionately devoted to literature, philosophy, and history, and the former became the chief of a republican party in the college, denouncing the government of the Restoration, and dwelling in gloomy language upon the splendid reminiscences of the Republic and the Empire. He thus created the dislike of the professors and the surveillance of the police, but, on the other hand, was more than recompensed by the admiration of his schoolfellows. About this time he won a prize offered by the Academy at Aix, but which was refused him on account of his democratic opinions. The prize was deferred till the following year, when a brilliant essay from Paris carried it off. Greatly to the surprise of all, it was found the essay was the production of Thiers himself. After this affair he became an advocate, and practised for some time at Aix, but here he found his low birth and extreme opinions against his progress, and accordingly he left it, with Mignet, to fight the battle of life in Paris itself. Here for some time he lived in great obscurity; but the expulsion of the orator from the Chamber of Deputies led to an acquaintance that resulted in M Thiers becoming one of the editors of the *Constitutionnel*. While filling the office his great talent became known, and he contributed to the *Moniteur* the commencement of the "History of the French Revolution," which at once placed him in the first rank among the literary men of the day.

About this time, by the generosity of Baron Cotter, a rich millionaire, he became one of the proprietors of the *Constitutionnel*. This increase of wealth led to a corresponding change in life Thiers quitted his mean apartments and set up for a man of fashion In 1828, becoming tired of the effete liberalism of the *Constitutionnel*, in conjunction with Armaud Carrell, he started the *National*. We now approach an eventful period of his life. Thiers was foremost in attacking the Polignac administration, and materially aided that revolution which placed Louis Philippe on the throne. Thiers had his reward—he was made Councillor of State. In the next ministry formed, Thie was made Under-Secretary of State, and during th.. time he was elected Deputy for Aix, and made his *debut* in parliamentary life. When the ministry of Casimir Perier was formed, instead of joining his colleagues in opposition, to their surprise, he violently attacked them all In 1832 Thiers became Minister of the Interior, under the Presidency of Marshal Soult. This office he did not long retain, disgusted with some of its duties he became Minister of Commerce and Public Works Thiers, however, returned to his former office, when the Parliament passed its measure respecting clubs, of which he was a warm advocate. Shortly after, an attempt at insurrection was made in Paris, and Thiers fought personally at the barricades In consequence of a misunderstanding with Thiers, Soult retired from the ministry, and after several attempts to find a suitable head, that office was filled by Marshal Mortier, and Thiers continued in his old place. In consequence of the violent measures adopted by the government, after Fieschi's attempt on the life of Louis Philippe, Guizot, accompanied by Marshal Soult, retired from office, and Thiers was appointed Minister of Foreign Affairs, and President of the Council which office, however, he resigned, in consequence of finding himself in opposition to the King with respect to intervention in Spanish affairs He then took a tour in Italy, and kissed the Pope's toe. Thiers' successor in office, Count Mole, being compelled to resign, Soult and Thiers were once more requested to form an administration, but, as they could not agree, Thiers retired into the ranks of the opposition, alternating his time between politics and history Since the accession of Louis Napoleon, Thiers has been busily engaged in plotting to bring back the Orleans family to France We presume his activity in this respect excited the animosity of the French President Happily, however, instead of becoming a prisoner of state, Thiers contrived to be a refugee, which character he sustains at this time

It now remains, that we speak of Thiers as a historian Of all the native historians, who have written on the French Revolution, the two most distinguished are Thiers and Mignet Both are remarkable for the impartial tone of their narratives, considering how recent and exciting are the events of which they treat—for the accuracy of their details, for the skill with which they compare and sift conflicting evidence, and the general justness of their conclusions, and for the manner in which they trace step by step the most fearful political convulsion known in these modern times They do not mix themselves up with the strife, but stand aloof as lookers on They enlist neither under the banners of the Gironde nor the Mountain; they sworn neither by king nor people, but though they are thus alike in many points, yet there are many in which they differ Thiers is more of the journalist—Mignet, of the philosopher. In their various delineations of character, Thiers exhibits the most worldly tact—Mignet the most metaphysical acuteness. To the general reader, Thiers's work will always present more attractions than that of Mignet, for this plain reason, that, although it contains less of what is called the philosophy of history, it is of a far more animated and dramatic character. There is a shrewd, business-like air about it—although, here and there, the author would evidently desire to be thought a profounder reasoner than he is Hence, the secret of Thiers's historical works. Thiers, the historian, is a perfect *fac-simile* of Thiers the statesman—an adroit, keen, ready, man of the world, with no strong passions or prejudices to warp or lay aside his judgment. This praise, however, must be modified when we speak of his yet-unfinished "History of the Consulate." There, his passions and prejudices as a Frenchman have had full scope.

ELECTRO-METALLURGY.

Our readers have seen, in shop-windows, beautiful works art, all shining, as silver or gold. By means of electro-metallurgy these articles are made In the daily papers, we rea that, last month, a banquet was held in Birmingham, in honor of the discoverer of electro-metallurgy Mr Spencer the gave the following graphic account of the origin of the experiments, which resulted in the discovery of the art metallurgy —

"In September, 1837, the British Association for th Advancement of Science met in Birmingham, and durin the week of its sitting I attended the chemical section when I heard Dr. Bird state that while he was repeatin an experiment of Dr Becquerell's he had met with a very u expected result. After having passed a feeble voltaic curre for a considerable period through a disc of clay, moistened wit a salt of copper, he found, on breaking it up, that the meta contained in the cupreous salt was reduced, and in a crystallin state, in the interior of the clay disc. Now, the remarkabl part of this gentleman's communication consisted in the sup position that the crystals of copper had originated out of con tact with either of the metals employed in generating the cu rent. At that time (1837), I had sufficient acquaintance wit the leading principles of electro-chemical science to enable m to judge of the importance of that statement, should it b true, while on the other hand it was so contrary to all analog not to say experience, that I could hardly help suspecting th the gentleman had fallen into some mistake To resolve th doubts I had on this score, I determined to take an early oppo tunity to repeat the experiments in the manner they were de scribed by their author, and it was while I was repeating tho e periments, that I was led, step by step, to the discovery the electrotype Moreover, the apparatus which I adopted f these operations, in 1837, is the same as that now sold in th shops as the 'single cell electrotype apparatus' I began September, 1837, and in little better than a month I arrived a knowledge of that wonderful plastic power of metallic dep sitions, which we possess in galvanic, or voltaic electricity. was then that I discovered that branch of metallurgy, whi has since been designated the electrotype, but whi implies the practical application of electro-chemistry most of the metals used in the arts. There are sever gentlemen now present who saw those experiments operation at the time, but as many attempts have been ma to deprive me of the credit of the discovery, let me not accused of egotism in thus distinctly stating the particula and dates of my proceedings. A statement was made in t *Mechanics' Magazine* in 1814, and most industriously disseminated through out all Europe, to the effect that I had copied i experiments from a letter written by a Mr Jordan, and pu lished, I think, in the June number of that print for 18 Nothing could be more absurd than this last charge, in fact had never seen the letter until it was thus pointed out; and i had I could not have obtained anything practical from it. M claims have been usually admitted as dating from May, 18 because at a public meeting of the Polytechnic Society, he on the 9th of that month, a letter was read from me to t secretary, which is entered on the books of the society, a mentions some of the results of the discovery, and also tha had been engaged in perfecting the process for a considera period. The latter fact was spoken to by several members th present, some of whom had been made acquainted with my e periments at the first meeting of the society in October p vious. Along with this letter a number of voltaic specime were shown to the meeting, consisting of medals and copp moulds, and specimens of engraving, all of which had b formed by the electrotype. In a conversation which ensued explained the process to the meeting, and further showed so specimens of silver plating and guilding which I had with i I have hitherto forborne to give public denial to those sta ments to which I have referred until this evening In su porting a claim of this nature, however, there is a higher pr ciple than mere personal vanity. I feel that my honesty of p pose is involved should I fail in supporting that to which, in first instance, I laid claim, and which I never suspected wo

be questioned. I have always felt it to be degrading to science to clog its history with considerations merely personal; yet, looking at its past history, I fear that controversies of this character must be pronounced inevitable."

But our readers, possibly, may wish to learn a little more of electro-metallurgy. The process may be described in the following manner:—

When a galvanic current is passing through a solution of metallic salt, it separates the metal from the other chemical elements, and precipitates it in a fine layer, which solidifies into a film or sheet. When an ornament of white metal is to be coated with silver by this means, the metal foundation, properly prepared, is dipped into a chemical solution of silver, and a galvanic current is passed through it. The result of this action is, that the solution is decomposed, and a fine film of metallic silver becomes deposited on the surface of the article suspended in the liquid, the thickness of the deposited layer being determined conjointly by the duration of the immersion, the strength of the solution, and the strength of the current. In the progress of the operation the solution becomes exhausted of its silver; and, to keep up the supply, plates of pure silver are suspended in it; the silver dissolves in the liquid as rapidly as the deposition on the articles takes place, atom for atom. If the article—whether a piece of table-plate, a button, or a trinket, is to be coated with gold instead of silver, a process generally similar to the above is followed, the nature of the solution being the chief point of difference.

Mr. Dent has coated the balance-springs of chronometers with gold, by the electro-metallurgic process, to protect them from damp. Professor Christie has proposed the same treatment for magnetic needles. Medallions are sometimes coated with copper as a means of preservation or of beautifying. The medallion is first coated with black-lead, and then exposed to the action of copper (in the state of sulphate or some other salt), the metal of which is precipitated on the medallion by a galvanic current. Fruit, small twigs, leaves, seeds, and other vegetable specimens, may be similarly coated with copper, either for ornament or for the purpose of illustrating the size and form of the object. Insects, too, such as butterflies, may be thus coated with a metallic film, and it is a striking proof of the [illegible] selves, that the exquisite frame-work of the insect's wings is exhibited almost as distinctly as in the natural state. Ornamental baskets, whether made of wicker or of wire, are coated in a similar manner. So likewise are lace and other articles made of woven fibres. In England, indeed, electro metallurgy has arrived at a high state of perfection, and has done much to adorn many an English home.

A STRANGE HISTORY.

A PRIVATE letter, written by an English lady, who has recently visited the United States of America, to a friend in this country, gives the following interesting account of a lady whom she met with at an hotel in Boston:—

Mrs. de Kroyft was a bride, a widow, and blind, in a month. Her history, as she related it to me, is as follows:—When she was eighteen she became attached to a young man, without fortune, who was studying for the medical profession. Having no money herself, his friends wished him to marry a young lady of property, who was supposed to have a *penchant* for him. This stimulated her ambition, and she resolved to make herself superior to her rival mentally, since she could not vie with her pecuniarily. Accordingly, she contrived to raise twenty dollars per annum to pay for studying at Lima College, where she remained four years, carrying off the first prizes.

The next year they were to be married, on the 25th of August. A short time before this her intended husband was seized with a spitting of blood. It ceased for a time, and he was better. After a little it returned, he was told he had but a short time to live. On hearing this she went and lodged in the same house, nursing him night and day. When their wedding-day arrived, he said he should die happier if he could once call her his own. They were married, and he died four days after. The necessity for exertion which had hitherto supported her was gone; she gave herself up to grief. This added very much to an inflammation that had settled in her eyes since her night watchings. One morning she awoke, and could not open them. The doctor told her she would open them in a day or two. A week elapsed; still they remained the same. One morning the doctor forced them open, and exclaimed "My God! you are blind!" She thought before nothing could exceed her misery; but this terrible announcement seemed to absorb everything else. She could not believe that she should never see again. The endeavour to realise it seemed to benum every feeling. She was roused from this state of lethargy by the kindness of her college companions, who, when they heard of her misfortune, collected fifty dollars among themselves, and sent one of their number to give her the money and nurse her for a fortnight.

At the expiration of this time she was well enough to walk about and to feel that, if she could not find some way of exercising her powers, she should go mad. She is one of those energetic spirits who find it much easier to do than to suffer. Besides, her father was not well off, and had nine children younger than herself. Through the influence of Senator Backus, she spent a year at the New York Institution for the Blind, to try if she could learn music sufficiently to teach it. In this she failed. This disappointment with her blind hopes and fears of sight (for she says she could never accustom herself to be blind), so preyed upon her spirits, that she could neither eat nor sleep, and often spent the greater part of the night in walking in the garden. She was a constant mourner between two graves—in one lay buried her affections and hopes; in the other a world of light and beauty, in which she might have found consolation. A friend of hers, Dr. Nott, sent her to a water establishment, where she remained six months, made many friends and recovered her health. Still she was no nearer finding some thing to do, to secure herself an independence, now became the great passion of her life. During her stay at the above-named institution, she had, by means of a grooved card, written a great number of letters to her friends, in which she described, with considerable eloquence, her feelings and sufferings, and her sources of consolation. These she was induced to publish by subscription. She wanted on the managers of the institution, who gave her the influence, and set down their names for several copies. From thence she went to the City-hall; they gave her the [illegible] went on boldly, with her prospectus, her hand and a guide, and called on all the principal merchants for dollars in advance.

In a very short time she possessed a thousand dollars, which was quite sufficient. She brought out her first edition of 1,000 copies September, 1849. These she delivered herself to the subscribers most of whom never expected to see her again, but gave to her dollar because she was blind. They were so pleased with her or her book, or both, that they recommended her to their friends. She brought out another thousand, disposed of them quickly, the another. Now she is selling the fourth thousand, and expects, the end of the year, to have disposed of them all, and to be worth one thousand dollars towards the four thousand that she thinks will secure her from want. She secures all the profits by selling herself. She travels from one town to another, taking a pretty girl as a guide, and a boy to carry her books—goes to all the stores tells her tale, and solicits them to buy her book, and does it handsomely—to use her own expression—that very few decline the purchase. When she sells thirty she returns, considering that day's work. Sometimes she does this in an hour and a half—sometimes in three hours. She sold 500 at Washington.

She was introduced to President Taylor, Mr. Clay, and the principal members of the Congress, and their wives, through Mr. Bell, wife of the Secretary of the War Department. This has established an institution for the blind in Tenesse, and consequently took a great interest in her. She says she went in style to sell her books in Washington. Mrs. Bell, and after her many of the other ladies, took her books and her in their carriages, went round the city, sent the footman in with a book to every house likely to buy it, left the book to be looked at, and called for the book coming back. Very few returned a book under such favourable auspices. Those people gave her letters of introduction to the friends in other places. She has a very nice note from Henry Clay, another from President Taylor, with his signature outside which is a very important document. By showing this, she and her attendants travel free of expense all over the States, that is, in public conveyances.

MISCELLANEA.

HUMOROUS INCIDENT OF RAILWAY TRAVELLING.—"There's nothing like an obliging disposition," I thought to myself, one day, when, travelling in a railway car from Boston to Worcester, seeing a gentleman putting himself to considerable trouble to land another gentleman, who had fallen asleep, at his destination. "Passengers for Needham!" cried out the conductor, "the cars stop but one minute." "Hallo!" exclaimed a young man in spectacles, at the same time seizing an old gentleman by the shoulders who was sleeping very soundly, "here's Captain Holmes fast asleep, and this is Needham, where he lives Come; get up, Captain Holmes—here you are" The gentleman got upon his feet, and began ... eyes, but the young man forced him along to the door of the car, and gently landed him on the road-side Whiz went the steam, and we began to fly again. The obliging young man took his seat again, and said, with a good deal of satisfaction, to somebody near him, "Well, if it hadn't been for me, Captain Holmes would have missed his home finely. But, here he has left his bundle," and the young man, picking up a paper parcel, threw it out of window, and directly discovered another bundle in a handkerchief, which he also threw out. "Well," he said again, "if it hadn't been for me, Captain Holmes would have missed his bundles finely" When we stopped at the next station, a lady began to rummage under the seat where Captain Holmes had been sitting, and exclaimed, in great alarm, "I can't find my bundle!" "Was it done up in a piece of brown paper?" I asked "Yes, it was, to be sure," said the lady "Then," said I, "that young man yonder threw it out of the window at the last stopping-place." This led to a scene between the obliging young man and the old lady, which ended in the former taking the address of the latter, and promising to return the package in a few days, provided he should ever find it. "Well," said the obliging young man, "catch me doing a good natured thing again! What can I do for that old woman if I cannot find her bundle?" Whizz, went the steam, ding, ding, ding, went the bell; the dust flew, the sparks flew, and the cars flew, as they say, like lightning, until we stopped again at the next station; I forget the name of it now, but it would be of no consequence if I could remember it An old gentleman started up and began to poke under the seat where Captain Holmes had sat. 'What are you looking for?' I inquired. 'Looking for?' said the old gentleman, 'why, I am looking for my bundle of clothes." "Was it tied up in a yellow pocket handkerchief?" I asked "Yes, and nothing else," said the old man. 'Good heavens!" exclaimed the obliging young man, "I threw it out of the car at Needham; I thought it belonged to Captain Holmes." "Captain Holmes" exclaimed the old fellow, with a look of despair, 'who is Captain Holmes? That bundle contained all my clean clothes, that I was to wear at my son's wedding to-morrow morning. Goodness gracious! what can I do?" Nothing could be done but to give his address to the obliging young man as before, and console himself with a promise that the bundle should be returned to him, provided it was ever found. The obliging young man was now in a and made another solemn vow never attempt to oblige a man again. The next station was his landing-place, and as he went towards the door of the car he saw a silver-headed cane, which he took hold of and read the inscription on it, "Moses Holmes, East Needham" "Well," again exclaimed the obliging young man, "if here isn't Captain Holmes' cane!" "Yes," said a gentleman, who got in at the last station, "and the old fellow is lame, too. He will miss his stick.' "Do you know him?" inquired the obliging young gentleman. "Know him! I should think so," replied the gentleman; "he is my uncle." "And does he live at East Needham?" asked the obliging young gentleman. "Of course he does, he never lived anywhere else." "Well, if that don't beat everything," said the obliging young gentleman, "and I put him out at Needham, just five miles the other side of his home.'

MAKING CASKS BY MACHINERY.—A patent has been taken out by Mr. Rosenborg, the inventor, for machinery which is worked by steam power at the patent cooperage works in Wenlock road, City-road, London. Every day the extraordinary number of 400 casks is produced, the number of men and boys on the premises employed in the operation not being more than twenty five This will afford some idea of the rapidity of the process. Memel planks are cut into shapes by the circular saw, and then rendered into perfect staves by a most ingenious and novel machine, by which they are formed with the greatest accuracy They are then placed in a circular machine, called a trussing machine, by which they are brought together and formed into a cask, and the hoops being immediately fixed, the work is complete. The rapidity of the process is perfectly astounding, and is a fresh proof of what the ingenuity of a practical as well as a scientific man can produce.

IDLENESS AND VICE.—Great examples to virtue, or to vice, are not so productive of imitation as might at first sight be supposed. The fact is, there are hundreds that want energy for one that wants ambition, and sloth has prevented as many vices in some minds as virtues in other Idleness is the grand Pacific Ocean of life, and in that stagnant abyss the most salutary things produce no good, the most noxious no evil Vice, indeed, abstractedly considered, may be, and often is, engendered in idleness, but the moment it becomes efficiently vice, it must quit its cradle, and cease to be idle

THE LANGUAGE OF YOUNG LADIES.—The Rev. A. Peabody, in an address which has been published, enlarges upon the use of the exaggerated, extravagant forms of speech used by young ladies—saying splendid for pretty, magnificent for handsome, horrid or horrible for unpleasant, immense for large, thousands or myriads for any more than two. "Were I," says he, "to write down for one day the conversation of some young ladies of my acquaintance, and then to interpret literally, it would imply that, within the compass of twelve or fourteen hours, they had met with more marvellous adventures and hairbreadth escapes, had passed through more distressing experiences, had seen more imposing spectacles, had endured more fright, and enjoyed more rapture, than would suffice for a dozen common lives."

ANSWERS TO CORRESPONDENT

N.—We must decline answering many of t questions referring to the "French Lessons They need no explanation. They are compl in themselves.

A FACTORY OPERATIVE asks us what is o opinion of Joseph Barker. We really cann answer the question. We do not know the pri at which Croly's "Life of George IV" was pu lished, nor do we recommend it. He then as us the best work on ethics. If he had said wort we could have answered. Let him get Macki tosh's "History of Ethical Philosophy;" he w there see reference to the chief ethical write to which he can refer at leisure; or, if he can get that, let him get the "History of Ancie and Modern Philosophy," published by C Knight in his shilling series—the best book the subject that has appeared in our time.

A MINER.—We cannot answer your questi but we believe Audubon's works are published a very expensive form. The engravings nec sarily would make them very costly.

ROBERT MACKENZIE.—THE WORKING MA FRIEND will be complete in 26 numbers, mak a handsome half-yearly volume.

CAUSALITY, If his disposition answers to ame, will soon see that parties offering to him, with a comparatively trifling expense, i possession of from £5,000 to £50,000 a year, and must be quacks who enrich themselves at expense of the public. In these days of fi competition there is no such royal road to rich In Europe we have no California; here, at le man lives by the sweat of his brow or brain. is only by industry, per-severing, self-denying, intelligent, that wealth in this age can be acqui and secured. Unhappily—that is, if riches the great end of life—the course we have rec mended does not necessarily lead to wealth. man may possess every virtue under heaven yet be poor.

EMILY.—The Chinese were the first people appear to have had a knowledge of the marin compass The earliest notice of it in t records bears the doubtful date of 2634 years Many circumstances contribute to the impres that the mariners' compass was first made kn in Europe through the communication of Moorish invaders of Spain, although the kn ledge of it has been brought direct from Ch first through Marco Polo, and afterwards by Gilbert, the physician to Queen Elizabeth.

J. C wishes to know if brothers' children ot lawful cousins, as well as sisters. Most cidedly.

O.—We are almost surprised you should had to ask our advice. If you read newspape and you ought to read them, for newspa teach men precisely the practical knowledge want—you would hear of building and fri and societies. These are precisely what want, only be sure and join one that has res ble names attached to it, and that does not use too much. Your own good sense sh teach you to moderate your expectations.

JAMES LEADER.—The answer we have giv will suit your case We know nothing o rank to which you refer Nor can we ente the merits of particular societies. We sh say, as a general rule, the less they promis more they are likely to perform.

J. S. B.—I is usual to grain oak in distem and to varnish it over when thoroughly dry

F. G. C. asks in what way it would affe country if the National Debt were paid off I answer, very agreeably: much in the sam as, supposing F G C were over head an in debt. If some kind Samaritan were to p debts for him. If F. G. C. pays £5 a y taxes, he would, after the National Debt settled, only have to pay £2 10s.

A. B. C.—There is only one paid commis connection with the Board of Health Chadwick, whose salary is £1 500 per a Dr. Southwood Smith is a paid member Board under the Interment Act; his sal £1,200 per annum. Mr. Austin, as secr receives £600 per annum, and Mr. John T assistant-secretary, receives £500 per annu

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER IX.

A DIET was convened in December, 1832. The Government perceived at the very commencement that the minds of the people were greatly biassed again d that unless they could succeed in the beginning i doing away with the se unfavourable impressions, the ld prove anything but favourable to Austria. The mi stry therefore proce ed a desire to co-operate with the li ral party in lightening or removing the burdens of feudal n. The king propos d to

MEETING OF THE HUNGARIAN DIET ON THE 5TH OF JULY, 1848.

the two houses the revision of the *urbarial* code. This was a law passed in the reign of Maria Theresa, under the name of *Urbarium*, fixing the extent of the farms and the amount of the rents. For every two hundred acres of land the occupying tenant was obliged to pay one-ninth of the produce, and one hundred and twenty days' labour, some lambs, a little honey, butter, and bees'-wax. This would not, however, have been considered exorbitant, if the peasants were n any way protected from still further exactions on the part of their lords But when a serf had any cause of complaint gainst his seigneur, he w d t l g his charge in the court of the vice-count, t 's town, in all prob lity a , and before a tribunal composed of those whose rank and prejudices would operate very seriously against them leading a favourable ear to his complaint.

On the contrary, when a noble had found any cause of offence in a serf, he had but to lay his accusation before the bailiffs of the village, who could forthwith imprison him, and inflict upon him five-and-twenty strokes of a stick or whip, according to the sex of the culprit.

The nobility paid no imposts; all fell upon that class of the community whom the ancient acts designate with truthfu

simplicity, *plebs misera contribuens*—"the miserable populace which pay the taxes."

Such was the system into which the Government now proposed to introduce some reforms. Whatever were the motives which prompted it, the design itself was at least praiseworthy. But it showed itself unwilling to carry out these auspicious beginnings, by bringing all its influence to bear to oppose the return of any of the patriotic party at the next election. But notwithstanding all its efforts, the Diet was composed in the main of liberals.

Szechényi opened the session by another attack upon the feudal privileges of the noblesse. He represented to them in glowing colours the injustice of remaining exempt from the lawful burdens of the state, of entailing upon the unfortunate serfs all the toil and labour, and reserving to themselves alone the fruit and the shade. He pointed out to them the British aristocracy as an example in the highest degree worthy of imitation, who, in the possession of unparalleled influence and boundless wealth, submit themselves without a murmur to share with their fellow-subjects the toils and dangers of war, and claim in peace no exemption from the rule of equal law and fair contribution to the revenues of the exchequer. He endeavoured to impress upon them that it was their duty to keep pace with the spirit of the age by freeing themselves at one blow from the yoke of antiquated prejudice. And that he might not disgust them by too sudden and too violent a change, and knowing that great principles are not to be asserted and established by incidents in themselves of little importance, he proposed the construction of a suspension-bridge across the Danube, to connect the towns of Buda and Pesth, to pay the expenses of which a small toll should be levied on each passenger. This, though apparently a measure of no great weight, assumed, from the results which it involved, the garb of a great political position, round which the battle of the new social revolution was to be fought. It nobles as well as peasants paid the toll, it would be an admission, however slight, of the principle of the liability of all to public taxation. The party of the oligarchy at once perceived the drift of the proposal, and the Országh, the highest judge in the kingdom, declared, with horror in his eyes, like Lord Eldon at the passing of the Catholic Emancipation, that he never would set a foot upon a bridge which promised to be the ruin of the ancient constitution of Hungary. The measure was nevertheless carried, and the ice was broken.

Szechényi next endeavoured to bring about some change for the better in the social condition of the peasantry, but the Government now succeeded in forming a party in the assembly to oppose him. Count Joseph Dessewffy, a man of considerable abilities, put himself at its head as the avowed partisan of the court, and styled himself and his followers conservatives. By his instrumentality three very important measures were rejected, having for their object the abolition of compulsory labour, amongst the serfs, a revision of the codes of law, and [illegible] ation of a regular system of popular education. By [illegible] clear of the last of these the youth of the co[illegible] left in the hands of the clergy, who were proverbially ignorant, lazy, and matter-of-fact, at least to this portion of their du[illegible]

After a session, which lasted during three years, the Diet was closed in May, 1836, but not without having effected some needful reforms. To the peasant they had accorded the right of selling what belonged to him, of removing from one district to another, they protected him also from arbitrary punishments on the part of the seigneur, diminished the rents, and reduced the number of days of forced labour from one hundred and twenty to fifty-two each year. Article 10 took away judicial power from the seigneur, and Article 13 gave the peasant the right of proceeding against the noble, and even against his own landlord, in the ordinary courts of justice.

The last subject which came under discussion was which of all the dialects of the kingdom should be the official language of the Government. Our readers may remember that the predominance of the Magyar language was always a point, regarding which the Hungarians were more than usually jealous. Not that they had ever been desirous to impose its use upon peoples of another race, but they wished to protect themselves as far as possible from the inroads of the Sclavonic and C[illegible] [illegible] around them. They were a[illegible] that the language of the administration should be intelligible to all, and that the use of the Latin in official documents should be abolished for that of a tongue known at least to the majority of the population, and that, by the adoption of uniform and well-regulated system in the writing and promulgation of government acts, men of every race, whether Magyars or not, might be eligible for employment in the various departments of the public service.

When once the Latin, which could only be understood by the lawyers and a few of the educated, fell into disuse, who could be better fitted to take its place than the Magyar? Certainly not the Sclavonic, for it was the language of the Russian autocrat, and the jargon of his boors, and would open a way for his encroachments, nor yet the German, for it was understood only by a very small number of the population.

It was therefore resolved and carried, "that the tribunals of Hungary, properly so called" (thus excluding Sclavonia and Croatia) "should deliberate and pronounce judgment in Magyar upon all subjects which should be laid before them in that language, and that on and after the 1st of January, 1844 no one should obtain any public office, or receive the diploma of an advocate, who was ignorant of it." In all this, we can see nothing but an endeavour to bring about that amalgamation of races and languages which has been productive of so much good in England, and the want of which has exercised so baneful an influence in Ireland. But a union of race in Hungary centering in the Magyar language and institutions, was the very thing which the Austrian emperor wished to prevent, as it was in direct opposition to his cherished scheme of a great empire having Vienna as its capital, and the German as the *ruling* tongue.

Louis Kossuth was present at all these debates. He was then thirty-one or two years of age, having been born in 1802, at Monok, in the county of Zemplin. He was the son of Aaron Kossuth and Caroline Weber. The early death of his father, and the limited means of his mother, prevented his receiving a good an education as would have been otherwise afforded him. He was, however, sent at a very early age to the Calvinistic College of Sarospatak, and afterwards finished his course of law at the University of Pesth. In 1832 he returned to Monok, and was appointed honorary attorney for the county. He was, at this time, a great sportsman, and, we believe, for a time, rather addicted to gaming. When the Diet was assembled in 1833 he was appointed proxy for an absent magnate, and had thus a right to take part in the debates, but not to vote. Nearly three hundred advocates attended the Diet in a similar capacity. The triumphs of Szechényi first inspired Kossuth with the idea of winning honest fame in the political arena—taught him

> "To feel the bright presence, and turn him with shame
> From the idle he fondly had knelt to before."

The fowling-piece and the billiard-table were now for ever abandoned for the pen and the sword. His debut in the chamber was anything but auspicious. He certainly had in him the [illegible] materials of a great orator—the weapons of parliamentary warfare—but he was not as yet trained to use them with effect. His first speech was delivered with painful sense of embarrassment, and there was nothing in it to attract the attention of the audience, but the extreme awkwardness and hesitation of the speaker. But he was determined to succeed. Everything by labour and practice, and that he might in the meantime aid the cause he had at heart, he conceived the idea of publishing reports of the proceedings of the chambers, which had up to that time remained partially or wholly unknown to the great mass of the population. He, therefore, with great diligence and perseverance, distributed manuscript reports of the speeches of the deputies, and particularly those of the opposition, as more in accordance with his own sympathies. Finding the demand for his paper daily increasing, he endeavoured to diminish the labours of transcription by setting up a lithographic press, which, of course, multiplied the copies with greatly-increased rapidity. The alarm of the Government was instantly excited, and the publication of the journal prohibited. The ministry were, however, obliged to give way before the clamours of the opposition, and the interdict was removed upon condition that manuscript copies only should be circulated. The liberal party now increased their efforts to procure a good circulation, and the partisans and admir[illegible]

whom Kossuth thus gathered around him ever afterwards adhered to him through all the vicissitudes of his "strange, eventful history."

When the Diet closed in 1836, Kossuth still diligently continued his paper. He now resolved to report the proceedings of the county assemblies, the constitution and duties of which we have already described. They had previously acted separately and without concert. By making known to each the proceedings of the others, he wished to enable them to bring their strength to bear unitedly on the popular side. This was more than the Government had anticipated. They had feared the printing-press before, they now [illegible]. He was seized, and kept in [illegible]. Having been then brought to trial, he was sentenced to four years' imprisonment. He was shut up in a building at Pesth, called the *Neuhaus*, and having obtained books, he made so good a use of a copy of Shakspere and an English dictionary, that he acquired our language as he has since spoken it with such tremendous effect in this country and in America. When the Diet met in 1839, his imprisonment was declared illegal, and the supplies were refused until his liberation, which soon after took place. He had, however, spent three years in prison, and came out worn in mind and body. The welcome he met with from the people was sufficient to dispel the gloom which oppressed him. A vast crowd assembled to hail his return unto liberty and to labour, and accompanied him with [illegible] torches and loud acclamations through the streets of P[illegible].

Instead of intimidating the liberal party, the persecution of Kossuth only irritated them more and more every day. During the sitting of the Diet, some young men had formed a society or debating club for the discussion of political questions. They were at once pounced upon by the Government, and their leaders were thrown into prison. Almost at the same time, Baron Wesselenyi, one of the most intrepid defenders of Hungarian freedom, was arrested. His fierce denunciations of the Austrian ministry and the feudal excesses of the Magyar nobles, had raised up against him a host of enemies. He was seized, brought to Buda to be tried, and sentenced to three years imprisonment. He lost his eyesight before the term had expired, and died of the implacable enmity of Austria.

Two of these severities were inflicted at the instigation of Palh, Chancellor of Hungary—a man who possessed neither patriotism nor diplomatic talents. He was, however, in every way worthy of his master, Francis I., upon whose head three bankruptcies in succession had borne it down to the maledictions of the whole nation. He died in 1835, in the midst of the dissensions of the Diet, and left the crown to his son Ferdinand, who had been already crowned king of Hungary in 1830, under the name of Ferdinand IV.

Francis was a narrow-minded man, possessing no claim to distinction beyond the indomitable perseverance which he displayed in the struggle against Napoleon. He was vulgar, coarse, and egotistic, an enemy of literature and science, and unable to speak his language with any greater correctness than the rudest of his peasants. Revolution, reform, and civilisation, seemed to him to have the same meaning, and that to be danger—to his throne and dynasty.

As Ferdinand was labouring under mental debility when he ascended the throne, the administration of the Government was committed to the hands of the Archduke Louis, and Prince Metternich. No two men could have been better fitted to precipitate the catastrophe which was now impending, the one by his Machiavellian cunning and deceit, and the other by his rigid and inflexible obstinacy.

The policy which was adopted at the commencement of the new reign was marked by greater leniency towards the political prisoners, and greater willingness to accept the propositions of the Diet. Those who knew Austria well, however, knew her reluctance to yield one jot to anything but stern necessity, and her secretly-formed determination that each concession should be the last. Half measures, temporisation, and evasion, were the order of the day. The cause of this vacillation and irresolution is found in the materials of which the Austrian empire is composed. A very small part of the population is of German origin. The vast majority is Magyar, Sclave, Italian, and Wallachian. The Magyars form the only really compact body on the whole, and number 5,472,910; the Germans scattered through the various provinces, 7,833,157; the Sclaves, 17,760,159; the Italians, 5,596,000. The empire can, in fact, scarce be called Austrian, when only three millions are Austrians properly so called. Only one sort of policy could enable the Government to maintain its ascendancy over such a heterogeneous mass, and that is expressed in the maxim of Machiavelli, *Divide et impera*, by setting one race against the other, it was enabled to trample upon all. Hungary, however, was always the greatest difficulty, for it was better organised, more united, braver, and richer, than any of the other provinces which owned its sway.

Whilst the Magyar Diet was engaged in the struggles, of which we have given a rapid sketch, the national interests were defended in Transylvania with equal courage, but not with so great success. The States of this principality had not been convened since 1811, although, according to the terms of the constitution, the sovereign was bound to convoke them every year.

The Diet at last assembled in 1834, and for a long period maintained an animated contest with the central Government.

In the meantime the exertions of Szechenyi had given a sensible impulse in Hungary to trade and industry. Steam-boats began to appear on the rivers, and railroads to intersect the country. The nobles began to adapt themselves to the spirit of progress, and the value guaranteed to bills of exchange [illegible] by gentlemen, very materially restored their confidence. They soon fell into the hands of brokers, who fleeced them without mercy. For want of a national bank, the establishment of which had been constantly opposed by Austria, they were compelled to pay an enormous discount to greedy Jews.

The intellectual progress did not lag behind the material. Books began to multiply. Reading became more general. The theatre was enriched by historical plays, recalling the [illegible] of Hungary, and were nightly enacted before [illegible] of the youth of the country. And thus homage to the rising genius of the nation partook more than ever of the colouring of modern civilisation from the circumstance that now, for the first time, did the Hungarian ladies bring the sagacious traits of oriental etiquette, and lend their presence to temper the fierce impulses of patriotic fervour with the grace and sentiment of female beauty.

In the meantime Kossuth had taken up his residence at Pesta, and there became editor of a journal called the *Pesth Hirlap*, or "Pesth Journal." The first number was issued in January, 1841. It was at first published four times a week, but soon became a daily paper, as the circulation rose rapidly, until it reached twelve thousand. In 1841 the ministry was changed, and a quarrel with his publisher deprived Kossuth of the vote of his journal. He thereupon determined to devote his attention to projects for the material amelioration of the country, [illegible] the entire emancipation of the serfs, and [illegible] Hungarian trade from the restrictions imposed by Austria, the chief of which was that no Hungarian manufactures should be exported to Austria, and none but Austrian imported into Hungary. For this purpose he formed an association called the *Bedeckgift*, the members of which pledged themselves to use nothing of Austrian manufacture until the tariff was reformed.

The effects of this were soon felt. The Austrian manufacturers began to remove their factories into Hungary. The court took the alarm, and appointed imperial paid commissioners to preside over the counties instead of the counts. The agitation now became general, and at the head of it were Kossuth and Louis Batthyanyi. The former was daily rising in popularity and importance, and, despite all the efforts of the court party to prevent it, he was elected in 1847 member for the county of Pesth. Immediately upon the meeting of the Diet an act was passed abolishing the feudal services of the tenantry, and the immunity of the nobles from taxation.

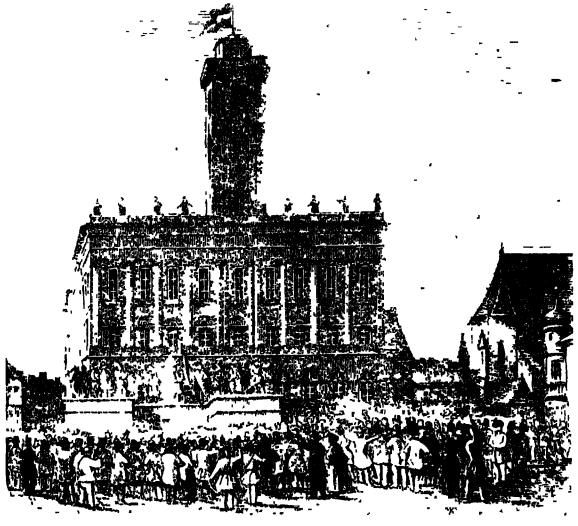
Austria now endeavoured to secure the support of the Croats and other Sclavonic races by flattery and conciliation, and thus range them against the Magyars, but, notwithstanding all their efforts, the Diet contained amongst its members some of the most distinguished men of the Liberal party, and abated nothing of its opposition to the court. The final settlement of the question as to which should be the official language of the administration, was one of the first subjects which occupied its attention. The former Diet had discussed this delicate question

with great tact and prudence, and the present one displayed signals of reserve and circumspection; but the Croats, excited by Austria, and anxious to overturn all other nationality, to found a Sclave dominion upon their ruins, used every means to frustrate the pacific intentions of the opposition. Nothing was left untried—intrigues, bribes, and menaces. So that it required all the eloquence of Gabriel Blonzal, the leader of the Opposition in the Chamber of Deputies, to prevent the total overthrow of the constitution. A law was at last carried, containing the following clauses—"The official language of the Diet shall be, henceforth, exclusively Magyar. It shall, however, be lawful for the deputies of those provinces who do not speak Magyar to continue the use of the Latin for six years from this date. All public acts emanating from the King or the tribunals shall be rendered into that language. The tribunals and higher offices of the administration in the adjoining countries shall address all writing to the Hungarian tribunals in Magyar, and the answers returned shall be in Latin. The Magyar language shall be taught in all the schools of the dependent provinces, and shall alone be admissible in those of the interior and frontiers of Hungary Proper."

This was the law of which the Croats complained so loudly, but with no better reason than if one should, in this country, find fault with the desire of the Government to make English the language of the United Kingdom, as richer, more copious, and in every way better adapted to the wants of the age than any other of those in

VESSPITNYI.

The question of mixed marriages next occupied the attention of the Diet. In the interval which had elapsed since the preceding session, the Roman Catholic priests had, in many instances, refused to celebrate the marriage of any couple who did not belong to their own church. It was now enacted that all such marriages should be valid, if they but received the sanction of a Protestant minister. Chapter IV. of this Session confirmed and extended the enfranchisement of the peasantry. When the taxation of the nobles came under consideration, Szechenyi seized the opportunity of expressing his sentiments upon it in a manner which at least had the merit of originality. He appeared in the Chamber of Magnates on the 28th of October, 1841, in splendid uniform, his breast covered with stars and ribands of the various orders to which he belonged. "It is now thirty-three years," said he, "and eleven days since I was sent to the camp of Marshal Blucher. I arrived at the dawn of day, and at the entrance of the tent found a soldier occupied in powdering his hair before a looking-glass. I was rather surprised, but, on passing on a little further, I found a page engaged in the



FRONTIER GUARD OF THE BAN OF CROATIA.

same way. At last I reached the tent of the old general himself, and found him, like the others, dressing his hair also. 'General!' said I, 'I should have thought this was the time to put powder in the cannon, and not in the hair.' 'We hope,' was the reply, 'to celebrate a grand *fête* to-day, and we must, therefore, appear in our best costume.' On that day the battle of Leipsic was fought. For a similar reason, gentlemen, I appear here to-day, dressed in this singular manner. I believe that we are, to-day, about to perform one of the brightest acts in the history of our nation." His address was received with loud acclamations, although the measure he supported was but partially successful.

The opening of the Diet at Presburg took place under circumstances of great pomp and splendour. The King and Queen, and all the members of the royal family, were present. There were the Archduke Francis, heir-presumptive to the throne, and the Archdukes Francis Joseph (the present Emperor), Albert Charles, Ferdinand, and Leopold. Each of these returned answers in the Magyar language to the addresses which were presented to them. The Queen alone, the sister of the late King of Sardinia, Charles Albert, answered in Latin.

About this time the palatine, the Archduke Charles, died, to the great regret of the whole nation, and Stephen, the governor of Bohemia, was unanimously elected to succeed him. His father's services, his youth, and talents, and kindly disposition, had rendered him deservedly popular. When he was sworn into his new office he added, in an impressive manner, the following words to the

POLITICAL MEETING IN FRONT OF THE HOTEL DE VILLE, PARIS.

RECRUITING FOR THE WAR IN 1848.

usual form of the oath:—"I solemnly promise that the sole object of my life shall be to show myself worthy of the confidence the people have reposed in me."

After the election came the debate on the address. The conservative party and the deputies from Croatia, Sclavonia, and Fiume, were desirous of still adopting the hackneyed language of compliment and adulation. But the Diet was indignant at the substitution of imperial commissioners in the place of the counts, and wishing to make up for all the omissions of the preceding session, voted an address, which set forth all their grievances at length, and in indignant language. It was finally adopted by the lower chamber, but the magnates refused to affix their names to it. The deputies then deposited it amongst their archives, and left the Emperor unanswered. This first declaration of hostilities was, in a great measure, the work of Kossuth, who had now become the first orator of an eloquent nation. It was in vain that Szechenyi opposed him, and declared that, although there was nothing he had so much at heart as the progress of the nation, yet he did not, by any means, desire it upon a basis that was not in accordance with the principles of the constitution. He was the elegant and courtly representative of the high aristocracy. Kossuth was the man of the people, and they followed and revered him as their prophet and guide.

The question of language was now again brought up, and this time was the cause

of the fiercest contest that ever raged within the walls of the Diet. The Court deputies, in particular, distinguished themselves by the fierce animosity of their harangues. They charged the Magyars with desiring not so much the assertion and preservation of their own nationality as the downfall and subjugation of that of others.

In spite of all these intrigues, however, a number of laws were passed, and ordered to be laid before the Emperor, in order to receive his sanction, which decreed the exclusive use of the Magyar language in the public assemblies, courts of law, schools, colleges, and official documents, but allowing the Croats to use their own language upon all occasions except in their communications with the Hungarian authorities, and that all Hungarian ships should carry the national tri-colour flag.

The taxation of the nobles now came again to be considered, when the news of the revolution in Paris came like a thunderbolt to interrupt their deliberations. The whole nation seemed electrified, and Kossuth saw at a glance the use which the national party might make of an event of such momentous importance, not to France only, but to the whole of Europe. He now came forward as the man of the crisis, and placed himself, with that self-confidence which always distinguishes great souls, in the van, as the leader of the revolution which was now impending. The tide was now beginning to ebb, and he did not for a moment hesitate to seize the helm, and undertake the guidance of the vessel of state over the stormy waters of agitation to the calm of self government and constitutional freedom. The weight of his personal character, and his great eloquence, had secured him the respect of all parties in the chamber. It was therefore amidst profound silence that he ascended the tribune to address the house on the third of March, 1848. The question under discussion was a financial one. A pin might been heard dropping as the orator began. "I give," said he, "my entire and unqualified approbation to the motion of the deputy for Gyor, but unusual circumstances render it our duty to pass beyond this secondary question, and I now call upon the house to follow a course of policy worthy of the responsibility which now devolves upon it, of the momentous events which are already looming in the future. Looking at the question in this point of view, I shall not enter into any details regarding the Bank of Vienna, further than to say that the fears already manifested as to the value of its notes, and the motion now before us, ought to be more than sufficient to induce the Government to restore the confidence of the public in an institution, in the stability of which so much of their property is involved. I say, without hesitation, that the bank cannot be kept out of danger as long as the Government continues to follow a line of policy which, by creating an enormous deficit each year, forces it to make sacrifices which must in a short period prove inevitably the cause of another bankruptcy.

"If, on the contrary, it now turns over a new leaf, we shall henceforward have no cause for anxiety, and I now call upon you to solve, once for all, the problem which involves so much of our happiness and prosperity. Everybody knows the powerful influence which Austria has always exercised in Hungary, by means of her financial system, and this can never be done away with until the accounts of the Bank of Vienna are published, until we know not only the amount of the Hungarian revenue, but the purposes to which it is applied; and that we may have this done in a satisfactory manner, the Minister of Finances *must be a Hungarian, and responsible to this diet only.* Otherwise our monetary affairs will ere long be plunged into an intricable confusion.

"I have already stated my conviction that until the King is surrounded in every part of his dominions by constitutional forms, we can never feel assured of the welfare of our country in the future. It is evident that our form of government being in opposition to that which prevails in the other provinces of the empire, we shall be continually liable to unconstitutional menaces and attacks. I repeat it, that where our interests come in contact with those of more powerful states, [illegible] should be established between them by [illegible] of all the which they perform in common, without prejudice to our independence; But I be origin and development of the bureaucratic system at Vienna, which builds its tottering power upon the ruins of the liberty of the neighbouring states, and I have no hesitation in asserting, that he who shall have the courage to substitute a new constitutional organisation in place of the mechanism of the old Government will prove the second founder of the Hapsburg dynasty.

"We have heard to-day of the downfal of thrones sustained by the talents and energy of great statesmen, and that the people are now in possession of an extent of liberty, which a few weeks ago they never dreamed of. We, on the contrary, have been for three months rolling the stone of Sisyphus, and I cannot look upon the waste of strength and talent which has taken place in the fruitless struggle, without the deepest anguish."

He concluded a powerful and eloquent speech by calling on the Diet to demand from the Emperor a constitution for the whole empire, and an independent ministry for Hungary. His resolution was carried unanimously in both chambers, and the whole affair produced the profoundest sensation all over the kingdom. Nothing was more necessary in a monarchy comprised of so many various races, differing so widely in their traditions and habits, than a uniform system of government, popular in its origin, and firm and impartial in its administration. The bureaucratic centralisation of Vienna was preying upon the vitals of the nation, and destroying all that was graceful in private life, and manly and upright in the discharge of public duty. The capital was the head quarters of a great army of public functionaries, dependent upon the monarch for their daily bread, and fearing the growth of municipal institutions and local self-government, as they feared poverty and destitution. To this vast body of state-paid men the nation was nothing, and the court was everything. The pest of espionage—the sure offspring of functionarism—invaded the privacy of domestic life, and destroyed the peace of families. Confidence and self-respect were banished from society. The nobility became proud, selfish, cowardly, and deceitful, and the people crouching, mendacious, and degraded. To impose life and health into this mass of [illegible] to progress, and substitute [illegible] on the faded hues of exhaustion and decrepitude, were the objects Kossuth had in view, and when he appeared on the dark and horizon, the prostrate nation hailed him as its saviour and restorer.

On the tenth of March, 1848, the people rose in Vienna, and overpowered the Government. Metternich fled, and the Emperor granted a constitution, and swore to it. The Hungarian Diet seized the opportunity to send a deputation to plead their cause at the foot of the throne, and for the purpose chose Kossuth, Louis Batthyani, Stephen Szechenyi, and Joseph Czinski. They obtained an audience of the Emperor, and prayed him to appoint an independent ministry for Hungary, who should enjoy the confidence of the people. Their request was granted, and Louis Batthyanyi was appointed president of the council, with power to choose his colleagues. In this ministry Kossuth received the portfolio of finances. The people of Buda and Pesth received the news with acclamation, but their triumph was destined to be but short-lived. The court party could never place confidence in a ministry which, though including many of the moderate party, numbered Kossuth and Szemere amongst its prominent members.

The royal family, having recovered from their stupor, were loth to acknowledge the empire to be only a collection of confederated states, and resolved to seize the first opportunity of withdrawing from the engagements into which they had entered, under the influence of fear and coercion. In the meantime, however, the persuasions of the Archduke Louis induced the Emperor to confirm the appointment of the new Magyar Ministry—on condition that the Minister of Foreign Affairs should always reside at Vienna.

From this moment the aspect of Hungary was changed. Trade and commerce seemed to have received a sudden and powerful impulse. The Diet, driven on by the force of public opinion, displayed an amount of energy and activity before unknown. Reform succeeded reform in rapid succession. The old abuses of feudalism were speedily numbered amongst the things of the past, and in their pla [illegible] stitution, the offsp [illegible] of mode [illegible] nised the equality of all classes of citizens, guaranteed to every one the full and free exercise of his political and social

rights, leaving the nobles in possession of their rank and station, but raising the law above all. The Emperor closed the session in person, on the eleventh of April, with these words:—"It is with extreme pleasure that I have again come amongst you, for I find my beloved subjects the Magyars always the same.'

The work of political reform was begun. The principles had been laid down; but they were not to be carried into execution without great opposition and great difficulty. The revolution of 1848 had roused the other nations which were subjected to Austrian rule, as well as Hungary. The Lombardo-Venetian kingdom sought to regain its independence, the [illegible] the brink of insurrection, refusing any longer to submit to the H[illegible]an Diet; and in an assembly convened at Rudovicz, the [illegible]ch of the Greek Church proposed to establish relations w[illegible] Austrian Government as a distinct state. The Cabinet of Vienna being obliged to maintain a fair face toward the Magyars, at first pretended to turn a deaf ear to the seditious of the prelate and his adherents, but when the news arrived that the Croats had risen in arms against the new ministry, it did all in its power to stir up an insurrection among the Serbes also. A war of surprises and [illegible] now broke out, and the districts bordering on the [illegible] on the Danube and Tibissa became the scene of [illegible] guinary engagements. The Magyars at one time de[illegible] Serbes, and at another the Serbes took terrible revenge. Torrents of blood were shed, and the most frightful atrocities perpetrated, without promising a successful issue to either party. The whole country became a great field of battle, and generation yet unborn will lament the waste of blood and money caused by this unhappy struggle.

Austria, in the meantime, was meting a the Croats to simulate excesses. A Diet was convoked at Zagrabia, and presided over by Baron Joseph Jellachich, which manifested the bitterest enmity against the Hungarian ministry, and refused obedience to the laws which had been recently enacted. They resolved that they would take part with the Emperor of Austria against the Magyars, and called the peasantry to arms. They appointed Jellachich general of their forces, and the emperor conferred on him the dignity of Ban of Croatia. Jellachich was until then a subaltern officer, but he now became a powerful auxiliary of the Austrian Government, and his combination of the charms of the Archduchess Sophia rendered him completely subservient to the views of the court. The Hungarians knew his character, his deceit, and dissimulation, and immediately upon hearing of his appointment they foretold that the question must now be decided by the sword alone.

On the 5th of July 1848, the Magyar Diet again resumed their sittings, but this time removed to Pesth, further into the interior of the country. They had previously met at Presburg. The Palatine Archduke Stephen, whose popularity was still at its height, was received with enthusiasm, and every one appeared prepared to meet the exigencies of the crisis with energy and resolution. Kossuth was the first to ascend the tribune. "Gentlemen," said he, "in ascending this tribune, in order to summon you to save your country, I feel the responsibility imposed upon me, in its full weight and importance. It seems to me that God is holding in his hand the trumpet of judgment, and is proclaiming that the weak and faint-hearted are to be cast back into the tomb, and the brave and energetic are to enjoy life everlasting. Yes, gentlemen, God has placed the existence of Hungary in our hands. It is for you to decide whether she shall perish or be saved. However widely-different your political opinions may be, the love of country, of national honour, of liberty and independence, is a sentiment [illegible]ry one is ready to defend with his life and fortune. I shall not attempt to excite your enthusiasm on this point, for I believe it exists already. When I tell you that your country is in danger, perhaps I am telling you what you know [illegible]ice the revival of our liberty, the veil has been rent which had from yourselves the position of your own affairs. You can now see with your eyes the frightful situation in which you are placed."

He then dwelt upon the state of the army and the volunteers, and continued "After the dissolution of the last Diet, the Hungarian minister found the treasury empty and the country defenceless. He has fathomed with terror the abyss that yawns at our feet. I was one of those who long ago called the attention of the Government to the grievances under which we laboured, and the defects in our constitution, who demanded that justice should be done towards the people, and now, perhaps, it is too late to commence reforms. Can patriotism and enthusiasm ward off the danger *now*? The nation and the Government deferred the doing of their duty too long, and now, when they have taken the first step in the right direction, the bonds of nationality are beginning to break asunder.

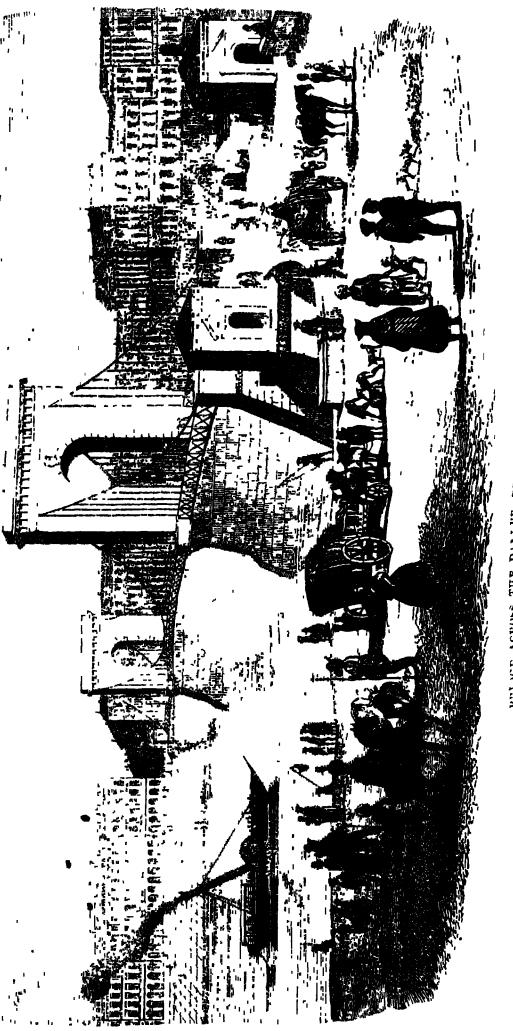
"Such are the circumstances under which we have assumed the reins of administration, in the midst of a [illegible] insurrection, of the exasperation caused by reaction, and the [illegible] passions which the accursed policy of Metternich has left [illegible] as an heritage to blast and destroy us." He then spoke of the combination formed amongst the Sclavonic tribes of the north.

"The Croats have risen in revolt. It is many years now since we assured the Austrian Government that in encouraging these intrigues amongst the Sclaves, it was nourishing a serpent in its bosom which would one day destroy the reigning dynasty. The Croats think that by taking advantage of the [illegible]sis they can take upstairs with impunity [illegible] nation. If we had given them any [illegible] this unbelievable determination, I would be [illegible] you to appease their anger by redressing their grievances, instead of repressing their rebellion by force. But you all know that when we were ourselves unable to obtain all the liberties which of right belonged to us, we refused none of them to Croatia.

"Since the reign of Arpad Hungary has never enjoyed a privilege which the Croats have not shared, and not content with awarding them a share, we have often bestowed upon them special favours at our own risk. I have read in the history of Ireland that England despoiled that country of certain political rights, but it is the Magyars alone who have granted to a small province more than they themselves possessed. Where then can we find the cause of this insurrection? Nowhere! Was it the last Diet which altered the relations between the two countries? Did it not on the contrary begin a new era? Did it not obtain her rights, not for us only, but for the Croats also? They enjoy the same liberties with ourselves. The Hungarian nobility is pledged to redemnify them for the abolition of the dues payable by the peasantry. The right of using their own language in their own assemblies has been specially received to them. Their municipal privileges have been extended. They can manage their elections in whatever manner they please, they can send representatives to the Diet to deliberate in common with us for the safety and welfare of the two countries. The last Diet said to them, 'Regulate your elections, elect your deputies, we do not interfere with you.' We cannot then find in the past any cause for this insurrection. Shall we look for it in the present? The ministry is now responsible to the people for the manner in which [illegible] transacted. It is Diet has decreed that the Croats [illegible] use their own language in their official documents, and in all that relates to the internal administration of the country. All that it insists upon is that they shall henceforth receive from the ministry and the Hungarian counties all official communications in the Magyar language, accompanied by Sclavonic administration."

Kossuth then explained the importance attached by the Croats to the office of *ban*, or governor, and continued — "Nevertheless, we, the ministry, have not for a moment hesitated to ask this insurgent ban to take his seat at the council board and deliberate in concert with us upon the best means of quieting the discontents of his countrymen. We have invited him to state their demands in person, and have declared that if in our power we will comply with them, and if not we will make them a cabinet question.

"But he has not complied. He has returned an insolent answer to our invitation, he has placed himself at the head of the insurrectionary party, and threatens to inflict upon the countries all the horrors of a civil war. I do not deny Croatia has just grounds of complaint. But abuses imputed to the old government, not to us. On the contrary the Magyars, in addressing their representation to the Austrian Government have always made common cause with the Croatians. We are still ready, I repeat, to adjust the affairs of Croatia,



HONVED

we will never put Jellachich upon the same level with the king of Hungary. The king can pardon; the duty of Jellachich is to obey. We declare our belief that the only way to put an end to these unhappy differences is for the Emperor to act as mediator between us. Let him command the Croats to summon their provincial Diet. Let their representatives, lawfully chosen, present themselves in the central Diet of Hungary, and there make a plain statement of their grievances, and if their demands are just and reasonable, we pledge ourselves to comply with them, or to retire from office."

He then laid before the Diet a statement of the force at the disposal of the government, and, though expressing his belief that the rebels would not venture to cross their own frontiers, he called upon the Assembly to put the country in a state of defence. For this purpose it would be necessary to raise 200,000 men, and to vote 12,000,000 florins, as a loan or extraordinary contribution. The whole house rose in a body, and shouted with one voice, "We vote them! we vote them!" It was one of the most magnificent episodes in the history of a grand and chivalrous nation. Kossuth was overwhelmed with emotion. "You," he said, with tears in his eyes—"you have elevated ourselves, and I prostrate myself before the greatness of the people!" He then left the tribune, amidst thunders of applause.

The Palatine Stephen then made a short speech, in which he held out the hope that a reconciliation might still be effected; and in the name of Ferdinand, the Emperor, he formally denounced the conduct of Jellachich and the Croats as traitorous and illegal; and it was even believed for a while that the former had been degraded and outlawed by the Emperor himself.

The Ban was summoned to render an account of his doings to Ferdinand, and for this purpose formally presented himself before him at Innspruck. They had an interview in private, and the consequence was that the baron received new testimonies of his Sovereign's favour, and was ordered to return to his post. The Emperor then recommended that a conference should be held in Vienna, to arrange the points in dispute between the Croats and Magyars. Louis Batthyanyi appeared on behalf of the latter, and Jellachich on that of the insurrectionists. Their efforts to bring about an amicable settlement were unavailing. "We shall see you again on the banks of the Drave," said Batthyanyi to the Ban, on parting. "No," was the reply, "I shall visit you on the banks of the Danube."

BRIDGE ACROSS THE DANUBE, BETWEEN BUDA AND PESTH.

Upon his return, Jellachich resumed the command of the united armies of Croatia and Slavonia, and called upon all the savage herds of the military frontiers to range themselves under his banner. In a few days he found himself at the head of 54,000 men. The Austrian government secretly sent him supplies of money, arms, and ammunition.

THE SHOEMAKER OF ST. AUSTELL,
OR INCIDENTS IN THE LIFE OF A METAPHYSICIAN.

A LARGE proportion of those whose names are "[illegible] on the cliffs of fame" have reached their positions of eminence and usefulness from the lowest conditions of indigence, and amidst constant depressions of spirit from the ceaseless cravings of want. In the pressure of external trials, and the drudgery of toilsome occupations, the inner man has been separated from grosser employments, and consecrated to the purposes and pursuits of knowledge. The desire to know—the eldest born of wisdom—awakened their energies, braced their spirits, held weariness in check, and grew rich on the spare moments of time economically preserved and industriously employed. It was not genius, blazing, but transient as a comet, taking one truth, or a class of truths by intuition, and expiring in the splendour of its conceptions, but the determination to know, to "intermeddle with all wisdom," to grow rich by the patient and steady accumulation of thought, that made them avaricious of time, and prodigal of health and strength and rest. Industry performed the office of stoker to the intellectual fires burning within them, and fidelity to the one absorbing object of desire gave light in the gloom of discouragement, a man's joy to every step of their ascent, and a graceful dignity to the coronets of honours of their triumph in reaching and recording their names in the Temple of Knowledge.

It is no less profitable than gratifying to trace the progress of the development of the mind; especially when, unaided by fortune or education, but, guided by its own aspirations, and the energy of its own determinations, it works its way to posts of honour and positions of influence in the intellectual and moral world. The republic of letters is free for all. The knowledge of the alphabet entitles all to the rights of citizenship. Freedom to roam through the whole unbounded continent of learning is secured by these twenty-six letters. Their possession is already initiated into the secrets of wisdom, and has the passwords to its profoundest mysteries. The mind is its own world. It may be a desert dismal with ignorance and vice, or a garden rich and beautiful with the fruits of knowledge and virtue. In an age and country like ours voluntary ignorance is a crime of fearful magnitude. Contented ignorance is a sin against self and society. Knowledge is power. It is also a treasure more priceless than gold. But like gold, it is found in grains, seldom in lumps, and is obtained by digging. When one sees a man possessed of "much gold," he is not altogether sure that a large proportion of it is not alloyed with the dust of fraud and dishonest gains. The jewel that sparkles on the coronet of wealth may have been placed there by oppression and violence. But learning stands free of all suspicion. Its possession is a stamp of honesty, and a passport to reputation and usefulness. Wisdom is the principal thing. "Therefore get wisdom, and with all thy gettings, get understanding." Exalt her, and she shall promote thee. In her hands are riches, and honour, and life. But if she be despised, thou shalt be lightly esteemed. Knowing our letters, the literature and "languages of the babbling earth" are all within the reach of desire, industry, and application. With these, the key of the Temple of Knowledge is in our hands. Shall we open its doors, and survey its magnificent and gorgeous palaces? At least, let us trace the progressive career of one who, unschooled, ignorant and vicious; but, animated by a *desire to know*, patiently and resolutely worked his way up the hill, and sat down to enjoy an ennobling and virtuous repose on "the steep where Fame's proud temple shines afar." We portray the fortunes of an humble shoemaker, whose perseverance in self-improvement was [illegible] that has placed him in the front rank of the profoundly eminent men of the last qu[illegible]

[illegible] was born in the parish of St. Austell, Cornwall, on the 3rd of March, 1765. His parents were extremely poor. His father's occupation fluctuated between tillage and "streaming for tin." When not turning up the soil of the farm, he was examining the deposits of mountain streams, and selecting, by the processes of washing and pulverising, such parts as were valuable for the ore they contained. Diligence and care, even in this toilsome occupation, yielded him such success, that, in the course of a few years he was able to take a better residence, and engage in the business of a common carrier for a brewery in his neighbourhood. At this he found employment for some time; and, with the prospect of a permanent engagement, with steady accumulations, might have anticipated ultimate competency. But industry and integrity are not always a guarantee of success, nor a protection against the frauds or dishonest carelessness of others. The brewer, a lover of pleasure more than of business, and wasted in prodigal living more than was yielded by the gains of trade. Bankruptcy soon followed, and several pounds due to the poor carrier went down into the gulf with his employer, and, what was worse, left him without fodder for his horses, or food for his children—bereft at once of employment and means of subsistence. He had to strike out a new mode of "making both ends meet."

Poor as were the parents, they were pious, and were not only sensible of the importance of education to their children, but solicitous to impart it, to the limited extent their circumstances would allow. For a while the two sons were sent daily to a school, in which the charge for reading was only a *penny a week*. But Samuel seemed careless of this opportunity of learning to read. Books were disagreeable things. He had a talent for doing nothing, and he gratified it by playing truant. He loved the sunning fields and the lonely woods, with their murmuring rivulets and singing birds, and he carried his heart *there* to find "sermons in trees and books in *brooks*." Whatever his disregard of book-learning, he was shrewd enough in other things, and his shrewdness had a bent of mischief that was generally more successful in getting him into scrapes than in getting him out of them. But it sometimes left him "unwhipt of justice." His wild pranks were a grief and annoyance to his excellent parents, and compelled them to practise the spirit rather than the letter of the proverb, "Spare the rod, and spoil the child." On one occasion, having incurred his father's displeasure, he was threatened with the rod; and he knew it was not merely "a promise made to the ear." But he believed it would be "better kept in the breach than in the observance." Such sentences were generally carried into effect at night, when the culprit was unbreeched and in bed. Apprehensive that the visit to keep him from spoiling would not be overlooked, no, the rod spared when it was paid, he prevailed on his elder brother to exchange places with him in the bed for the night. It proved another case of the substitution of the innocent for the guilty, and poor Jabez smarted under the lash, as unconscious of the fault that incurred the punishment, as of the trick by which it had been transferred to his own shoulders. On another occasion, for some offence, his father gave him a note to carry to his schoolmaster. Suspecting it to contain an order for a flogging, payable at sight and unwilling to be a party in the transaction, the latter never reached its destination. He subsequently confessed that, to escape the rod, he spoiled the note.

A trait of character that gave direction to his life, and success to his plans, was developed at an early period of his youth. It was no ordinary energy of will, sustained by a quality of *sticking* to what he attempted. Perseverance, even against his books, and in truants from school, became a habit—a bad application, it must be confessed, of a very important quality of the mental constitution. At illustration of this disposition while very young, has been preserved among the records of his early life. Noted among the tin mines of Cornwall, and familiar with their operations, he became ambitious of embracing the profession, very soon after he was breeched and he resolved on sinking a shaft for himself. Accordingly, he organised a company, of which he was captain, and with a pickaxe, a rope, and a board for a bucket, he commenced his work. They had been engaged at the shaft for some time, and had gone some distance below the surface, when his mining operations were brought to a sudden halt. He was at the bottom, digging away with a right good will, one day, when some one threw a handful of earth upon him. This was a great offence to his dignity, as the presiding genius of the undertaking; and, in a dictorial way, he [illegible] the offender to desist. A larger handful of [illegible] clattering down upon him was the only response to his order. Greatly incensed, and vowing to give the offender a sound drubbing, he ordered them to draw him up, when, to his utter mortification, he found himself face to face with his father, who had just discovered the mining ambition of the youngsters, and regarding more as a trap for his cow than a mine of wealth, peremptorily ordered the captain to put the dirt back in its place.

It was not long, however, before he was mining in good earnest. Tin ore is commonly lodged in masses of stone. These are gathered and pulverised in the stamping mill, from whence the material is carried by a small stream of water into shallow pits prepared for its reception, where the gravity of the metal causes it to sink, while the sandy particles pass off with the stream. The

puts are called *buddles*. Children are employed to stir up these deposits, and keep them in agitation until the process of separation is complete. These children are called *buddle-boys*. At eight years of age Samuel Drew became a buddle-boy, his father receiving three-halfpence a day for his service. Like his father at the brewery, his first earnings were lost by the insolvency of his employer. But a new master came and advanced their wages to twopence. This increase had a powerful effect in augmenting the self-importance of the boys. It came near ruining one of Samuel's companions. The little fellow, having lost his parents, had been taken by an aunt and kindly cared for as her own. But, like too many others, his virtues were not proof against the temptations of sudden fortune. He was so elevated by this addition to his income, that he went home and gave his aunt notice that as soon as his wages become due, he should seek new lodgings and board himself! Its effect on young Drew was to make him aspire to the rack not of torture—but of a higher step in the refining process. But, although he remained two years in the pit, he was never promoted beyond the rank of buddle-boy.

Young as he was, with such dispositions, and associated with vicious children, he could not fail to be influenced by their conversation and example. He was rapidly descending into vicious habits. To augment his danger and accelerate his ruin, the only being on earth who understood his disposition and knew how to restrain it from ill, and guide it "in the good and right way," had been removed from her place in the family. His mother had gone down to the grave, and there was now scarcely a heart to love him, or a hand stretched out to sustain and encourage him. She had early discovered that the levity of his feelings unfitted him to receive instruction through the ordinary channels. He was therefore taken under her own charge. She taught him to read and write, at least, all he learned of either during his youth. But his moral nature was the field she cultivated with most avidity. The good seed of religious truth was deposited in his heart, and it never lost its vitality. In later years the harvest of that sowing was abundant and glorious.

. . . . . .

The death of his mother introduced a new phase in the life of Samuel Drew. In the second year of his loneliness his father married a widow, who for some time had presided over his domestic affairs as housekeeper. She was a worthy woman, but the transition to the mother's place was not at all agreeable to the children. A regular warfare of petty annoyances, in which Samuel took the lead, was commenced, and reached their consummation in his expatriation from his father's house. The act that precipitated this end was certainly as provoking in character as it was delib[illegible] in purpose and graceless in execution. Soon after her marriage, on an occasion when some of her female acquaintances were visiting her, he provided himself with a vessel of water, bored a hole through the partition, and while they were at tea discharged a volume of water upon them. This insult to her dignity and hospitality was a little more than her human nature could bear, and the husband and father was compelled to transfer the culprit where he would either cease his annoyances, or else find new victims for his experiments.

At the age of ten years he was apprenticed to a shoemaker at St. Blazey, about three miles from St Austell. It was not long after this change in his affairs before his father removed to a greater distance, and left him to cultivate his vicious propensities unrestrained by the presence and influence of family and friends. His new home was situated in a beautiful valley, adjoining the mansion and grounds of one of England's wealthy families. But he was too young and ignorant to enjoy the picturesque in nature, and too constantly occupied with the drudgery of his daily tasks to be sensible of anything beyond the pressure of discomfort and want. He was regarded rather as a convenience to subserve the wishes of others, than as a member of the family. His master, to the trade of shoemaker added that of farmer, and when there was no work up, there was always [illegible] in the field. Alternating these [illegible] ing that he stood a fine chance of being a different shoemaker, or a very poor farmer. Besides this, his personal discomforts were numerous. To the comforts and conveniences of life he was an entire stranger, and, passing his days in rags and wretchedness, he became almost as reckless of life as he was careless of his own character, and of the rights of others. One of his chief troubles was with his mistress. She was disposed to add to his other offences in the family that of servant. He knew remonstrance would avail nothing, and he had recourse to the shrewdness and mischief that exiled him from home. She insisted that he should bring water for the family; but somehow or other the pitcher always met with an accident in his hands, and he had always a plausible reason for it. But it happened so often, that a standing order was issued to release him from bringing water, except when he evinced a perfect willingness to do it. But his taste sought a wider field than the shop and farm of his master. He became a leader of the vicious boys of the parish, and soon[illegible] a follower of more depraved and wicked men. From robbing birds' nests, he proceeded to depredations upon the gardens and orchards of the neighbourhood, and ultimately, while yet a boy, to assist in smuggling. Under these circumstances, with no abatement of the bad treatment he always received in his master's house, he absconded in his seventeenth year, with the intention of entering a man-of-war. He was led to this selection of his future, by occurrences that, as little as he thought of it in its conception and frustration, had no small share in determining his subsequent career and his ultimate eminence.

During his apprenticeship, a few numbers of the "Weekly Entertainer" were brought into his master's family. It contained many tales and anecdotes, which he read with great avidity. He was especially interested with the narratives of adventures connected with the American war. Paul Jones, the Serapis and the Bon Homme Richard, excited his mind with a profound attraction. They mingled with his thoughts by day, and his dreams by night. He longed to be in a pirate-ship—a thought natural to his perverted tastes and vicious habits. There was also in the house an odd volume of the history of England during the Commonwealth. These were read again and again, until, having nothing else to read, they palled on his taste, and he turned aside to low and corrupting pleasures. It is true, there was a Bible in the house, but the command to read it on the Sabbath, apart from a natural distaste [illegible] was a [illegible] but to obedience. With books, [illegible] turn to rectitude. But he had them not, and in the absence of means to gratify a disposition to read, he almost lost the ability. Still his reading gave direction to thought and supplied the material. It was under the influence of thoughts thus born in his mind, that he abridged his apprenticeship by flight, and steered his course to Plymouth. When he set out on this adventure, he had but sixteen pence halfpenny, and went by his home to mercave his store. His father was absent, and his mother, at a loss what to do, declined, but persuaded him to stay all night, hoping his father might get home, and detain him, or transfer the matter of supplying his wants from herself. The next morning, to the dismay of his family, he was gone. But the "providence that shapes the ends" of life had rendered the consummation of his plans, checked his downward course, and turned his feet paths of virtue, usefulness, and honour. His first night from home was spent in a hay-field. The next morning, a ferry and his breakfast took twopence of his stock of cash, and filled him with dismay at its probable early consumption. Passing through Le Leare, with a view of replenishing his purse, he sought employment at his trade, but to provide the necessary implements nearly exhausted his means. He was soon reduced to an extremity of hunger truly painful. His fellow-workmen, seeing he did not quit his work for dinner, as they were accustomed to do, made some inquiry as to where he dined, when one of them facetiously replied, "At the sign of the mouth, to be sure." He endured the gibe, but to appease the urgent cravings of hunger, drew his apron-strings, and compressed his stomach into a smaller circle, and stitched away with the best heart he could summon to his aid. The next day, his employer, discovering he was a runaway apprentice, dismissed him from the shop, advising him to return to his master. Ere he left the door, his elder brother came in pursuit of him. His father, having accidentally heard where he was, sent for him. The message came at the time of need. He only consented to return, on condition that he was not to be sent back to St. Blazey. His indentures were subsequently cancelled.

Mr Drew ever after considered this as the turning-point of his destiny. In late periods of life, when fame, fortune, and family were his, he was accustomed to refer to these circumstances as occasions when his future destiny trembled on the beam, and a hair might have turned it down with a force that would have depressed and ruined him for ever.

For some months after leaving Liskeare, he remained with his

father. He then went to the neighbourhood of Plymouth, where for two years or more he pursued his trade with increasing profit to himself, but with very little improvement to his moral character. During this period, he came very near losing his life in a smuggling adventure. But it is said, on the authority of one familiar with him at the time, there was a surprising mental development, especially in his readiness at repartee, and his powers of reasoning; so striking, indeed, that few were bold enough to provoke the one, or engage the other. It made him prominent among his craftsmen, and gave great importance to his opinions. It was not from books, for he was still careless of them, but the friction of intercourse with men, the collision of mind with mind, that elicited thought, and awakened a faculty hitherto slumbering in the repo of a profound ignorance. We shall see how, following this thread, he was led out of the labyrinth of his various propensities, into a straight path of intelligent rectitude and virtuous activity.

. . . . . .

In January, 1785, he removed to St. Austell, and became foreman, in his branch of trade, to a young man who carried on the business of a shoemaker, a saddler, and a bookbinder. It was here, and under these circumstances, that he renewed his acquaintance with books, and prosecuted the advantage under every conceivable discouragement. Speaking of his ignorance at this time, in after life, he said, "I was scarcely able to read, and almost totally unable to write. Literature was a term to which I could annex no idea. Grammar I know not the meaning of. I was expert at follies, acute in trifles, and ingenious about nonsense." His writing was compared to the "traces of a spider dipped in ink, and set to crawl on paper." On this foundation he began to build, and the finished superstructure was of magnificent proportions—glorious in its adornments, and durable as time.

The shop of his master was frequented by a better class of persons than he had ever been brought into contact with, and the topics of conversation were above the standard of his information. He listened to their discussions with a deep and painful consciousness of his own defects. Sometimes he was appealed to to decide a doubtful point. The appeal flattered, but humbled him. The desire to know was born in his mind; and he set himself to seek knowledge. He examined dictionaries, added words to his small stock, and treasured them with a miser's care. Books came to be bound; he read their titles, and gleaned ideas from their pages, and truth began to dawn on the darkness of his mind. "The more I read," he says, "the more I felt my own ignorance; and the more I felt my ignorance, the more invincible became my energy to surmount it. Every leisure moment was now employed in reading one thing or other." He could command but very little leisure. Lank poverty and clamorous want cried out against every pause in his employment. "From early chime to vesper bell," and deep in the night, he was doomed to hammer heel-taps, and stitch on soles, while his own soul was alive with the desire to know. "Where there's a will, there's a way." He had "the will," and he found "the way." He was obliged to eat, and he would make it a meal for soul and body. He took a book to his repast and crammed ideas in his mind and food into his stomach, at the same time. Digestion in both departments was not incompatible with stitching. In this way, five or six pages were mastered at a meal.

At an early stage of his new intellectual life, a gentleman brought "Locke's Essay on the Human Understanding" to be bound. It was a new conception to his mind. He had never heard of it before. He pored over its pages with a fascination as profound as a philosopher's joy at a new discovery, a sensation as new and thrilling as a child's over his first toy-book, and drank in his reasonings with a zest as transporting and heartfelt. It was as when a new star blazes in the telescope of the astronomer. But its magnitude was greater than a star. It was a new world with its suns and systems, that filled his soul from horizon to zenith with brilliant images and gorgeous hopes. The continent of mind was spread out before him. What world he not have given to own that world of thought! "I would willingly have laboured a fortnight to have the books." Could his desire be more forcibly expressed? Again, he says, "I had then no conception that they could be obtained for money." How priceless did he consider them. But they were soon carried away; and his mind felt as if the sun had gone down in the early morning. Yet they left a luminous track behind them, rich and glorious as a western sky when the sun has gone to waken the song of gladness in other climes. Years passed before he saw the Essay again, yet the impression was never lost from his mind. "This book set all my soul to think, to feel, and to reason, from all without, and from all within. It gave the first metaphysical turn to my mind; and I cultivated the little knowledge of writing which I had acquired, in order to put down my reflections. It awakened me from my stupor, and induced me to form a resolution to abandon the grovelling views which I had been accustomed to entertain." Heretofore no specific object, besides the general one of improvement, had guided his efforts. Locke awakened his enquiries, and concentrated his mental energies. Its influence was powerful upon every period, and on every undertaking of his subsequent career.

About the same time that another and a sublimer change was wrought in the moral nature of Mr. Drew. A mother's hand had scattered the seeds of life over the soil of his young heart. In childhood and youth it seemed to have fallen on stony ground. It had brought forth no fruit unto righteousness. But now the seed had germinated long after the hand of the sower was still in the grave. The apparent instrumental cause of his religious quickening was the remarkably triumphant death of his brother. This awakened reflection on the folly and wickedness of his own life, and the aimless nature of his pursuits. These impressions were strengthened under the ministry of the then youthful, but now world-known and honoured, Adam Clarke. Coincident with these things, the deathless work of that

> "Ingenious dreamer, in whose well-told tale
> Sweet fiction and plain truth alike prevail"

The Pilgrim's Progress gave shape to his thoughts, and direction to his life. The infusion of the religious element into his nature was a most important epoch in his existence. It gave tone to his feelings, sprightliness and vigour to his mind, purity and decision to his character. It brought him into a new atmosphere of being, placed new and vaster objects before his mind, and stirred the profound depths of his intellectual and moral nature with higher aspirations, and a more ennobling ambition. Old things were passed away; and a new life, stretching outward and upward, blending usefulness and happiness, the rewards of virtue with the conquests of duty, was mapped on his soul in lines of fire traced by the finger of God. Henceforth, in the contemplation of his life, we perceive not only a new direction, but a fuller development of mental energy, and trace the application of his powers to subjects, respecting truth, duty, and God, that religious conviction alone could suggest or support. He is no longer ambitious to tread the deck of a pirate-ship. The past is forgotten, or exists as a mournful remembrance. A purer principle is implanted in his nature. It has taken root in his heart, its foliage and its fruits distinguish and adorn his subsequent career.

It is not to be supposed that his difficulties either in getting bread or books had ceased. They were still at the flood tide. He was still "inured to poverty and toil." He had entered into business for himself, but on a scale exceedingly limited. Dr. Franklin's "Way to Wealth," of which he possessed a copy, was his chart. "Poor Richard" gave pithy but very excellent advice to poor Sammy Drew. Eighteen hours out of the twenty-four, "the sound of his hammer" might be heard. He had borrowed five pounds to begin business, and it was only at the expiration of a year that he was able to return it. But his business, and his own character for industry and integrity, were established. He was in the *way* to wealth. His desire, however, was not mordinate. He only wished to be able to spare some moments from constant toil to the purpose of reading and study. In a few years, this object was accomplished, and he found himself at liberty to pursue his long-cherished scheme of mental improvement. But the best-concerted schemes sometimes fail. His were nearly wrecked by politics. He was saved by an incident as singular as it was effectual. During the American war everybody was a politician. In his boyhood he took sides with the Colonies. He had not yet changed his opinions; and there was danger of political discussion engaging his attention, to the exclusion or detriment of his more important mental occupations. From this hazard he was preserved by an incident, which we will describe in our next number.

GENERAL CHANGARNIER.

LEDRU ROLLIN, says the author of the "Revelations of Russia," when a member of the Provisional Government, was one evening much occupied, when an African general, who refused to give his name, was announced as desiring a private interview. Ledru Rollin replied that he was engaged till two in the morning; to which the stranger rejoined, that he would wait. When at length the general (whom Ledru Rollin did not know personally) was admitted, he introduced himself as General Changarnier, and then proceeded to explain that, for several years past, the dream of his life had been the invasion of England; that he had sent agents to levy plans, survey harbours, and obtain information on the minutest points connected with the topography and defences of the country. Basing his calculations on these data, he judged the capture and destruction of the British metropolis feasible, was anxious to attempt it, and came to entreat of Ledru Rollin the means of putting his project into execution. Ledru Rollin remarked, that such matters were not within his province; but Changarnier answered him, that, nevertheless, he could collect 12,000 men belonging to regiments which had served under his orders in Africa, and obtain for them means of transport on his (Ledru Rollin's) sole order. The general expressed himself further satisfied that, with this force, he would be able to make a swoop on Woolwich, burn the shipping in the docks, and destroy or capture astonished London. He added, that, in case of failure he permitted Ledru Rollin and his colleagues to disavow him, and pledged his word of honour as a soldier that, if he were tried, hanged, or shot, he would die without criminating his employers. Ledru Rollin replied that he had also entertained the notion that France must some day avenge the disasters of Waterloo, but that at present peace with Great Britain was the wish and policy of the French people, and that in any case it appeared to him that it was only on a fair field, with an armed enemy, that France could vindicate her honour; not by an act of piracy, or by barbarously injuring the lives and property of peaceful citizens.

GENERAL CHANGARNIER.

This strange story should, at any rate, interest Englishmen in General Changarnier. His recent incarceration in Ham, by Louis Napoleon, has also added a fresh notoriety to his name. A French writer has supplied us with the particulars, which we here translate:—"On the morning of the *coup d'état*, at five minutes past six, the Commissaire de Police rang at the door of the house of the General, No. 3, Rue de Faubourg St. Honoré. The porter, as usual, asked, 'Who's there?' The reply was, 'Open the door, I wish to speak with you!' The porter, however, refused to open. It was evident he was on his guard. In the same house, and beside the entrance door, is a grocer's shop. The commissaire was struck with the idea that the shop might communicate with the court-yard of the house. He entered, asked in an imperative tone for the key of the door that communicated with the court, and obtained it. He thus penetrated into the house, followed by his agents. The porter had, however, already given the alarm by ringing bells which were hung in the General's apartments. His servant was found on the landing-place of the first story, above the *entresol*. The key of the apartment, which he had in his hand, was taken from him. The commissaire opened the door and entered. At the same moment a bedroom-door was opened, and the General appeared in his night-shirt, and with a naked pistol in each hand. The commissaire rushed to him and put down his arms, saying, 'What are you about, General? we do not seek your life; there is no need to defend it!' The General remained calm, gave up his pistols, and said, 'I am yours; I will dress myself.' The General was dressed by his servant, and said to the commissaire, 'I know that M. de Maupas is a gentleman; have the kindness to say to him, from me, that I hope his courtesy will not allow him to deprive me of my servant, whose assistance is necessary to me!' His request was at once granted. On his way to prison, in the vehicle, the General spoke of the event of the day. 'The re-election of the President was certain,' said he; 'he had no need to resort to a *coup d'état*. He gave himself much trouble for no purpose.' On another occasion he said, 'When the President has a foreign war on his hands, he will be glad to seek me, to give me the command of the army.'"

Of Changarnier little is known, beside his African campaign and his political career, since the revolution of 1848. He still remains a prisoner in Ham. It is to be hoped that there he will plan something better for the world than an invasion of England—that he may become conscious that the time has come to bury the memory of Waterloo—and that he may learn that England and France must henceforth seek a higher and holier rivalry than that which in time past waged between them on the battle-field or on the ocean's wave, dyed red with blood.

THE MODEL PALACE.

THERE is probably no spot in the British dominions more beautiful than Chatsworth—nothing so perfect of its kind as the palace of the Duke of Devonshire It stands peerless, if not unparalleled, and nothing of princely magnificence can surpass it without the many natural advantages, which so abundantly contribute to its perfection in grandeur and beauty

The valley that embosoms this noble structure is of surpassing richness, rural simplicity, and beauty The pure and silvery Derwent winds its way in prolonged circuits, as if reluctant to leave a scene so enchanting, and pays, in the deep green of her borders, her silent and treasured tribute for the honour of passing amid such richness and splendour, and returns, proud to have added to their perfection and charm

We never saw the sun throw its beams with such mild loveliness, or the stars of night rest so satisfied in their moonless splendour through their midnight watchings, as over the enchanting valley of Chatsworth.

Prepared for this scene by a brief sojourn at the romantic gorge of Matlock Bath, and a drive through rich fields to this first lukedom of England, we were expecting almost wonders, and, having seen it, we are not at all surprised that Victoria, as she entered the lofty conservatory with coach and four, amid fourteen thousand lustres pouring their effulgence upon her, exclaimed, 'Devonshire, you beat me!'

In rising a slight eminence, you command a view of the palace of Chatsworth, the most perfect structure of its kind in the world Not so spacious, not so imposing, as many of the seats of royalty, or of nobles of the realm, but as a whole for its beauty, order, scenery, cultivation of art, and aids of science—incomparable

It is an autumn day —a bright, bland, mild, September morning We drive to the inn, just without the upper gate of the park of Edenson, kept chiefly for visitors at the country residence

In ascending the hill from Edenson, you have a full view of nearly the whole of Chatsworth The first and most imposing object is the mountain back of the palace, looking in flowing majesty directly upon its turrets N[illegible] from its almost countless chimneys [illegible] —the evidence of life and industry within Next you look back upon the sweet little village of Edenson, with its neat Gothic spire and clustered dwellings in the Tudor, Elizabethan, and Swiss styles, giving an air of rural beauty and antique simplicity to the scene There is the home of the more favoured of his lordship's tenants.

On the loftiest peak of the mountain is the *Tower*, where *ladies* were formerly indulged in the spectacle of the chase, when some poor, doomed buck, became the sport and the victim of a hundred hounds, and scores of horses and noble riders, in the wonderful

Another, and perhaps *more* deserving object that rises at a distance, radiating brilliantly the morning sun, is the *Conservatory*, of glass, covering several acres, and securing in its ample enclo all the climates the earth knows, with land and water to meet the wants of all vegetable growth

Casting your eye up the winding Derwent and along its beautiful curves, you see embosomed in native oaks, beech, and chestnut, and richly cultivated shrubbery, what is called the "kitchen-garden" You would think a prince lived there It is nearly a mile from the palace Here are productions enough for an army, and fruits choice enough and abundant enough for the banquet of kings and nobles and ladies in the times of Elizabeth and Leicester Such peaches mellowing in the sun, such clusters blushing on the vine, with endless varieties of fruits and flowers, we never beheld before. A single peach-tree in bearing, and so be very old, and yet perfectly vigorous and fresh, branches more than seventy feet

Shrouded in the wood, on the top of the mountain, is the perfect model of a Swiss cottage, retired enough to win the most devoted recluse, and too lovely not to be enjoyed as a permanent residence On the loftiest summit possible for such purposes, are gathered exhaustless resources of water, there reserved and held tributary to the claims, necessities, beauties, and fancies of the valley below. From the flag-tower you realise the wisdom of his selected spot. Its view is commanding and perfect

From this elevated position, the whole of Chatsworth lies before you—hills, vales, flocks, herds, winding drives, flowery paths, the silver stream, wide-spread waters, gardens, lawns, and jets, the conservatory, Flora, its church, and the noble PALACE—[illegible] of its kind. Not an object, not a thing, but is in good taste and in keeping, adding to its perfectness and its charming grandeur and beauty

We will come, however, to more than simple description of scenery We will approach the *Palace* in sober reality. Of this we must more particularly speak, and it shall be no fancy sketch, nor fancy drapery of description

It is natural for us to desire some knowledge of the nobleman upon whose princely estates we are resting. It will not do, however, alway[illegible] tions of men. M[illegible] may be hazarded by too strict examination of their tenure It would seem that the present Duke of Devonshire is a bachelor of about sixty His claim to his title and estate being early disputed by other members of this noble family, it is said that he bound himself not to marry, that, at his decease, the dukedom should descend in the direct line of his opposing claimants This, with five other palaces, left in undisputed possession for life, Devonshire accepts as the substitute for a WIFE And, with it all, we do not approve of his decision in the least It is somewhat doubtful whether the duke is satisfied fully himself, for it is said that he is not now the man that he was when these princely estates first came into his possession Yet he evidently desires to promote the highest good of his numerous tenantry He liberally aids all who wish to emigrate to America or the colonies, and has even proposed to reside permanently on his estates in Ireland, that he may contribute to the relief of that miserable people

Prepossessed in favour of the noble duke, we hasten to his palace We pause to gaze on its vast dimensions Before us is the massy and richly-ornamented square pile of the old house, with its rusticated base, beautifully fluted Ionic columns, pilasters, elaborately adorned friezes and pediments, all surrounded with an open balustrade, divided into sections, and surrounded with urns, vases, and statues A new wing is thrown out from this venerable square, in Grecian style, with elevated cupolas, projecting considerably forward about midway, breaking its vast extent Then there is the magnificent temple soaring aloft, with its open colonnade, giving a beautiful finish to this wing, and a striking counterpart to the massive pile at the north. This gigantic structure, taken in connection with its grounds ornamented as they are, presents a scene of unrivalled richness and beauty

We entered the stately doorway, and registered our names in the superb "Sub-Hall" Antique busts and figures, with splendid gilt vases, imparted an imposing air to this introductory apartment His grace was leaning easily on his elbow, in familiar chat with a young relative, and, with a benignant smile, made us quite welcome to his princely mansion. From this, we ended by a flight of stairs to the north corridor, which is enriched by a costly tessellated pavement of most elegant de[illegible] variegated ornaments, inlaid with beautiful marbles, &c., which [illegible]dly are antique statues and busts, and r[illegible] ments From this apartment we are conducted into the "Great Hall," all gorgeous with the costliest of ancient paintings, by Verrico and Laguerre, presenting the most prominent scenes in the life of Julius Cæsar,—his Passage of the Rubicon, Voyage across the Adriatic, his Sacrificing at the closing of the Temple of Janus, his Death at the foot of Pompey's Statue, and his Apotheosis, or Deification The last occupies the ceiling, and is splendidly executed The Gallery, defended by a series of open balustrades, is carried round three sides of the [illegible] Hall", the centre of which is adorned by one of [illegible] marble slabs, eleven feet by seven, supported by a superb carved gilt stand, and bearing descriptions historical and in honour of the pal[illegible] and family of Devonshi[illegible]

From the [illegible] we passed to the south, through a beautiful archway which gives an airy lightness and great elegance to the southern extremity, by which we were introduced to the "State Rooms"

No language can do justice to these magnificent apartments—so numerous, so spacious, so splendid The door-cases are of the Derbyshire variegated alabaster, panelled, and richly ornamented with foliage and flowers The windows are of solid plate glass, without sashes, and the furniture throughout of the richest character. There are two sets of magnificent gilded chairs, in which royalty once sat, and was crowned—the rich and prided perquisite of this noble house, in virtue of its official re-

lation to the throne These rooms are lined with costliest wood, stored with beautiful cabinets and carvings, hung with paintings of the finest schools, both ancient and modern, and fitted with Gobelin tapestries of the cartoons of Raphael You pass on from room to room of vast dimensions, the Ante-Room, the Music Room, the Red Velvet Room, the White Room, the Library, with others, till you reach the chapel, literally fatigued, and amazed, and confused, by the dazzling splendour that has filled and pained, as well as delighted, the eye You welcome the chapel as a place of repose, and from its silence and pictured scenes of solemnity and of grace divine, you are charmed almost to the devotion and realisings [illegible] mourning

In no part of Europe have [illegible] paintings uniformly so choice, so well selected, and so beautifully arranged France, with the prided galleries of her capital, has nothing so perfectly complete, and no specimens of artistic excellence rivalling the superb pencillings of these royal saloons There is nothing here of inferior or ordinary execution to offend the eye of the most cultivated, but a peerless excellence in every department

The Chapel and Library we could hardly consent to leave The first is perfectly chaste and appropriate for the kind of service to which it is consecrated [illegible] brought "dissent" somewhat from the [illegible] our hearts, we trust, would not rebel, and refuse them union with the true worshippers of God in this noble house of devotion The Library is of large extent and exquisite finish, and is one of the finest rooms of the kind that we ever saw, surpassed by that of Blenheim only by the flowers [illegible] that [illegible]

The Sculpture Gallery next claims our attention We leave the Chapel for this extended apartment From these galleries we obtain a [illegible] approbation But there we [illegible] more that we did not expect to meet The room is stored well of chisselled beauty and, almost speaking divinity Some of the most celebrated pieces of design and art to be found in the world adorn this Gallery, and little, if anything, of Continental grandeur can be met [illegible]

Next in succession to this gallery comes the "Orangery" in perfumed attractions and wonderful beauty This [illegible] noble room one hundred and eight feet by twenty-seven, and twenty-one feet in elevation Here we met the cherished trees of the Empress Josephine [illegible] and cherished by her own hand of Malmaison And who would not pay a tribute of affection to the memory of unfortunate and injured Josephine, while breathing the fragrance of these nobly bedded flowers As fresh and fragrant for ever may be the memory of this gifted Empress, the only [illegible] seen in the crown of her imperious and prejudged lord How was she [illegible] Rhododendron arboreum, [illegible] in one year upwards of two thousand of the loveliest flowers

From the enchanting room we passed near the private apartment of our noble host But visitors of any kind are debarred the honour of more than a [illegible] of these halls and saloons of luxurious pomp and noble pride They are said to be in good keeping with the palace rooms, and to have witnessed, in latter days, scenes of surpassing bounty, extravagance and courtly honours A change is said to have come over these, and, at this moment, they are graced and cheered with virtuous beauty and talented worth, and the untired, of just and generous aspirings, are the favoured and welcomed guests of these ancestral chambers

We must pass to the apartments of flowers, of which it is in vain to speak The extent, the variety, the beauty, the magnificence, cannot be pictured You are decoyed alone almost unconscious of the change, till you find you feet treading silently on the velvet lawn—soft, verdant, fresh - enriched and cooled by the unseen spray thrown from the many jets, or sent abroad from the giant cascades, far above the palace, as if to defy the scorching heat and drought of the seasons, and to secure ever-continued freshness to these gardens of beauty, and scenes of science and art

Our attention is soon attracted to the south, where rises that "mountain of glass" first seen from the hill of Edgcumbe Suddenly, you are in the midst of rocky defiles, beneath frowning cliffs, where rounded and water-worn blocks of grit stone strewed in every direction, wild scenery, and irregular, never seen by man before, or invaded at all by his hand, save to open these winding defiles for your feet, Al[illegible] bankment, and every part of its wavy outline, and even the plant rare exotics, shrubs and flowers, are growing luxuriantly, the whole bounded by magnificent beech, lime, and sycamore trees, with others, in almost endless variety

Leaving this scene of [illegible] attempting the rivalship of wild Nature [illegible] achievements, you meet a stone archway, through which the "drive" passes into an immense open area, where breaks upon you wondering eyes THE CONSERVATORY that matchless structure, in all its grandeur, truly a sea of glass, whose waves are just settling and smoothing down from the commotions of the storm

Such is its mechanical arrangement, that, to the eye, it seems to "undulate" along its giant dimensions, and almost persuades you that it must be a swelling mountain of the ocean.

This magnificent and unexampled structure has a central curved or arched roof, sixty seven feet high, with a span of seventy feet, resting on two rows of iron pillars twenty-eight feet high Floral and every choice production of the varying latitudes, have here their native soil and genial temperature, adapted to the nature and necessities of every species and every part of the globe [illegible] tributary to this countless collection of vegetable [illegible]

The form of this immense edifice is a parallelogram of two hundred and seventy-seven feet by one hundred and twenty-three The iron sash-bars sustaining the glass of this structure would extend forty miles, while they actually contain seventy thousand square feet of strong glass, capable of resisting the elements in wintry storms, and [illegible] artfully arranged "in zig-zag lines" as to produce the optical delusion to which we have referred

This mountain of glass may be illustrated by comparing it to three square hall-cases [illegible] each end, the extreme base of the upper one resting on the apex of the other two, or, we may say, that the long central part of the upper dome is a semi-cylinder, which, when joined to the semi-cylindrical transverse ends, form groups of the respective angles

The structure is indescribably magnificent It was here his gracious pleasure for his mother Queen Victoria to dine at night, in torch and [illegible] through the rocky defiles, with courtly attendance, direct here [illegible] through the mountain of glass while [illegible] a thousand lamps [illegible] their blaze from shrub and tree, and pillar and cornice, reflecting and reflecting, and mingled in more than moonday brightness, to receive and honour the mouth [illegible] and the loyalest sovereign of earth Never did Victory wear a crown and the sceptre of more [illegible] ing the splendours of her own princely dwelling

On returning from the *Conservatory*, we ascend the steps of the "great terrace walk" which [illegible] round the immense area with the [illegible] church We wend our way among rock-work, passed the [illegible] [illegible] which, the *Eucalyptus* then, descending, a succession of steps [illegible] by the yew, to the "Stud," we met [illegible] fragment of rock, strewed in wildest confusion, yet decked profusely with plants and flowers

From all [illegible] you can [illegible] full and enchanting view of the widely bay of Cadswith, the [illegible] jets and fountains in full play, and [illegible] [illegible] still at the palace When and are [illegible] and nothing of the kind is known to surpass the beauty [illegible] the scene

The [illegible] situated in the centre of the large [illegible] sheet of water throws its great column two hundred and sixty-seven feet, or [illegible] above, its torrents of rain, and flowers of spray, and fleecy clouds, reflecting far the wide lawns and gardens Multitude, of more modest pretension, send forth their *jets d'eau* from pool, and grove, and garden, and mountain precipice, and [illegible] lofty oaks, far up the crags, and from the cliffs, seen, in the distance, like so many cones and pyramids, and curves and segments, of pure light and snow, reflecting the sunbeams of the morning with enchanting brilliancy, and, as we gazed upon this wondrous scene, each moment bringing to view some new attraction, some fleecy *jet d'eau*, amid the woods of the mountain, suddenly, and indeed almost [illegible] enough, to our ears, the great cataract came thundering down the rocks and crags of the mountain and the lofty precipice, a literal flood of waters And, as by magic, they soon died from our sight, burying themselves in silence beneath the garden views and lawns of nobility below [illegible] as if conscious of wrong in disturbing [illegible] charms of this lovely r[illegible]

In this veritable sketch we have but selected a few from the vast [illegible] of wonders of Nature Science, and Art that crowd and adorn this [illegible] domain this proud memorial of Devonshire, and highest gem of English nobility

MISCELLANEA.

THE MUSIC OF NATURE.—Any ear may hear the wind. It is a great leveller; nay, rather, it is a great dignifier and elevator. The wind that rushes through the organ of St. George's Chapel at Windsor has first passed through the barrel-organ of some poor Italian boy; the voice of Alboni and that of a street-singer have but one common capital to draw upon—the catholic atmosphere, the unsectarian air, the failure of which would be the utter extinction of Handel, Haydn, and all the rest. The air, or atmosphere—the compound of nitrogen and oxygen, to which we are all so deeply indebted sometimes plays the musician of itself, and calls upon Handel, Haydn, Mozart, Beethoven, and Mendelssohn, upon the ocean and the forest; and they, like invisible but not inaudible performers, make glorious music. Sometimes the shrouds of a ship, as she rolls upon the tempestuous deep, raise wild and piercing sopranos to the skies, sometimes the trees and branches of a forest of gigantic pines become mighty harp strings, which, smitten by the rushing tempests send forth grand and incessant harmonies—now anthems, and anon dirges. Sometimes the waves of the ocean respond, like white-robed choristers, to the thunder-bass of the sky, and so make Creation's grand oratorio, in which "the heavens are telling," and the earth is praising the glory of God. Sometimes the deep calls upon deep, the Mediterranean to the German Sea, and both to the Atlantic Ocean; and these, the Moses and the Miriam of the earth, awaken rich antiphones, and from opposite choirs, responding from side to side in Nature's grand cathedral, praising and adoring their Creator and Builder. Were man silent, God would not want praise.

THE LIPS.—Leigh Hunt says, of those who have thin lips, and are not shrews or niggards—I must give here as my firm opinion, founded on what I have observed, that lips become more or less contracted in the course of years, in proportion as they are accustomed to express good humour and generosity, or peevishness and a contracted mind. Remark the effect which a moment of ill-humour and grudgingness has upon the lips, and judge what may be expected from an habitual series of such moments. Remark the reverse, and make a similar judgment. The mouth is the frankest part of the face, it can the least conceal its sensations. We can hide neither ill-temper with it, nor good; we may affect what we please, but affectation will not help us. In a wrong cause it will only make our observers resent the endeavour to impose upon them. The mouth is the seat of one class of emotions, as the eyes are of another, or, rather, it expresses the same emotions but in greater detail, and with a more irrepressible tendency to be in motion. It is the region of smiles and dimples, and of trembling tenderness, of a sharp sorrow, of a full breathing joy, of random of reserve, of a carking care, of a liberal sympathy. The mouth, out of its many sensibilities, may be fancied throwing up one great expression in the eyes—as many lights in a city reflect a broad lustre into the heavens. On the other hand, the eyes may be supposed the chief movers, influencing the smaller details of their companion, as heaven influences earth. The first cause in both is [illegible] represented

EPITOME OF FRENCH LIBERTY.—Universal suffering and vote by bullet.

VALUE OF TIME.—Lord Brougham, the most indefatigable man in England, often does not quit his study before midnight, and he is always up at four. Dr Cotton Mather, who knew the value of time in everything, was never willing to lose a moment of it. To effect this purpose, he had written upon the door of his study, in large letters, 'Be brief. Ursines, a professor in the University of Heidelberg, wishing to prevent the idlers and babblers from interrupting him in his hours of study, had written at the entrance into his library, 'Friend, whoever you may be, who enter here, be quick with your business or go away.' The learned Scaliger placed the following phrase upon the door of his cabinet "My time is my estate.' The favourite maxim of Shakspere was 'Consider time too precious to be spent in gossipping. Friends are the real robbers of time,' said Lord Byron.

PRESENCE OF MIND.—Presence of mind is often shown in quick conception of some device or expedient, such as we usually suppose to be an emanation of superior intellect. This has been repeatedly exemplified in rencontres with the insane. A lady was one evening sitting in her drawing-room alone, when the only inmate of the house a brother, who for a time had been betraying a tendency to unsoundness of mind, entered with a carving-knife in his hand, and, shutting the door, came up to her and said "My sister, an odd idea has occurred to me. I wish to paint the head of John the Baptist, and I think yours might make an excellent study for it. So if you please I will cut off your head." The lady looked at her brother's eye, and seeing in it no token of jest, concluded that he meant to do as he said. There was an open window and a balcony by her side, with a street in front, but a moment satisfied her that safety did not lie that way. So putting on a smiling countenance, she said, with the greatest apparent cordiality, "That is a strange idea, George; but would it not be a pity to spoil this pretty lace tippet I have got? I'll just step to my room to put it off, and be with you in half a minute." Without waiting to give him time to consider, she stepped lightly across the floor, and passed out. In one short moment she was safe in her own room, whence she easily gave the alarm, and the madman was secured. A lady one day returning from a drive, looked up and saw two of her [illegible] on a [illegible] five and the other [illegible] on the outside the garret window, which they were busily employed in rubbing with their handkerchiefs, in imitation of a person whom they had seen a few days before cleaning the windows. They had clambered over the bars which had been intended to secure them from danger. The lady had sufficient command over herself not to appear to observe them, she did not utter one word, but hastened up to the nursery, and instead of rushing forward to snatch them in, which might have frightened them, and caused them to lose their balance, she stood a little apart, and called gently to them, and bade them come in. They saw no appearance of hurry or agitation in their mamma, so they took their time, and deliberately climbed the bars, and landed safely in the room. One look of terror, one tone of impatience from her, and the little creatures might have become confused, lost their footing, and been destroyed.

VALUE OF TIME.—Lord Brougham, the most indefatigable man in England, often does not quit his study before midnight, and he is always up at four. Dr Cotton Mather, who knew the value of time in everything, was never willing to lose a moment of it. To effect this purpose, he had written upon the door of his study, in large letters, 'Be brief. Ursines, a professor in the University of Heidelberg, wishing to prevent the idlers and babblers from interrupting him in his hours of study, had written at the entrance into his library, 'Friend, whoever you may be, who enter here, be quick with your business or go away.' Friends are the real robbers of time,' said Lord Byron.

PRESENCE OF MIND.—Presence of mind is often shown in quick conception of some device or expedient, such as we usually suppose to be an emanation of superior intellect. This has been repeatedly exemplified in rencontres with the insane. A lady was one evening sitting in her drawing-room alone, when the only inmate of the house a brother, who for a time had been betraying a tendency to unsoundness of mind, entered with a carving-knife in his hand, and, shutting the door, came up to her and said "My sister, an odd idea has occurred to me. I wish to paint the head of John the Baptist, and I think yours might make an excellent study for it. So if you please I will cut off your head." The lady looked at her brother's eye, and seeing in it no token of jest, concluded that he meant to do as he said. There was an open window and a balcony by her side, with a street in front, but a moment satisfied her that safety did not lie that way. So putting on a smiling countenance, she said, with the greatest apparent cordiality, "That is a strange idea, George; but would it not be a pity to spoil this pretty lace tippet I have got? I'll just step to my room to put it off, and be with you in half a minute." Without waiting to give him time to consider, she stepped lightly across the floor, and passed out. In one short moment she was safe in her own room, whence she easily gave the alarm, and the madman was secured. A lady one day returning from a drive, looked up and saw two of her [illegible] on a [illegible] five and the other [illegible] on the outside the garret window, which they were busily employed in rubbing with their handkerchiefs, in imitation of a person whom they had seen a few days before cleaning the windows. They had clambered over the bars which had been intended to secure them from danger. The lady had sufficient command over herself not to appear to observe them, she did not utter one word, but hastened up to the nursery, and instead of rushing forward to snatch them in, which might have frightened them, and caused them to lose their balance, she stood a little apart, and called gently to them, and bade them come in. They saw no appearance of hurry or agitation in their mamma, so they took their time, and deliberately climbed the bars, and landed safely in the room. One look of terror, one tone of impatience from her, and the little creatures might have become confused, lost their footing, and been destroyed.

ANSWERS TO CORRESPONDENTS.

MARY wishes for a cure for scandal. We wish we could gratify her. So long as people are ignorant, and foolish, and uncharitable, they will talk scandal. If, instead of professing Christianity, men and women led Christian lives, we should have less scandal. When that happy time comes—when the Bible shall be a rule of life, and not a mere storehouse of theological dispute, scandal will die out amongst us. In the meanwhile Mary must console herself by reflecting that the people who talk scandal, instead of being better, are weaker and worse than their neighbours.

O OWERS.—You will find a good account of the constitution of the United States in Lord Brougham's work on "Political Philosophy," or in De Tocqueville's work on "American Democracy." Your other question we cannot answer at this time.

J H R.—Members of Parliament are not paid for their services. If they were, many of them would get very little by it. Members serving on committees are paid for their attendance.

J M BUTTINGHAM.—The price of covers for 'The Illustrated Exhibitor' is 1s. 9d. Some fine whitening powder will remove grease from drawing paper. It must be laid on the spot with another paper over it, and a hot iron must be drawn across it.

R GALT.—The Mammoth Cave in Kentucky is one of the largest in the world.

HAM wants to know what we think of the present gentleman's hat. Our opinion is rather in its favour. When a man is well dressed, a good hat adds immensely to his appearance. We believe—though we [illegible] little stress upon that—that George the Fourth was of the same opinion. However well a man may be dressed, a shabby hat will give him a shabby appearance. At any rate, the present hat is better than the unseemly felt hat it aimed to be substituted for it. That seems to us, at any rate, to be utterly indefensible.

AN EMIGRANT.—On the 1st of January, 1845, there were 29,191 convicts in Van Diemen's Land. In December, 1850, the number was 21,447. Last year the gross expense of the convicts was £153,180 1s 6d; and the produce of convict labour, £13,935 14s. 6d.

A CONSTANT READER.—We really do not know it. 'Knight's Pictorial History of England" is to be had in shilling parts. We believe not. It is a first-rate work, and one that everyone who can afford it should have.

B B.—The glass manufacture is divided into three principal branches—bottle glass, flint glass, and window glass, the latter being again divided into three descriptions.—1 Crown glass, blown into the shape of large globes, and afterwards opened out into circular flat plates. 2 Sheet glass, blown in the shape of long cylinders, and afterwards opened out into circular flat plates. 3 Plate glass, cast on large iron tables, used in the rough state for skylights, &c., and, when ground and polished, for windows and looking-glasses, cabinet furniture, &c.

A HOUSEWIFE.—According to Dr. Playfair, the hard London water may be easily softened by adding caustic lime. The proportions required are one part of lime water to five of common water, and this reduces the hardness to the same degree as that of water after being boiled. The process of softening water by means of caustic lime has been tried, and found practicable, at the Chelsea Water Works. One pound of chalk, when calcined, will produce 9 oz. of caustic lime, which will make 40 gallons of lime water, and be sufficient to mix with 360 gallons of ordinary London pipe water. The *Builder* says "We know of cases in which this method is now regularly and successfully adopted in household practice, of course on a small scale."

L R.—We cannot answer such questions as you propose. The prices of indexes you can get better by looking into journals professedly commercial than by writing to us.

G W H.—Half the penalty goes to the informer.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER X.

THE court had now recovered from its fright, and showed itself disposed to oppose the Magyars openly, and withdraw the concessions which the emperor had already made. The army of Jellachich was in the meantime encamped on the right bank of the river Drave, prepared to cross it upon the first signal. The Hungarian Diet, as a last resource, sent another deputation to Ferdinand, to implore him to keep his promises and save the country. They arrived at the palace the deputies returned as they had come, having obtained nothing. As soon as they had left the palace, they put red plumes in their caps, and quitted Vienna immediately. The last hope of reconciliation had failed, and the revolution had set in.

On the ninth of September Jellachich crossed the Drave with his army. The news arrived in Pesth on the fifteenth [illegible] prevailed amongst all classes on hearing it. But Kossuth and his colleagues having lost all con-

STORMING OF BUDA.—(*See page 262.*)

of Schoenbrunn, with Pasmandi, the president of the Diet, at their head, and obtained an audience. "Sire," said Pasmandi, after having presented his colleagues, "we have come to-day, in the name of the fidelity which we have shown to your ancestry, to beseech you to maintain our rights. Your Majesty knows that Hungary is not a conquered province; it is a free nation. You have sworn to defend its privileges and independence." But the Emperor had a reply prepared, and fidence in the Emperor, sent in their resignation in a body. It was announced in the Diet, amid general consternation, that Count Adam Teleki, who commanded the Hungarian troops, had surrendered to Jellachich, without striking a blow, alleging, as an excuse, that he could not fight against a man who had sworn fidelity to the same flag as himself. Batthyanyi then advised the Diet to call upon the Palatine to put himself at the head of their army. His proposal was favourably

received; and, after some moments of general silence, Kossuth ascended the tribune, and stated his opinion that the army should not be placed at the disposal of the Palatine until he had solemnly pledged himself to march without hesitation against the enemies of Hungary, and not yield an inch of her territory without disputing it to the last extremity; and expressed his conviction that the insurgents would not dare to attack an army which had a prince of the royal family at its head.

Stephen accepted the charge without hesitation. He set out the same evening for the Croat army, and demanded an interview with Jellachich, and the place of meeting which he appointed was in a steamboat in the midst of Lake Balatan. The Ban, confident of the support of the Emperor, refused to see the Archduke, who immediately forsook his post, and fled out of Hungary altogether.

A messenger of Jellachich was about this time arrested by some Hungarian exiles, and his despatches addressed to the Emperor, on being examined by the Diet, revealed a long course of treachery on the part of Ferdinand. It appeared that the Ban had been all along in his confidence, and from the commencement of the disturbances had been acting under his instructions, even when he had publicly denounced him as a rebel and a traitor.

The Diet now resolved upon addressing itself to the Emperor no more, but to the Austrian Assembly, but in this body the Sclavonic element predominated so largely, that it refused to receive the Magyar deputation by a majority of twenty-five. Louis Batthyanyi now laid down all his powers, and a National Defence Committee was elected, of which the Diet appointed Kossuth president.

On the 22nd of September the Emperor issued two manifestos, the one addressed to the people, and the other to the army. The former denounced the conduct of the Hungarians in the recent events, and accused them of abusing the concessions of their sovereign by disturbing the tranquillity of the empire. Count Lamberg was by the latter appointed Imperial Commissioner, and commander-in-chief of the Hungarian army, with full powers to carry the Emperor's orders into execution without consulting the Diet. But no sooner did the proclamations appear in Buda and Pesth than they were torn down and trampled under foot by the populace, with the strongest expressions of indignation and contempt. Count Lamberg arrived while the excitement was at its height. On reaching Buda, he had a few minutes' conversation with the governor of the fortress, and then ordered his carriage to drive on to Pesth. He was just upon the bridge which connects the two towns by a crowd of workmen and armed peasants. He was recognised by a student who had seen him at Vienna, and [illegible] to pieces with [illegible] sabres. His dead body was with difficulty rescued from the hands of the infuriate mob. The foul murder excited the horror of everyone, and the Diet was amongst the first to denounce it. One good purpose it might, however, have served. It might have shown the Government the temper of the people, and warned it from taking any step which might still further irritate and arouse them. It was not yet too late to go back. There was yet room for reconciliation and amendment. The blood of the murdered man did not cry from the ground for vengeance, but for peace and reform, and if Ferdinand had but heard it aright, Austria would have been at this moment a mighty and puissant nation, safe in the hopes and affections of a warlike people, and not, as she is, a by-word and a shaking of the head all over the world.

Immediately upon hearing of this outrage, the Emperor placed Baron Adam Recsey, an old military man, of fierce and arbitrary temper, at the head of a new ministry, formally dissolved the Diet, and appointed Jellachich Commissioner Plenipotentiary in Hungary, with the command of all the forces in the kingdom. Anything more atrocious than this could not be calculated to incense the Hungarian people and arouse their anger, cannot well be imagined. The mask was now thrown off. Jellachich was no longer the champion of Croat nationality, but the servant of Austrian despotism, engaged in [illegible] against the liberties of a free people.

In the meantime the Ban pursued his march, and on arriving at Stoyal Alba, he found the Hungarian army [illegible]. Their army was in truth [illegible] old men and boys, half armed, or having only scythes stuck on the end of poles, sabres, and rusty muskets, with but few officers, most of whom had never seen the face of an enemy in their lives. But the hussars were there in great force, a body of the finest cavalries in the world, mounted on fiery steeds fresh from the plains, and in the full glories of sabre and shako, dolman and pelisse. Kossuth did all that man could do to rouse them courage by his fiery eloquence. But his efforts were unnecessary. All were panting for the fray, burning with impassioned animosity towards Jellachich and the Croats. General Moga had the immediate command of the Hungarian forces. The struggle was long and bloody. The troops on both sides rushed together, and fought hand to hand with scythes and bayonets, inflicting the most frightful wounds, and dying in the silence of the most intense hatred and ferocity. Quarter was neither asked nor given, and for many hours it seemed as if the extermination of one party alone could decide the day. But the fiery valour of the hussars carried everything before it. In the very first charge the cavalry of Jellachich was driven off the field, and precipitated into a marsh, where thousands of the men and horses were drowned or smothered. The hussars then fell upon the infantry, wheeling about, and coming on and again to the onset with irresistible impetuosity. The Croats were completely broken and routed, and the Ban begged a truce of three days. It was granted, upon condition that both armies should remain in their positions to abide the result of the negotiation. In the meantime the news arrived that a second revolution had broken out in Vienna, that Count Lamberg, the Minister of War, had been murdered, that the Emperor had fled, and that the city was in the hands of the people. Immediately upon hearing this, Jellachich broke through his agreement, abandoned his position in the night, and having levied contributions on the inhabitants of Gran on his way, appeared suddenly and unexpectedly under the walls of Vienna. A close alliance was now entered into between the Magyars and the Viennese. Then cease and then cease, for it was a crime were the same—freedom and resistance to arbitrary power.

Jellachich united his forces with those of Prince Windischgratz, and commenced a combined attack upon the revolted city on the 28th of October. The inhabitants trusted confidently in the Hungarians to follow the Croats and come to their assistance. But the Hungarian army, mainly composed of undisciplined peasants, numbered only twenty thousand men, and Moga, the commander-in-chief, even as a soldier of the Austrian army, he rated about as being only against his old masters. At last Kossuth arrived in the camp, and gave him positive orders to march to the relief of Vienna, and the army immediately broke up its quarters at Stuhl-Weissenburg, and advanced upon Schwechat. But the delay was fatal. The city had surrendered on the 30th. Upon receiving the intelligence that the Magyars were coming to their relief, the besieged, under the command of General Bem, had defended themselves with renewed courage. But Windischgratz divided his army into two parts, one of which he cast against the Magyars, whilst with the other he rained shot and shell into the city for two days without intermission. The Hungarians gave battle to the division which marched to meet them, but were defeated, owing to the superiority of their opponents both in numbers and discipline, and were obliged to fall back upon the Leitha; whilst the Viennese were compelled to submit themselves at discretion to all the horrors of military violence.

To compensate for this failure the Magyar army soon after achieved a signal triumph over the Croats. When advancing upon Royal Alba, Jellachich had detached ten thousand men from his main body under the command of Roth and Philippovitz, with orders to invade and ravage the southern provinces of Hungary. Casimir Batthyanyi and Maurice Perczel, deputy of the Lower Church, were sent in pursuit of them, at the head of the National Guard.

It was on this occasion that Arthur Görgey, then a major serving under them orders, first distinguished himself. He was a stern, cold, reticent man, possessed of the most splendid military talents, and physical and moral courage of the highest order. Cruel, unrelenting, and remorseless,—he was the very embodiment of the genius of war, divested of its gaudy trappings, and reduced to the naked symmetry of a deadly science.

The iron strength of his will, and the inexhaustible resources of his fine intellect, at once marked him as the man that was to save or ruin Hungary. To him Batthyanyi committed the immediate command of the forces at their disposal. Owing to his able tactics, the Austrians were completely out-generaled, surrounded, and forced to surrender at discretion. Now that it gave proof of its strength, the Diet determined to show itself merciful also. Roth and Philippovitz were allowed to reside at Pesth on their parole, whilst the common soldiers were all dismissed to their homes. But there was one amongst the prisoners who was reserved to a more ignominous fate. Count Eugene Zichy, a rich Hungarian magnate, was arrested in his travelling-carriage, and amongst his baggage were found confidential letters, written to him by Jellachich, and proclamations signed by the same individual, calling upon the peasantry to throw off their allegiance to the Diet and repair to his standard. These Zichy was engaged in distributing. There was no excuse for a traitor whose rank and birth and education should have made him as dishonour as he feared a wound. So palpable an violation of the first duties of nature and religion called for condign punishment. A court-martial was held to try him for the offence, and Goergey acted as president. The offender in vain pleaded his rank and titles. The impassible judges heard him with cold and silent contempt, and on his being pronounced guilty sentenced him to be hanged in five minutes. The order was executed on the spot. This event excited a profound sensation all over Hungary, and doubtless kept many a wavering adherent to his duty, and at the same time gave every one some idea of the stern determination of Goergey's character.

Vienna having submitted, military preparations were made on an immense scale for the subjugation of Hungary. Six week, however, were suffered to elapse without any renewal of hostilities. The interval was employed by the Austrian ministers in endeavouring to induce the emperor to break up the federal union which had hitherto existed between Austria and Hungary, and make the latter entirely subject to the will of arbitrary power. But Ferdinand could not overcome his scruples. He remembered his oath, sworn at his coronation, and began to fear, now all had ended at the close of a long fight, and was beginning to dread the loss of the crown, to dishonour his early hairs by perjury. He therefore resolved to abdicate, and his brother, Francis Charles, renounced his right in favour of his own son Francis Joseph. The latter ascended the throne and is now the emperor.

The Magyar people, all the time, remained loyal. They refused to recognise it. They declared that a body could not relieve the sovereign from the duties imposed upon him when he became the chief magistrate, pronounced the abdication null and void, and continued to promulgate all the laws in Ferdinand's name.

Early in December, the Austrians had completely made ready for the campaign against Hungary. Their purpose of the empire was to furnish its contingent to a general and simultaneous invasion. So that the Magyars were attacked on the north by General Schlick, on the south by Count Wallachians, and the revolted Slavonians in Transylvania by Hermannstein and Puchner, and lastly, Windischgratz advanced with the main body of the Austro Germans on the side of Austria.

To all these, the Hungarians could only oppose some battalions collected in haste, and strong rather in their patriotic enthusiasm than in their numbers or discipline, and wholly unused to war. Meszros commanded in the north, Perczel, and Count Batthyani, advanced against the revolted hordes of Servia and Croatia. Goergey was placed at the head of the main body of the Hungarian forces. He was a native of Scepuse, born in 1818, and had acquired his military training in the service of Austria. In this he saw no prospect of rising, and his pride not suffering him to play a secondary part in anything, he embraced the national cause, rather from ambition than patriotism. Here there was a fair field opened to him; and when the war broke out, his transcendant talents raised him in a few days to the highest position in the revolutionary army. He wished to be great, not that he might see men bow down and worship him, for he regarded popular applause with the profoundest contempt, but that he might himself look down upon all men.

The greatness of his genius justified his appointment. With the small number of men at his command, he found himself utterly unable to cope with the overwhelming forces of Austria, and, therefore, in the opening of the campaign fell back upon the Tibissa, which he knew would be a strong position in the wars between the Hungarians and the Austrians. Windischgratz, marched on without meeting with any opposition until he arrived under the walls of Pesth, when a deputation was sent to him, headed by Louis Batthyanyi. They still hoped that it might be possible to bring about a reconciliation. But the Austrian general haughtily declared that he could not treat with rebels, and arrested Batthyanyi, on his presenting himself with a flag of truce in the camp. But instead of advancing, he lost a great deal of valuable time at Pesth, and thus gave the Hungarian government time to complete its measures of defence. The activity which it displayed has met with few parallels in history. At the commencement of the war it had neither powder, small arms, nor artillery. But factories arose all over the country as if by magic, and brass and iron, saltpetre and charcoal, were speedily manufactured in immense quantities. The Diet had in the meantime transferred their sittings to Debreczin, an old town in Upper Hungary, where they could deliberate in security. A spirit of earnestness and determination seemed to pervade the whole body. There was now no retreat but with submission and slavery. "Their lives, their fortunes, and their sacred honour," were pledged to the cause of their country, and the sword alone was to do right between them and their enemies.

The Magyar generals were at this time reinforced by the addition of two Poles, Bem and Dembinski, men of great military experience. The former had already distinguished himself by his gallant defence of Vienna against the overwhelming forces of Windischgratz and Jellachich. The latter was in Paris when the Hungarian envoy extraordinary to the French Republic offered him a command in the Magyar army. He accepted the proposal, and placed himself at the disposal of the Diet.

When the news of the Viennese revolution reached Transylvania, the whole country was in a flame. Those of its inhabitants who were Magyars and Sicules, of course declared for the Diet, but the Saxons, and Wallachians of German origin, sided with the Austrians. The Wallachians now believed that the time had come for them to erect their country into a separate state, independent of Hungary, and under Austrian protection. The two latter mentioned peoples, instigated by Austrian agents, committed the most horrible atrocities upon the Magyar population.

In the beginning, however, Bem had collected an army of six thousand men, and by a series of able manœuvres, surprises and stratagems, he completely drove the Austrians and their Russian auxiliaries out of the country, and subdued the Wallachians. His rapid success, which secured to Hungary the occupation of the whole of Transylvania, was the astonishment of Europe.

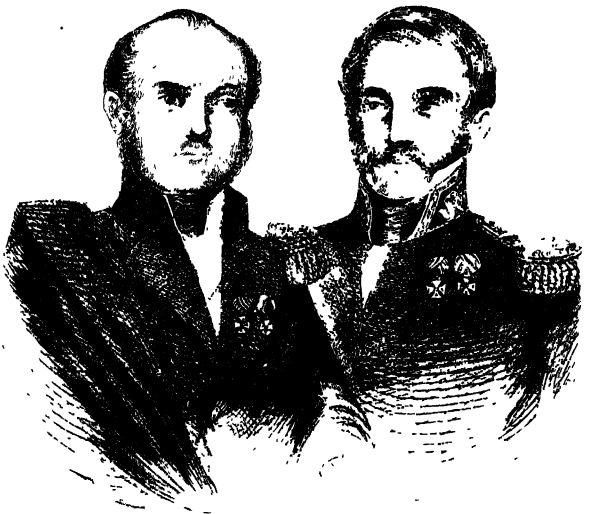
When the Magyar Government had abandoned the capital, and Bem was beginning to inflict the most terrible severities upon the Austrians and Germans who were compelled to remain behind. But their indulgence of this predilection, so characteristic of Austrian success, for the persecution and torture of the unarmed and unresisting, cost him dear. Goergey took advantage of his delays to achieve several signal successes. Twenty times when the two imperial generals, Schlick and Goetz, believed that they had him in their clutches, and needed only to strike in order to annihilate him, they would find, to their astonishment, that he had slipped through their hands and was hanging on their rear, or their flank, in fact anywhere but where he was expected to find him. Whenever a small corps was detached from the main, he was sure to pounce upon it and cut it to pieces. By such tactics as these he succeeded in harassing and fatiguing the enemy, while he gave the Diet time to organise their forces and make all necessary preparations for a vigorous defence. After having driven back the enemy to the foot of the Carpathians, he fixed his headquarters in Kesovia, in Upper Hungary. In the meantime, in other parts of the kingdom, the national cause met with severe reverses. The fortresses of Leopoldburg and Petzk fell into the hands of the Imperialists. General Simovich then proceeded to lay siege to Comorn, and, in another direction the [illegible] upon the almost impregnable

fortress of Petervaradin; but in the south, the Hungarian generals laid siege to Arad and Temesvar.

Windischgratz now resolved to act upon the offensive, and marched upon Debrecin with all the forces he could collect Jellachich took up his position at Szolnok, whilst the Prince and General Schlick co-operated in the attack upon the new capital.

The plan formed on the other side by Dembinski, who was now commander-in-chief of the Hungarian army of the centre, directed General Netter to take Szolnok, and from that position attack the right wing of the enemy. Goergey had orders to support Dembinski himself in a movement against the main body of the Imperial army.

HUNGARIAN GENERALS IN THE LATE HUNGARIAN WAR.

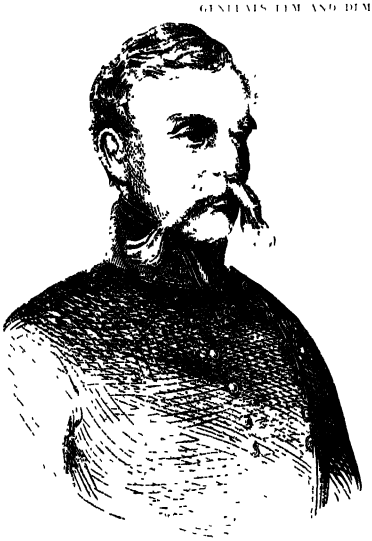


Antony Vetter — Vetter, Georges — George Klapka
Louis Aulich — Count Casimir Batthyanyi — Richard Guyon.

This plan, if successfully carried out, would have proved the destruction of the imperial armies but the ambition and bad faith of Goergey ruined all

A desperate battle was fought at the village of Kapolna a few days afterwards. The Hungarians, headed by Dembinski in person, displayed the most heroic courage, coming on to the charge under a tremendous fire of artillery without wavering. The village was again and again taken and retaken. Every room, every wall, and every garden was defended by either side with the fiercest obstinacy. The old Pole flew in person through the ranks, encouraging the men by his voice and example But strange and humiliating to relate Goergey's division remained the whole time passive spectators of the engagement, acting under the orders, and having implicit faith in the military skill, of their general, who looked on without remorse at his countrymen engaged in all the horrors of a bloody fight in the plain below him, without moving a foot to their assistance. His pride had been wounded by the appointment of the Polish general to the chief command, and he determined to thwart him as far as lay in his power. A coolness between the two generals thus arose, at a

time when union and co-operation were imperatively necessary. Dembinski was a taciturn and reserved man, giving his orders with stern gravity, and taking no pains to make himself agreeable. Goergey, on the other hand, was surrounded by a



The result of the battle was, that the Hungarians were worsted; and Windischgratz, thinking that the war was now over, offered large rewards for the heads of Kossuth and a number of other revolutionary leaders, and despatched a special

coterie of generals, whom he had attached to himself by his winning and graceful manners, and he knew how also to work upon the enthusiasm of the Magyars, without bringing the stern restraints of military discipline too prominently forward.

messenger to Vienna with the joyful tidings. But he had counted too confidently upon the faint-heartedness of the Hungarian people.

After the action, Dembinski rode up to Goergey, and asked,

in a tone full of sternness, "What should be the punishment of a general who disobeys the positive orders of his superior officer?" "Death!" was the reply, delivered in a tone of equal hautcur. But Dembinski saw that Georgey had too large a body of partisans to make it safe for him to vindicate his authority by any heavy stroke of discipline. But by suffering this betrayal of the national interests to pass over unnoticed, he struck a heavy blow at his own authority, for Georgey's party, encouraged by this success never desisted from their intrigues until they had obtained the appointment of their favourite to the chief command.

At the same time a disagreement between Windischgratz and Jellachich led to results disastrous to the imperial cause. The badness of the weather, and the difficulty of quartering or manœuvring regular troops in a marshy and uneven country, had weakened and disheartened the Austrian forces. In the north the able tactics of Georgey, and a victory gained at Tokai by Klapka, raised the spirits of the Hungarians. General Schlick was forced in a few days to abandon all the positions which it had taken him three months to gain. Georgey pursued closely, and coming up with him at Gyongyos, offered him battle. To his great joy it was accepted, as he saw that he now had the Au[illegible] It was one of the most fiercely contested [illegible] the whole war. The greater part of the Austrian army was formed into squares, to enable them to resist the charges of the Hungarian cavalry, but the precaution was useless, for the hussars broke them in succession, and swept away the men like corn before the scythe of the mower. Eight entire squares were destroyed, seven standards were captured, 3,200 [illegible] and six thousand left dead upon the field, whilst the Hungarians did not lose more than two thousand killed, wounded, and missing. The checks sustained the main masses of the army, so that this division of their army was almost entirely lost. Disaster now followed upon disaster. The weak division in Pesth, from Comorn, and [illegible] were routed with great slaughter at Nagy Sarlo. General Weldon was sent in all haste to supersede the feeble Winterberger, but he met with no better success. Jellachich, reduced to despair by his losses, abandoned the main body of the army at Pesth, and hurried at the head of the Croats to his own territory.

The weakness of Austria was now manifested to the world. Her mighty battalions were driven like sheep before small armies of undisciplined peasants. Nothing now could prevent the Hungarians from marching on the capital, and dictating their own terms in the streets of Vienna, but foreign aid. Aid foreign and was sought. The degenerate descendant of Charles V. saw himself compelled to implore the protection of the Russian autocrat, but when he signed the degrading supplication, he virtually became the vassal of the Czar, and bent homage for the throne of his ancestors, and acknowledged himself to be "his man in life and limb and earthly honour." The conflict now became the strangest the world ever saw. The two greatest military powers of Europe were about to effect the destruction of a little nation, whose population was [illegible] greater in number than the standing armies of the two empires, and when we find that even in the [illegible] of these tremendous odds, the Hungarians did not decline the contest, let no man say the age of chivalry is fled. The spirit of liberty is deathless as man's soul, and burned no less brightly on the plains of Hungary in 1849, than in the narrow defile at Thermopylæ two thousand years ago.

While the negotiations were being carried on between Austria and Russia, the Diet, which now held its sittings in the Protestant Church at Debreczin, in reply to the proclamation of Windischgratz, formally declared, upon the motion of Louis Kossuth, the deposition of the House of Hapsburg from the throne, and elected Kossuth himself Governor-General of the kingdom. He immediately set about the formation of a ministry. Batthiany was appointed President of the Council, Casimir Bathyanyi was recalled from the army to take the portfolio of foreign affairs; Sebastian Vukovitz was appointed Minister of Justice, Francis Duschek, Minister of Finance, Michael Horvath, of Public Worship; and, lastly, Goc[illegible], with the command of the army, received the [illegible].

Immediately after the formation of this ministry, a question arose, upon which the fate of Hungary depended. Two courses were open—either to follow up the late successes, march upon Vienna, take possession of it, and dictate terms to the emperor in his own palace, or to lay siege to Buda. Nothing was easier than the former. The Austrian forces were scattered and panic-struck, and the negotiations with the Czar were not yet completed. The whole struggle might thus have been ended, before a single Russian soldier had left his quarters. Had the ministry, or the Diet itself, pronounced positively upon the course to be adopted, Hungary might have been saved, and despotism crushed [illegible]. But with that infatuation which has so often destroyed the hopes of the best and bravest, they placed in Georgey's hands the power of following the dictates of his own [illegible] during the remainder of the campaign. Georgey was [illegible] Kossuth's popularity and elevation, and, utterly unprincipled as he was, determined that, rather than Hungary should triumph under his government, she should be enslaved for evermore. This man had the head of a god and the heart of a demon, and, with characteristic treachery, he pretended that before marching [illegible] Vienna it was necessary to take Buda, which still [illegible] in the hands of the Austrians. We may feel surprised at the folly and blindness of this was not apparent to every one the slightest reflection must have told him, however he might be ignorant of military tactics, that if Vienna had once fallen, Buda could not hold out, that when total dependence was placed in the blow, it was madness to be [illegible] attacking at the hinder [illegible]. But such was the confidence in the [illegible] general's skill and integrity, that the Diet assented to his proposition, and thus [illegible] the fate [illegible].

While Weldon was making his escape, and collecting the scattered remnants of his army, Georgey proceeded to invest the fortress of Buda, and summoned Hentzi, the Austrian General, to surrender. The attempt was hazardous, for the fortress [illegible] on the other side of the river. It was therefore determined to lay siege to the [illegible]. But there was no necessity for it, and they had [illegible] to Comorn. The [illegible] proposed to [illegible] and the Russians were already [illegible] Austrian territory, encamped on the [illegible], when [illegible] was communicated to the [illegible] to [illegible] the [illegible] with which it was [illegible] [illegible] [illegible]

lofty dignity, and appealing with grand but touching pathos to the sympathies of all the free nations of the world. They asked for aid, not so much for their own sakes as for that of freedom and self government, they implored the great powers of west e Europe to atone for their apathy towards Poland, by saving another nation placed in similar peril from being crushed in the embrace of the northern bear. But England, France, and America, looked on with folded arms, and left Hungary to her fate. She, however, resolved to make the best resistance in her power, and, if unable to conquer, at least to die without dishonour.

Preparations were in the mean time being made to crush her on the most gigantic scale. In the north, the main body of the Russian army was placed under the command of Prince Paskewitz in the north west of the Russian dominions and in the command of General Grabbe were prepared, to cross the frontier. The Austrian army advanced from the west, under the ferocious Haynau, who had superseded Welden in the chief command. He was seconded by a body of forces under the command of General Panmuine. Nugent opened the campaign in the south-west, and he too at first with success was seconded by troops of the Austrian army, under the command of Archduke Ferdinand of Austria. Hungary was thus completely hemmed in on every side!

Perceiving that the passes of the Carpathian Mountains were very narrow, and with regard to Dembinski with a very small force to prevent him. At the same time, the Austrian forces under Count Wallmoden, Haynau, Puchner, and Jellachich, were to advance from the west and south, and by the overwhelming force of numbers which they would bring to bear upon the Hungarians, crush them at once. The Austrian army, which was to act on the offensive, consisted of 170,000 men, and the Russian army of 80,000 men, making a total force of 250,000 men. The Austrian army was commanded by General Haynau, and the Russian army by General Paskewitz. The Austrian army was divided into three divisions, each of which was commanded by a general. The first division was commanded by General Haynau, the second by General Nugent, and the third by General Panmuine. The Russian army was divided into two divisions, each of which was commanded by a general. The first division was commanded by General Paskewitz, and the second by General Grabbe. The Austrian army was divided into three divisions, each of which was commanded by a general. The first division was commanded by General Haynau, the second by General Nugent, and the third by General Panmuine. The Russian army was divided into two divisions, each of which was commanded by a general. The first division was commanded by General Paskewitz, and the second by General Grabbe.

[illegible] before the Russians under Grottenheim and Sudrs. The Government recalled him, with the intention of putting him at the head of the army, believing that he would carry out their [illegible] Georgey. His popularity, [illegible] expectations, but before the order reached him he had engaged the enemy at Temesvar, where his little army was utterly routed and he himself covered with wounds, from which he never recovered, and died in Turkey, shortly after the close of the war.

Georgey, soon after arrived from the north, closely pursued by the Russians under Paskewitz, and the Austrians under Schlick. Debreczin, defended by Nagy-Sandor, fell into the hands of the former, and the fortress of Great Varadin, a few days after experienced a similar fate. In the meantime Georgey took up a position at Vilagos, a town near Arad, where the Magyar Government still held its sittings. The divisions of Bem and Dembinski having been dispersed after the defeats of Szoreg and Temesvar, nothing remained but Georgey's army.

But Georgey's force of Kossuth rendered it impossible to hold out much longer. The disobedience of the former to the orders of the executive had already exasperated him much, the Hungarian deposed them even to lend an ear to the [illegible] proposals of the Russians. From an interview which took place with him at Arad, he saw that the only hope of safety of such as lay in putting an end to the unfortunate dissensions which had already well nigh ruined. He told the people, it was their own power to establish in the Generals hands, to whom he was the people's choice. Had he taken this step two months previously, it might have saved the country, but even now nothing but absolute necessity could [illegible].

But Georgey's negotiations with the Russians had already reached a dangerous stage, and he was beside, the impossibility of holding out longer, as forty-four thousand men, with [illegible] of love of liberty. After having issued [illegible] to them, and having heard the decree of the dictatorship, he [illegible] camp to General Rudiger, surrendering his [illegible] surrendered, but on the express [illegible] that the Russians should [illegible] Georgey's sword to a Russian general. While this [illegible] consulted the safety of his own life, it exasperated the Austrians, a band of them imbecility and disgrace, determined to [illegible] of their vengeance upon the companions whom he [illegible] betrayed. He then concentrated his army in Vilagos, and [illegible] to them that further resistance was impossible, and that [illegible] no resource but to surrender to the [illegible] army. The [illegible] that followed the announcement [illegible] tremendous shout of despair and [illegible] were heard on both sides. The grief of the hussars, whose [illegible] were [illegible], was distressing to witness. [illegible] men. Some cried for vengeance on the traitors who had thus abused his newly acquired power, others [illegible] their manes around the necks of their horses, the [illegible] embraced their children, others split the heads of their [illegible], and threw [illegible] themselves, to escape the humiliation of [illegible] to the enemy. Some of the officers broke their swords [illegible] at the feet of the triumphant general's feet [illegible] and declared to him, with tears in his eyes, that [illegible] themselves to death. "This is [illegible]," was the stern reply.

The main [illegible], with [illegible] except two, all the other [illegible] Georgey.

Those [illegible] of the fortress of Arad and Petervaradin, [illegible] by [illegible] of the dictator, surrendered soon after. Klapka, [illegible] the garrison of Comorn, refused to [illegible] and [illegible] by holding out to extract from [illegible] as to respect the ancient constitution of the country. [illegible] Austrians [illegible] on every side, and cut off from [illegible] of assistance, he at last capitulated on honourable terms. But here also the Austrians committed a gross breach of faith. It was expressly stipulated that the common soldiers should be permitted to return to their homes, but no sooner had they laid down their arms, than they were [illegible] into the army.

Kossuth, with about 5,000 men, crossed the frontier at Orsova, on the eighteenth of August, after having received from [illegible] a promise that he should be treated

as the guest of the Sultan. This known at Constantinople, the ambassadors of Austria and Russia at once demanded that they should be given up. A message was at once sent to the Hungarians that their only safety lay in their becoming Mahomedans, and subjects of the Turkish empire. Bem and Kemety adopted the advice, but Kossuth, it is said, would not listen to it with the abhorrence of his family. On the first of October, the Sultan declared that he would not consider himself bound by the usages and customs of hospitality, until he knew how far England and France would support them, and that in the interim he would consent to their being kept as prisoners in some distant part of the empire. At the end of October the fleet of Admiral Parker entered the Dardanelles, and there was an end at once of the threatenings of Russia and Austria.

All now was over. Austria had triumphed by Russian aid, and Hungary, "like a bastinadoed elephant, was kneeling to receive her paltry rider." All that unaided valour could effect against force and treachery had been done. The Magyars may look back to that sad period with sorrow, but they need never feel ashamed of it. They are now the vassals and subjects of the imbecile and perjured house of Hapsburg, but it is only for a time. The cruelties which were inflicted

EXECUTION OF THE TRAITOR, COUNT ZICHY. (See page 259.

at the close of the war; the horrible executions on the 6th of October, at Arad; have raised between the two countries a gulf of unutterable hatred, which nothing can ever bridge over. Too much innocent blood has been shed, too many acts of cowardly ferocity have been perpetrated, to encourage the hope that aught but the sword can settle the quarrel.

When all was over, Louis Batthyanyi, who since his arrest by Windischgratz had been kept in close confinment, was dragged from his dungeon to Pesth, and condemned to be hanged. He sought to escape so ignominious a death by cutting his throat with a poignard. The wound was perceived and tied up; he then begged of [illegible], but his request was refused. Lord Waterford [illegible] without assistance to the place of execution, dressed in black, pale and worn-looking, but still with unshaken courage. He mounted the scaffold without the slightest tremour, and crying out, *Eljen a haza!* "Fatherland for ever!" he fell dead. In his last interview with his wife he prayed her to bring up their children true to Hungary, and in hatred of Austria.

On the same day that Batthyanyi was executed at Pesth, the fortress of Arad was the scene of slaughter unequalled in the annals of despotism. Thirty Magyar generals, men of high rank and valiant attainments, were all put to death together. They died as they had lived, hurling defiance at their murderers. Nagy-Sandor cried out, when the executioner was putting the rope round his neck, *Hodie mihi, cras tibi*, "It is my turn to-day, it will be yours to morrow." John Damianitz, the Murat of the Magyar army, and the terror of the Austrian soldiery, expressed his regret that he should be the last to mount the scaffold. "Must I," said he, "who was always the first in fire, be the last here!"

Amongst those put to death by the Austrians after Goergey's surrender are the following.—Count Louis Batthyanyi, Prime Minister; Ladislaus Csanyi, Minister of Commerce; Baron Sigismond Perenyi, President of the House of Peers, Baron Jeszenak, Lord Lieutenant of the County of Nyitra; Szatsvay, Member and Secretary of the Diet; Prince Woronyiczky, Czernus; Councillor of State, Major Murman; Major Abancourt. Among the prisoners of war given up by Russia to the Austrian executioners were Generals Aulich, Kiss, Damianich, Count Leiningen (cousin of H.M. Queen Victoria), &c. &c., who were hanged or shot at Arad on the 6th of October, 1849.

[In our next number we shall conclude the History of Hungary, giving a short sketch of Kossuth's reception in England.]

ARREST OF JELLACHICH'S MESSENGER.—(See page 253.)

WHAT PERNICIOUS LITERATURE CAN DO.

"Give me the songs of a people, and I will tell you their character," said **Fletcher, of Saltoun**; but the test now is of a different kind. We are more readers than singers. Our character can be gathered better from our books than our songs. Hence the importance of our literature. By it we stand or fall. *Scripta literæ manent.* It proclaims our moral worth, or want of it—our greatness or our littleness—our glory or our shame.

Where a healthy literature prevails, the effects are soon seen in the general intelligence and morality of the people. In these days the real preacher is the book. The pen reaches further, and its impression tarries longer than the living voice. To the chapel or the church, comparatively speaking, but few go. The book comes to all, appeals to all, influences all. If sophistry is to be advanced—if the worse is to be made appear the better reason—if immorality is to be dressed in bewildering charms—if Satan himself is to be transformed into an angel of light for this purpose, nothing is so effectual as the book. Every day this truth is being illustrated.

An extraordinary instance of the ill-effects of reading the trashy publications which now swarm in the country was brought forward at the Liverpool Assizes last week. Frederick Jones and William Walker, two boys, were charged with having, at Heaton Norris, assaulted Ellen Wood, by presenting a pistol at her, with intent to rob. They were also charged with assaulting, in a similar manner, Harriet Beckett, at Levenshulme, near Manchester, with intent to rob her. To both indictments the prisoners pleaded guilty. Mr. Wheeler, the barrister for the prosecution, wished to call the attention of the magistrate to a statement of a somewhat extraordinary nature, which would be made, with his lordship's permission, by Mr. Sadler, the chief constable of Stockport, to which town the witness belonged. The learned judge having expressed his willingness to hear the statement, Mr. Sadler said,—

"Both prisoners, whose ages are sixteen years, were born, and have always resided, in Stockport. This is the first time either of them has ever been in custody or charged with any offence whatever. Up to about twelve or fifteen months ago they were extremely well-conducted boys, and ever since that period they regularly attended their work, never absenting themselves a single day from their employment, or an entire night from their houses. Unfortunately about that length of time since, these lads were sent to work under a man of the name of Johnson, who, I find, had been in the habit of purchasing a number of pernicious publications, such as 'Jack Sheppard,' 'The London Apprentice,' 'Paul Clifford,' 'Claude Duval,' 'Reynold's Miscellany,' 'The London Journal,' and other similar trash, which narrate and detail the daring exploits of celebrated robbers. All these papers were usually read by Jones and Walker, and a visible change in their conduct perceptible. There is little doubt that this course of reading has been the sole cause of leading the two prisoners on to the commission of crime, as proof of which I may remark that they have never been known to associate with thieves, or to frequent any place where known thieves resort to, and to determine this, I have directed the most particular inquiry to be made. Against their social condition, for their sphere has been favourable and free from any transportation on the part of their relatives to lead them in crime. Walker lost his mother many years ago, and his father in 1840, but has since resided with his brother, who is a teacher in a Sunday-school, and a man of remarkably good character. Jones has lived with his grandmother, a kind and amiable old woman. Perhaps I ought to remark to your lordship that, although I have, during twenty years in the police, witnessed numerous instances where the baneful effects of reading such publications have been apparent in leading youth into a career of crime, yet I never met with one which could be traced so clearly and conclusively as the present, unaccompanied as it is by any apparent intention to murder plunder a means of obtaining a livelihood. Both prisoners, as I before stated, had never left employment up to the last hour required from them on the very evening of their apprehension."

His lordship thanked Mr. Sadler for the information, and on reading the deposition, that it would probably be his duty to transport the prisoners, but, after the information of which he was now in possession, he thought that a term of imprisonment might lead to their reformation and return to honest habits. At a later part of the day the prisoners were sentenced to imprisonment for six months, after an admonition.

Such facts as these speak volumes. Two hitherto steady lads, the sons of respectable parents, get hold of some of the pernicious literature of the day, and, in consequence, commit crimes which place them in the felon's gaol. These lads evidently were lads to whom good books would have been a lasting benefit. Had their youthful imaginations been fired by the exhibition of the higher and holier elements of our common humanity—had they read of the industry which has worked its way till it was crowned with wealth and honour and rank—of the pursuit of knowledge which no difficulties could impede or render nugatory—of the lofty philanthropy which sought and recovered its wretched victims as they languished forgotten and trampled on by their fellow-men—of the piety which has counted the world's gain as dross, that it might lead back an alienated world to its Father and its God, they would have been stirred up to imitation. In their humble way they would have sought to make their lives sublime, and the attempt might have been successful. Parents would have had reason to bless the authors. Many of [illegible] had [illegible] platform. But [illegible] models [illegible] part [illegible] the [illegible] invested with meretricious charms characters essentially bad, and in the case of these lads we see the result. But how much is there we do not see? How many a one is led astray and undone for life, of whose ruin the world never hears; and how many are there besides who are morally blasted, though they commit no overt acts? How much the tone of public morals is also undermined? These questions we cannot attempt to discuss now—we merely refer to them. One thing is clear—that a healthy literature makes a healthy people, and a vicious literature the reverse. Let young men and women mind what books they read. Let fathers and mothers mind what books they put in their children's hands. Let them remember that if a good book be a great blessing, a bad book may be equally as great a curse.

THE SHOEMAKER OF ST. AUSTELL.

(*Concluded from page* 252.)

[illegible] friend one day remarked to him, "Mr. Drew, more than once I have heard you quote that expression,—

'Where ignorance is bliss, 'tis folly to be wise.'

quote it as being true; but how are we to understand it?" "I will give you," he replied, "an instance from my own experience.

When I began business I was a great politician. My master's shop had been a chosen place for political discussion, and there, I suppose, I acquired my fondness for such debates. For the first year, I had too much to do and to think about to indulge my propensity for politics; but after getting a little ahead in the world, I began to dip into these matters again. Very soon I found myself deeply into new-paper argument as if my livelihood depended on it. My shop was often filled with loungers, who came to canvass public measures; and now and then I went into my neighbours' houses on a similar errand. This encroached on my time, and I found it necessary sometimes to work till midnight, to make up for the hours I had lost. One night, after my shutters were closed, and I was busily employed, some little urchin who was passing the street, put his mouth to the key-hole of the door, and, with a shrill pipe, cried out, 'Shoemaker! shoemaker! work by night and run about by day!'

"And did you," inquired his friend, "pursue the boy with your stirrup, to chastise him for his insolence?"

"No, no. Had a pistol been fired off at my ear, I could not have been more dismayed or confounded. I dropped my work, saying to myself, 'True, true! but you shall never have that to say of me again.' I have never forgotten it; and while I recollect anything, I never shall. To me it was the voice of God; and it has been a word in season throughout my life. I learned from it not to leave till to-morrow the work of to-day, or to idle when I ought to be working. From that time I turned over a new leaf. I ceased to venture on the restless sea of politics, or trouble myself

about matters which did not concern me. The bliss of ignorance on political topics I often experienced in after life; the folly of being wise my early history shows."

It is not often that a boyish freak confers such a blessing upon man and the world. It was sport to him, but a life's blessing to his intended victim. It checked and cured a bad habit, and gave a fresh impetus to the struggle to ascend the hill of knowledge Thanks, a thousand times, for that piece of midnight mischief!

"Ah! who can tell how hard it is to climb
The steep where Fame's proud temple shines afar"

This is the utterance extorted by the pangs of intellectual labour. How exquisitely must it have been felt at each stage of his course, every step of his ascent, by Mr. Drew. Between the point on which he stood, and the foot of the hill, what vast fields stretched their broad and interminable lengths before him. Each was fresh with flowers, alluring to taste, attractive to the eye, fair to the vision, and flattering to hope, as "the tree of knowledge" to the mother of the human race. But when he essayed to enter,

"Chill penury repressed his noble rage,
And froze the genial current of his soul."

Industry and economy had "broken the neck of his difficulties," and left him with some degree of leisure to pursue his ruling passion—the acquisition of knowledge. Possessed of the opportunity of improvement, he increased his efforts, and enlarged his plans of acquiring information. Fugitive thoughts—those first and best teachings of truth—were preserved with an avaricious care. Even while at work, he kept writing-materials at his side, to note the processes of his mind, and fix, beyond the possibility of forgetfulness, the outlines of arguments on such subjects as engaged his attention for the time. But he had not as yet fixed upon any plan of study, any one subject or science that was to engross his efforts or absorb his powers. His one desire was to know, to grow in wisdom and knowledge. He was on the shore The broad sea of truth was before him He wished to sound its depths, not to skim its crested waves. We shall see what determined his choice —

"The sciences lay before me. I discovered charms in each, but was unable to embrace them all, and hesitated in making a selection. I had learned that

'One science only will one genius fit,
So vast is art, so narrow human wit'

At first I felt such an attachment to astronomy, that I resolved to confine my views to the study of that science, but I soon found myself too defective in arithmetic to make any proficiency Modern history was my next object; but I quickly discovered books and time were necessary than I could either purchase or spare, and on this account history was abandoned In the realm of metaphysics I saw neither of the above impediments. It never theless appeared to be a thorny path, but I determined to enter and accordingly began to tread it."

Poverty selected the field on which he was to win his triumphs, and carve his way to usefulness and honour. It was indeed a thorny path, hedged with difficulties. He entered it with a giant's energy. The immaterial world, with its empires of being, its unfathomable entities, uncaused causes, endless organizations, mysterious laws, and chainless powers, was the world through which he was to roam with the freedom of a free-born citizen The map of that world already existed in outline in his own intellectual and moral being. His own being was the door of entrance to that world of spiritual existences of which

"Millions—walk the earth unseen
Whether we wake or sleep"

In such a study the heaviest draft would be on his own mental organism. Reading was the smallest part of its labour Reflection—deep, earnest, protracted reflection, in which the soul turned inward upon itself, surveyed, as in a mirror, the unseen world of life, activity, and immortality, was the first and ceaseless demand of the subject. The difficulties of his start in the pursuit of knowledge, and the energy that triumphed over them, had eminently qualified him for the toils of his new career. Reading filled his leisure: reflection occupied him while at work. He possessed, in a remarkable degree, the power of abstracting his mind from surrounding objects, and fixing it, like a leech, upon whatever subject occupied his attention. He could read and rock the cradle, and his profoundest mental investigations were often carried on in the din of domestic affairs. His works, which have given his name to fame, and will waft it to immortality, were written, not in the solitude of the study, but amidst the hammering of heel-taps and the cries of children. He had no study—no retirement. "I write," he said, "amid the cries and cradles of my children, and frequently when I review what I have written, endeavour to cultivate 'the art to blot.'" During the day, he wrote down "the shreds and patches" of thought and argument. At night, he elaborated them into form and unity. "His usual seat, after closing the business of the day, was a low nursing chair beside the kitchen fire. Here, with the bellows on his knees for a desk, and the usual culinary and domestic matters in progress around him, his works, prior to 1805 were chiefly written."

The first production of Mr. Drew's pen was a defence of Christianity, in answer to what a celebrated Irish barrister, with singular felicity and force of language has called "that most abominable abomination of all abominable abominations, 'Tom's Paine's Age of Reason.'" It was elicited by circumstances no less attractive in their nature than they proved to be beneficial to the spiritual interests of one of the parties. Amongst the friends drawn to Mr Drew by his literary pursuits and the attractions of his expanding intellect, was a young gentleman, a surgeon, schooled in the writings of Voltaire, Rousseau, Gibbon, and Hume. Confirmed in infidelity himself, he sought to shake the religious convictions of the pious and strong-minded, but humble shoemaker. They had frequently discussed abstruse questions of ethics; especially the nature of evidence, and the primary sources of moral principles When "Paine's Age of Reason" appeared, he procured it and fortified himself with its objections against Revelation, and assuming a bolder tone, commenced an undisguised attack on the Bible Finding his own arguments ineffectual, he proffered the loan of the book, stipulating that he should read it attentively, and give his opinions with candour, after a careful inspection. During its perusal the various points of its attack on Christianity were [illegible] in their discussion. Mr. Drew made note of these [illegible] they closed, the surgeon began to waver in his confidence in the "Age of Reason," and the ultimate result was that he transferred his doubts from the Bible to Paine, and died an humble believer in the truth of Christianity, and in cheerful hope of the glory, honour, and immortality, it brings to light The notes of Mr Drew were subsequently remodelled and offered to the public. Its appearance produced a powerful impression on in behalf of religion, then most virulently assailed by the combined forces of French Atheism and English Deism It placed its author upon commanding ground as a profound thinker and a skilful debater, and attracted to him a larger and powerful friends. This firstborn of his brain was published in 1799. It was followed in rapid succession by several other pamphlets; one a poem of six hundred lines, rich in thought, but too local in subject, and less fanciful than popular taste in "the art of poetry" required; the other was a defence of his church against the attack of one in whom the qualities of author, magistrate, and clergyman were blended. His defence was as successful in refuting the assault, as it was, in the mildness and manliness of its spirit, in converting the assailant into a personal friend

In 1802, Mr. Drew issued a larger work, a volume alone sufficient to stamp his name with immortality. It was on the [illegible] of Immateriality of the Human Soul." It is a masterpiece of profound thinking, acute reasoning, and logical accuracy. The English language boasts no superior work on the subject.

It made a strong impression on the public mind, and attracted a large number of learned men to the object, but profound, metaphysical of St. Austell. The history of the volume furnishes an interesting page in the life of authorship. When finished, it was offered to a Cornish publisher for the sum of ten pounds. But he could not risk such an amount on the work of one "unknown to fame" It was then published by subscription, and the edition was exhausted long before the demand for it was supplied. Many years after this, Dr. Clarke said Mr. Drew was "a child in money matters." The occasion before us justifies the remark. Afraid of the risk of a second edition, he sold the copyright to a British bookseller for twenty pounds, and thirty copies of the work. Before the expiration of the copyright, it had passed through four editions in England, two in America; and had been translated and published in France. The author survived the twenty-eight years of the copyright, and it became his property. He then gave it a

final revision, and sold it for *two hundred and fifty pounds*. A fact that proves its sterling value.

His "Essay on the Soul" was followed, in the course of a few years, by another work, not less abstruse, and certainly not less important to the future destiny of the human race: "The Identity and General Resurrection of the Human Body." His former work had surprised the critics of the day. This confounded them. They knew not what to think of the man; and they were afraid to adventure in a review, upon the vast and profound ocean of metaphysics, over which he sailed with the freedom of a rover, bearing a flag that held out a challenge to the world. The editors of several Reviews, as did also the publisher, courted a criticism of the work. But they could find no one able and willing to attempt it. At length one of them ventured to ask the author for a criticism on his own work, as the only person competent to do it justice. The request stirred his indignation. "Such things," was his reply, "may be among the tricks of trade; but I will never soil my fingers with them." But it went not without a notice. It was reviewed in two works. But the verdict of the public is recorded in the fact of the rapid sale of nearly fifteen hundred copies.

The improvement of Mr. Drew's circumstances has been spoken of. He had not grown rich. The gain of *a little time* for mental pursuits, was all the wealth his literary labours had secured. His publications gave him fame as an author, and attracted friends, ardent and anxious to assist him, but they contributed very little to his release from the daily avocations of his shop. He was still poor; and, to gain daily bread for himself and his family, he was compelled to "stick to his last." Even at this period of his life, he concluded a letter to a distinguished antiquarian of London, with the remark: "I am now writing on a piece of leather, and have no time to copy or correct." Yet, in reading his pages, while the mind is stretched to its utmost tension to compass the depth and elevation of his thoughts, it is almost impossible to realise that they were written on a piece of leather in the midst of his workmen, or in the chimney corner, with a bellows on his knee, and with one foot rocking a brawling child to sleep. It is, nevertheless, a reality; and adds new confirmation to the hackneyed remark, that "truth is stranger than fiction." As late as 1809, Professor Kidd, of Aberdeen, wrote to him as follows. "When I read your address, I admired your mind, and felt for your family; and from that moment began to revolve how I might profit merit emerging from hardships. I have at length conceived a way which will, in all likelihood, put you and your dear infants in independence." The plan of the Professor was to induce Mr. Drew to enter the lists for a prize of twelve hundred pounds for an essay on "The Being and Attributes of God." He entered, but did not win, much to the sorrow of his kind-hearted adviser. But the work, in two volumes, was subsequently published, and augmented the fame of "The Metaphysical Shoemaker."

By the agency of his friend, Dr. Clarke, he was engaged to write for several Reviews, "receiving—guineas for every printed sheet." He also commenced lecturing to classes on grammar, history, geography, and astronomy. Several years were spent in these employments. They paved his way, and prepared him to enter a larger field of labour, on a more elevated platform of life.

In 1819 he was invited to Liverpool, to take the management of the Imperial Magazine, published by the Caxtons. He accepted it, and parted with his awl and ends. This was a new enterprise, both to the editor and the proprietor. But it succeeded to admiration. His own reputation attracted seven thousand patrons at the start. Whatever may have been the tastes of Mr. Drew as to dress, he had never been in circumstances that allowed of much attention to his personal appearance. The family of Dr. Clarke, who now resided near Liverpool, and who were warmly attached to him, set themselves to reform his costume, and polish his manners. An epigram of the Doctor's comprises a full-length likeness of the figure he presented.

"Long was the man, and long was his hair,
And long was the coat which this long man did wear."

He was passive under the management of his young friends; and they did not pause until a manifest change in the outside man was effected. When he next visited St. Austell, he was congratulated upon his juvenile appearance. "These girls of the Doctor's" he said, "and their acquaintances, have thus metamorphosed me." His residence at Liverpool was abridged by the burning of the Caxton establishment. The proprietors resolved to transfer their popular editor behind them. He accordingly repaired to the metropolis. Here all the works issued from the Caxton press passed under his supervision. He augmented his own fame, and multiplied the number of his learned friends. Of his labours he says: "Besides the magazine, I have, at this time, six different works in hand, either as author, compiler, or corrector. 'Tis plain, therefore, I do not want work; and while I have strength and health, I have no desire to lead a life of idleness; yet I am sometimes oppressed with unremitting exertion, and occasionally sigh for leisure which I cannot command." But leisure came not till the weary wheels of life stood still in 1833.

A Chinese proverb says, "Time and patience will change a mulberry leaf into a silk dress." They have wrought greater wonders than this in the intellectual and moral world. As illustrative of their power in any pursuit of life, how attractive and impressive are the incidents in the history of the poor Shoemaker of St. Austell. Through then agency, vice, ignorance, and poverty were transmitted into virtue, knowledge, and independence;—a youth of idleness was followed by a manhood of industrious diligence, and an age dignified by success in the noblest aspirations that can swell the human breast. To the student, the lover of knowledge, the aspirant for literary distinction and usefulness, such histories have a voice whose utterance is a melody of encouragement. Drew's life is a beacon blazing on the coast of time; himself a star of the first magnitude, brilliant in the firmament of truth, serene in its orbit, endless in the sweep of its influence.

GENERAL CAVAIGNAC.

In 1848, the name of Cavaignac became familiar to the British public. As an African general we hardly knew of his existence, but when the terrible June of 1848 came and deluged Paris with blood, Cavaignac was regarded in France, and in other lands, as the asserter of law and order. He it was who saved society for the time. He it was who guarded the young Republic in its hour of danger. Had it not been for him, Paris would never have remained for Louis Napoleon to trample under foot. The storm raged in its fury, but Cavaignac had taken precautions, and its rage was powerless. We soon heard, on this side of the water, that Paris was tranquil, that confidence had returned, that the bustle of trade was once more perceptible, that the streets were no longer filled with armed men.

Yet, at the time, the outbreak was terrible, and threatened to shake society to its very base. The evidence taken before the Committee of Inquiry, appointed by the French Assembly, bears witness to this. Lamartine says, we are aware his conviction was that there was little of conspiracy or premeditation in them. The troubles of the 15th of May, when the populace broke into the Assembly, he attributes to chance; the movements of the 23rd of June he considers as spontaneous. Lamartine says, the insurrection had no general; his opponents said it had many, and not only generals, but directing politicians, as Caussidière and Louis Blanc. Lamartine says, that the most eminent and dangerous parties did not intend, or promote, the insurrectionary movement; that of the 23rd of June springing from the national workshops, and the money allotted them. By attacking the barricades and the insurrection on the first night, Lamartine thinks they would have been put down without the terrible struggle and efforts, necessitated by the military force not having acted at first. On this point General Cavaignac and Lamartine differed. There seems, however, to be little doubt that the plan of the majority of the extreme party, as early as the 16th of April, was to seize the government and make Ledru Rollin dictator, or head of a Committee of Public Safety. The scheme failed, from Ledru Rollin's own want of resolution. Meanwhile, Caussidière, who still continued Prefect of Police, was conducting intrigues and plots of the most diabolical character. It gives an idea of what the state of Paris then was, to be told by the Director of Police that there were at that time four divisions of the metropolis, all working under distinct authorities and against each other; the prefecture was all but openly favouring the Communists; the Mayor of Paris, who had also his agents, was endeavouring to crush them; the Home-office was at open war with the Mayor —for Ledru Rollin retained his whole influence there through the subordinate officers, even after he had quitted the depart-

ment; and, lastly, the Executive Committee was labouring to effect an impossible union, and to avoid an inevitable collision between the contending parties. Certain proofs of complicity were brought against Caussidière, Proudhon, Louis Blanc, and others. General Cavaignac seems to have made a wise suggestion, when he advised the cancelling and suppression of a mass of inflammatory evidence. Throughout the proceedings, Cavaignac seems to have been firm and unflinching. In reply to a deputation of journalists, who waited on him while Paris was in a state of siege, he referred unreservedly to the fears

GENERAL CAVAIGNAC.

which the threatened outbreak of the Legitimists excited in his mind. He spoke of entire battalions of the National Guard, which were ready to rally round that cause, but declared that he would use all the powers with which he was invested to establish the Republic. "I am not," said he, "a Republican of the eve, and I have faithfully served Louis Philippe. If I said the contrary, all my acts would belie my words; but I have accepted the present mission, and I will, without weakness, fulfil it." On the 10th of December, 1849, Cavaignac's dictatorship expired. France chose not him, but Louis Napoleon, for her President. His candidature was based on the interests of order and security. He sought to be the Washington of France. The son of a member of the Convention—of a regicide—and avowedly proud of his father, he has always been a sincere Republican. He entered the army, and after serving six-and-thirty years in Algeria, and rising from being a subaltern to being a general, returned to Paris to take the command of the army—National Guard and Guarde Mobile—in suppressing the insurrection of June. His friends say of him, that they do not know a man whose word is more true, whose heart is more disinterested and upright, or whose spirit is more just and clear, than that of General Cavaignac; but France preferred Louis Napoleon.

To this fact it is, perhaps, to be attributed that Cavaignac became one of the victims of the recent *coup d'état* Happily, however, Cavaignac was not dealt with so severely as the others He was liberated from prison, and has since become a married man. We read that he is now in Paris, enjoying himself in his new character.

THE ELECTRIC TELEGRAPH IN AMERICA.

The electro-magnetic telegraph, which, by the way, was invented by Mr Ronalds, who published his discovery and experiments in 1823, has worked a revolution everywhere; but no country has felt its effect so greatly as America; and no other country possesses an equal length of telegraph line, or can boast of equal cheapness or regularity in the transmission of information. With us the telegraph has hitherto been the instrument of the Stock Exchange, and the slave of commerce and the rich, rather than a universal agent used by all classes of the people.

A recent visitor to the United States—Mr. Watkins—says—"I noticed with interest the tall, red or white poles, surmounted by insulators, and bound together by long lines of telegraphic wire, planted like trees through many of the main streets of New York, of Boston, of Philadelphia, of Baltimore, and contrasted this sacrifice of the feelings of street commissioners with the ridiculous regulations enforced at home, by which the ordinary telegraphic wires laid through towns are, to the great injury and obstruction of the enterprise, buried in the ground under flags and pavements. In riding out amongst the forests too, far away from any cleared country, along roads cut straight out of the woods for miles, there again were rough poles, and a single, thin, dangling wire, stretching away into the distance. There were wires under the rivers and over them, across prairies and over mountains. Indeed, the single wire telegraph, erected at a cost of some £20 or £30 a mile, is pushed out everywhere, almost in advance of the population, the pioneer of civilisation.

"There are now above 11,000 miles of telegraphic line in the States. You may transmit information from Quebec or Montreal in the north to New Orleans in the south, a distance of 2,000 miles, or 4,000 miles there and back, and have your reply in about two hours, including delivery and all delays. You may telegraph from New York to Fond du Lac, in Wisconsin, a distance by the telegraph route of 1,500 miles, or 3,000 miles there and back, and have your reply delivered to you in an hour, including all delays. A tenth of the time would suffice for mere transmission and reply, but we refer to the practical interval within which, in the most adverse average circumstances, the message may be sent, written out, and delivered, and the reply received, transmitted, written out, and placed in your hands by the messenger. Your message is not, however, rivalled by written. The printing telegraph is much in vogue, and, although, in our own country it has made no progress, and has been considered rather as a toy, or pretty trifle for experiment, than as adopted to everyday working, and its accidents, in the United States its inventor appears to have so perfected it, that its action is certain and unexceptionable. It is relied upon for a large mass of important daily intelligence, including the price list of stocks and funds, and the market rates for staple commodities."

People in America buy by the telegraph, and sell by it, order their beds at hotels, and their clean linen from home, by it, notify all domestic wants of urgency by it, use it as the fairy wand by which distant relatives and friends are brought to speak to them, as it were, under their very windows, and at their doors, from the other side of a mighty country. And, in fine, it serves them universally from the cottage to the palace, if such a thing be allowed in so "practical" a country. Mr Watkins says—"An old woman, the mother of a labourer in Wisconsin, addressed me, in the steamer, on Lake Erie, to ask if the telegraph had been extended to Fond du Lac. She had come all alone from some out-of-the-way place in Maine, and was on her way to Fond du Lac to join her son, she said; and she wished to telegraph him from New Buffalo, on the east side of Lake Michigan, to meet her at Chicago." A glance at the map will show the wonder of this. New Buffalo has sixty miles of water between it and Chicago, and Fond du Lac is 350 miles north of Chicago. Fond du Lac is a place of yesterday, and yet it is placed within a few minutes, in point of intelligence, of New York, Boston or Philadelphia.

Thus prices are equalised; the only distributing element being cost of conveyance. Labour flows at once to the place where a demand exists for it. A broker, consul, or employer, has merely to telegraph to some great centre, a thousand miles off, with the word high wages, cheap bread, and good privileges, the newspaper gets hold of the intelligence, and the stream turns in that direction as truly as water in coming to its level.

The secret of this extensive use of the telegraph is the low charge, stimulated, of course, by the locomotive and enterprising habits of the people, and by the special demand for economy of time in so wide and so new a country. But the connection between the telegraph and the press is the great aspect of this question:—There are in America some 2,500 separate newspapers published daily, weekly, or at other periods. The total circulation of these newspapers averages one million copies per day. Now see the working of this cheap telegraph. The steamer from England comes in at New York or Boston, say at two o'clock; at a quarter to four the heads, or leading "items of news, are printed and circulated in New York by an issue of thirty thousand evening papers. And in two hours the same news is transmitted, printed, and in circulation all over those parts of the Union where the telegraph and the daily papers exist. Thus you may be sleeping and musing at some out-of-the-way place, in a newly-settled state, having the events of two months ago in your head, when an "extra" of the local paper is put into your hand, and you learn, perhaps, as "important news from Europe," that Lord Palmerston has put on "a stiff upper lip" to Russia, that a horrid accident happened on the Great Western Railway; or that some Italian songstress is coming over by next packet. This news is, perhaps, an hour, or at most two or three hours, old in New York, while a passage of nine-and-a-half days has brought it from England.

This telegraphic communication is outstripped only by the diffusion of light, and, just as in the beautiful and glorious phenomena of nature, rapidity of progress is accompanied by universality. Not one line or course of country only, but the whole Union, far and near, accessible or otherwise by travel, is thus made by it to ring with the same intelligence, to weep at the same woes, to rejoice at the same successes, and to discuss the same [illegible] information on the same day.

[illegible] change therefore, that news is taking the place of mere leading articles, and that the truth, the daily history of the world and its leaders, little and big, is becoming, happily, of far more interest than the cloudy speculations and dreary pointless abuse with which the hacks of political parties still disfigure the press of America! Men are now reading for news, desiring to form their own opinions, and requiring, in connection with the data they search for, and now obtain at first hand, no better speculations than their own. "I confess," says Mr. Watkins, "to have been startled over and over again by being questioned, far away from those places which seem to me to be the cycles of population and intelligence, on some English or Continental events of which my letters of three days back contained no mention, and by hearing daily, from the mouths of the humblest, discussions upon what was passing, which showed, to use an Americanism, that every one was 'posted up' to the latest date with all the important news of the world."

The telegraph, during Congress time, supplies all the principal daily papers with two, three, or sometimes five columns of debate per day, throughout the session. We do not wish to draw any parallel between the systems pursued by the telegraph companies of the States and of England. The telegraph company have reduced their charges very recently, for messages not exceeding twenty words, and for distances of 100 miles and under, to 2s. 6d., and for distances over 100 miles, to 5s., and 3d. for every additional word. This is a great step. That the English scale of charges can ever approach the American, with profit in the [illegible] upon which we have considerable doubts.

The New American Telegraph Line stands in a similar position [illegible] Electric Telegraph Company. It has the largest extent of communication under its command; and, though competed with, has the great run of business in its extended district between New York, Philadelphia, Baltimore, Washington, and the South and West. It connects with O'Reilley's Atlantic, Lake Ohio, and Mississippi Telegraphs. It transmits information to some 400 through stations, and works over several thousand miles of wires. The directions issued by this company to parties sending messages are:—"Write your messages plain, so that it can be read by the operator; also give dates, full address, and signature, *as no charge is made for either.*" The practice of making no charge for addresses is at once a curtailment of one-third of the cost of short messages as charged with us. But even with this concession, and with low rates also, the company notify to the public, that they "respectfully solicit a share of telegraphic business, and, in return, every effort will be made to give satisfaction to their numerous patrons."

THE BIRTH OF THE SNOW-DROP.

FAR away among the vine-clad hills of sunny France, there lived a poor woman with her only child. She was a soldier's widow, and gained a scanty subsistence by working in the vineyards. Little Renie was only able to follow his mother in her labours; but he loved to sit under the vines and see the rich purple clusters of grapes that hung among the green leaves like bunches of amethysts.

The widow dearly loved her little son, and often, seating him upon her knee after the labour of the day was over, she told him of his father; how he was a good man and a brave soldier, who had died fighting for his country; and then she would sob and press the child to her bosom, as she related how handsome the soldiers looked, marching on to the sound of fife and drum, and how not one of that gallant band ever returned again.

Renie was much too young to understand all this; but as he grew older, he learned that his mother had left her home with a young soldier, and that her father never forgave the marriage, or saw his daughter again. The old man was living still in a distant province; but, though the heart of the lonely widow yearned for home, and with a mother's pride she longed to show her boy, yet she knew the stern nature of her father, and dared not seek him to plead again for the pardon so often denied.

At last the poor widow fell ill, and though it was the season when the rich hue of the grapes deepened into perfection beneath the warm sunbeams, she knew full well that she should not live to gather them.

The dying mother bade little Renie come very near to her, and then, in faltering tones, whispered that she must leave him, and perform a long, dark journey, alone. But the child, with violent sobs of grief, clasped his arms about his mother's neck, praying to go with her, and not to be left behind.

Then the widow, whose strength was failing fast, comforted the child, murmuring, "I will not leave you for ever, my son; we shall meet again—in my Father's house."—She spoke no more, and soon poor little Renie was an orphan.

The peasants made the poor widow a grave in a quiet spot, and gave the little boy a home among themselves; but day after day he threw himself upon his mother's grave and wept, refusing to be consoled. Children gathered about and pressed him to join their sports, kind women drew him to their bosoms and promised to cherish him, strong-hearted men raised him up and bade him be of good cheer, but Renie turned from them all to the cold, damp sod, exclaiming, "She will not leave me for ever, my mother will come back. I will wait for her here."

When they saw all their comforting words were of no avail, they left him, trusting that the natural joyousness of childhood would [illegible] his grief; but when weeks passed on and brought no [illegible]ge, they learned to respect the child's sorrow, and the [illegible] gatherers, as they returned from the vineyards with baskets of the beautiful fruit, paused in their vintage song as they saw little Renie with his arms clasped about the wooden cross upon his mother's grave.

The leaves at length dropped dry and sere, and the snow rested upon the hills; then Renie himself fell ill, and for many weeks he could not rise from the little cot where a kind peasant and his w[illegible]fe nursed him tenderly; during the tedious hours of illness, his mother's image was ever before him; and remembering her words, 'We shall meet in my Father's house," he resolved, when he grew strong again, to go and seek her, as she did not return to him.

The snow had not yet melted in the valleys, though the sun was shining warmly, when Renie feebly turned his steps once more toward the spot where his mother slept. He knelt down before the little cross, and his warm tears fell fast upon the snow, when, lo! just where the tears had fallen appeared a tiny blade, struggling to pierce the crusted ground. The boy tenderly scraped aside the snow, that the little plant might feel the sun, and another warm shower of tears fell upon it as he did so, for he remembered his lost mother's love for the flowers.

When Renie came again to the grave, he saw with surprise a group of lovely white blossoms, that seemed to bend sorrowfully over the sod. The child knelt beside them, and a strange feeling of peace crept into his heart.

"My mother has sent them from the land where she dwells," he thought, "to show that she has not forgotten me;" and a smile of hope beamed on his sad pale face, as he looked fondly on the flowers.

But when the peasants beheld this mysterious little plant blossoming in the midst of the snow, and of a kind they had never seen before, they were filled with astonishment and awe.

"It is sent from the spirit-land," they whispered, "and born of Renie's tears.—See how each snow-white drop quivers upon its stem, like a tear about to fall! His mother knows his sorrow, and would console him thus."

Gradually the grief of the little boy became more subdued, and hope and cheerfulness beamed upon his face once more. He loved to water and nurture the tender blossoms, and soon the grave was covered with the delicate and graceful flowers, gently bending towards the earth.

The good curé, who dwelt among these simple peasants, loved the little motherless boy, and spoke often to him, explaining how the child must one day join his mother, but she could no more come to him. Renie listened to the good old man with interest; still, the words of his mother seemed ever present with him:

"We shall meet in my Father's house."

And so one day the boy filled a basket with tufts of the spirit-flowers, as the peasants called them, and going to the curé, said firmly "My mother has sent me many messengers. See, I take some with me to show the way, and I go to seek her in her father's house, where she told me we should meet again."

Then the good cure drew little Renie towards him, and told him of that heavenly Father's house, where his mother awaited his coming, and as he dwelt upon the love and goodness of that all wise Parent, and the eternal happiness prepared for his children, the boy was comforted, and dared not wish his mother back to the home of that earthly father who had cast her off.

As the kind teacher went on, and spoke of the loneliness, and perhaps the remorse, of the old man who had refused to forgive his child, little Renie's heart swelled with tears; and as a sense of peace filled his own bosom, he longed to impart it to others. Suddenly he looked up with a brightened countenance.

"I will seek my grandfather," he said, "and carry these sweet flowers to him. They are messengers sent to console us both. And when I tell him my mother has gone home to her heavenly Father's house, he will not be angry with her any more, but love me for her sake."

The good cure blessed the little boy; the peasants gathered around with gifts and many kind wishes, and then Renie, after a last visit to his mother's grave, started on his journey, carrying with him the precious flowers.

He met with much kindness on his way; for all who listened to his simple story willingly aided the little orphan boy. Many wished to purchase the strange and beautiful blossoms which he carried, but Renie would not sell them. He regarded them with a love too holy to barter them for money. But whoever did him a kindness was rewarded by a little tuft, and if he met any one in sorrow he offered his simple tribute, strong in the faith of its power to soothe.

The twilight was fast fading into night when Renie entered a shaded lane, and, softly opening a wicket-gate, carried his treasured flowers to the well to water them, ere he sought a shelter for the night. The little garden into which he had entered was overgrown with weeds, and the low-roofed cottage wore an air of desolation. In the porch sat an old man who, with thin, silvery hair floating on his shoulders, leaned heavily upon a staff, and, with mournful voice and shaking head, constantly murmured to himself—

"My child! my child! I have driven you from me, and now am I [illegible]bereaved! I shall never see you more—my child, my child!"

Little Renie heard these words—a gleam of joy illumined his heart. Lifting his basket of flowers, he stood before the old man, saying, as he offered them—

"Grandfather! see—I bring you consolation!"

The poor old man was for a time bewildered; but when he had heard Renie's story, and read the letter of the good curé, he clasped the child in his arms, and shed over him tears of mingled penitent sorrow and gratitude.

The weeds were uprooted, and the precious flowers planted in the garden, where they grew and flourished in luxuriant beauty. When Renie, with his grandfather, went to visit his mother's grave, tufts of the lovely blossoms met them at every turn, like the footprints of angels leading them on, and each one to whom Renie had given the flowers came out to welcome them as they passed.

When the next spring-time came, the hills were covered with the delicate blossoms, and for many years the peasants named them "Renie's consolation."

MISCELLANEA.

HOW TO SUBDUE MAN!—In the course of a book just published in America, and which is entitled the *Reveries of an Old Maid*, we are told that the weapons to subdue man are not to be found in the library, but in the kitchen! "The weakest part of the alligator is his stomach. Man is an alligator. Let the young wife fascinate her husband with the teapot! Let her, so to speak, only bring him into habits of intoxication with that sweet charmer, and make honeysuckles clamber up his chair-back and grow about the legs of his table—let the hearthrug be a bed of heart's-ease for the feet in slippers, and the wickedness of the natural enemy must die within him." What excellent wives some of these old maids who write books would make.

BOOK AUCTIONS were by no means common during the seventeenth century. They became fashionable at its close, and the death of Dr. Francis Bernard, who was an eminent physician, made them important. His library was sold in 1698, and produced no less a sum than £1,600. Upon this occasion, a well-known collector of books being recognised in the crowd which attended the sale, was appealed to by the auctioneer, "*Arch*" Millington, as he was called, who remarked that there was an important observation written in the volume he was about to sell, in Dr Bernard's own hand. The consequence of this intimation produced a spirit of rivalry among the bidders, but when the book was knocked down at a high price, the purchaser read, to his astonishment—"*I have perused this book, and it is not worth a farthing.*"

LADY'S POSTSCRIPT.—The most striking illustration of the saying that the pith of a lady's letter is the postscript, which we ever heard of, was that of a young lady, who, having gone out to India, and writing home to her friends, concluded in these words:—"*You will see by my signature that I am married.*"

HOW TO PAY A LAWYER.—An old lawyer of the city of New York tells a good joke about one of his clients. A fellow had been arraigned before the police for stealing a set of silver spoons. The articles were found upon the culprit, and there was no use in attempting to deny the charge. Lawyer G—— was applied to by the prisoner as counsel, and, seeing no escape for his client, except on the plea of insanity or idiotcy, he instructed the fellow to put on as silly a look as possible, and when any question was put to him, to utter in a drawling manner the word "spoons." If successful, the fee was to be twenty dollars. The court proceeded to the trial; the charge was read, and the question put to the prisoner, "Guilty or not guilty?" "Spoons," ejaculated the culprit. The court put several questions to him, but "Spoons, spoons," was all the answer he would give. "The fellow is a fool," said the judge; "let him go about his business." The prisoner left the room, and the lawyer followed in his wake, and when they got into the hall the counsellor tipped his client on the shoulder, saying, "Now, my good fellow, that twenty dollars." The rogue looked the lawyer full in the face, and, putting on a grotesque and silly expression, and, winking with his eyes, exclaimed "Spoons," and then walked off.

NON-RESISTANCE.—William Meade, a companion of Penn, and a co-defendant with him in a government prosecution, was, although an old Cromwellian soldier, a stout partisan of the doctrine of non-resistance. Nevertheless, it is reported of him that, being challenged one night by three robbers in a lane, he laid about them with his oaken stick, to their utter discomfiture. He was questioned on this account at a monthly meeting. "The Spirit of the Lord was upon me," was his defence; "and I could have beaten seven of them." Of course the accusers had no more to say.

A GOLDEN RULE.—"I resolve," says Bishop Beveridge, "never to speak of a man's virtues before his face, nor of his faults behind his back."

A WISE PRIEST.—A German priest was walking in procession at the head of his commissioners, over cultivated fields, in order to procure a blessing upon the crops. When he came to one of unpromising appearance, he would pass on, saying, "Here prayers and singing will avail nothing, this must have manure."

THE FAMILY OPPOSED TO NEWSPAPERS.—The man (says the *Boston Commonwealth*) that don't take his county paper was in town yesterday. He brought the whole of his family in a two-horse waggon. He still believed that General Taylor was President, and wanted to know if the "Kamschatkians" had taken Cuba, and, if so, *where* they had taken it. He had sold his corn for twenty-five cents—the price being thirty-one—but upon going to deposit the money they told him it was mostly counterfeit. The only hard money he had was some three cent. pieces, and those some sharper had "run on him for half-dimes!" His old lady smoked a "cob pipe," and would not believe that anything else could be used. One of the boys went to a blacksmith's shop to be measured for a pair of shoes, and the other mistook the market house for a church. After hanging his hat on a meat-hook, he piously took a seat on a butcher's stall, and listened to an auctioneer, whom he took to be the preacher. He left "before meetin' was out, and had no great opinion of the "sarmint." One of the girls took a lot of seed-onions to the post office to trade them for a letter. She had a baby, which she carried in a "sugar-trough," stopping at times to rock it on the side-walk. When it cried, she stuffed its mouth with an old stocking, and sung "Barbara Allan." The oldest boy had sold two "coon skins," and was on a "bust." When last seen he had called for a glass of "sody and water," and stood soaking gingerbread, and making wry faces. The shopkeeper, mistaking his meaning, had given him a mixture of sal soda and water, and it tasted strongly of soap. But "he'd heard tell of soda and water, and he was bound to give it a fair trial, puke or no puke." Some "town fellow" came in, and called for lemonade with a "fly in it," whereupon our "soaped" friend turned his back, and quietly wiped several flies into his drink. We approached the old gentleman, and tried to get him to "subscribe," but he would not listen to it. He was opposed to "internal improvements," and he thought "larnin' was a wicked invention, and culterwaten nothin' but vanity and vexation." None of his family ever learned to read but one boy, and he "teached school awhile, and then went a studying diwinity."

ANSWERS TO CORRESPONDENTS.

GENTIAN.—Monks and friars are the same. There is little difference between a holy friar and a holy monk.

INQUIRER.—We recommend you Professor De Morgan's arithmetic and algebra. They are hard books to understand, but they contain the principles of the science. You must be prepared to work at them.

C. H.—We are sorry that you are not pleased, but we really cannot help it. We have to consult the taste of the many. We cannot alter our plan for individual readers.

ORIGINAL.—All freshly-printed works have a peculiar smell. If damp, hold them to the fire, and that will remove the smell of which you complain.

ELI CATTERALL.—You must pay the person you had the coals of. You say you bought them of the son; consequently you must pay the son.

A CONSTANT READER wants to know how to pickle red cabbage. We recommend a Constant Reader to buy a cookery-book. However, we will answer this question for him for once. Cut the cabbage into small pieces. After removing the outer leaves, put it into a sieve, and sprinkle it with salt and saltpetre. Let it drain for twenty-four hours; then squeeze it until it is very dry. Put it into a jar with whole pepper and salt, and pour cold vinegar over it. Mind not to boil the vinegar.

A CONSTANT SUBSCRIBER.—The Government Emigration-Office is No. 9, Park-street, Westminster. We can give you no information respecting the Quebec and Halifax Railway.

RICHARD GEORGE is informed that the nineteenth century is called the nineteenth century because such is the fact. A child is in its first year, and is described as such long before its first year is completed Custom and reason alike sanction such a mode of speaking.

D. J. wants to know if there is any substance capable of destroying the growth of the hair, without injuring the skin?—Not that we are aware of. The only plan is to have the hair plucked out with the roots.

T. EGLETON.—There are so many Temperance Benefit Building Societies, that we really cannot answer your question.

F. H REVELL.—There is no occasion whatever for enrolling a Mutual Improvement Society.

GALLIA.—There are many Italian grammars, but they are intended to be used with the aid of a master. A work was published a few years since in London, and we dare say can be still had of the publishers, called "Italian without a Master." Possibly that may suit you; but we cannot say anything either in praise or censure of the book, as we know nothing of it.

JUVENIS.—If you would get on in life; if you would prosper in the world; if you would be a man; learn to say, No. The men who fail in the battle of life are the men who say, Yes. Their ruin is inevitable. Sooner or later they become the prey of idleness and vice. Remember the language of Holy Writ:—"My son, if sinners entice thee, consent thou not."

AN INQUIRER.—We cannot answer your question. For all that we know to the contrary, the society you refer to is a very respectable one; but we know nothing of it. You must exercise your own discretion in such matters.

A FACTORY OPERATIVE has written to complain of not having his questions answered. He takes it for granted that we refused to answer them as too trivial, and then blames us for answering other questions which he conceives more trivial. Now this is uncharitable. A Factory Operative might conclude that we do not answer questions when we cannot, or when answers to them would be libellous. Again, a Factory Operative might conclude that, now and then, owing to the press of matter, a letter may be mislaid, or overlooked. If a Factory Operative, instead of rushing to the conclusion that we thought his letter trivial, taken the trouble to repeat his questions, they would have had a better chance of being answered. As it is, we think the questions have been answered, though they were not answered directly. We are, owing to our large impression, always obliged to be some time in advance.

HUNGARY—ITS PEOPLE AND ITS HISTORY.

CHAPTER XI.

MARTIAL-LAW was immediately established in full vigour all over Hungary. Every one suspected of the slightest leaning to liberal opinions was treated with unsparing vigour. No act was too dastardly for Haynau, who was now placed in command of the Austrian armies. The flogging of Madame de Maderspach for sheltering her own nephew, and the suicide of her husband in consequence of the disgrace, are too well known in England to need any comment.

SURRENDER OF GOERGEY AT VILAGOS

No law is now known but the will of the Emperor. He still calls himself King of Hungary, but Hungary is a kingdom no longer. She is nothing but a conquered province. The coarse jest of the soldier is heard in halls and bowers that beauty and rank once graced. There is now no Diet, no county assemblies, no press, no bar, and no pulpit for anyone but the Jesuits. All trials are held by military officers, sitting with sabre at their side, and surrounded by bayonets. All civil tribunals are abolished, all traces of the ancient constitution have been carefully effaced; thousands of young men of the best families have been forced to serve in the ranks of the Austrian army as private soldiers, the objects of daily tyranny from the brutal minions of a foreign despot; through the length and breadth of the land the voice of wailing is heard in the hamlet and hall. The youth of the country have died on the battle-field, are wandering in exile, or, worse still, are pining in prison; and in the march of the hideous ruffians who disgrace the military profession by the coarseness of their brutality, many a happy maidon had reason for ever to rue the day when the cause of her country was lost. Numerous Hunga-

rian ladies wear deep mourning, under a vow never to cast it off until their country's independence shall have been achieved. Others wear the national colours in the various articles of dress, and all decorated with bracelets and necklaces made from the coins issued during the government of Louis Kossuth. Mr. Spencer states that, whereas, when he visited Hungary in 1847, the German language was universally cultivated, in 1850 he found it as universally neglected. Everywhere he found excitement and discontent. The peasants are everywhere overawed by sabres and cannon. They cultivate their farms in sullen listlessness. All that can make life happy, or labour tolerable—liberty and security—all are gone. But Hungary is nevertheless said to be tranquil. *Solitudinem faciunt et appellant pacem.* Nothing is left but hope. Many of the country people are said still to believe, with all the glowing fervour of oriental fancy, that Kossuth has gone to the plains of Asia, and will soon return, in might and majesty, with an army of their ancestors, the Huns, to drive out the Austrian invader for ever. The red rain of slaughter has fertilised the soil; and we feel right well assured that hosts of brave men will, when the time comes, start again into action, like the sleeping warriors in the enchanted cave, and wipe out the memory of defeat and disaster, not merely in the bloody triumphs of the sword, but in the wisdom, and moderation, and farsightedness, which alone can make nations truly great.

Goergey has reaped the reward of his treachery. He lives in retirement, upon estates bestowed on him by the government, diligently employed in the study of chemistry. His name is never mentioned in Hungary but with a shudder, and will be handed down to history for the execration of posterity, with those of the Catalines and Louis Napoleons and Arnolds. Mr. Brace, an American gentleman, whose imprisonment by the Austrians last summer excited some stir, and whose sympathies with the cause of independence are characteristic of the great nation to which he belongs, has furnished the following graphic sketch of this extraordinary man, which we shall here present to the reader:—

"There is much truth in the remark, 'Goergey never had the least sympathy with either the virtues or the weaknesses of his countrymen.' A man of cold, stern nature, of few words and tremendous deed, he always laughed over the Magyar fire, and eloquence, and patriotism. Despite the falseness he displayed at last, there is something striking about his character. If he were a traitor, he was no common one. His career commenced in a characteristic way, by hanging up, when he was only a major, one of the first noblemen of Hungary for treachery, as sternly and indifferently as if the man had been a runaway drummer. The affair made a great noise, and brought his name very prominently before the public. His after course was consistent with this—as cool in a discharge of grape, his officers say, as he was at the council-board. They have told me they have often seen him, in the midst of a fearful charge around him, sitting quietly on his horse, with a pistol in hand, but not for the enemy. The moment he saw a man flinch he shot him, as unrelentingly as if he had been a dog. He seemed to others utterly cold and indifferent to what men usually long after. He always professed, amid his most splendid achievements, he would rather be teaching chemistry than leading an army. When Kossuth sent him on one occasion 200,000 guilders (100,000 dollars), to make a provision for his future, and, in order not to offend him, enclosed it to his wife, he sent it back with the remark, 'If I fall, I shall not need it, and my wife can be governess again, as she was before; if we are conquered, and I escape, I can be professor abroad; if we conquer, and I survive the victory, I need no money now!' After one of his great victories, the ministry sent him certain declarations and orders of honour; he put them aside with a sneer, 'such gew-gaws were not the things for a republic!' People have told me that, after the storming of Ofen, the only words on the lips of the people and the army were 'Goergey! Goergey!' but, with all the demonstrations before his quarters, he never even showed himself, and remained coldly within, expressing himself, that 'this very bombardment was the ruin of Hungary!' He always sneered at everybody, even the friends that idolised him; and was almost the only man in Hungary who was perfectly indifferent under Kossuth's eloquence. Amid the splendidly-dressed Hungarian officers, he always appeared in his old major's coat, and in boots which he had not taken off, perhaps, for a week. A lady told me that she met him, after the taking of Ofen, in a vile-looking coat, with a great hole in one of the elbows. She remonstrated with him for wearing such a thing. 'Poh!' he said, 'I shall be known through all my rags!' 'Ah!' said she, pointing to the rent, 'see the Diogenes peeping through the hole!' at which he seemed very unusually disconcerted. And I have no doubt the lady hit the matter exactly. It was not that he was indifferent to people's opinion. He took this very course to show his own pride. His ruling trait seems to have been a mean, selfish, pride. He was unspeakably jealous of Kossuth; and would rather see Hungary a hundred times ruined than it should conquer under him."

Kossuth and his followers were sent first to Shumla, and thence to Buda, on the 11th of April, 1850. Kossuth occupied the apartments over the barrack gate, and spent his time in laying out the garden attached to his prison, and in the study of English.

Austria threatened to occupy the Moldavian provinces of Turkey, in case the Hungarians were liberated; but on the 22nd of August, Soliman Bey came to Kossuth, announced his freedom, kissed his hand, and said, "Go; you will find friends everywhere now; but do not forget those who were friends when you had but few." The United States sent their steam-frigate the Mississippi, to convey him to America. In her he came as far as Gibraltar, and thence to England in the Madrid. Louis Napoleon, no doubt at that time meditating his *coup d'etat*, refused him permission to pass through France.

Madame Kossuth had the utmost difficulty in escaping. For months she wandered through the country, often whole days without food, and obliged to seek safety from the Austrian police in the fidelity of the peasantry. Nothing but woman's heroism and devotion could have sustained her under the almost incredible hardships which she endured. Forty thousand florins were offered by the Government for her capture, and death was the punishment marked out for those who harboured her. The following account of her arrival at the end of her weary journey, with a faithful female friend, may not be uninteresting to our readers —

"It was night when they entered Belgrade. They knocked at the door of the Sardinian Consul, who had recently been stationed in that frontier town by his King, whose whole heart sympathised in the Hungarian cause, and who had formed a friendly alliance with M. Kossuth for the freedom of Italy and Hungary. The Consul had been advised by Kossuth that two females would probably seek his protection, but not knowing them, he inquired what they wished of him? Madame L—— replied, 'Lodging and bread.' He invited them in, and Madame L—— introduced him to Madame Kossuth, the lady of the late Governor of Hungary.

"It will readily be perceived that the Consul could scarcely believe that these two miserable beings were the persons they represented themselves to be. Madame Kossuth convinced him by showing him the signet-ring of her husband. In his house Madame Kossuth fell ill, but received every possible kindness from her host. They learned that all the Hungarians and Poles had been removed from Widdin to Shumla; and, notwithstanding that it was in the midst of a severe winter, they decided upon proceeding at once to the latter place. The Sardinian Consul applied to the generous and very liberal Prince of Servia, in whose principality Belgrade is, for his assistance in behalf of the ladies, and in the most hospitable and fearless manner he provided them with his own carriage and four horses, and an escort, and in this way they started through the snow for Shumla. Their journey was without any apprehension of danger, for the British Consul-General at Belgrade, Mr. F——, had provided the party with a passport as British subjects, under the assumed names of Mr., Mrs., and Miss Bloomfield; yet the severity of the weather was such, that Madame Kossuth, in the ill state of her health, suffered very much. Often the snow was as deep as the breasts of the horses, and not unfrequently, four oxen had to be attached to the carriage in their places. A journey which, in summer, would have required but a few days, now was made in twenty-eight.

"On the twenty-eighth day a courier was sent in advance o them to apprise Governor Kossuth of their approach. He was ill; and, moreover, on account of the many plans of the Austrians to assassinate him, the Sultan's authorities could not allow him to leave Shumla, and go to meet his wife. The news of her deliverance, and her approach, occasioned the liveliest satisfaction to all the refugees; the Hungarians and Poles went as far as the gates of the city to meet this heroic martyr of the cause of Hungary. It was night when the carriage neared the city; as it entered the gates she found the streets lighted up with hundreds of lights, green, white, and red, the colours of the Hungarian flag, and was welcomed with the most friendly shouts from the whole body of the refugees.

"When Madame Kossuth descended from her carriage, she found herself in the presence of her husband, who had risen from his bed of illness to receive the poor 'Maria F——' of the plains of Hungary. In place of receiving her in his arms, M. Kossuth, overcome by feelings of admiration for the sufferings which his wife had undergone, and by gratitude for her devotion to the cause of her country, threw himself at her feet and kissed them. She endeavoured to speak and offer her husband consolation and tranquillity, while her own poor feeble heart was ready to burst with emotion. Her voice failed her, and, amid the reiterated shouts of the Hungarians and Poles, this heroic woman was carried to her husband's apartments."

Kossuth's arrival at Southampton created the most intense excitement. Crowds thronged the quay to meet and welcome him. He was forthwith taken to the Mayor's house, and, from the balcony, delivered a short speech to the people. He spoke twice again in this neighbourhood, at a *dejeuner*, at Winchester, and again at a banquet in Southampton.

Upon his arrival in London, he took up his residence at the house of a Mr. Massingherd, in Eaton-place, and on the following day he set out to Guildhall, to receive the address of the Corporation of London. Vast crowds lined the way, and greeted him with enthusiastic cheering. In reply to the address, he made one of his best speeches.

On the second day after his landing at Southampton, M. Kossuth accepted the invitation of a London committee, representing the Trades Unions, to receive an address from them at Copenhagen House, on Monday, the 3rd of November. Accordingly, on that day, about twelve thousand working men assembled in Russell-square, headed by banners, and marched in procession to Copenhagen House, where they found M. Kossuth already arrived. Temporary hustings had been erected in front of the house; and M. Kossuth, attended by the Chairman of the Central Committee, made his appearance before the vast crowd assembled round them, variously estimated from twenty-five to one hundred thousand persons, at three o'clock, when he delivered a speech from which we give the following extract;—

"Gentlemen,—I most warmly thank you for your generous sentiments of active and operative sympathy with the freedom and independence of my native land, so closely connected—as you have rightly judged—with the freedom and independence of other nations on the European continent. (Cheers.) It is to me highly gratifying to know that a large party of the present meeting belongs to the working classes. (Cheers.) It is gratifying to me, because, if to belong to the working classes implies a man whose livelihood depends on his own honest and industrious labour, then none among you has more right to call himself a working man than I so to call myself. I inherited nothing from my dear father, and I have lived my whole life by my own honest and industrious labour. (Cheers.) This my condition I consider to have been my first claim to my people's confidence, because they well knew that, being in that condition, I must intimately know the wants, the sufferings, and the necessities of the people. And so assuredly it was. It is therefore that I so practically devoted my life to procure and to secure political and social freedom to my people, not to a race, not to a class, but to the whole people; besides, I devoted all my life for many years, by the practical means of associations, to extend the benefit of public instruction to the working classes, and to forward the material welfare of the agriculturists, of the manufacturers, and of the trading men. (Cheers.)

"Among all the enterprises to that effect of that time of my life, when I was yet in no public office, but a private man, there is none to which I look back with more satisfaction and pride than to the association for the encouragement of manufacturing industry—to its free schools, to its exhibitions, to its press, and to its affiliations. Besides conferring immense material benefits, it proved also politically beneficial by bringing in closer contact and more friendly relations the different classes of my dear native land, by interesting the working classes in the public political concerns of our nation, and by so developing a strongly united public opinion to support me in my chief aim, which was conserving the municipal and constitutional institutions of my country—to substitute for the privileges of single classes the political emancipation of the whole world, and substituting freedom for class privileges—to impart to the people the faculty of making the constitution a common benefit to all—for all—in a word, to transform the closed hall of class privileges into an open temple of the people's liberty. (Loud cheers.)

"Allow me, firstly, to congratulate you on the attention which you have hereby proved that you devote to public matters and to the interests of your country as well as to the freedom and glory of humanity. May this public spirit never decrease; may every Englishman for ever feel that it is the basis of all constitutional organisation, be it under a republican or a monarchical form; that it is the public opinion of the people which must give direction to the policy of the country, and that it is, therefore, not only the right, but also the duty, of every honest citizen to contribute to the development and expression of that public opinion, of which the legislative as well as the executive authorities are, and must be, faithful representatives.

"Allow me, secondly, to congratulate you on the just and happy instinct with which, bestowing your attention on public concerns, you have seized the very point which really is the most important among all in which the mind and heart of Englishmen can be interested. That point is the freedom of the European continent. I said it in the Common Council of the city of London, I repeat it here; there is none among your internal questions which outweighs in importance the external. (Cheers.) And how may be summed up the external interests of the British Empire on the European continent? It is to be summed up in this question—By which principle shall the continent of Europe be ruled, by the principle of freedom or by the principle of absolutism? Can England, or can it not, remain indifferent to the approaching struggle and final decision of this question? And, if it cannot remain indifferent without losing its position in the world, endangering its own freedom, and hurting its own interests, with which principle shall England side—with the principle of freedom or with the principle of aggression? Shall it support the rights, freedom, and happiness of nations, or the oppressive combinations of arbitrary governments? (Cheers.) That is the question—a question the most urgent and the more important that (*i. e.*, because) no man, of whatsoever party, can dissimulate, still less deny, that the situation of France, of Italy, of Germany, of Austria, of Hungary, of Poland, and of Russia is so unnatural, so contrary to the human and national interests of the respective people, that it is utterly impossible it can endure. Yes, no man can dissimulate the conviction that France, Italy, Germany, Austria, and Hungary are already on the eve of those days when the great, and I hope final battle of these adverse principles, will be fought out. (Loud cheers.)

"By taking such a view of the brotherhood of people you are the interpreters of my most warm desires, and by assuring me to hope and to be resolved for the future, that Russian intervention in the domestic concerns of whatever country shall by England not be permitted more. (Loud cheers.) By this you have anticipated all that I, in my humble quality of a representative of the principles of freedom, in the name of my country, and in the interests of all oppressed nations, have again and again entreated from the people of England since I have been here. And here I meet again another noble idea of your address, where you say that the name of my country is linked in your prayers and in your hopes with the name of other nations. Bless you for that word? You ennoble my name, and my country's by it. Yet you speak the truth. The very moment that Russia first interfered in Hungary our struggles grew to an European height; we struggled no more for our own freedom, our own independence, but altogether for the freedom and independence of the European continent. Our cause became the cause of mankind. My nation became the martyr of the cause of European freedom in the past; of other nations it will be the champion of that freedom for the future. I, for my own part, but whom my people and the public opinion of the world consequence, great, but bible; serious

for the personification of my people's sentiments, I know where my place is I know what duties are entailed upon me I shall insure the sympathies of England by my devotion to my country's European cause England will find me faithful to that place and to those duties which my people's confidence having assigned to me, foreign violence could hinder me from exercising, but whose legitimate character no violence should destroy I but also hope that, while Hungary and I are aware of the solidarity of our cause with the cause of European freedom and independence, and while Hungary is resolved to stand manfully in its place, the other nations, and England itself, will not forget that the freedom and independence of Hungary are indispensable to the independence of Europe against Russian encroachment and preponderance, and so neither the other European nations nor England will allow Russia again to interfere in order to uphold that detested house of Hapsburg, with which, exasperated, alienated, Hungary will never, through time, have any transaction, unless to trample it, expulse it, or to hurl it in the dust (loud cheers)'

At Manchester and Birmingham he was *feted* with the utmost enthusiasm and addressed crowded audiences His last speech, previous to his departure for

He sailed for the United States in a few days afterwards, and his progress ever since has been one of unbounded triumph We have been brief in this sketch of his sojourn in England, because fuller and more detailed accounts have been given of his progress in the daily press than our limited space would allow us to insert With a short sketch of his oratory from the pen of an able writer, we shall take our leave of Louis Kossuth as a man, and confine our remarks during the remainder of the chapter to his connexion with the present position and prosperity of the cause which he advocates

'Let us say a word or two of the man and his oratory, and the eloquence for which he is so remarkable Well proportioned and good-looking his features being soft and agreeable, he is far more winning than commanding His power amongst his own people must have rested on persuasion No great man ever existed, perhaps, who did not at least fascinate those immediately around him That he has a strong will there can be no doubt but it acts by love rather than by violence Kossuth is a self sustained man

and eloquence. Upon all men
bility of any country look with
of England perhaps the least, but
as much as any other in the world.

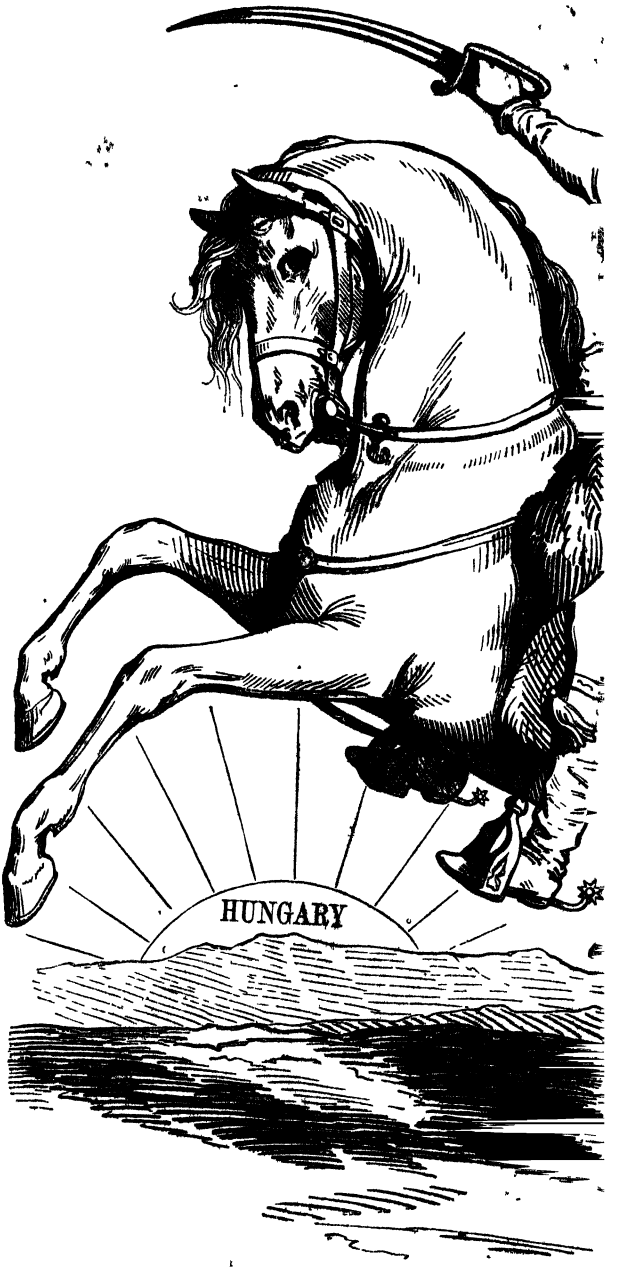
It was the terrible nature of the crisis alone that induced the high priests of feudalism to admit the clever *parvenu* to the highest seat in their synagogue. They bore him patiently, and obeyed him with reverence until all was over, then they returned like hogs to wallow in the mire of absolutism, and not content with that, they must needs cast some of the filth upon him. They could never forget that one of the first fruits of the revolution was the destruction of many of the most valuable but most oppressive privileges of the aristocracy, and the making all men equal before the law. Their hearts were never with it, and they have consequently taken the earliest opportunity of wreaking their spleen against him who animated, and directed it.

His advocacy of a republic in Hungary must also be necessarily distasteful to them, and in truth the propriety of his doing so has been disputed by many whose motives are above the reach of suspicion. This much, indeed, is certain, that a republic can never meet the wants of a country whose traditions are monarchical, and which has been accustomed to be controlled in all things by the centralised government in the metropolis. It is strange that in discussing the great political changes of our day more attention should not have been paid to the influence of these two facts. It is strange that men should look for the hardy growth of republican institutions in the land where, since the days of the Grand Monarque, the king was the state, and Paris the fountain-head and centre of power, and honour, and fashion; where the will of the sovereign has for ages regulated all things from a declaration of war down to the committal of a drunkard in a country village; where the people have ever been accustomed to pay and obey, and where the simplicity of a commonwealth must seem flat, stale, and unprofitable in the eyes of a gay and excitable population, in place of "the pomp, and pride, and circumstance" of royalty. And it is strange too that men should feel surprised at the prosperity of the model republic across the Atlantic, when they remember that the first settlers were men nurtured in the love of English liberty, grave, austere men, who were accustomed in all things to think for themselves, and act as they thought; men who feared the loss of freedom more than the solitude of the unexplored forests of the far west, more than the terror by night, the arrow that flieth by day, or the pestilence that walketh in darkness. For more than two hundred years their descendants were accustomed to elect their own rulers, to discuss their own affairs, and regulate the expenditure of their own taxes, to sit in council to-day, and hold the plough or wield the axe to-morrow. They knew nothing of monarchs, or ministers, or standing armies. They were their own rulers, and their own soldiers, and their own police. No king had ever been amongst them, and they knew well that neither king nor aristocracy was necessary to their safety, welfare, and progress. When they were forced into war, they carried on a sanguinary campaign of seven years in duration, better than any despot in Europe, with his vast and disciplined military force, his ministry, bureaux, and commissaries, could ever do it, and when all was over they elected their governors and houses of representatives, as they had been accustomed to do before, and all went as calmly, as prosperously, and as securely as if nothing of the kind had ever happened. They had received the best kind of political training—the education of experience. The case of Hungary is very similar to that of the United States, and there is every reason for believing that, inasmuch as republican institutions have now become racy of the soil in America, so also they would take root and flourish on the plains of Hungary. The county assemblies are precisely analogous to the House of Representatives for each state; the viscounts are the governors; and nothing could be easier than to turn the palatine into a president. The county assemblies were composed of men freely elected, who deliberated upon the affairs of the district; and it was they who chose the Diet, which discussed and enacted the laws which were to govern the entire nation. The influence of a monarch who was rarely seen in the country, who ruled at the distance, surrounded by bayonets, was but little felt, and any undue exercise of his power was at all times sternly resisted; in short, the parallel is complete up to the period of the revolutionary war. But here, when the Hungarians were affording the highest proof of the fitness for self-government, it suddenly ceases. The Americans were assisted in their struggle by the

most warlike nation in Europe. The Magyars, on the contrary, had to contend, single-handed, against the two greatest military powers in the world. But they had displayed no less valour in the conflict, and have left a splendid example of heroic fortitude in defeat.

The point which Kossuth has most strongly dwelt upon, is the necessity of carrying out, to its fullest extent, the doctrine of non-intervention, which has now become so great a favourite with the English people. If their loud assertion of this principle means anything, it means that they are anxious that all the nations of the world should be left to manage their own affairs, in whatever manner pleases them. It acknowledges the right to choose its rulers to be inherent in the people themselves, and no more a matter for the consideration or dictation of a foreign sovereign than the domestic affairs of a private individual are for those of the Government of his own country. But if England, while abstaining from interference herself, do not cause other powers to do so likewise, her policy, from being sound and enlightened, becomes selfish and degrading. Nations have duties towards other nations, as well as members of society towards one another. It is unwise and unjust to interfere with a man's disposal of what is his own, but it is cruel to allow another to ravish from him the fruits of his industry and labour whilst we stand calmly by. Every man who is not with the cause of freedom, is against her. To allow the interference of Russia, in the quarrel between Austria and Hungary, was as impolitic as it would have been to have interfered ourselves. Every time that we tamely suffer the triumph of brute-force over right, we do something towards the demoralization of the human species—we lead the masses to applaud and trust in fraud and violence, and to believe in the final triumph of the wrong doer. No darker cloud ever hung over the future of Europe than the Russian empire, as it is organised at the present day,—a vast extent of territory, as large as all the rest of Europe, with an immense population, thinly scattered over its almost boundless surface; a cringing, crouching, degraded, and brutalized people, whom the priests of a faith which professes to be Christian teach from the cradle to reverence the seigneur as their owner, and the emperor as the vicegerent of their God; but hardy, robust, capable of enduring any amount of fatigue, or cold, or hunger. Nearly a million and a half of these men are armed—drilled into the highest state of military discipline. Their religion is a misty and debasing superstition, their education nothing, save the use of an uncouth jargon, picked up in the discomfort of a smoky cabin. The highest duty of their code of morality is implicit obedience to the will of their superiors, and to die in its execution their surest path to the heaven of the saints. They have all the fanaticism of the Saracens, without their chivalry, their poetry, or their learning. At their head is a mendacious, slavish, champagne-drinking, gambling nobility, born and nursed in an atmosphere of tyranny, and worshipping only at the shrine of power and money. Their God is the autocrat Nicholas. His smile can set up, and heads fall at his frown. He is the caliph of the Greek Church. Never was there an organisation so powerful for evil, so dangerous to Christian civilisation and European liberty. Ages must roll over before the moral force can ever gain the ascendant in Russia—before the other nations of Europe can ever hope to act upon her by any other arguments than those of force. She presents the strange spectacle of a Government far in advance of the people, filled with the fraud and cruelty of barbarism, but in possession of the military discipline and science of western civilisation. The Czar is a man of vast projects, of boundless ambition, and unscrupulous in the use of means to bring about the end he has in view. He looks with a gloating eye upon the rich plains of India, and every year spills torrents of blood in the defiles of the Caucasus, in the attempt to get nearer to our possessions in the East. Turkey is tottering to her fall, and he wants but a European war to occupy Constantinople. Napoleon the Great, the man of far views and deep-laid projects, prophesied that Russia would never be content till the Cossacks of the Don watered their horses in the Thames. She has already blotted out one from the list of European kingdoms, and who can tell which will be the next?

Is it wise, under such circumstances, to lay a trap for our own feet—to look calmly on the growth and aggrandizement of an enormous system of brute-force, hostile to all the principles of politics and religion, for the promulgation of which so much of the best blood of England has been shed? Austria already the minion of the czar; Hungary lies bleeding at feet; and the degenerate nephew of the conqueror of Austerl and Borodino sues with 'bated breath for his approval of slaughter and proscription of the bravest and best of a gre and chivalrous nation. To curb the pretensions of the Cza to afford free course to the self assertion of national indep dence—it is not necessary that England should bombard Petersburg, and land an army upon the shores of the Bal Enough of the prestige of victory still remains to give weig to the simple expression of her opinion, even if it were backed by that instinctive deference which is always render by the vilest and coarsest, to a long course of enlighten policy, and a consistent following of the principles of truth justice. Had England acknowledged the independence Hungary early in the struggle, she would have sa her from ruin and misery, and Austria from self-degradati Russia would have hesitated to interfere in the face of su opposition. Now that these two powers have been tw suffered to annihilate the liberties of independent nations, is not to be expected that they will pause in their career conquest and annexation until all the smaller and weak kingdoms of Europe are merged under the same iron yoke.



What may be the ultimate result of the struggle now go on in Europe, it is impossible to say. The issue is, of cou in the hands of Providence and of the people. It is greatly be regretted that the latter should be so often slow to ex themselves on behalf of humanity, and should be always re with sympathy and assistance only, when sympathy assistance are well-nigh useless. When the tide has eb the boats and the men are ready; but the patriots strugg afar off with the boisterous waves, exclaim, as they sink sorrowing despair, "Ah! why did they not take it at flow!" We confess we have our doubts of the success issue of Kossuth's mission to this country and America. O he who roused the enthusiasm of the people by his win eloquence is far away, the enemies who have leagued to h him down, and blacken him with slander, remain behin instil their poison daily into the public ear. The mass the people, from want of education, of reading, and discipline, are proverbially as fickle as they are excita When the occasion which aroused them has passed away, principles which they applauded at too often forgotte disregarded, and, like an impatient audience in a theatre, tramp with impatience for the curtain to rise upon and scene and different actors. Our aim in the performance of task which is now closed has been to assist in taking this reproach from their character, and by placing before yes, however imperfectly, the great men who lived fought and laboured in the history of a heroic nation inspire an admiration for liberty and truth which shall not only enthusiastic, but lasting. When the people beg take an interest in foreign affairs, they will enlarge their sympathies and purify their own hearts, and promote growth of that "*solidarity*" which as yet, we fear, exists in name. They will feel that their interests and tho suffering humanity all over the world are identical, and will hate despotism as they hate evil. Safe in our own Island, in blest repose under the joint reign of liberty and let us not survey the storms which rage around us in a calmness and security. Neither the Christian nor the lanthropist can look upon millions of men, with imm minds, shut out from literature, from security of lif property and domestic happiness, ruled by the sabre bayonet, without the deepest emotion. Let us ask ours Can this fearful state of things be remedied by the argu of the philosopher, or the preaching of the divine prece the Author of our religion? Argument is replied to bullet, and the representative of Christ upon earth has le himself, all over Europe, with the worst abominations of c and slavery. The priests and the despots are combin gether for the destruction of everything allied to freed mind or of body. The people have cast off the church, a has sought refuge in the arms of their enemies. Crown mitres have at last forgotten their differences, and have together for the annihilation of opinion.

Notwithstanding all that has recently taken place, there is no cause for despair. Though it be true that from the shores of Biscay to the banks of the Don, absolutism reigns and the people lie wounded and beneath the yoke, the bow of promise is already hanging over the cloud. The enormous standing armies which the despots are obliged to maintain to protect them against their own subjects will soon work the ruin of their masters. The enormous sums necessary to pay and support them causes a yearly deficit in the revenues of kingdoms, where commerce languishes in the arms of lawless violence; and whether the crash of bankruptcy come next year or in ten years hence, come it assuredly will. The dry earth has not been suffered to drink up the blood of the innocent and unoffending shed on the scaffolds of Milan, and which filled up the hollows around the roots of the trees on the Boulevards. It has risen up to heaven to implore providence to avenge the wrongs of the unfortunate, and set at nought the councils of the princes of the earth. The people of Hungary are panting for a renewal in space in the France will be slow to forgive the covering of the third of December, and res of [illegible] of the struggle have been sent to die by i[illegible] let the slaughters o swamps of Cayenne. [illegible] the poor exiles wh have not wholly failed his [illegible] but he has fastened a bayo[illegible]ches in the noisom and while he opens the g[illegible]e keys of St. Pete to the *Chasseurs de Vincenn*[illegible] Holiness the Pope stabs his own subjects w[illegible]et in his girdle also butcheries and cruelties in [illegible]tes of the kingdom forth the horror and execr[illegible]e with one hand, h world. Everything port[illegible]ith the other. The temporary triumph of desp[illegible] Naples have called nearer. When it c[illegible] a of the civilised the people of England [illegible]nds a crisis, every how far the great pri[illegible]otism is bringing it Kossuth have taken root [illegible]t will be the duty o will bear fruit in their acts [illegible] America to show

It is, of course, impossi[illegible]ples enunciated the issue of an armed strug[illegible]n their hearts, an nothing which history tea[illegible]le to calculate upon clearness, as that the gov[illegible]eggle; but there is for support upon a milit[illegible]arches with so much volcano, and knows no[illegible]ment which leans engulphed. JULIA.

"Thou art, weary, perhaps," said the young Antonius to his companion, a pensive girl, who languidly reclined upon one of the rich couches that lined the spacious apartment, "thou art weary, for thou seemest to have lost thy relish for the story of the old Greek, shall I amuse thee with one of the Idyls of Theocritus, or with the eterner music of some of our own poets? Or wilt thou leave this too-heavily-scented atmosphere, and this glare of artificial light, and seek with me our accustomed seat beside the fountain? The moonlight is making a pavement of brightest mosaics beneath the avenues of limes and olives, such as the lapidary Sylvius might imitate in vain And dost thou not hear the cool plash of the water? Come, my Julia, thou art drooping to-night, the sweet air will revive thee' and the youth pushed aside, as he spoke, the scroll from which he had been reading The movement aroused the maiden from the reverie into which she had fallen, and she started up, with an evident desire to disguise her abstraction

"What! leaving me so soon, Antonius? I thought thou hadst never tired of thy noble old Grecian

[illegible] sweet, thou art the weary one I wager thee a dozen [illegible] vent the strug- heard one word of that fine passage to which I [illegible] endeavours to thy attention What ails thee of late? vided in order to restore him to his Creator's favour again—nothing less than the sacrifice in his stead of one whom they called the Son of God. The earnestness with which they spoke touched me, for tears were on their cheeks as they pronounced the name Jesus My curiosity was awakened, I told them that I had overheard their discourse, and constrained them to relate many more things to me in regard to this new doctrine There was a strange fascination about it, which seemed irresistible It appealed to my heart as well as to my head, and to my inward consciousness as no other philosophy had ever done Again and again did they repeat to me, at my command, what they had learned, until my interest becoming more aroused, I was induced to go disguised and sit as a listener at some of their assemblies"

"Thou!" exclaimed Antonius, starting up from the attitude of attention he had assumed, "thou, frequent with slaves and plebeians these treasonous meetings of the Nazarenes! My proud Julia thus lower her patrician blood! Away with it! Thou wert disgusted, I hope, and hast no inkling now after the levelling fanaticism'

"No, Antonius, I was not disgusted, never, *never* saw I anything so noble as the solemn, earnest, wrapt manner of the grey-haired teacher, or heard I anything so imposing in its persuasive eloquence, as the words that fell from his lips Our Seneca himself never gave utterance to a philosophy purer or more reasonable"

'And how comes it, interrupted *Antonius*, "that this astonishing eloquence has laid hid in this obscurity? This is not wont to be the case with true merit, and it seems thy orator has lived to hoary hairs But I forget, thou art no frequenter of the forum and how shouldst *thou* know what eloquence is?'

'But thou hast taught me the art of reasoning, Antonius, and I could not detect any sophistry in the discourse of the old man"

'And art thou ready to credit the novelties these accursed Christians put forth because thy woman's wit could not unravel their sophistries See, from beneath yon plane-tree the statue of the Stagyrite seems to frown upon thee, that thou settest thyself up to be wiser than he Rely upon it, these doctrines will not long stand sifting I have never heard of them, except among the vulgar who are *not* accustomed to give reasons for their belief, they will not among scholars and philosophers But I am forgetting my engagement with Plautus I must leave thee now, but I will talk with thee on this subject again, and ease thy mind which it delights me to find is, after all, no more heavily burdened

---

It was a day of high festival at Rome, and the magnificent city looked still more gorgeous in its holiday array The porti- fill'd with groups of earnest talkers—white bearded senators and dignified patricians, the streets were lined with a busy multitude—young boys, who had not yet donned the *toga virilis* priests in their robes of office, gambolling children, slaves hurrying hither and thither laden with delicacies for the supper of many a disciple of Apicius The public gardens were filled with revellers the statues were hung with garlands of flowers, the air rang with the sound of musical instruments Here a group was gathered round a gaming-table, there another was watching some dice-players who sat upon the broad marble edge of a fountain here a knot pressed round a band of Grecian dancing girls, there, some Roscius was calling forth peals of applause from his noisy auditors The magnificent baths were emptying forth their voluptuous loungers, who, amid an atmosphere heavy with sweet perfumes, reclining upon silver seats inlaid with ivory and cushioned with the damask of Oriental looms, and beneath vaulted ceilings, rich in all the gorgeousness which Roman architects could devise, had been storing for the exertion of the evening part of the day.

[illegible] me was endeavouring to forget that its young Emperor, [illegible] seeming humanity had, at his first accession to the throne, [illegible] the hopes of the people so high, was likely to prove him- [illegible] f Caligula Great had been the rejoicing when to his [illegible] whose imbecility had rendered him successively the [illegible] most infamous wives, succeeded the apparently [illegible] he youth, Nero But his evil propensities were [illegible] and as soon as a theatre vast enough for [illegible] itself, they were brought into full play. [illegible] ans were to witness acts of barbarity in [illegible] human and unnatural son became the [illegible] and hated as she was—a thrill of

horror ran through the public heart, and men trembled for the future which the parricidal deed presaged.

But the delight which Nero took in pleasures of a refining and softening nature, still held out a promise which the most desponding were fain to grasp. The apartments of the imperial palace echoed to the tones of his lyre; and when he showed himself in public, acting as his own charioteer—as was his constant custom—his delicate and almost girlish appearance aroused the enthusiasm of the multitude, and made them forget what was past.

The sun was still some hours high, as Antonius sauntered up and down a lofty and cool arcade, arm and arm with a friend with whom he was in earnest conversation. A sudden movement among the crowd that jostled through the thronged ways, and oft-repeated cries of "The Emperor!—the Emperor!" induced him to advance forward in order that he might see the cause of the excitement. At that moment, the imperial chariot, glittering with gold and jewels, appeared, guided by the emperor himself, who dexterously managed the fiery and impatient horses. The multitude swept aside with the utmost speed, to leave an unimpeded way for the imperial cavalcade. An old blind man, confused by the noise, and not knowing whither he was going, had advanced with extended hands half-way across the paved street, but a short distance before the advancing chariot. Antonius sprang forward to drag him back. "Let him alone!" cried the Emperor, who perceived his design, "let him alone, I will teach him to give way, since he does not choose to do it of his own accord." The hand of Antonius was on the old man's shoulder, but the plunge of the horses at that instant felled the latter to the earth. The chariot wheels passed over him, and left mangled body to be picked up by the attendants behind.

There was horror depicted on the faces of the crowd, that closed together after the passing of the imperial chariot, as the waves close behind the ploughing keel, but no execrations were uttered. Silence suddenly fell upon the hitherto noisy multitude the spirit of festivity was interrupted, and men retired to their homes to brood unseen over the outrage that they had witnessed.

A more than usual quiet succeeded the festive day, and as the twilight deepened into darkness, Julia summoned into her private apartment her two most confidential servants.

"Think you there will be no risk, Glaucus, in my going with you to-night?" said she, turning to the freed-man who had first entered.

"My mistress need fear none," he replied. "The *Via Sacra* is so retired, that it is almost empty at night."

"Then attend me in half-an-hour; Marcia will have me in readiness by that time."

Glaucus withdrew, and the female slave began at once to loosen from the head of her mistress the jewelled fillet that circled it, letting fall as she did so a luxuriant mass of rich hair upon the fair shoulders from which the upper dress had been thrown aside.

The fire with which Julia's dark eyes had once gleamed was tempered now to an unwonted softness; the pride that had lurked formerly about the lines of her finely-cut lips seemed all gone, the consciousness of her beauty's power no longer betrayed itself. The maiden's spirit was undergoing a marvellous change; it was no wonder that Antonius had of late remarked it.

Marcia proceeded to unclasp the sparkling armlets and necklace, and to unbind the rich zone about the slender waist of her young mistress. All marks of rank were carefully laid aside, and when Glaucus appeared, according to her command, she followed him beneath the carved archways and over the tessellated pavements of magnificent apartments, with as heavily a sandalled foot, and a dress in no respect different from that of the female slave beside her. They passed through a group of unquestioning servants in the inner court below, and threaded the mazes of the garden, until they reached a door in the high wall, through which they passed to a private street beyond. They hurried rapidly along, and were soon before a low-browed passage, which they entered. The ascent of several stair-ways brought them to a small apartment, partially filled by persons in the same plebeian garb as themselves. It was an assembly of Christians, met in "an upper chamber" for prayer. Julia knelt with the lowliest; she had been there often before, and had not listened in vain to the instructions of the aged teacher, she had learned humility. She hung with an intensity of interest, such as she had never known before, upon the prayer that was poured forth from the very soul of the venerable teacher, until, through the influence of its glowing fervency, she felt, when she arose from her knees, that she had been holding an audience with the Eternal. The simple hymn of praise which followed, sung with low and suppressed voices, touched her as never music of harp or viol had done—so earnest was the devotion it breathed And when the white-haired old man, bowed down with many years of toil and peril and persecution, but with an eye still flashing with his one absorbing theme, addressed the little audience with eloquent words of holy comfort and hope; when he spoke, with the wrapt ardour of one inspired, of "Christ and him crucified," of his glorying in the cross of Christ, of his readiness to be offered up, to seal with his own blood, if need be, his attachment to this most holy faith—Julia felt as if she too were willing to become a martyr.

The speaker had drunk largely of the spirit of Paul, the Apostle of the Gentiles, whose companion he had been in some of his sufferings and persecutions, and whose place he had assumed as teacher to the disciples in Rome, since the aged veteran himself was no longer able, by reason of the rigour of his imprisonment in chains, to teach "in his own hired house all that came unto him."

Suddenly the quiet of the assembly was interrupted by the tread of heavy footsteps without. In a moment more the door was thrown open, and two men entered, bearing between them a dead body. The females present shrank back with terror as they carried it past them, and laid it down in an open space in the centre of the chamber, where, having laid aside the covering of the face, they revealed the well-known features of an aged disciple who had often sat in their midst—the old man who had, but a few hours before, perished under the wheels of the imperial chariot. The mangled corpse had been thrown aside hastily by the attendant guard, and it had not been known to the Christians that any of their number had been the victim, until accident discovered it to two of them, who had sought out the body, disrobed it of the bloody clothes, wrapped it for the grave, and now bore it to the place where they knew the brethren were assembled, that fitting obsequies might be performed before they should consign it to its humble tomb. Few present had heard anything of the transaction of the afternoon; no word of it had reached Julia's ear, and she listened with a thrill of horror to the recital And when the narrator proceeded to say that the noble youth who had attempted to rescue the blind old man was Antonius Severus, Julius heard no more, the idea that he too had been crushed beneath the chariot-wheels drove the blood with one bound back to her heart, and she sank swooning to the floor.

Her attendants speedily bore her away; and when with returning consciousness she was assured of her groundless fears regarding Antonius, she was able, though still pale with agitation, to return to her home. The sudden apparition of the ghastly face of the dead man had startled her most painfully, for she had a womanly dread of such sights, unbefitting her Roman blood, which had often been the jest of her young companions when compelled by them to be present at the gladiatorial spectacles.

She ascended to her chamber—one of the loftiest apartments of the house—and was surprised to find it flooded with a ruddy glare of light. She parted the heavy drapery that fell over the window, and the glow of flames in several directions met her eye. At first she thought them only the bonfires which were closing the day of festival, but as she gazed, tongues of flame mounted high into the air, and a confused and tumultuous swell of voices came, borne by the night-wind, to her ear. The conflagration was evidently spreading rapidly, and, filled with alarm, Julia flew along the passages to the supper room, where she knew she would still find her father over his Falernian. Just as she reached the door, it was opened by Antonius, who came out, and hastily closing it behind him, advanced to meet her. As he did so, his eye fell upon her disturbed face and menial dress, which the bronze lamp, suspended from the ceiling overhead, revealed. He gently put her from him again, and holding her at arm's-length, keenly surveyed her.

"Not cured yet of your liking for the fanatical Nazarenes!" he said, reproachfully, as his hand still grasped her arm, "this will not do, Julia; you strangely forget your rank and dignity. If my expressed desire is not sufficient to deter you from exposing yourself in the public thoroughfares after night with no protection but that of slaves, for the sake, too, of attending unlawful assemblies, it would be well to ask yourself if it is no compromise of female propriety."

Julia shook off the hand that still held her arm, and drew her

fine figure to its full height, until, even in her disguise, she looked queenly.

"Can Antonius for a moment allow himself to harbour the idea that Julia would ever do anything that could call in question her maidenly dignity? I had thought his confidence too perfect for that." The tears started to her eyes, and she turned away to hide them.

Antonius was possessed of a quick and somewhat dogmatical temperament, and he felt really angry to find that his wishes had been so little regarded; he was therefore about to pass on without a further word, had not Julia detained him.

She hurriedly communicated to him her alarm, and led him to an upper window that commanded a view of that part of the city where the flames were raging. The simultaneous fires at various points were as inexplicable to him as they had been to her, and it was evident to him, from the speed with which they spread, that great danger threatened the city. Leaving Julia to divest herself of the obnoxious garb she wore, he hastened back with the tidings to the supper-room, where the guests had risen from the couches, and were gathering their togas around them, preparatory to their departure. In a few moments they were all gone, and Antonius and Fluvius, the master of the house, were left alone amidst the luxurious tables and the trains of hurrying slaves. Fluvius sought with all haste an open balcony, where he found his daughter surrounded by a crowd of frightened attendants, while Antonius hastened away to ascertain the extent of the danger. A startling scene met the eye of the gazers! lurid flames illuminated the whole sky, and clouds of murky smoke were gathering thickly above them. The street beneath was filled with flying crowds of women and children, and cries and exclamations of terror arose from them continually, as they fled fearfully by. Slaves loaded with household utensils and furniture went groaning past, and many vehicles, filled with whatever could be snatched from the doomed dwellings, thronged the thoroughfares. Hourly the light grew more brilliant, until it rivalled that of noonday; and more distracting and frightfully distinct became the sight to the occupants of the balcony. The roofs of the houses all around them were covered with persons gazing like themselves with bewilderment and awe upon the increasing conflagration.

With but little intermission, the night was passed by Julia and her father on the balcony; and as it grew towards morning, it became apparent, from the roaring and crackling of the flames, that they were making progress towards them. For hours Julia had watched for the return of Antonius, and her anxious eye had sought in vain for his well-known figure among the living tide that swept through the street beneath.

"My child," said Fluvius, "we have been long enough idle spectators, it remains for us now to look to our safety; for unless the gods interfere, the fires will reach us. Would Antonius were here, that he might conduct thee to the villa!"

"Ha! thy wish has brought him. See! there he comes!" exclaimed Julia; and the two descended together to meet him. After replying to their eager inquiries, he added that he feared there was foul influence at work, for that he himself had seen soldiers resisting all attempts to extinguish the destroying element, saying that they had authority for so doing.

"The gods forbid!" ejaculated Fluvius, "nevertheless, Antonius, I would have you bring hither your sister—she is the only one you have immediately dependent upon you for protection—and with her and Julia, proceed at once to the villa, their safety must be our first concern."

"We go not without you, father," interrupted Julia, throwing her arms at the same time round the neck of the old man.

"Nay, my child, I must remain here while my presence can be of any avail. What could these terrified menials do towards the preservation of my property? I will follow when I can do no service here."

Julia acquiesced; Antonius brought thither his sister, and in a short time the chariot was awaiting them in the court below.

It was with great difficulty that the charioteer could make his way through the obstructed streets, and it required his utmost pep in check the impatient horses, frightened as they he roaring and flashing of the fires. They met with ays in their slow progress towards the city gates, and od many sights which made them turn away, sick at antic horses plunged madly about—children were ... from whom they had been separated—and distracted mothers, as wildly searching for their children.

The sun was just beginning to touch the turrets of one of the imperial palaces, near which they passed, when a strange sight caught the eye of Antonius. He grasped the arm of Julia, and in speechless indignation pointed to the open tower where stood the Emperor, arrayed in the habit of an actor, apparently reciting something with a tragic air, and accompanying himself on the harp, which he held in his hand. To their eyes he seemed the demon of the scene, gloating over the destruction going on around him.

Antonius felt a shudder pass over Julia's frame, and his own brows knit sternly, as he said—"Talk of a just God in heaven! either there is no God, or he concerns not himself with the affairs of men, but leaves them to the government of chance. The blind old man who perished yesterday, I have been told, was a model of virtue, and a Christian; yet is he allowed to be crushed beneath the wheels of yonder wretch, who lives prosperously on, to riot as he now does on human agonies. Call you this justice?"

But Christians believe in a judgment after death, where all these seeming contradictions will be righted," said Julia, earnestly. "Before no fabled Rhadamanthus will yonder wicked prince be called on that day to stand, but before that holy and just being, who will reward him and his victim each according to their several deeds."

With all the speed Antonius could make, it was several hours before he could return again to the city; the villa being some Roman miles distant, and the detentions in the thronged way being many. Fearful was the havoc the insatiable element had made during his absence. He passed near the house where he and his orphan sister had dwelt; it had been swept over by the flames, and everything combustible about it had been consumed. He sought the street in which Fluvius lived, but the flames were raging throughout and all around it so frightfully, that he was driven back, and all attempts to approach it were in vain for many hours. Not until the close of the day, when the work of desolation in that part of the city had been completed, was it safe to enter into the midst of the smoking ruins.

During all this time, had Antonius been searching unsuccessfully for Fluvius among the maddened crowds that rushed distractedly through the streets; and now, over prostrate columns and broken architraves—over demolished porticoes and the dismembered wrecks of Rome's proudest works of art—he urged his difficult and dangerous way towards the desolated mansion, so late the abode of luxury, and the scene of the most generous hospitalities. The massive walls were standing uninjured, but begrimed with smoke, and the interior was an entire wreck. He thought to find his friend lingering about his ruined dwelling; but he sought in vain. Bands of plunderers were at work, picking up what the flames had failed to consume. The smouldering fire was still gleaming up fitfully, and he turned away to the garden, still light as day, notwithstanding the approaching night, from the conflagration raging beyond. The heavy foliage was shrivelled—the shrubbery trampled down by hundreds of feet—the statues thrown from their pedestals—the basin of the fountain emptied of its water and filled with blackened cinders.

He pursued his way, in the hope of finding Fluvius, or some of the household slaves who could give some tidings of him. Loud lamentations at length broke upon his ear, and following the sound, he soon discovered a group of the latter in a remote part of the garden. The cause of their grief was quickly explained: they had seen their master enter the house after the flames had seized upon it, to secure, as they supposed, some scrolls on which he set a high value, and which, in his confusion, he had forgotten, and they watched in vain for his return. They had rushed into the burning building to rescue him, but the suffocating smoke had driven them back, and they could do nothing to save him. He had fallen a sacrifice, and his own beautiful home had proved to him a funeral pile.

(To be concluded in our next number.)

HEIGHT OF MOUNTAINS IN GREAT BRITAIN.—It has usually been considered that Scawfell and Helvellyn, in Cumberland, are the highest English mountains; but from the measurement of the Ordnance surveyors it appears their altitudes are surpassed by two other mountains in Yorkshire—Whernside and Ingleborough, the former of which is 4,050 feet and the latter 3,987 feet above the level of the sea.

EMILE GIRARDIN.

THE recent *coup d'état* in France has not merely affected the men of the sword, but the men of the pen. Nor do we wonder at this. No despotism can last where free thought exists. The ruler who would reign despotically must gag the press; otherwise, he would seek to rule in vain. Napoleon the Great was so conscious of this, that to repress the irony, and eloquence, and ready wit of Madame de Stael, was a matter he deemed of the first importance. Napoleon the Little, in the same spirit, has exiled Emile Girardin from the land of his birth. Nothing exists so powerful in this world as a free press. We do not wonder, then, that in France the tyrant of the hour should seek, by brute force, to subdue—what can never be subdued for long—the written and spoken thought of man.

Emile Girardin has long been known in France—aye, more, in Europe—as the conductor of the *Presse*, a journal which, till the 24th of June, 1848, had a circulation of upwards of 70,000 subscribers. When Paris was placed under the dictatorship of General Cavaignac, and was declared in a state of siege, a great change was made in the state of the press. The caution-money and the stamp having been done away with imme-

M. EMILE GIRARDIN.

diately after the revolution of February, a host of newspapers sprang into existence. They were of all shades and characters, and trusting to their large circulation for a remuneration, they were sold at the lowest possible price. A tolerably-sized paper could be had from a halfpenny to a penny. In June, the caution-money being revived, more newspapers ceased to appear. At the same time, a number of reactionary and revolutionary journals were also suppressed. The most remarkable of these were the *Presse* of Emile de Girardin, and the *Assemblée Nationale*. The loss experienced by the proprietors of these newspapers was of course very great. The *Presse* gave employment to a great number of persons. Almost 200 were employed in delivering it to subscribers and selling it in the streets, and about 600 or 700 were engaged in printing and publishing and writing for it. We do not know what was the number of persons connected with it when Girardin's journal was suppressed by Louis Napoleon. Possibly its circulation may not have been so great; but still it was large—so large as to be a power which Napoleon was afraid to tolerate. As a business paper the *Presse* held the first rank; and its money and commercial articles were written with the greatest care. In general and political news it nearly equalled the *Debats*—a paper which has been supposed to stand at the head of the French press.

But we must now speak of the editor himself. Girardin is, perhaps, the cleverest newspaper writer in France. Any cause he undertakes has in him a most powerful supporter. He spares neither time nor pains. Of most active habits, he works fifteen or sixteen hours a day. His opponents tremble at his biting sarcasms. A man of great courage and energy, he gives no quarter. He had much to do with the downfall of Louis Philippe. This he did by writing on finance, and thus attacking the weak points of the French Government. He clearly demonstrated that, unless some change was immediately made, France would become bankrupt. To his political opinions we can not give much praise. Self has always predominated; and the only wonder is that he has never become entangled in legal prosecutions. The style of M. Girardin is very difficult to foreigners. In some respects it resembles that of M. Dumas, his articles being often composed of long strings of detached words and sentences. The difficulty to persons not thoroughly conversant with French consists in the inversions and entanglement of his style, which often cause his meaning entirely to escape the reader.

Girardin, though thus the victim of injustice, does not

retire beaten from the contest. It was rumoured that he was going to America; a tempting offer having been made by the proprietor of a French newspaper existing in that country. A later account says that he will establish in Belgium a paper, to which we doubt not that his popularity will ensure [illegible]. The literary man in France has a different position [illegible] which he has in this country. The anonymous there does not exist—a writer signs his name to his articles. Consequently he writes in his best style, and aims at brilliancy and power. If he be successful, his name becomes familiar. It is a possession in itself. It brings to him riches and rank and fame. In England the literary man has no such inducements. To spur him there is no such golden future. His name is never heard. Through life he wears a mask, and his personal existence is never known. It is only in France, then, such men are principalities and powers, before which the proudest representatives of ancient dynasties turn pale, and to which all men submit. And it is only in France, then, Captain Sword is compelled to urge war with Captain Pen—a war difficult for brute force to continue long—a war in which its defeat is sure.

We have spoken of the power of the press in France as that which is its due; but we must make an exception; we must not be understood as speaking in praise of lighter French literature. The best exponent of the feelings and manners of a nation is to be found in its lighter works of fiction; for they at once take their colouring from the ideas prevalent at the time, and tend also to reproduce them. The French, however, protest strongly against any such criterion being used in judging of them. And well they may, for it would rank them in the lowest scale of morality as a nation. There is a story told of a traveller who, having hastily to quit Paris, and wishing to take some books to read on the road, selected, without examination, some thirty or forty volumes with the most inviting titles; but, on opening them, they proved to be so thoroughly licentious and disgusting, that the traveller threw them out of the carriage window to escape being suspected of reading works so utterly profligate. Things have mended somewhat since then, but the Parisian press still teems with publications of the most demoralising tendency. Such of them as are translated into English are not only the best, but also the least objectionable, of their class; but anyone reading even them may picture to himself the low tone of morals prevalent in France. The drama is quite as bad; and some years ago the most popular light piece on the Parisian boards was one in which three of the characters were *aux petit soins* with each other's wives. Yet, in spite of all this, it is affirmed by a good authority that the immorality said to be so prevalent in Paris is almost wholly confined to the extremes of society, and that no better wives are to be found than those of the middle classes.

PEACE OR WAR?—We are not inobservant of the talk of many of our "Peace Society" friends. But in our grave judgment the tendencies of not a little of that talk are anything but wise, anything but *humane*. We have a deep horror of war—of the war which destroys by the sword. But we have a deeper horror still of the war that destroys by the many thousand forms of lingering death that are ever taking place beneath the dark wings of the demon of absolutism. To die in the battle-field may be terrible—to die in the night, and loneliness, and foulness of the dungeon is a thousand-fold more terrible. We lament that thousands should perish as seamen or soldiers; but we lament with a sadder grief that millions should be dwarfed in mind, corrupted in heart, thrust down from their place as men, to be used up as so much mere material—and all that a certain family may rule, or that some lunge possessor of power may continue to possess it. Absolutism is the upas tree of the mind. It inverts every principle of morals. It knows nothing of religion except as an engine of state. Man ceases to be man as subject to its pressure. We have no wish to see the world at the bidding of such masters. The cost must be great that should not be freely incurred to put it in far other hands. To bear with absolutism, wherever it can be put down, is to be false to humanity and to God.

THE GREAT EXHIBITION.

THE Americans are getting ready their Exhibition to be held next summer. It will not beat that we held in Hyde-park; but, for all that, it may be a very successful one. We trust it may be so. We trust that it may foster the spirit of good-will which our own intended to cherish among the nations of the earth. We trust that it may promote the reign of industry and peace, and human brotherhood.

But our readers may wish to know what has become of the Crystal Palace. That, and its wonders, they cannot have forgotten by this time. Some curiosity respecting it must prevail in the minds of the millions who gazed upon its pomp and splendour. We believe that we may state, for their gratification, that the Crystal Palace may at last be said to be cleared out. By this time every package is gone, all the partitions removed, and the vast area open from end to end. In a few days the public will no doubt be admitted once more into the interior. They will be able to contrast the present deserted aspect with what it was a few months ago, and to estimate how far the gigantic structure is worth preservation, and what purpose of utility, amusement, and instruction it may serve. The wooden panelling which closes in the ground-floor is now exposed, and looks rather unsightly. Many of the columns, too, have their lower parts unpainted, for the work of decoration was overtaken by the exhibitors bringing in their goods, and the evidences of the rapidity with which the preparations for the opening were carried forward are now bared to the eye of the most cursory spectator. While the public are thus about to test by actual inspection whether they will keep the Crystal Palace, the Government are collecting such information upon the subject as may be demanded from them when it comes on for discussion. The Lords of the Treasury have appointed a commission of three members to ascertain the cost of purchasing the building, of keeping it in repair, of making it a permanent structure, of removing it to some other situation, and generally, the purposes to which, if retained, it could best be applied. The commission consists of Lord Seymour, Sir William Cubitt, and Dr. Lindley, and it is now actively engaged in taking evidence on all these points. Lord Seymour, says the *Times*, has hitherto shown far more affection for the iron [illegible] in front of the Crystal Palace than for one of the greatest architectural achievements of his age, but he has recently given some tardy evidence of regard to public opinion, which induces us to hope that at the last moment he may hesitate to incur the obloquy which after times will attach to the destruction of such a building. At the Society of Arts the series of lectures suggested by Prince Albert is in course of delivery. Dr. Whewell has in eloquent language expounded the general principles and philosophic results of the Exhibition. Sir Henry De La Beche has given an elaborate review of the minerals and mining processes displayed. Professor Owen and Mr Jacob Bell have discoursed before the Society on the departments of the Exhibition, of which they were most competent to treat, and Dr. Lyon Playfair has again, from the chemical display in Hyde-park, enforced his views on industrial education. The intention of the Government with reference to the construction of a National Gallery in or near Hyde-park, the necessity which exists for remodelling the School of Design and providing more suitably for the accommodation of the students; the crowded state of the British Museum, which renders more space unavoidable, are all considerations more or less mixed up with the disposal of the surplus, and which point to a combined movement, whereby those closely associated interests may be brought together and appropriately provided for. The Royal Commission possess under their new charter the most ample powers, and the tendency at present seems strongly in favour of concentrating round the Crystal Palace collections and institutions which would bring into closer and more intimate relations with each other the most eminent men in science, in art, and manufactures, all over the world. Under the care of Lieutenant Tyler, the Trades' Collection is making rapid progress. There is little doubt that this trades' collection will be preserved from becoming a mere useless show buried under glass cases. Every means will, it is said, be used to render it a really practical thing, the rendezvous of all novelties, accessible to experimentalists, and free from the deadening influences of an antiquarian character. Sir Stafford Northcote is preparing for the Royal Commission an elaborate report, in which a large and highly interesting mass of statistics connected with the Exhibition will be included. Almost the only point on which

re still remain much in the dark is the statement of expenditure. There is one subject of unmixed satisfaction to the promoters of his great undertaking, and which now, at the close of their abours, they are permitted to realise. The foreign exhibitors have cleared out of the building, on the whole well pleased with he treatment which they have experienced while their contributions remained there. The handsome presents from the French Government to the Prince Consort, Lord Granville, and Mr. Dilke, are evidences of this feeling among our nearest neighbours. The complimentary letters from foreign commissioners, which from time to time have been published, are further proofs of this happy feeling, and even the following return of presents given to he police in charge of the building, is not without its significance and interest in the same direction.—In money from France, £28 12s.; Great Britain, £16 2s. 6d.; Portugal, £5, North Germany, £5, Canada, £3 3s., China, £1; East India, £30 (to Superintendent Pearse), amounting altogether to £88 17s. 6d; besides other presents of shawls, bonnets, pen-knives, snuff-boxes, &c., distributed, with the above exceptions, to eleven sergeants and seventy-three constables. The medals awarded at the close are now in rapid progress of distribution, and the dissatisfaction which some of them, not always unfairly, created, has gradually given way to a feeling of acquiescence in the general impartiality of the decisions. When another exhibition, however, takes place, it seems extremely doubtful whether, after the experience of 1851, any awards of prizes will be attempted. An ingenious discovery of Wheatstone's, improved by Sir David Brewster, has enabled the skilful photographer to produce pictures of the Exhibition as complete in everything but colour as those formed upon the retina of a spectator's eye. You have the image of every object as it stood, its amount of projection, the atmosphere and perspective of the interior, all realised before you with the vividness of an actual scene, though with a spectral effect It is he place as it would be seen by moonlight. The philosophic explanation of this singular discovery would occupy more space than we can now conveniently devote to it, and a personal visit to Mr Claudet, the well-known photographer, in Regent-street, will be the simplest method for all who are interested in this subject to gratify their curiosity. Here it will be sufficient to say that he effect is produced by taking two Daguerreotype or Talbotype impressions of the same object, at an angle corresponding with hat at which you look with each eye. These pictures are placed n one frame, and slid into an instrument called a stereoscope, which somewhat resembles an opera-glass in shape On looking at them through the stereoscope the two pictures are seen as one, and that, to use a bold expression, looks exactly like the ghost or spectrum of the original to which it refers. Wheatstone's discovery is now about twelve years old, but the remarkable application of it which we now record, and its extended publicity, are due to the Great Exhibition, where the stereoscope was brought by an ingenious French optician.

IGNITION OF NATURAL GAS ON CHAT MOSS.

A CORRESPONDENT has favoured us with the following:—"Not having seen any account of the ignition of natural gas on Chat Moss, I beg to give you the result of my visit there a few weeks since. It appears that the gas has been brought to light by the process of boring for water. A short time ago the workmen commenced, and for the first sixteen feet the boring was through moss and mossy substances; then came about sixteen feet of marl; after which there were two or three feet of sand; and whilst scooping through this portion of the earth the gaseous matter made its appearance. The first indication of it was by a sudden noise or report, though not very loud, accompanied by a slight sulphurous smell. A stream of gas then floated along the surface of the ground, and a lighted candle having been applied, the gaseous air immediately took fire, and was converted into a blaze of considerable dimensions. A long pipe, of about ten or twelve inches in circumference, was then procured and inserted in the ground for two or three feet in depth, and ascending upwards for about thirty-five feet. The gas, being thus conveyed above the level of the neighbouring forest-trees, is allowed to burn with all its force, and exhaust itself in the desert air. I was told, that it had been burning for the previous week, with one or two short intermissions, when the flame was extinguished by the high wind and storms, which are of no ordinary character within the confines of Chat Moss. On Wednesday night the flame appeared to be eight or nine feet in length, and had a yellowish cast, mingled occasionally with beautiful tints of blue; and the light thrown out by it was strong enough to enable me to see the time by my watch at a distance of about one hundred yards. On putting my ear to the pipe the sound of the gas travelling through it was distinctly heard, and resembled the noise that would arise from a quantity of water rushing along. I am informed, that a similar bore has since been made on the Moss within two hundred yards from the same spot, but not with the like result; no gas or gaseous matter being discovered. I send you this statement simply as facts, without troubling you with scientific comment. To me, the blaze of light was curious, and the whole scene interesting; but what is the nature of the gas or its particular qualities? Whether it arises from decomposed trees and vegetable matter, or from mines of coal or cannel, or from the vasty deep, or how near akin it is to the oldfashioned Will-o'-th'-wisp, I give you not my speculations. I simply record an account of my visit. I may add, that the *locus in quo* is on the right side of the railway as you proceed from Liverpool to Manchester, and within two hundred yards of the Barton oss-station."

A MERRY HEART.

BY CHARLES SWAIN.

'Tis well to have a merry heart,
However short we stay;
There's wisdom in a merry heart,
Whate'er the world may say
Philosophy may lift its head
And find out many a flaw,
But give me the philosophy
That's happy with a straw!

If life but brings us happiness—
It brings us, we are told,
What's hard to buy, though rich ones try
With all their heaps of gold!
Then laugh away—let others say
Whate'er they will of mirth!
Who laughs the most may truly boast
He's got the wealth of earth.

There's beauty in a merry laugh—
A moral beauty too—
It shows the heart's an honest heart
That's paid each man his due.
And lent a share of what's to spare
Despite of wisdom's fears,
And made the cheekless sorrow speak,
The eye weep fewer tears.

The sun may shroud itself in cloud,
The tempest-wrath begin,
It finds a spark to cheer the dark,
Its sunlight is within;
Then laugh away, let others say
Whate'er they will of mirth,
Who laughs the most may truly boast
He's got the wealth of earth!

THE ANCIENT USE OF A KISS.—A Roman woman in the ancient time was not allowed to drink wine, except it were simple raisin wine; and, however she might relish strong drinks, she could not indulge, even by stealth: first, because she was never intrusted with the key of the wine cellar; and, secondly, because she was obliged daily to greet with a kiss all her own as well as her husband's male representatives, down even to second cousins; and, as she knew not when or where she might meet them, she was forced to be wary and abstain altogether, for had she tasted but a drop, the smell would have betrayed her. "There would have been no need of slander," says Polybius. So strict were the old Romans in this respect, that a certain Ignatrus Mercurius is said to have slain his wife because he caught her at the wine cask—a punishment which was not deemed excessive by Romulus, who absolved the husband of the crime of murder. Another Roman lady, who, under the pretence of taking a little wine for her stomach's sake and frequent infirmities, indulged somewhat too freely, was mulcted to the full amount of her dowry.

MISCELLANEA.

DOMESTIC LIFE.—Pleasure is to a woman what the sun is to the flower; if moderately enjoyed it beautifies, it refreshes, and it improves—if immoderately, it withers, deteriorates and destroys. But the duties of domestic life, exercised as they must be in retirement, and calling forth all the sensibilities of the female, are perhaps as necessary for the full development of her charms as the shade and the shadow are to the rosé, confirming its beauty, and increasing its fragrance.

SELF-KNOWLEDGE—Who seeth not how great is the advantage arising from this knowledge, and what misery must attend our mistakes concerning it For, he who is possessed of it, not only knoweth himself, but knoweth what is best for him. He perceiveth what he can do, and what he cannot do; he appliеth himself to the one, and gaineth what is necessary, and he is happy; he attempts not the other, and, therefore, incurs neather distress nor disappointment.

ERSKINE puzzled the wits of his acquaintance by inscribing on a tea-chest the words "*Tu doces.*" It was some time before they found out that the wit of it lies in the literal translation—"Thou tea chest."

THE CRISIS OF AFFAIRS.—Certain editors are always writing about the "crisis of affairs," and we believe no editor could write unless he had a crisis; but what the editor of the *Go-a-head-Journal* really calls a "crisis of affairs" is—"Having to write whilst the baby is crying—your wife is asking you for the hundreth time what yo will have for dinner—the butcher is d claiming in the hall, loud enough for the Deaf Asylum to hear him, that he will not give any more credit—the servant is scrubing the floor over head—the water is coming into the cistern—two hurdygurdies are playing opposite your window —and the printer's devil is knocking at the door for copy. That is something like a 'crisis of affairs,'" he says, "which America may thank its stars it isn't the editor of a paper, or else it might be troubled with such a crisis regularly once a week."

HOW TO GET IT.—The following is not new, but it is both good and true. Parents, "tame them to death," themselves the cause —Mother I want —I haven't got any —I know there's some I saw it when you er—Well, you don't hurts children. Child ing), I do want a piece; mother, mayn't I have a piece? Mother—Be still. I can't get up now, I'm busy. Child—(Still crying.)—I want a piece o cake. Mother—(Rising hastily and reaching a piece.)—There, take that, and hold your tongue! cut it up quick. I hear Ben coming. Now don't tell Ben you've had any. (Ben enters.) Child—I have had a piece of cake; you can't have any. Ben—Yes, I will; mother give me a piece Mother—There, take it, it seems as if I never could keep anything in the house. You see, sir, if you got any more. (Another room.) Child—I've had a piece of cake! Young sister—Oh, I want some too. Child —Well, you bawl, and mother will give you a piece; I did.

ONE WAY TO NULLIFY A BAD LEASE.—There is a shrewd and wealthy old Yankee landlord away down in Maine, who is noted for driving his "sharp bargains"—by which he has amassed a large amount of property. He is the owner of great number of dwelling-houses, and it said of him that he is not over-scrupulous in his rental charges whenever he can find a customer whom he knows to be responsible. His object is always to lease his houses for term of years, to the best tenants, and get te utmost farthing in the shape of rent. A diminutive Frenchman called on him last winter, to hire a dwelling he owned n Portland, and which had long remained mpty. References were given, and the Yankee landlord ascertaining that applint was a man "after his own heart" for tenant, immediately commenced to "jew" im. He found that the tenement appeared to suit the little Frenchman, and he placed an exorbitant price upon it; but the lease was drawn and duly executed, and enant moved into his new quarters. Upon he kindling of fires in the house, it was found that the chimneys wouldn't "draw," and the building was filled with smoke. The window sashes rattled in the wind at night, and the cold air rushed through a hundred crevices about the house, until now unnoticed. The snow melted upon the roof, and the attics were drenched from leaking. The rain pelted, and our Frenchman found a "natural" bath room upon the cellar-floor—but the lease was signed, and the landlord chuckled—"I hav ben vat you call humbug vis zis vile *maison*," muttered our victim to himself a week afterwards—"but *n'importe*—ve sall see, ve sal see!"—Next morning he rose bright and early, and passing down town he encountered the landlord.—"A-ha! *Bonjour, monsieur*," said he, in his happiest manner. "Good day, sir. How do you like your house?" "Ah! Monsieur—elegant, *beautiful*—magnificent! *Eh bien, Monsieur*,—I hav but ze ono regret—" "Ah! What is that?" "Monsieur—I sal live in zat house but tree little year." "How so?" "I have find, by vot you sal call ze *leese*, you hav give me ze house for but tree year, and I hav ver mooch sorrow for zat." "But you can ..ave it longer, if you wish—" "Ah, Monsieur—I sal be ver mooch glad if I can hav zat house *so long as I please*—eh, Monsieur?" "Oh certainly—certainly, sir."

Tres bien Monsieur! I sal walk right to your offees—an you sal give me vot you call ze leese for zat *maison* jes *so long as I sal vant ze house.* Eh, Monsieur?" "Certainly, sir. You shall stay there your life time, if you like." Ah, Monsieur, I hav ver mooch tanks for dis accommodation." The old leases were destroyed, and a new one was delivered in form to the French gentleman, giving him possession of the premises for "such period as the lessee may desire the same, he paying the rent thereof promptly," &c., &c. The next morning, our crafty landlord was passing the house, just as the Frenchman's last load of furniture was being started from the door; and an hour afterwards a messenger called on him with a "legal tender" for the rent for eight days, accompanied with a note as follows: —"Monsieur, I hav bin shmoke—I hav bin drowned—I hav bin frees to death in a period as

as so I
v give you so key]—*Bonjour, Monsieur*" It is needless to add that our Yankee landlord has never since been known to give up a bird in the hand for one in the bush!

ANSWERS TO CORRESPONDENTS.

MALCOLM writes word he is a married man, aged 31, and wants to know if he has any chance of getting a situation in America as a draper's assistant. We answer, none whatever. We recommend none to go to America unless first-class workmen, and they can get work more easily, and live quite as well, at home.

S. A. wishes to acquire conversational powers. He says "I have a larger amount of knowledge perhaps than most I meet with, yet I show so wretchedly in company, I am ashamed to go into it. My sentences are so undignified, and clumsily, and often tardily, constructed, that nothing can be more remote from elegance." We can only recommend S.A., to go more into society, and to seek to talk. Practice makes perfect. He can write very well, and, if he accustom himself to talking, in time he will speak very well.

W. F.—If you wish for THE WORKING MAN'S FRIEND in Melbourne, you must get some bookseller there to procure it for you as it comes out in volumes.

W. W. S.—You had better get some bed-room cheap, and then join an institution like the Whittington Club, Arundel-street, Strand, where you can take your meals, and have access to lectures and classes, and books, besides the magazines and newspapers of the day.

JAMES JACKSON.—Pontifex Maximus is a pagan title, and was assumed by the Emperor for time being. Pope Alexander VI. died of poison.

COMUS.—An Index is published to THE WORKING MAN'S FRIEND.

WILLIAM GRIFFITH.—The latest accounts from Australia make no mention of a want of shoemakers. But we learn from the immigration agent at New Zealand that there is a demand for them there.

J. E.—The price of Jonathan Dymond's essay on the "Principles of Morality" is 4s. 6d., it is published by Charles Gilpin.

S. J. B.—It is difficult to say what the Ecclesiastical Titles Bill empowers the Attorney-General to do. Certainly, at present no steps have been taken under it.

REV. THOMAS TAYLOR.—In the last number of the "Colonization Circular" we learn that an extensive establishment has been formed at Sydney for the reception of orphan immigrants, and that arrangements have been made for the reception into it of all UNMARRIED FEMALES who may come to the colony unaccompanied by friends or relations. There is a matron in charge of the establishment, under whose care the females will be placed; and they will receive the advice and assistance of a committee, comprising clergymen of the Church of England, the Church of Scotland, and the Church of Rome, and other members who, from their official position, or general experience, are well qualified to form a correct opinion of the characters of applicants for servants, and to advise immigrants accordingly as to the engagement at which it would be most conducive to their interests to accept. We have no later information on this subject.

JOHNSON B.—Facts are in favour of the financial legislation of later years. In spite of reductions of taxation year after year, the receipts keep up almost to the highest point at which they ever reached. A more gratifying picture still is the diminution of expenditure, which is carried so far by judicious retrenching, as well as by the constant falling in of the expensive leases left upon the country by previous misgovernment, as to leave as a surplus upon the year, of income over expenditure, of more than three millions and a half pounds sterling—the greatest amount ever yet known or realisable, even in the days of the abandoned stinking fund.

ADOLPHUS.—You have read himself sufficient Latin to understand the Latin phrases in general use without the aid of a master. All he needs is a grammar and dictionary.

HAMILTON.—The Lollards were usually regarded as disciples of Wycliffe, but they seem to have been rather a sect of foreign origin, whose opinions are guessed coincident with those of Wycliffe. The name is derived "probably from ... Lollhard, the German Reformer, who ... at Cologne in 1322, for holding opinions ... similar to those held by the English Lollards ... thirteenth century.

CHINA AND THE CHINESE.

THE LANGUAGE, LITERATURE, AND RELIGION OF CHINA.

CHINESE FAMILY PRESENTED TO THE QUEEN, IN 1851.

According to tradition, the ancient mode of communicating ideas among the Chinese was by knotted cords, employed to express the will of their sovereigns, and aid in social intercourse. The next step was the invention of symbols, about two thousand six hundred years before the Christian era, and appears to have been suggested by appearances in the heavens, the footsteps of birds and beasts on the sand, and the veins on the back of the tortoise. The present system of writing, so far as regards the formation of the characters, originated from various sources. One was a resemblance to natural objects, in which any of them were described by rude imitations; such as an idle schoolboy among us will sometimes trace on his slate, but which requires the appendage of "a mountain," "a moon," or "a cat." Another was from comparison, or a borrowed use of words, which have hence acquired a literal and a figurative meaning, as the character for "a fierce boar" denotes also "a brave warrior." Others were the association of ideas, reversing or inverting the symbol, and a variety of modes, the detail of which would not interest the reader. The elementary principles of the language, based on pictorial representations of familiar objects, and abstract conceptions symbolized, are two hundred and fourteen; or roots, the simplest form to which a character can be traced. Its oral properties consist of four hundred and eleven monosyllables, modified by five tones. "Symbols," it was remarked by a late eminent Chinese scholar, the Rev S Kidd, "Symbols presented to the mind in conversation, or to the eye in reading, constitute more valuable vehicles of thought than alphabetic signs, and are, moreover, of great importance to the preservation of language in its original purity. China, though the subject of numerous political changes, which generally exercise corresponding influence over modes of speach, has retained the same written tongue through all periods of her history. It is, doubtless, owing to the symbolic mode, that there are not as many written languages as provincial dialects, and that one medium, addressed to the eye, has been, for many centuries, understood through out China and several neighbouring countries."

The Chinese have their figures of thought in composition, as well as ourselves and other people. Two or three instances cannot fail to be acceptable. They have, for example, comparisons whereby instruction or reproof is veiled under the form of allegory. Mencius, a disciple of Confucius, desirous of convincing the sovereign that it was his own fault if he did not acquire universal dominion, proceeded in the following manner:—"'Should any one say to your majesty, I have strength to raise three thousand castles, but am unable to take up a feather; I can discern the smallest atom, but cannot see a cart-load of hay, would your majesty credit his assertion?'—The *king*. 'Certainly not; it is an absurdity.' 'Yet,' replied *Mencius*, in what other light can the conduct of your majesty be viewed, who takes care of animals, but utterly neglects human beings. That you do not extend your dominions is, therefore, not because you are unable, but unwilling.' The king inquired the difference between unwillingness and inability. *Mencius* 'Should your majesty command your servant to haul this mountain into the sea, he would justly reply, 'I am unable.' His inability would excuse his disobedience. But if, when ordered to pluck that flower, he should return the same answer, his disobedience would arise from unwillingness, not from inability. Your majesty's conduct is exemplified not in failing to remove the mountain, but in refusing to pluck the flower.'"

When conversing with another prince, whose attention he wished to direct to his misgovernment, Mencius related a parable, which will, doubtless, remind the reader of Nathan's appeal to David:—"'One of your majesty's servants entrusted his wife to the care of a friend during his absence at Tsoo, and found her on his return perishing with hunger and cold. What ought the husband to do?'—*The king*: 'Discard his perfidious friend.'—*Mencius*: 'What must he done to a superior officer who cannot rule those under his control?'—*The king*: 'Let him be deposed.'—*Mencius*: 'And since there is no regular govern-
t within the borders of your majesty's dominions, how is
vil to be corrected?' The king, without replying to the
turned aside, and entered into conversation with his
ants."

e following is a specimen of another kind of composition.—

"The philosopher perambulating a mountain forest, approached a tree adorned with noble branches and luxuriant foliage, beneath which woodmen stood with their axes, but did not attempt to cut it down. On inquiring why the tree was permitted to stand, he was told it was useless, and hence it was allowed to complete the period ordained by heaven. The philosopher left the mountain, and visited an old friend, who was delighted to see him, and ordered a goose to be killed for his entertainment. The servant said, 'There are but two, sir; one dumb, and the other possessed of its natural voice; which am I to kill?' 'The dumb one,' replied the master. On the morrow the disciples of the philosopher asked him where he would choose his position, since the same reason—the want of utility—was alleged for the preservation of the tree and the destruction of the bird. Their master, smiling, said: 'If I pursue a medium between possession of talent and the want of talent, I shall appear to be what I am not, and how then can I escape trouble? But if, by reason and virtue, as in a magnificent chariot, I ascend into the presence of the great Parent of the universe, controlling affairs, but not depending upon them, I can never be involved in calamity."

The Chinese have many proverbs. The "excellent sayings," as they are called, of the Chinese philosophers, are held in the highest veneration. Confucius is styled "the instructor of ten thousand ages"—"the perfect sage," and they speak of his precepts as "the glory of ancient and modern times." The following are some of the maxims and sayings of this singular people.—"The loftiest building arises from small accretions.—Let me fulfil my own part, and await the will of heaven.—Frugality is not difficult to the poor, nor humility to the low.—The best swimmers are oftenest drowned, and the best riders have the worst falls.—The people are the roots of a state; if the roots are flourishing, the state will endure.—The blind have the best ears, and the deaf the sharpest eyes.—The mandarin is not so secure as the husbandman.—It is better to suffer an injury than to commit one.—He who is willing to inquire will excel, but the self-sufficient man will fail.—Anger is like a little fire, which, if not timely checked, may burn down a lofty pile.—He who is clothed in silk, is seldom a rearer of silk-worms.—Every day cannot be 'a feast of lanterns.'—If men will have no care for the future, they will soon have sorrow for the present.—Kind feeling may be paid with kind feeling; but debts must be paid with hard cash.—Produce much, consume little labour diligently, spend cautiously."

A resemblance has been traced between some of the Chinese maxims and the Proverbs of Solomon. The following are instances:—

CHINESE MAXIMS.	PROVERBS OF SOLOMON.
"Virtue is the surest road to longevity; but vice meets with an early doom."	"The fear of the Lord prolongeth days, but the years of the wicked shall be shortened." (x. 27.)
"The heart is the fountain of life."	"Out of the heart are the issues of life."—(iv. 23)
"Honours come by diligence; riches spring from economy."	"The hand of the diligent shall bear rule; but the slothful shall be under tribute."—(xii. 24.)
"If you love your son, give him plenty of the cudgel; if you hate your son, cram him with dainties."	"He that spareth his rod hateth his son, but he that loveth him chasteneth him betimes."—(xiii. 24.)
"The slow horse is fated to receive the lash; the worthless man will ultimately get his deserts."	"A whip for the horse, a bridle for the ass, and a rod for the fool's back."—(xxvi. 3.)
"A virtuous woman is a source of honour to her husband; a vicious one causes him disgrace."	"A virtuous woman is a crown to her husband; but she that maketh ashamed is as rottenness to his bones."—(xii. 4.)
"When mandarins are pure, the people are happy."	"When the righteous are in authority, the people rejoice: but when the wicked beareth rule, the people mourn."—(xxix. 2.)

"The rich man's wealth is his strong city; the destruction of the poor is their poverty."—x. 15.)

"A man without money is a reptile; but with money a dragon."

Maxims are often written in China, on silk or paper, or carved in wood, and hung in pairs, on the walls of dwellings and temples, as ornaments. In ancient times, before the invention of paper, documents were written on slips of bamboo. On these characters were inscribed, prior to the invention of pencils and ink, with a pointed instrument.

The principal religion of China is Buddhism, or Boodhism. It prevails also in Burmah, Siam, Ceylon, Japan, and Cochin-China. Its founder is said, in the Burmese books, to have been a son of a King of Benares, that he flourished about 600 years B.C.; and that, in various ages, he had ten incarnations. The Boodhists do not believe in a First Cause, but consider matter eternal, and that every portion of animated existence has its own rise, tendency, and destiny, in itself. They suppose a superior Deity raised to that rank by his merit; but he is not governor of the world. The lowest state is hell, the next souls in the form of brutes, both being states of punishment, and that the state above—that of man—is probationary. They believe that there are four superior heavens; below these, twelve others, and that there are six other inferior heavens. After these comes the earth; then the world of snakes; then thirty-two chief hells, and one hundred and twenty hells of lesser torment. The great motive for doing good and worshipping Shudda, is the hope of obtaining absorption into the nature of the god, and being freed from transmigration.

The Chinese Empire is full of Buddhist temples, and swarms with the priests of that system. They profess to renounce all domestic ties—take a vow of celibacy—shave their heads—dwell in temples—abstain from animal food—and subsist on the voluntary offerings of the people. The gods they worship are "the three precious Buddhas." They are generally represented half-naked, with woolly hair, in a sitting posture, one holding an egg in his lap; one adorned with a sacred thread, and one with his finger upraised, as though employed in the work of instruction.

In front of the three images, or in a separate temple, is an image of Kwang-yin, the goddess of mercy; on one side in a niche, the god of war, and in the other, the protectress of seamen. A high table, for candles and incense, stands before the images, and in the centre of the temple is a large iron cauldron, for burning gilt paper in; on either side the hall are placed a bell and a drum, to arouse the attention of the god, when important persons arrive to engage in his service, and a few cushions and mats, on which the worshippers kneel, make up the whole furniture of a Bhuddist temple. They have no Sabbaths, nor periodical sessons of rest, they observe the new and full moon, with special solemnity; and keep, on the whole, one hundred and sixty-two fast days every year; besides the matins and vespers of each day.

"At a famous Chinese pagoda," say some visitors, "a pagoda situated among granite rocks, on the sea-shore and consisting of various attached temples, with places for offerings, all in the grandest style of nationally fantastic architecture, we met a mandarin of high rank, coming to worship, with a long train of attendants. We were not allowed to follow him into the shrine, whither he went to prostrate his magnificence before a deaf, dumb, blind, lame, dead stock, which a man who durst not have looked him in the face, had they met by the way, may have carved out of a piece of wood, and when he had finished his work, gathered up the chips, and made a fire with them to boil his paddy-pot.

"But, we had an opportunity of witnessing the antic tricks exhibited by another personage, of no mean rank, at the same temple. Immediately on his arrival, he put a white robe over all his other clothing. While he was doing this, a man brought a large wooden tray, on which were laid two ribs of fat pork, a boiled fowl, and a baked fish. These were placed upon an altar table before the idol, together with a teapot, and five porcelain cups. The worshipper first poured water out of the pot into each of the cups. He then produced a bundle of incense-sticks, rolled in sacred papers, which, having reverentially lighted, he fixed them one by one—there might be thirty in all—before the idol, on either hand of it, and in various niches, both within, and on the outside of the building; at each act making certain grotesque, but grave gesticulations, as though an invisible divinity dwelt in every hole and crevice where he could stick a splinter of sandal-wood. After this performance, he went and kneeled down in front of the altar where the provisions had been deposited. A servant on each side of him did the same; and all three repeatedly bowed their bodies till they touched the ground with their foreheads. This part of the service was accompanied by three loud strokes upon a bell without, and as many on a great drum within, by a boy in attendance.

"Some sacred scrolls of paper, which had been carefully counted, and put into a kind of fire-place on the outside of the temple, were now set in flames, by a scroll of the same hallowed

GODDESS OF MERCY.

character, which was lighted at one of the incense-sticks. Finally, a parcel of small crackers was opened, and the train of them suspended before a hole in the wall, at the back of the fire-place. One of these, being ignited, communicated with the next to it, and on went the blaze, the fume, and the explosion, till the whole had been dissipated, and left nothing but the stench behind.

"Here ended the ceremony. The water was poured back from the little cups into the teapot, and the tray and its savoury contents were carried away again. We were informed that the spirit of the god had regaled itself on the spirit of the food, and the latter, not being a whit the worse for wear, was taken home

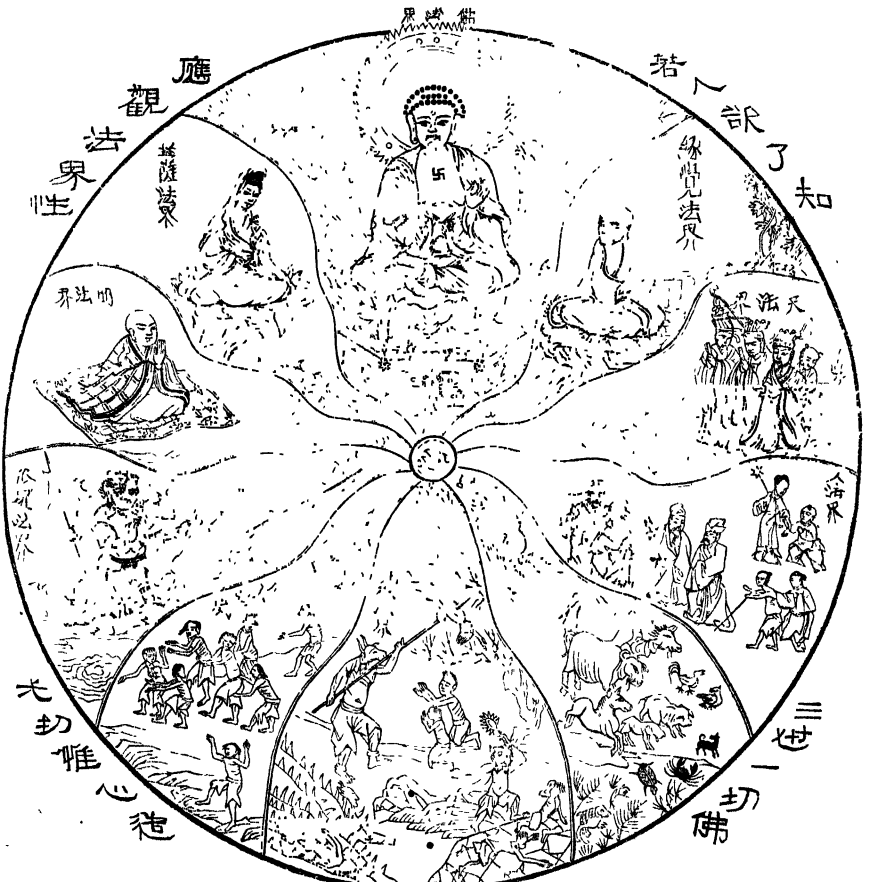
by the devout owner for his own use. This is genuine Chinese thrift. *All the while,* a company of gamblers were seated on the floor, within the same sanctuary, playing at cards with quite as much devotion as the idolater and his menials were playing at religion. Better employed than either party were a few lads, in the joy of youth, romping and racketing at their own more commendable, and not less intellectual pastimes; though our presence somewhat interrupted the indulgence of their mirth, that they might amuse their curiosity with looking

CHINESE GOD OF WAR.

at the strangers, and wondering—if even a Chinese child can wonder, born and brought up as they are in dogged indifference, to everything not Chinese—wondering, we say, what two outlandish fellows could be doing there, who were neither gambling, nor worshipping, nor playing, like themselves."

The Buddhists hold the doctrine of transmigration. We give a representation on the opposite page of the changes which are believed to take place. At the top appears the king *Chuen lan.* He is sometimes exhibited reading from a book the history of the persons who have been brought before him for judgment. Some, whose conduct was wise and good while they lived, he rewards, and they are seen in a state of repose, or proceeding to its enjoyment. Others are condemned and sentenced to be sent to the place of everlasting torment, or back into this world. In the lower part is a demon torturing men, and changing some into beasts. Sometimes "the great wheel of transmigration" appears, which is thought to have the power of breaking the bones and softening the bodies, so as to prepare them for the change they have to undergo. On the right are various

THE PROTECTRESS OF SEAMEN.



animals, showing that in these instances the change has been effected.

Another religious system which prevails in China is that of Confucius, who was born B.C. 549. It is the one most honoured by the learned. The works of Confucius constitute the class-books of the schools, and are the ground work of the public examinations. Hence all who make any pretensions to literature pride themselves in being considered the disciples of that philosopher. There are 1,560 temples dedicated to him, and 62,000 pigs and rabbits annually sacrificed to his memory;

though his worship is also practised without temples or priests, or indeed any form of external worship, every one being left to adore the King of Heaven, the supreme God, in the way he likes best. The system of Confucius is the state religion. The emperor is Pontifex Maximus, and the mandarins form the only priesthood.

According to the precepts of this philosopher, children are bound to sacrifice to their deceased ancestors; all persons

Other singular and superstitious arrangements are made. As here it is impossible to obtain comforts without money, so it is supposed that in the invisible state there is for it the same necessity. Hence those who wish to benefit the departed, must not only feed them once in the year, but supply them with cash for unavoidable expenses. In order to remit money, they procure small pieces of paper, about four inches square, in the middle of which are fastened patches of tin foil, or gilt leaf,

THE HALL OF FUTURE JUDGMENT.

must therefore present offerings to their manes, on the anniversary of their parents' death, as well as at the annual feast of the tombs. The object of these gifts is not a little strange; it is exclusively the support of the departed individual. The hosts are supposed to feed on the provisions offered up, contenting themselves, however, with the more subtle and imperceptible parts of the food, leaving the others to be devoured by the worshippers; though the Chinese affirm that there is no more taste in the offerings at the close of the ceremony than in the white of an egg.

which represent gold and silver money. As these are set fire to, it is believed that they are transformed into real bullion, and pass through the smoke into the invisible world. Such large quantities of this sacrifice paper are used, that Dr. Medhurst, to whom we are indebted for the fact, states that it constitutes a great article of trade and manufacture, and even affords employment to many myriads of people.

He says also, "Besides transmitting money to the distressed and indigent spirits, the Chinese think it necessary to provide their ghostly friends with clothes, and other articles, adapted

for their use in the shades below. With this view they cause coats and garments to be delineated on paper, which pass through the fire as certainly and regularly as the paper money into the abodes of spirits. Others construct paper houses, with furniture, cooking utensils, and domestic slaves, all ready for use on their arrival, and, in order to certify the conveyance of the estate, they draw up writings, and have them signed and sealed in the presence of witnesses, stipulating that on the arrival of the property in Hades, it shall be duly made over to the individuals specified in the bond, which done, they burn it with the house, and rest assured that their friends obtain the benefit of what they have sent them.

"When the priests have gone through their service, and the ghosts are supposed to have been satisfied, a signal is given, and the rabble rush forward to scramble for what the spirits have left, which is all the material part of the food. It is amusing to see the eagerness and agility with which the mob seize on these leavings, for, although the stage is generally twenty feet high, with the boards projecting about two or three feet beyond the head of the poles, the more expert manage to mount the high table, and engrossing what they can for themselves, bear it off, imagining that food over which so many prayers have been said must be attended with a blessing. It is curious, however, to observe how hypocrisy creeps into a religious service of so anomalous a character. The provisions consist of fruit and confectionery, with rice and vegetables, piled up in basins and baskets, which, to the eye, appear full to overflowing, but, in reality, the hollow of each vessel is filled with coarse paper or plantain stalk, and the provisions are only thinly scattered over the top On being remonstrated with for thus deceiving the ghosts, the worshippers reply that the spirits invited to the feast know no better, and by this means they make a little go a great way."

The popular superstition of China assigns three souls to each person; one of which, at death, passes into the world of spirits. The second dwells at the tomb of the deceased, into which, as its new abode, it is formally inducted at the funeral by the ceremony of drawing some little ribbons or a flag at the end of a stick. The third is supposed to occupy the ancestral tablet, which consists of an erect wooden plane, about twelve inches in height fixed on a stand, and ornamentally inscribed with the names and date of the deceased. It is carefully treasured in some common temple of ancestors, in those cases in which a family possesses sufficient wealth to have such a temple, or in the family dwelling, in the case of poorer families. In the latter instance, it is placed in juxta-position with the household gods, and receives the offerings of incense, eatables, gilt paper money, and miniature garments, in common with the idols.

The worship of the ancestral tablet is the only custom of a strictly religious kind universally observed by the literary as well as by the uneducated part of the community. It forms also one of the most formidable to the progress of Christian missionaries.

In addition to the sects of Buddha and Confucius already noticed, there is a third—that called Taou. Its founder was Laou-tan, commonly called Laoutsze, who was contemporary with Confucius; but the Taou, or Reason itself, they say, is uncreated and underived. Though the period of his life is described as first stated, he is said to have existed from eternity, and to him they even ascribe the creation of the world. Thus the following declaration is made: "The venerable prince, the origin of primary matter, the root of heaven and earth, the occupier of infinite space, the commencement and beginning of all things, farther back than the utmost stretch of numbers can reach, created the universe."

The Taou sect worship a variety of idols, some of which are imaginary incarnations of eternal reason, and others rulers of the invisible world, or presiding divinities of various districts. Among the rest are the "three pure ones," who are first in dignity; the "pearly emperor and supreme ruler;" the most honourable in heaven; the god of the north, the god of fire, with lares and penates, genii and inferior divinities without number.

JULIA.

(Concluded from page 284.)

For six days and nights, the flames raged throughout the distracted city; and not until open spaces were cleared, by the levelling of vast numbers of houses, was a stop put to their ravages. Multitudes perished beneath the falling walls; and the Campus Martius, and other public places, were filled with masses of wounded and terror-stricken people. Temples, palaces, the most magnificent monuments of art, and the spoils of many foreign conquests, were swallowed up in one common ruin, and when it was at last stayed, the imperial city had the appearance of having been sacked by a ruthless army. Murmurs rose wild and loud against the Emperor, whose wretched ambition of becoming the founder of a new city, called after his own name, it was said, had led him to plan the destruction of the old one Unwilling to be thus clamoured at, he cast about for others on whom he might fasten the fiendish act, and he was not long in selecting the innocent Christians—the professors of the "foreign superstition." as it was called—to whom the debased and ignorant populace were ready to impute all sorts of wickedness – as the perpetrators of the hated deed. And while he tried to stifle the discontents that were rife among the people, by ordering at once the rebuilding of the city on a scale of grandeur that should far outshine its former glory, with wily tact, this monster of cruelty turned the tide of vengeance against the Christians, and poured out upon them the utmost of his demoniacal fury They were hunted down like wild beasts; they were tortured with every species and device of barbarity which the most ferocious ingenuity could invent, they were thrown as food to the animals in the amphitheatre, they were extended upon crosses, they were wrapped in garments saturated with tar and pitch, then bound to stakes and scattered through the public gardens, and even in those of the Emperor himself, and, when the darkness of night drew on, fire was applied to them, and by the light of these human torches were held the most fearful orgies! Every day witnessed new persecutions, and the infuriated populace and soldiery seemed determined not to give over their bloody work until not only every Christian, but all on whom the remotest suspicion had fastened, should be swept away.

It is not difficult for us to enter into the feelings of the Pagans, so far as to imagine the apprehensions with which they must have looked forward to the ultimate issue of the conflict. At the close of the second century, the members of the new sect were not more formidable from their numbers and station, than from their irresistible valour. Carrying in their hand the life they valued so cheaply, the martyrs lavishly exchanged it for the treasures of eternal glory, but besides this, in itself an abundant recompence, they bought over the hearts of men. With such a price they seduced the world into imitation of their virtues: the same violence that took heaven by force prevailed over earth, and vanquished hell. Nothing could have been devised better adapted to display the power of the new faith, than submitting its professors to martyrdom. Not proof against the generous enthusiasm of his victim, the executioner often caught the flame—gazed upon the dangerous spectacle of the power of true religion, till his heart burned within him; and, fairly overwhelmed by the trial of faith and hope, hastened to undergo the death which his hands had inflicted on another. It was, perhaps, the frequent experience of this which led many of the Pagan officers to avoid capital punishment, and to employ the more efficacious method of bribes and entreaties. There was, moreover, a spirit of combination among the Christians—an earnest energy, and a desire to extend their Master's kingdom at any risk to themselves, that must have suggested gloomy forebodings to the more thoughtful worshippers of Jupiter. There was undoubtedly a falling-off in the devotion of the Pagans, independent of the injuries inflicted on their religion by Christianity; a deistical philosophy was gradually taking the place of polytheism; yet the vigour of the persecutions shows that the "new dogma" was by no means looked upon with indifference, nor did the world tamely allow itself to be surprised into Christianity. Because a rationalist emperor placed together in his palace the statues of Orpheus, Abraham, Christ, and Appolonius, and because a few of the more learned heathens delighted in the same eclectic worship, we are not to infer with Gibbon, that

indifference gave the death blow to Paganism, and that Christianity only stepped in to enjoy the triumph. For one martyr to the unity of God among the Pagans—for one Socrates—how many might be numbered among the followers of Jesus to those who bled in the cause, let us ascribe the honours of the victory. So also Tertullian, "Theirs is the victory, whose was the fight: theirs the fight, whose was the bloodshed."

It is told of one of the Antonines by Eunapius, that he was in the habit of declaring publicly, that before long all the temples would be converted into sepulchres. From the well-known connection between cemeteries and places of worship among the Christians, it is clear that the imperial statesman foresaw the future ascendancy of our religion.

In the history of all religions or sects there is a period when they come into collision with, and are violently opposed by the old forms which they are to supersede. Incensed at the disciples of the new faith, who despised the sacrifices of sheep and goats, and who, although almost naked, smiled at the imperial purple, the priests and devotees of the old Roman superstitions persecuted them with great virulence.

Among the earliest sufferers in Rome after the completion of the inspired canon, was Ignatius, who was devoured by beasts in the Coliseum, A.D. 107. Of his martyrdom we have a short narrative, expressed in language sufficiently indelgant and obscure to stamp it as the work of uneducated persons, and professing to be the production of the martyr's personal friends. In addition to these "Acts" published by Usher and Ruinart, we have the epistles of Ignatius written to seven churches while on his way to Rome, in this respect he imitated his apostolic friend, who had departed this life a few years earlier. These epistles have happily come down to us uncorrupted. From these "Acts" and epistles we learn all that is known of the last days of Ignatius. While the Emperor Trajan was passing through Antioch on his way to Armenia, he observed that a portion of his subjects rendered him imperfect homage, so that the lustre of his recent victories seemed to suffer some diminution. His indignation being roused, he issued an edict commanding the Christians to sacrifice to the gods, under pain of instant death. Ignatius, fearing for the church over which he was bishop, presented himself before Trajan, and after a short conversation, too well known to need repetition, was sentenced to death. He was placed under the care of soldiers, to be conducted to Rome; during the journey he contrived to visit Polycarp, his fellow disciple in the school of St. John. He also wrote to the church of Rome, requesting them to make no attempt to save his life.

The non-resistant courage of such men as Ignatius and Polycarp was, through the grace of God, an instrument for arousing sympathy for the truth; and at last, from the force of circumstances, the church of Rome rose from the catacombs, and established itself upon the Vatican. As she became powerful, she became desirous of spreading a belief in her superior sufferings and sanctity amongst the other churches, and for this purpose she went down into the catacombs for the bones of saints and relics of martyrs, and to the regions of fiction for legends with which to impress the superstitious. But we return to our story.

Sick to the very soul—loathing the imperial family with all the horror that a virtuous nature could feel—his heart swelling with indignation against the venal Senate, who upheld all these inhuman excesses, Antonius strayed gloomily along the dismantled streets. He had forsaken the city on the night of the fatal day that had brought such desolation to the home and the heart of his beloved Julia, and had only occasionally returned to inquire into the fate of friends, and to render them assistance. The household of which he had been a member, had gone to their possessions in a distant province, and he came now to search after the missing Marcia—Julia's favourite attendant—who, it was feared, had perished in the general slaughter. On every side of him were evidences of the merciless persecution that was raging against the Christians. here, the crushed bones of one who had been torn to pieces by dogs, there, the burnt stake and chain and smouldering ashes. The spirit of stern indignation rose high within him, as he thought of those whom he firmly believed to be innocent, thus inhumanly murdered, and he ground his teeth, and clenched his hand, internally flinging defiance in the face of the persecutors. Not that he himself had any sympathy with the Christians, beyond that which a generous humanity felt for the innocent and suffering victims of tyrannical power. His God was the indefinite *Providence* or *Fate* of the Stoics, and his religion he found in the writings of the philosophers, over which he pored while most of the youth of Rome were revelling in vice and voluptuousness.

While thus indulging a train of most bitter thought, he was suddenly startled by the conversation of a group of idle soldiers, near whom he happened to be passing.

—— "But she is a patrician's daughter," said one.

"And what matters that," rejoined a fierce-looking centurion, "if she be a Christian? The imperial edict is, to spare none."

"How know you that she is a Christian?" asked the other.

"Her female slave would not deny the charge, even when perishing by torture, and that is proof enough. Why look ye, fellows! They say no man in Rome had a rarer taste in wines than the old Fluvius, and I warrant ye, his villa is well stored with Massic and Lesbian fit for Bacchus himself. Let us to the work to-night, and, when we have done, we will drag out the dusty amphoræ which have not seen the light for many a year."

The coarse ribaldry which followed fell, too, on the ear of Antonius, and his first impulse was to draw his dagger, and plunge it into the heart of the wretch who spoke, but a second thought [illegible]d him, and gathering his toga close about his stately figure, he strode away. A few moments later, he was pursuing his way to the villa, whither his fleet-footed steed soon brought him.

Julia's heart had been crushed by the blow which deprived her of her father, and but for the mysterious support—mysterious and inexplicable to Antonius—which she appeared to derive from the exercise of her new religion, it had seemed to him that she would altogether have sunk beneath it. He shrunk from being the bearer of such tidings as he had now to communicate, but there was no time allowed for delay. He sought the apartment occupied by Julia and his sister, where he found the latter doing all that kindness could prompt to soothe her companion's silent sorrow. Julia was lying with closed eyes upon one of the silken couches, pale, and touchingly lovely in her subduing grief. She was only made aware of the presence of Antonius, by his lifting her passive hand to his lips, when she started up with an expression of interest, which her face had not worn for many days, and asked for news of Marcia. Fain would Antonius have concealed the truth, but her inquiries were too searching for evasion. When she learned that her fears had been more than realised—that her devoted attendant who had been to her as a sister in the new faith, and an instructor, had fallen a victim to her steadfastness in that faith—she sank back again with a groan of anguish upon the cushions.

Antonius knew not how to comfort her, and did not attempt it—he could only kneel at her side, and regard her with silent compassion. He hesitated long before he could bring himself to add to her already accumulated sorrows, by telling her of the conversation he had overheard, and of his absorbing anxieties for her safety, but time was not to be wasted, and as gently as possible, he broke the startling intelligence.

"But," he added, after he had finished the recital, "if thou wilt but assure them that thou art no *professor* of this Nazarene creed, and consent to kiss the image of the Emperor—a mere form, which thy safety requires thou shouldst do, even though thy heart detest him—then these rioters can have no pretext for proceeding to any violence, and they dare not. But cling to this foreign religion, my Julia, and nothing can save thee from them but flight; for suspicion has fixed itself upon thee, and my arm is powerless to arrest the wretches, who can show as their warrant the edict of the Emperor. Renounce this faith, it cannot be the true one, since its author has not power to shield its professors from destruction, as thy poor Marcia is proof, but perished herself ignominiously. Think of the dishonour to thy patrician birth, of thy life, my Julia, of thy life, of its preciousness to me, and renounce—renounce it!"

There was intense earnestness and energy in the tones and gesture of Antonius, as he still knelt at Julia's side, and clasped her delicate hands between his own. The fearful words seemed at first to have stunned her, and she lay as if deprived of life, pale and motionless as the Parian statues that stood in niches around the apartment. Her eyes were closed, and her lips compressed and he could only see that a terrible struggle was going on in that young bosom. For some moments he gazed thus; at leng h

she slowly raised herself, and with an air sublime and fervid as the inspiration of a Pythoness, exclaimed—

"Can I dare I renounce the inmost convictions of my soul? Thou who art searching through all philosophies after truth, wilt *thou* counsel renunciation, when my heart tells me I have found it? What were my life worth, purchased at such a cost as this? No, no, I cannot perjure myself before my God, not for the sake of my own life, nor even, Antonius, for *thee!*"

A lofty heroism breathed through every line of her fine Roman face as she spoke, and Antonius, whose confidence in the strength of human principle had long been giving way, felt a sudden glow of admiration warm his bosom as he looked upon that noble brow, and read in the depths of those lustrous eyes a determination which danger or even death could not shake

"Could *my* philosophy enable me to do this" murmured he to himself, "would even Seneca be thus firm to principle?"

Julia continued, "I will fly to Etruria, on the banks of the Arnus there is a small estate cultivated by one of my father's freed-men Thither will I flee with one or two faithful attendants, until this fearful persecution be stayed"

Antonius interrupted her "Nay, thou shalt not brave the perils of such a flight alone Besides, what would it avail for us remain behind? The ruffian tools of the Emperor would wreak their vengeance for thy escape on this beautiful villa, encouraged to do so by thy flight, which they would regard as positive proof that thou art what they suspect thee to be—a Christian Wilt *thou* consent to go, Antonia?" he asked, turning to his sister, who all the while had sat by in silence A warm flush overspread the cheek of the young girl, to flee as if she were a Christian, she did not like—for as yet she knew nothing of the sect beyond its association with the vulgar plebeians

"It is not as a Christian I would fly," said Antonius, who understood her feeling "Julia *must* go, I am her only protector now, and Rome is such a scene of riot, debauchery, and murder, that I would not take thee thither, or go myself again, until something more human wears the imperial purple Yes, let us all seek together those quiet shades, where fire and sword shall not penetrate There shall our nuptials be, my Julia"

"And there, exclaimed Julia, with sudden enthusiasm, throwing one arm round Antonius, and the other round his sister, "there we will examine together the new religion, and compare it with the old philosophies, and with the aid of the sacred scrolls which mine own hand has copied, we will seek and find the truth after which Socrates and Plato, and all our wise men have groped so long"

Within a few hours the little party had gathered together what

CHINESE TEMPLE —(*See page* 291)

silver and gold and valuable things could be carried with them, had bidden farewell with aching hearts to the beautiful villa, the scene of so much happiness to them all, and were leagues on their way towards their place of refuge.

Julia's hopes were realised. Antonius became a Christian The overwhelming arguments of the Apostle of the Gentiles, who had perished a martyr to his faith in the same barbarous persecution from which Julia had fled, and whose letter to the Roman believers had been the companion of her flight, could not be resisted by a mind so clear, and so open to conviction as his He turned from the Dialogues of Plato, to find infinitely more than the "*Phædo*" could teach, in the pure and powerful reasonings of Paul. Peace long brooded over the home of the exiles, and before the second persecution of the Christians burst forth under the cruel Diocletian, God, in his mercy, had gathered them all to that home from which they should no more go out for ever

To close our portrait gallery of French statesmen and generals, and by a sad fatality in France, these two words have become synonymous with men intimately connected with the modern French history We will give a few particulars regarding them

Pierre Antoine Berryer was born at Paris on the 4th of January, 1790 His father occupied a high position as an advocate, and though a zealous advocate of reform in the constitution, was horrified by the excesses of the revolution When all danger was past, he confided his son to the care of the Oratorians of Sicily Young Berryer distinguished himself there by his great fluency and his religious enthusiasm. After leaving college, he led for some time a life of great gaiety, and at the age of twenty-one married Madamoiselle Gauthier against the will of his friends Towards the close of the empire he was called to the bar, though a passionate orator, of great energy and argumentative power, up to 1814 he had taken no interest in politics, when he became devoted royalist. On the return from Elba he sided with the Bourbons, and, after the Hundred Days, exerted himself vigorously in opposition to the reactionary policy of the king He pleaded with his father and Dupin in defence of Marshal Ney, and also for General Debelle, and when unsuccessful in preventing his condemnation, he obtained a commutation of the penalty He was also successful in saving General Cambornne In defending Generals Cannel and Drouandieu also who were accused of an attempt upon the life of the king he distinguished himself by an attack upon the ministry, Decazes, whom he accused of fomenting the insurrections of Lyons and Grenoble Under the ministry of Villele he contended strenuously for the liberty of the press contributing to the *Journal des Debats*, the *Drapeau Blanc*, and *La Quotidienne* The office of Procureur General was offered him in the hope of quieting him, but he refused it When Polignac was placed at the head of affairs he joined the ministry, and was elected member for Puy by a large majority, and addressed the Chamber on the first time in March, 1830 When the revolution of July occurred he took the oath of allegiance to Louis Philippe with great reluctance, and remained in the ranks of the opposition When the Duchess de Berry attempted to raise an insurrection in La Vendee, Berryer travelled down to see her in

the night, and vainly attempted to dissuade her from her enterprize. He was arrested as an accomplice in the plot, and was kept in confinement for three months, but was at last liberated by an order of the Court of Cassation. He has since distinguished himself by his strenuous advocacy of all reform movements.

Count Molé was born in 1780, and at an early age exhibited the talent which won for him his high rank in after life. His youth was passed in escaping the terrors which then ravaged France; some part of it was passed in Switzerland and Engl In 1806 he published his first work, "Essays on Morals and Politics," which secured for him the patronage of Napoleon, who immediately conferred upon the young author the office of auditor to the council of state. From this time his promotion was rapid. Almost every year fresh dignities were heaped upon him; and in 1813 he was appointed minister of justice. When the restoration came, Molé accepted office under the Bourbons, and was elevated to the Chamber of Peers. In 1817 he became minister of marine. Then we find him separating himself from the ultra-royalists, and, in 1822, opposing the project of the king relative to the crimes of the press. When the revolution of 1830 took place, Molé was one of the leaders of the party which sought monarchy for its own sake, as the only sure protection against the horrors of anarchy. Their object was to preserve the peace of Europe at every sacrifice short of the immediate honour and interest of France; to secure sufficient administrative strength to the government; and to check vigorously all the anarchical tendencies which naturally spring from a revolution. To this party belonged Casimir Périer, Guizot, Thiers, Molé, and in fact almost every man who had any pretension to statesmanship in France. Louis Philippe was naturally disposed to take part with these conservatives, but circumstances compelled him to temporize with the men of the movement, to whom he had been chiefly indebted for his throne. In 1836, on the resignation of Thiers after nine months hold of power, a new ministry [illegible], at the head of which was Count Mole, M. Guizot being also a member of the cabinet. During his administration of affairs Louis Napoleon made an attack on the French monarchy, which ended in his capture and deportation to America, after having, it is said, pledged himself to remain in that country for ten years. Molé commenced his administration by measures well calculated to win popularity, he released Prince Polignac from his captivity, and permitted him to retire from France; he granted an amnesty to the state prisoners who had not been too deeply implicated in the recent disturbances, and he brought to a successful issue the negotiations for the marriage of the Duke of Orleans. But difficulties gathered around his career as a minister. The king demanded from the nation large dowries for his daughters, and splendid donations for his sons; and, in 1839, a powerful coalition, headed by Guizot, Thiers, and Odillon Barrot, assailed, and ultimately overthrew the ministry of Count Molé. Once more, however, the services of Count Molé were required. In the revolution which sent Louis Philippe to die an exile in a foreign land, Count Mole was sent for by the king. However, this but precipitated matters, Count Mole was very unlikely to succeed in forming a cabinet. Precious time was lost; suspicions of the king's sincerity began to be circulated, and finally, after a long delay, Molé refused to accept office.

Odillon Barrot comes appropriately next. He was born at Villeport, department of Lome, 1790. His father was Member of the Convention, and of the Council of Five Hundred. The son was educated at Paris in the College of Louis the Great, and during his youth was remarkable for his military propensities. When his education was completed, he applied himself to the study of law, and at the age of twenty-three, practised as an advocate in the Court of Cassation, and early distinguished himself by pleading successfully the cause of some Protestants who refused to decorate their houses at the procession of *Fête Dieu*. In the Revolution of 1830, Odillon Barrot acted a distinguished part. He was of opinion that the king should be changed, but the monarchy preserved. His desire and that of those who acted with him was large measure of electoral reform at home. At the same time they were anxious that France should actively support the cause of liberty and nationality in Belgium and Holland. They proclaimed it to be their purpose to surround the monarchy with Republican institutions, and with the same aim Odillon Barrot seems to have shaped his public conduct, and with that aim to have materially contributed to the downfall of the man he had helped to place upon the throne. A series of demonstrations was organised under the name of Reform banquets, which were designed to give concentration and force to public opinion. Paris set the example of these demonstrations; the banquet at the Chateau Rouge, at which Odillon Barrot was present, was the first manifestation of the new movement, the object of which was declared to be "to arm union, order, and discipline against the disorder and anarchy out which the government had fallen." On the 19th of January, 184 a reform banquet was proposed, but prevented by government interference. It was then resolved that a general one should be held on the 20th of February. This also was prohibited by ministers. On the evening of the day on which the prohibition appeared, the leading deputies of the opposition, and the principal members of the committee of management were assembled at the residence of Odillon Barrot. They decided that the banquet should not be held, and that Odillon Barrot should impeach ministers. However, the people decided otherwise. Angry crowds gathered in the streets; to all observers it was apparent that a storm was thickening in the horizon. The plot grew firmly. At length, after blood had been shed, the king consented to accept a reform cabinet, of which Thiers was appointed premier, and in which Odillon Barrot became Minister of the Interior. This was too late. Odillon Barrot became persuaded that some further sacrifice was necessary, and he got the feeble and frightened king to abdicate in favour of his grandson, with what success the reader knows well. In terror in weakness, in contempt, died the monarchy of July, – that monarchy which promised so fair and was to have lasted so long.

Andre Marie Jean Jacques Dupin was born at Varzy, in the department of Nivernais, 1st February, 1783. The violent and illegal arrest of his father during the night by the emissaries of the Republic, made a deep impression upon his youthful mind, and gave him that love for legal forms which he afterwards pushed to degree bordering on madness. After his early education, given him by his mother, he came to Paris to study law in the Academie of Legislation. While his companions were wild with militant enthusiasm, rushing to reviews and parades, he was working hard in a lonely attic in the Rue Bourbon Villeneuve. He soon became an accomplished lawyer, passed his examination with credit, and at the age of twenty-three was chosen Dean of the New Faculty which Napoleon then established. His progress at the bar was rapid, that at the age of twenty-eight, in 1811, he was appointed Avocat General of the Court of Cassation. Some time afterwards he was selected with some others to classify the laws of the empire. He was above all things a great advocate; his political talents are not nearly so great. He was elected a representative during the Hundred Days, and strenuously opposed the succession of Napoleon's son. After the restoration he returned to his duties at the bar, and distinguished himself by his manly defence of those men whom the imbecile Louis XVIII. was hunting to death. His defence of Marshal Ney was considered a masterpiece of legal argument. He was put down by the court martial, and not allowed to follow his own course. He was similarly engaged at the trials of Wilson, Hutchinson, and Bruce, the heroic deliverer of Lavalette. He distinguished himself for several years by his opposition to the arbitrary proceedings of the Bourbons. M. Dupin has since been engaged in all the great legal cases which have [illegible] France, and though never in any ministry for any length of time, his political career has always been marked by attachment to liberty, reform, and constitutional monarchy. He was elected a member of the French Academy in June, 1831, in place of Cuvier, deceased. He has written many works, most of them on legal subjects. Since the above was written, Dupin has won himself lasting honour, by relinquishing his post of Procureur general to the Court of Cassation. In his letter to Louis Napoleon he thus states his reasons.—"To the President of the Republic, I regret exceedingly that, previous to the publication of the decree which I have read this morning in the *Moniteur*, you had not heard my opinion with the same kindness you have sometimes manifested towards me. I should have tried to demonstrate to you, not merely in the private interest of the children, the greater part minors, of the late king, of whom I am one of the testamentary executors, but in the interest of your own government, that those who have suggested that measure are not acquainted with the facts; and that they have disregarded all the rules of law and equity. In fact, there is an extreme exaggeration (at least to the amount of half) in the estimate made of the property of the Orleans family. In *law* the decree violates the

essence the very principle of property. This right of property was recognized, after a solemn discussion, in the person of the late king, by the 22nd and 23rd clauses of the law of the 2nd March, 1832; and in the person of his children by the very acts of the revolution of February, by the decree of the constituent assembly of the 25th October, 1848, and by the law of the national assembly of the 4th February, 1850, promulgated by your government, and authorized the loan of 20,000,000 on that property by your minister of finance. Thus, public right, will, special laws, contracts, all have recognized in the hands of the princes of the house of Orleans their right to the property which the decree of the 22nd of January deprives them of all at once, and in a manner so absolute that the sacred rights of the tomb, the burial ground of Dreux, are not even excepted. If the constitution of the 15th January was in vigour, the senate might be appealed to in virtue of the 26th article, which permits that body 'to make opposition to the promulgation of laws which are contrary to the inviolable character of property.' In the present state of things, the only resource is to appeal to you, Prince, and to invoke your wisdom and the magnanimity of your own feelings when they are again consulted and more deliberately listened to. But if these rigorous measures are to be maintained, a great scruple arises from the depth of my conscience. As Procureur-general to the Court of Cassation for nearly twenty-two years; as the principal organ of the law in that high branch of jurisdiction; charged as I am by the government to proclaim the constant respect to right, and to require the reversal and the annulling of the acts which violate the laws, or which constitute the incompetence or the excesses of the government—how shall I be able henceforth to exercise the same firmness, if acts are introduced in our legislation which are in contradiction with those principles? I feel myself bound, therefore, to tender you my resignation But I pray you, prince, and in an earnest manner, not to misunderstand my motives. The resolution I have adopted has nothing to do with politics. As president of the late Assembly, I rigorously kept myself apart from parties and their fatal divisions, and limited myself to maintain, as much as I individually could, the legal and moral doctrines on which the essential order of civilised society reposes After the *coup d'état* of the 2nd of December, against which it became my duty to protest, as I have done, I awaited the judgment of the people appealed to by you. After that solemn judgment I adhered frankly to the immense powers which were the result of that appeal, considering them as the strongest guarantee that could be presented to preserve or re-establish those principles which a wild Socialism had endangered and menaced, and, as a public functionary, my co operation was loyally given to you. But, at the present moment, and on a question of civil right, and of private rights, of natural equity, and of all Christian notions of what is just and unjust, and which I cherish in my soul for more than fifty years as *jus inconsulte* and as magistrate, I feel myself absolutely called on to resign my functions of Procureur-general."

Of Lamoriciere we have but left ourselves room to write that he was the popular brother-in-law of Thiers, and was appointed commander of the national guards, when Louis Philippe, in his hour of distress and despair, accepted the reform cabinet. These men, thus versed in public affairs; these renowned leaders of great parties in the state, have thus been made the victims of the man who now seeks to rule France with a rod of iron We cannot suppose that his sway will last long; we cannot suppose that a high-spirited nation will long permit itself to be governed defiance of all custom, and precedent, and right. We cannot suppose that that old French spirit which has struck down so many an ancient wrong, has for ever abandoned France.

NOT KNOWING WHEN TO LEAVE OFF.—There is a whole class of things which, though good in themselves, are often entirely spoiled by being carried out too far and inopportunely. Such are punctiliousness, neatness, order, labour of finish, and even accuracy. The man who does not know how to leave off will make accuracy frivolous and vexatious. And so with all the rest of these good things; people often persevere with them so naptly and so inopportunely as to contravene their real merits. Such people put me in mind of plants which, belonging to one intry and having been brought to another, persist in flowering those months in which they or their ancestors were used to flower in the old country.

ELIOT WARBURTON.

In his last book, "Darien," poor Eliot Warburton, whose melancholy death in the wreck of the Amazon has robbed literature of no common intellect, paints a terrible catastrophe akin to that in which he perished.

Here are the scenes:—

"A ROUGH NIGHT.

Almost instinctively he made his way first to Peel-house, where he heard the well-known voice of a fisherman Madden Ray, calling to Tam and Parten to "come out and hearken, for there was gruesome sounds from the say, and mirit guns that were stilly now." Tam was neither disposed nor quite able to move from his warm bed at such a summons; but Partan, who now habitually slept in his chimney-corner, staggered out into the storm, and down to the shore through showers of salt spray. Tinwald and Madden accompanied him, and beheld a sight that was terrible even to their practised eyes. The sea, thrown mountains high, and tortured into strangely awful shapes by the force of the whirling wind, was lighted up at intervals by a wan moon, as the black, rushing clouds for a moment revealed her pallid face within its shroud. All that could be seen, even close at hand, was but by glimpses—all that was heard was but ejaculations. Partan, after a few minutes, seemed thoroughly recalled from the effect of his potations. One excitement counteracted the other, and he was now roused into a seaman's interest in the scene before him. He lay down upon the shore, and kept his eyes steadily fixed in the direction of the sand-bank. The first gleam of light that passed over the sea revealed to him that the black hull of a large ship was stationary in the midst of the topsed billows.
